DEPARTMENT OF FINANCE,
OTTAWA, January 10, 1929.

Honourable J. A. ROBB,
Minister of Finance.

SIR,—I have the honour to submit to you the Public Accounts of Canada for the fiscal year ended March 31, 1928.

ORDINARY RECEIPTS AND PAYMENTS

The receipts for the year on account of Consolidated Fund amounted to \$422,717,982.68, and the expenditure on the same account to \$336,167,960.98, showing a surplus of ordinary receipts over ordinary expenditures of \$86,550,021.70.

SPECIAL RECEIPTS AND EXPENDITURES

In addition to the ordinary receipts and payments there were special receipts of \$7,129,568.76 and special expenditures of \$3,566,296.72, leaving an excess of \$3,563,272.04 of receipts over the expenditures as a credit to Consolidated Fund:—

Special Receipts:—

War and Demobilization Receipts—	
Refunds of Previous Years' Expenditure.	\$ 204,974 25
Payments received on account of Reparations from Germany—	
Under the Dawes Plan.....	3,002,047 78
Arrears—Pre-Dawes.....	3,789,430 00
Miscellaneous.....	133,116 73
	<hr/>
	\$ 7,129,568 76

Special Expenditures:—

Adjustment of War Claims.....	\$ 1,860,985 25
Cost of Loan Flotations.....	13,057 70
Home Bank Depositors' Relief Act.....	205,032 55
Civil Service Superannuation Act, 1924 (Government contribution to the Fund)	1,402,210 32
Miscellaneous Charges.....	85,010 90
	<hr/>
	\$ 3,566,296 72

Excess of Special Receipts over Special Expenditures.....	\$ 3,563,272 04

		<u>\$ 941,916 60</u>
Net Charge to Capital Account.....	\$20,635,647 85	

LOANS TO MERCHANT MARINE

Loans to the Canadian Government Merchant Marine, Limited, of \$999,836.63 were made under authority of the Appropriation Act of 1927.

DEBT

The net debt of the Dominion at the close of the fiscal year was \$2,296,850,232.92 or a decrease of \$50,984,137.17 under the debt as it stood on March 31, 1927.

The decrease is accounted for as follows:—

REVENUES—

Ordinary Revenue.....	\$422,717,982 68	
Special Receipts.....	7,129,568 76	
		<u>\$ 429,847,551 44</u>

EXPENDITURES—

Ordinary Expenditure.....	\$ 336,167,960 98	
Special Expenditure.....	3,566,296 72	
Capital Expenditure (net).....	20,635,647 85	
Loans to Canadian Government Merchant Marine, Limited.....	999,836 63	
Loans to Quebec Harbour Commissioners.....	1,458,000 00	
		<u>\$ 362,827,742 18</u>

Surplus of Revenues over Expenditures.....	\$ 67,019,809 26
--	------------------

Soldier Settlement Board Loans—

Amount transferred to non-active assets to provide for revaluations and losses.....	13,935,672 09
---	---------------

Seed Grain and Relief Advances—

Amount transferred to non-active assets to provide for losses.....	2,000,000 00
--	--------------

University Hospital Edmonton transferred to non-active assets.....

100,000 00

<u>\$ 16,035,672 09</u>

Net Decrease of Debt.....	<u>\$ 50,984,137 17</u>
---------------------------	-------------------------

Before the close of the fiscal year 1927-28 the amount of Active Assets as previously shown on our balance sheet was reduced by sixteen million dollars (\$16,000,000) on account of the following services:—

Chapter 68 of the Statutes of 1927 amended the Soldier Settlement Act of 1919, and provided for the revaluation of loans to Soldier Settlers for the purchase of lands. The Soldier Settlement Board estimated that altogether \$8,000,000 should be written off on account of this revaluation. It was also estimated that losses on the re-sale of stock and equipment, as well as of farms which have reverted to the Board, would be entailed to the extent of approximately \$6,000,000.

As early as 1876, the Dominion Government through the Department of the Interior commenced making advances for Seed Grain and Relief to needy settlers of the West. A considerable amount of these advances has been outstanding for many years. Many of these accounts to an estimated amount of \$2,000,000 are of doubtful value as an asset.

FUNDED DEBT

The surplus of \$67,019,809.26 of revenues over all expenditures for the year enabled the Department to provide for the retirement of \$61,759,650.00 of outstanding Bonded Debt in the hands of the public, involving the following transactions:—

The 5 Year $5\frac{1}{2}\%$ bonds of the 1922 Renewal Loan amounting to \$29,068,400, and the 3 Year 4% Treasury Notes issued in 1924 amounting to \$8,000,000 matured in November 1927, and were redeemed.

The 10 Year $5\frac{1}{2}\%$ bonds of the 1917 Victory Loan amounting to \$63,437,250, matured on December 1, 1927. To meet this maturing obligation, 3 Year 4% Treasury Notes to the amount of \$45,000,000 were sold to the Chartered Banks of Canada at par. The balance of \$18,437,250 of the maturing bonds was redeemed in cash.

In addition, \$6,254,000 of 5% bonds of the 1923 Refunding Loan, due October 15th, 1928, were redeemed in advance of the due date by purchase in the open market.

SAVINGS BANKS

At the close of the fiscal year, the balance at the credit of depositors in the Post Office and Government Savings Banks was \$31,103,776.26, a decrease of \$818,266.53 under the balance held on March 31st, 1927. The withdrawals for the year exceeded the deposits by \$1,733,099.07 while \$914,832.54 was added for interest accrued.

INVESTMENTS

SINKING FUNDS

Investments on account of Sinking Funds of the various loans were made during the year to the amount of \$3,418,685.69. The total of the investments at the credit of the Sinking Funds, which stood at \$45,198,200.28 on March 31, 1927, was therefore increased to \$48,616,885.97 on March 31, 1928.

ADVANCES TO HARBOUR COMMISSIONERS

Advances were made under statute to the following Harbour Commissioners:—

Montreal Harbour Commissioners.....	\$3,105,000
Quebec Harbour Commissioners.....	1,458,000
Vancouver Harbour Commissioners.....	1,564,000
	<hr/>
	\$6,127,000
	<hr/>

During the year, \$1,000,000 of Montreal Harbour Commissioners Debentures held by the Dominion matured and were paid.

LOANS TO BANKS

Under authority of the Finance Act, Chap. 70, R.S.C. 1927, advances during the year to an aggregate amount of \$301,750,000 were made by way of issues of Dominion Notes to various banks. On April 1, 1927 the outstanding balance on this account was \$12,500,000. During the year repayments were received to the amount of \$278,250,000, leaving a balance of \$36,000,000 outstanding at the close of the year.

SOLDIER LAND SETTLEMENT BOARD

The Loans outstanding to soldiers settling on the land and for General Land Settlement decreased during the year by \$804,096.22. This leaves a balance outstanding at the close of the year of \$83,345,871.25 of which \$69,410,199.16 is carried as an Active Asset. The balance \$13,935,672.09 has been transferred to a Non-Active Account.

HOUSING LOANS

The Provincial Governments reduced their indebtedness to the Dominion on account of Housing Loans by \$9,768,440.00 as follows:—

Province of Ontario.....	\$ 9,350,000 00
Province of Manitoba.....	165,000 00
Province of New Brunswick.....	58,000 00
Province of Nova Scotia.....	175,000 00
Province of Quebec.....	20,440 00
	<hr/>
	\$ 9,768,440 00
	<hr/>

FOREIGN GOVERNMENTS

Foreign Governments have paid all interest due on their obligations. In addition, the Government of Belgium paid \$4,528,336.00 on account of principal, thereby liquidating their debt in full. The Government of Greece, under agreement, paid \$195,000.00 on account of principal. The outstanding foreign debts are thus reduced to \$7,280,000.00 owing by Greece and \$23,969,720.00 owing by Roumania.

DOMINION NOTES

The circulation of Dominion Notes stood at \$188,631,489.61 on March 31, 1928, being an increase of \$16,463,850.39 as compared with the circulation at the close of last year. Gold held as security amounted to \$92,913,894.66. Of the total amount of Notes outstanding, \$36,000,000.00 were against approved securities held by the Department under the Finance Act.

GUARANTEED SECURITIES

Canadian National Railway Company:

An issue by the Canadian National Railway Company of \$65,000,000 4½% 30-Year Gold Bonds dated July 1st, 1927, was guaranteed as to principal and interest by the Dominion of Canada. The issue was sold to Blair and Company, Inc., the Chase Securities Corporation and the Equitable Trust Company of New York, at a price of 97.02 and accrued interest. This issue was authorized as follows:—

\$20,000,000—under authority of the Canadian National Refunding Act 1927, Chapter 27, to refund a like amount of 4% Dominion guaranteed 3-Year Notes which matured July 1, 1927.

\$15,000,000—under authority of Appropriation Act No. 3, Chapter 3 of the Statutes of 1926-27.

\$16,600,000—under authority of Appropriation Act No. 6, Chapter 76 of the Statutes of 1926-27.

\$13,400,000—under authority of the Special Acts in connection with the Toronto Viaduct Scheme and the construction of various branch lines.

Canadian National (West Indies) Steamships, Limited:

Under authority of the Canadian National Steamships' Act, Chapter 29 of the Statutes of 1927 and Order in Council, P.C. 340 March 1st, 1928, the guarantee of the Dominion of Canada was given to \$10,000,000 4¼% temporary bonds of the Canadian National (West Indies) Steamships, Limited.

Harbour Commissions:

Under authority of Chapter 58 of the Statutes of 1924 and Orders in Council P.C. 1094 of June 8th, 1927 and P.C. 1862 September 24th, 1927, a 4¾% Interim Debenture of the Montreal Harbour Commission for \$4,000,000 was issued and guaranteed as to principal and interest and pledged as collateral for temporary financing with the Royal Bank of Canada.

Under authority of the new Westminster Harbour Commissioners' Act, Chapter 158 of the Statutes of 1913 and Orders in Council P.C. 687 of May 2nd, 1928 and P.C. 1105 of June 26th, 1928, an issue of \$700,000 debentures of the new Westminster Harbour Commission, dated April 2nd, 1928, bearing interest at the rate of 4¾% per annum was guaranteed as to principal and interest.

Under Sec. 15 of the St. John Harbour Commissioners' Act, Chap. 67 of the Statutes of 1926-27, the Government of Canada is liable in the event of default by the Harbour Commissioners to pay interest and principal on an indebtedness of \$2,135,118.00 representing the value of Harbour Works transferred by the City of St. John to the Commissioners.

Respectfully submitted,

J. C. SAUNDERS,
Deputy Minister of Finance.

REPORT
OF THE
DEPARTMENT OF
NATIONAL REVENUE

CONTAINING
ACCOUNTS OF REVENUE

With Statements relative to the Imports, Exports, Excise
and Income

OF THE
DOMINION OF CANADA

FOR THE FISCAL YEAR ENDED MARCH 31

1928

COMPILED FROM OFFICIAL RETURNS

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1928

REPORT
DEPARTMENT OF
NATIONAL REVENUE

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I., G.C.M.G.,
etc., etc., Governor General and Commander in Chief of the Dominion of
Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of National Revenue containing Tables and Statements relative to the Imports, Exports, Excise and Income of the Dominion of Canada, for the fiscal year ended 31st March, 1928, as compiled from official returns.

All of which is respectfully submitted.

W. D. EULER,
Minister of National Revenue.

OTTAWA, 29th October, 1928.

W. D. EULER, Esq.,
Minister of National Revenue.

SIR,—I have the honour to hand you the Annual Report of the Department of National Revenue (Customs Division), containing Accounts of Revenue with statements of Imports and Exports of the Dominion of Canada for the fiscal year ended 31st March, 1928.

I have the honour to be, sir,

Your obedient servant,

(Sgd.) R. W. BREADNER,
Commissioner of Customs.

OTTAWA, 25th October, 1928.

PREFACE

The Customs Act contains the following provisions respecting the Annual Report of the Department of Customs:—

“305. The Minister shall annually make to the Governor General, to be laid before Parliament within fifteen days after the meeting thereof, a report and statement of the transactions and affairs of the department during the year then next preceding.”

The Inland Revenue Act also contains provisions respecting the Annual Report of the Inland Revenue Service as follows:—

“14. The Minister shall annually make to the Governor General a report and statement of the transactions and affairs of the Department during the year then next preceding, which shall be laid before Parliament within fifteen days after the next meeting thereof.”

The unrevised monthly statements of imports and exports, prepared and published under the direction of the Department of Customs from July 1, 1900, ceased to be published by this Department since March, 1918.

Detailed statements, however, showing the quantity, value, and origin of imports and the quantity, value, and destination of exports, continue to be prepared and furnished monthly by the Department of Customs from April 1, 1918, for publication by the Dominion Bureau of Statistics.

Trade statistics classified by countries, with other details, compiled from Customs returns, are now published by the Dominion Bureau of Statistics.

Part I of this report contains tables and statements relative to the Customs.

Part II of this report contains tables and statements relative to Excise.

Part III of this report contains tables relative to Income Taxes.

The differences between revenue totals in Statement Number 9, Part I and totals shown in other statements of revenue, represent the differences between actual cash received in the Department and remitted to the Receiver General, and totals shown on entries passed, and are adjusted in the next fiscal year.

PART I

CUSTOMS

REPORT

OF THE

COMMISSIONER OF EXCISE

To the Hon. W. D. EULER,
Minister of National Revenue.

SIR,—Herewith I have the honour to submit statements of the Excise Revenues collected by this department during the fiscal year ended March 31, 1928, with statistics respecting the sources whence these revenues were derived. The following summary comparison shows the accrued revenues for the fiscal years ended March 31, 1924, 1925, 1926, 1927 and 1928.

	1924	1925	1926	1927	1928
	\$	\$	\$	\$	\$
Excise Duty.....	38,616,038	39,005,343	43,370,231	49,139,913	58,062,085
Excise Tax.....	123,668,847	89,330,838	99,228,334	106,723,328	91,662,086
Totals.....	162,284,885	128,336,181	142,598,565	155,863,241	149,724,171

DETAILS of Excise Revenue accrued during the undermentioned fiscal years:

	1924	1925	1926	1927	1928
	\$	\$	\$	\$	\$
Spirits.....	9,371,063	9,393,661	10,932,578	13,904,584	18,267,537
Malt-Liquor.....	93,072	107,734	113,933	223,833	239,245
Malt.....	3,280,057	3,540,621	3,840,774	3,811,557	4,277,066
Tobacco.....	25,236,296	25,421,602	27,919,051	30,638,418	34,702,359
Cigars.....	608,685	516,606	539,300	536,845	549,896
Acetic acid.....	100	100	100	150	150
Manufacturers in bond.....	18,725	17,675	17,250	17,350	17,700
Other receipts.....	8,040	7,344	7,245	7,176	8,170
Totals.....	38,616,038	39,005,343	43,370,231	49,139,913	58,062,123

The quantity of spirits produced during the fiscal year was 11,596,200 proof gallons, as compared with 9,121,051 proof gallons produced in the previous fiscal year. The raw materials taken for use in the production of spirits, during the fiscal year were as follows:—

	Lb.
Malt.....	25,116,100
Indian corn.....	78,871,584
Rye.....	53,617,695
Oats.....	139,184
Wheat.....	249,660
Molasses.....	49,801,495

The transactions of the several distilleries will be found in Statement No. 7.

There was, on April 1, 1927, in process of manufacture.....	Proof gal. 859,893
Manufactured during the fiscal year.....	11,596,200
Returned to distilleries for redistillation—In bond.....	1,847,567
Received into distilleries from other sources—Duty paid.....	255,938
Total.....	14,559,598

This was disposed of as follows:—

Placed in warehouse.....	Proof gal. 13,851,317
Fusel oil and spirits written off.....	19,345
Deficiency arising from rectification.....	3,818
Remaining in process of manufacture, March 31, 1928, by actual stock taking.....	685,118
Total.....	14,559,598

Spirits.—The following statement shows the warehousing transactions in Spirits during the fiscal year ended March 31, 1928, and the four preceding fiscal years:—

Fiscal Years	In Warehouse at beginning of year including transits	Warehoused during the year Ex-distillery	Otherwise warehoused	Entered for consumption	Exported	Used in bonded factories	Other wise accounted for	For redistillation	In Warehouse at end of year, including transits
	Pf. gal.	Pf. gal.	Pf. gal.	Pf. gal.	Pf. gal.	Pf. gal.	Pf. gal.	Pf. gal.	Pf. gal.
1923-1924.....	8,677,289	5,615,401	164,677	899,291	875,699	1,244,249	1,521,588	1,198,038	8,718,502
1924-1925.....	8,718,502	8,646,683	41,696	910,316	803,535	1,053,472	1,485,694	1,462,169	11,691,495
1925-1926.....	11,691,495	7,328,232	119,972	1,082,785	499,007	1,109,295	1,894,957	1,756,259	12,797,396
1926-1927.....	12,797,396	10,842,001	156,677	1,404,111	571,792	1,170,059	2,438,928	1,810,783	16,400,401

W. D. EULER, Esq.,
Minister of National Revenue.

SIR,—I have the honour to hand you the Annual Shipping Report of the Department of National Revenue (Customs Division), containing statements of Navigation and Shipping of the Dominion of Canada for the fiscal year ended March 31, 1928, as compiled from official returns.

I have the honour to be, sir,
Your obedient servant,

R. W. BREADNER,
Commissioner of Customs.

OTTAWA, November 21, 1928.

M. W. D. EULER,
Ministre du Revenu national.

MONSIEUR,—J'ai l'honneur de vous soumettre le rapport annuel de la Navigation du ministère du Revenu national (Service des Douanes), comprenant les tableaux de la navigation intérieure et maritime du Dominion du Canada pour l'exercice se terminant le 31 mars 1928, tel que compilé des rapports officiels.

J'ai l'honneur d'être, monsieur,
Votre tout dévoué,

R. W. BREADNER,
Commissaire des Douanes.

OTTAWA, le 21 novembre 1928.

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I., G.C.M.G.,
etc., etc., Governor General and Commander-in-Chief of the Dominion of
Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of National Revenue containing Statements of Navigation and Shipping of the Dominion of Canada for the fiscal year ended March 31, 1928, as compiled from official returns.

All of which is respectfully submitted.

W. D. EULER,
Minister of National Revenue.

OTTAWA, November 26, 1928.

*A Son Excellence le Très Honorable Vicomte Willingdon, G.C.S.I., G.C.M.G.,
etc., etc., Gouverneur général et Commandant en chef du Dominion du Canada.*

QU'IL PLAISE A VOTRE EXCELLENCE:

Le soussigné a l'honneur de présenter à Votre Excellence le rapport annuel du ministère du Revenu National, comprenant les tableaux de la navigation et du commerce du Dominion du Canada pour l'exercice se terminant le 31 mars 1928, tel que compilé des rapports officiels.

Le tout respectueusement soumis.

W. D. EULER,
Ministre du Revenu National.

OTTAWA, le 26 novembre 1928.

TONNAGE SHOWN IN STATEMENTS ARE NET TONS

TABLE DE LA STATISTIQUE

Nos des États	Description	Page
1	Nombre total de vaisseaux construits, enregistrés et vendus, et nombre total du tonnage déclarés à l'entrée et à la sortie, depuis la Confédération.....	7
2	État, par ports, des navires construits et enregistrés, 1927.....	8
3	État du Commerce sur le fleuve St-Laurent (long-courriers) à l'entrée et à la sortie.....	9
4	État, par ports et ports secondaires, des long-courriers déclarés à l'entrée.....	10
5	Relevé, par pays, des long-courriers déclarés à l'entrée.....	14
6	État par ports et ports secondaires des long-courriers déclarés à la sortie.....	18
7	Relevé, par pays, de long-courriers déclarés à la sortie.....	22
8	État sommaire par ports, des arrivages et départs des long-courriers.....	24
9	État des nationalités des long-courriers.....	27
10	État sommaire des long-courriers déclarés à l'entrée et à la sortie.....	28
11	État sommaire des arrivages et des départs des navires (à l'exclusion des cabotiers).....	29
12	Commerce avec chaque pays, par ports, et nationalités des navires déclarés à l'entrée.....	30
13	État sommaire, par pays, et nationalités des long-courriers déclarés à l'entrée.....	55
14	Commerce avec chaque pays, par ports et nationalités des navires déclarés à la sortie.....	62
15	État sommaire, par pays, et nationalités des long-courriers déclarés à la sortie.....	90
16	État du commerce, par navigation intérieure, entre le Canada et les États-Unis, à l'entrée.....	92
17	État du commerce, par navigation intérieure, entre le Canada et les États-Unis, à la sortie.....	95
18	État sommaire de la navigation intérieure à l'entrée et à la sortie.....	98
19	État des navires déclarés à l'entrée et à la sortie comme cabotiers.....	99
20	État, par provinces, ports et ports secondaires, des arrivages et des départs des navires.....	109

NOTE EXPLICATIVE

LE TONNAGE INDIQUÉ DANS LES TABLEAUX EST EN TONNES NETTES

No. 1.—COMPARATIVE STATEMENT showing the Tonnage of all Vessels entered Inwards and Outwards, from 1868 to 1928 inclusive.

N° 1.—ÉTAT COMPARATIF indiquant le tonnage de tous les navires déclarés à l'entrée et à la sortie depuis 1868 à 1928 inclusivement.

NAVIGATION

Fiscal Year — Exercice	Vessels built — Navires construits	Vessels registered — Navires enregistrés	Vessels entered Inwards and Outwards (Sea-going and Inland Navigation exclusive of Coasting) — Navires déclarés à l'entrée et à la sortie (navigation maritime et intérieur à l'exclusion du cabotage)	Vessels entered and cleared Coastwise — Navires du cabotage déclarés à l'entrée et à la sortie	Vessels sold to other countries — Navires vendus à d'autres pays

THIRTY-SIXTH ANNUAL REPORT

DEPARTMENT OF TRADE AND
COMMERCE

FOR THE YEAR ENDING JUNE 30, 1916

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Report of the Department of Trade and Commerce for the fiscal year ended March 31, 1928.

All of which is respectfully submitted.

JAMES MALCOLM,
Minister of Trade and Commerce.

DEPARTMENT OF TRADE AND COMMERCE,
OTTAWA.

Report of the Deputy Minister

OTTAWA, June 15, 1928.

The Hon. JAMES MALCOLM, M.P.,
Minister of Trade and Commerce,
Ottawa.

SIR.—I have the honour to present herewith the thirty-sixth Annual Report of the Department of Trade and Commerce, that is to say, for the fiscal year ended March 31, 1928.

CANADA'S FOREIGN TRADE, 1927-28

The foreign trade of Canada, on the whole, during the fiscal year 1927-28 was satisfactory. The total trade for the year, amounting to \$2,359,412,000, was exceeded on only two previous occasions, viz., the war year 1918 and the post-bellum boom year 1921. The physical volume, however, of Canada's trade in 1928 was greater than in any previous year on record. The increase in imports was responsible for this improvement, as there was a slight decline in exports. The gradual growth in Canada's trade prior to the war, the expansion during the war period, the decline and subsequent improvement after the war, resulted in the Dominion having a favourable trade balance in 1926 of \$401,400,000. During the past two years imports have increased rapidly while gross export values have declined slightly, due largely to lower export prices, with the result that on March 31, 1928, the favourable trade balance was reduced to \$141,500,000. The decline, however, in the Dominion's trade balance does not necessarily reflect a curtailment of industrial activities, as there have been marked improvements in many lines of industries during the past year or so. It reflects rather a greater purchasing power, not only at home but also abroad.

QUANTITY AND PRICE CHANGES

Only moderate changes have taken place in the average level of prices during the past three or four years. Comparison of pre-war prices, however, with those during and immediately after the war show that changes in the level of prices have materially affected the comparability of trade statistics. Statistics have not been compiled for fiscal year 1928 making allowances for the marked fluctuation in the average level of prices. Figures compiled for the years 1921 to 1927, based on 1914 average import and export values, show that the Dominion's imports in 1927, valued at 1914 average import values, were \$135,193,000 greater than for the record year 1926; while the domestic exports, revalued at 1914 average export values, were only \$21,366,000 less than for the previous year, also a record year. Canada's total foreign trade, from 1921 to 1927, on the basis of declared values, decreased about 6 per cent., imports 17 per cent. while exports increased about 5 per cent; but when price changes have been eliminated the total trade from 1921 to 1927 increased about 50 per cent., imports 37 per cent., and exports 61 per cent.

ANALYSIS OF CANADA'S TRADE

The total trade of Canada for the fiscal year ended March 31, 1928, was valued at \$2,359,412,000, compared with \$2,298,466,000 in 1927, and \$2,256,029,000 in 1926, the increase over 1927 amounting to \$60,946,000 or 2.2 per cent, and over 1926 to \$103,383,000, or 4.6 per cent. Imports in fiscal year

1928 show a decided improvement over 1927 and 1926, while exports show a decline. Imports in 1928 amounted to \$1,108,956,000, compared with an importation in 1927 valued at \$1,030,893,000, and in 1926 at \$927,329,000; the increase in the imports over 1927 amounting to \$78,063,000, or 7.3 per cent, and over 1926 to \$181,627,000, or 19.6 per cent. Export trade (domestic and foreign combined) was valued at \$1,250,456,000 in 1928, at \$1,267,573,000 in 1927, and \$1,328,700,000 in 1926; the decrease in 1928 compared with 1927 amounting to \$17,117,000 or 1.4 per cent, and compared with 1926 to \$78,244,000 or 5.9 per cent. The domestic exports of Canada in 1928 totalled \$1,228,208,000; in 1927, \$1,252,158,000; and in 1926 \$1,315,356,000; the decrease in 1928 compared with 1927 amounting to \$23,950,000 or 1.9 per cent, and with 1926 to \$87,148,000 or 6.7 per cent.

The statistics in the following table indicate the trend of Canadian trade from 1914 to 1928 (a) with all countries; (b) with the United Kingdom; and (c) with the United States.

CANADA'S TRADE BY COUNTRIES, 1927-28

The imports from foreign countries in fiscal year 1928 amounted to \$859,-876,000 and from the British Empire to \$249,080,000, the increase in 1928 over 1927 in the case of foreign countries amounting to \$43,052,000 and in that of the British Empire to \$35,011,000; while the exports to foreign countries totalled \$728,930,000 and to the British Empire to \$499,278,000, the exports to foreign countries showing an increase of \$17,210,000, and to the British Empire a decrease of \$41,160,000. The trade of Canada, both import and export, with the United States exceeds that of any other country. In 1928 imports from the United States were valued at \$719,444,000 and domestic exports at \$478,006,000, the increase in imports being \$32,421,000 and exports \$11,583,000. The trade of Canada with the United Kingdom comes next in order of importance. Imports from the United Kingdom in 1928 amounted to \$185,889,000 and exports to \$410,704,000, the increase in imports over 1927 amounting to \$21,950,000 and the decrease in exports to \$36,169,000. Imports from Germany in 1928 were valued at \$17,056,000 and exports at \$42,244,000, the increase in imports being \$2,026,000 and in exports \$7,833,000. The imports from Japan and the Netherlands were \$12,505,000 and \$8,749,000 respectively, the increase in imports being: Japan \$1,335,000 and the Netherlands \$1,055,000; and the exports were \$32,-957,000 and \$35,538,000 respectively, the increase in exports being: Japan \$3,028,000 and the Netherlands \$9,164,000. Imports in Canada from France, Belgium, Italy, and Argentina show increases, but the exports to these countries show decreases. For further information as to the trade with other principal countries see the following table.

CANADA'S IMPORT TRADE, 1927-28

The increase in the import trade, 1928 compared with 1927, amounting to \$78,063,000, was contributed to by increases in each of the main groups, except in the Non-metallic Minerals and Miscellaneous groups. The Agricultural and Vegetable Products group increased from \$213,098,000 to \$238,186,000, or \$25,088,000. (Under this group alcoholic beverages increased \$16,588,000; fruits, \$4,082,000; corn, \$2,147,000; vegetables, \$1,581,000; and cocoa and chocolate, \$1,367,000; while raw sugar decreased \$2,109,000; and seeds, \$1,211,000.) The Animals and Animal Products group increased from \$53,214,000 to \$65,790,000, or \$12,576,000. (The chief increases under this group were: raw hides, \$5,084,000; furs, \$3,288,000; butter, \$2,984,000; unmanufactured leather, \$826,000; and fish, \$471,000; while eggs in the shell decreased \$840,000.) The Fibres and Textiles Products group increased from \$183,584,000 to \$186,996,000, or \$3,412,000. (Principal imports under this group to show increases were: raw cotton, \$4,469,000; artificial silk manufactures, \$1,822,000; raw silk, \$1,008,000; and jute cloth or canvas, \$972,000; while imports of binder twine decreased \$1,781,000; dyed cotton fabrics, \$1,695,000; silk fabrics, \$900,000; manila and sisal grass, \$776,000; and dress goods (wool) to be dyed, \$658,000.) The Wood, Wood Products and Paper group increased from \$47,963,000 to \$51,751,000, or \$3,788,000. (Under this group unmanufactured wood increased \$1,183,000; books and printed matter, \$1,091,000; manufactured wood, \$955,000; and paper, \$558,000.) Iron and Its Products increased from \$229,429,000 to \$259,573,000, or \$30,144,000. (The imports to show increases under this group were: farm implements, \$10,690,000; machinery, \$7,519,000; automobiles, \$7,339,000; automobile parts, \$2,901,000; and engines and boilers, \$2,085,000; while rolling mill products decreased \$2,626,000.) The Non-ferrous Metals Products group increased from \$52,748,000 to \$60,190,000, or \$7,442,000. (The chief increases were: alumina and cryolite, \$2,225,000; electric apparatus, \$2,112,000; copper bars and rods, \$1,044,000; and nickel-plated ware, \$690,000.) The Non-metallic Minerals Products group decreased from \$156,785,000 to \$153,049,000, or \$3,736,000. (The chief decreases were: anthracite coal, \$3,271,000; crude petroleum oil, \$2,364,000; refined petroleum oil, \$765,000; and glass, \$509,000; while the following show increases: coal and fuel oil for ships' stores, \$2,815,000; clay products, \$1,072,000; and asphalt, \$430,000.) The Chemical and Allied Products group increased from \$31,844,000 to \$33,572,000, or \$1,728,000. (The imports under this group showing increases were: fertilizers, \$653,000; and paints and varnishes, \$408,000.) Miscellaneous commodities decreased from \$62,227,000 to \$59,849,000, or \$2,378,000.

For further information relative to Canada's imports in 1928, see the following tables showing "Canada's Imports by Main Groups, 1927-28," and "One Hundred Commodities Imported into Canada, 1927-28."

CANADA'S IMPORTS BY MAIN GROUPS, 1927-28

Canada's Export Trade, 1927-28

Canada's domestic exports for 1928 compared with 1927 show a decrease of \$23,950,000. Five of the main groups show decreases and four increases. The Agricultural and Vegetable Products group decreased from \$574,994,000 to \$555,110,000 or \$19,884,000. (The principal decreases occurred in the following items: sugar, \$8,855,000; wheat flour, \$8,841,000; oats, \$4,324,000; barley, \$2,402,000; seeds, \$2,187,000; vegetables, \$1,867,000; and hay, \$1,562,000; while the following items show increases: rye, \$4,599,000; alcoholic beverages, \$2,449,000; and rubber products, \$1,931,000.) The Animals and Animal Products group decreased from \$167,291,000 to \$165,845,000 or \$1,446,000. (The chief items to show decreases were: meats, \$4,937,000; cheese, \$3,855,000;

butter, \$2,298,000; swine, \$1,586,000; fish, \$980,000; milk and cream (fresh), \$900,000; and eggs, \$476,000; while the following show increases; raw hides, \$4,655,000; furs, \$3,706,000; unmanufactured leather, \$2,821,000; and cattle, \$2,298,000.) The Fibres and Textile Products group increased from \$7,665,000 to \$10,904,000 or \$3,239,000. (The chief commodities to show increases under this group were: raw wool, \$1,611,000; artificial silk, \$517,000; binder twine, \$427,000; and cotton products, \$379,000.) The Wood, Wood Products and Paper group increased from \$284,120,000 to \$284,543,000 or \$423,000. (Paper under this group, chiefly newsprint, increased \$11,763,000; books and printed matter, \$112,000; while unmanufactured wood (principally laths, planks and boards and shingles) decreased \$8,485,000; and manufactured woods (largely woodpulp), \$2,967,000.) The Iron and Its Products group decreased from \$74,285,000 to \$62,754,000 or \$11,531,000. (The chief decreases were: automobiles, \$6,910,000; automobile parts, \$2,098,000; farm implements, \$1,770,000; while machinery increased \$1,411,000.) The Non-Ferrous Metals Products group increased from \$80,639,000 to \$90,840,000 or \$10,201,000. (The main increases under this group were: aluminium in bars, blocks, etc., \$5,474,000; nickel, \$4,105,000; raw gold, \$2,182,000; copper, \$676,000; while lead decreased \$1,583,000; and silver, \$1,114,000.) The Non-Metallic Mineral Products group decreased from \$28,510,000 to \$25,281,000 or \$3,229,000. (The chief commodity to show decrease was coal, which decreased \$2,441,000.) The Chemical and Allied Products group increased from \$16,575,000 to \$17,893,000 or \$1,318,000. (The chief increases occurred in fertilizers, which increased \$801,000; and acids, which increased \$690,000.) The Miscellaneous Commodities group decreased from \$18,077,000 to \$15,036,000 or \$3,041,000. (The export of films under this group decreased \$1,562,000; settlers' effects, \$1,197,000; and cameras, \$637,000.)

The decrease in Canada's exports 1928 compared with 1927 was due entirely to lower average export prices. The statistics in the following table clearly demonstrate that if the average export price in 1928 for certain staple products had been the same as in 1927, the Dominion's exports in 1928 would have been \$20,354,000 greater (instead of \$23,950,000 less) than in 1927.

Commodity	Declared Values Fiscal Year 1928	Based on 1927 Average Values	Increase
	\$	\$	\$
Wheat.....	352,117,000	379,268,000	27,151,000
Wheat flour.....	59,879,000	63,570,000	3,691,000
Rubber tires.....	20,274,000	23,834,000	3,560,000
Planks and boards.....	55,398,000	57,485,000	2,087,000
Potatoes.....	7,339,000	9,046,000	1,707,000
Copper ore.....	7,083,000	8,781,000	1,698,000
Cattle.....	13,877,000	15,140,000	1,263,000
Aluminium in bars, etc.....	10,822,000	11,961,000	1,139,000
Newsprint paper.....	128,507,000	129,524,000	1,017,000
Bacon and hams.....	11,941,000	12,932,000	991,000
Total above commodities.....	667,237,000	711,541,000	44,304,000

For further details respecting Canada's exports in 1928 see the following tables: "Canada's Domestic Exports, by Main Groups, 1927-28," and "Seventy Leading Canadian Commodities Exported from Canada, 1927-28."

CANADA'S TRADE VIA THE UNITED STATES

Canada's imports from overseas countries via the United States in recent years have steadily declined, especially from the British Empire. There was a decrease in the imports via the United States during the fiscal year 1928 compared with 1927 of \$643,626, the decrease from the British Empire amounting to \$1,545,840, while those from foreign countries show an increase of \$902,214. The appended table shows that imports from the United Kingdom via the United States from 1927 to 1928 increased from \$728,001 to \$773,694; from Other British Empire decreased from \$3,832,540 to \$2,241,007; while the imports from foreign countries increased from \$8,200,679 to \$9,102,893. The proportions were: United Kingdom, 1927, 0.41 per cent, 1928, 0.42 per cent; Other British Empire, 1927, 7.71 per cent, 1928, 3.55 per cent; and foreign countries, 1927, 6.3 per cent; 1928, 6.48 per cent.

Exports from Canada to overseas countries via the United States continue to remain about stationary, the proportion for the past three fiscal years being: 39·2 per cent, 39·5 per cent, and 38·9 per cent. The statistics in the table below indicate that Canada's exports to overseas countries via the United States were: United Kingdom, 1927, \$216,313,000; 1928, \$201,785,000; Other British Empire, 1927, \$23,549,000; 1928, \$26,762,000; and foreign countries, 1927, \$70,423,000; 1928, \$63,060,000. The proportions were: United Kingdom, 1927, 48·4 per cent; 1928, 49·1 per cent; Other British Empire, 1927, 25·1 per cent; 1928, 30·2 per cent; and foreign countries, 1927, 28·7 per cent; 1928, 25·1 per cent.

CANADA'S POSITION IN INTERNATIONAL TRADE

Canada continues to improve her position in international trade. The statistics in the following table giving "Net Imports into Ten Leading Countries of the World" demonstrate that in imports she has made progress among the leading importing countries of the world. In 1913 Canada occupied eighth place in imports, being exceeded in value of imports by the United Kingdom, Germany, the United States, France, the Netherlands, Belgium, and Italy, but in 1927 she had advanced to fifth place, displacing the Netherlands, Belgium, and Italy.

NET IMPORTS INTO TEN LEADING COUNTRIES OF THE WORLD

10	10	10	Argentina.....	406,600,000	793,700,000	826,800,000

In export trade Canada has made greater progress than in import trade, as the statistics in the following table showing "Domestic Exports from Ten Leading Countries of the World" indicate. In export trade, Canada in 1913 was in

tenth position, being exceeded by the United Kingdom, the United States, Germany, France, the Netherlands, British India, Belgium, Italy, and Argentina, but in 1927 she had moved up to fifth position, displacing the Netherlands, British India, Belgium, Italy, and Argentina.

DOMESTIC EXPORTS FROM TEN LEADING COUNTRIES OF THE WORLD

Rank			Countries	Years ended December 31		
1913	1926	1927		1913	1926	1927

5	10	10	Netherlands.....	1,239,400,000	701,100,000	762,000,000

In respect to aggregate trade, it will be noted from the following table giving "Aggregate Trade of Ten Leading Countries of the World" that Canada occupied ninth position in 1913 but in 1927 (as in 1926) she occupied fifth position, being exceeded in value of aggregate trade by the United States, the United Kingdom, Germany, and France.

With reference to trade per capita, Canada has made a very creditable showing since 1913, as the following table giving "Per Capita Trade of Ten Leading Countries of the World" shows. In the year 1913 Canada occupied fifth place in imports per capita and in 1927 she occupied seventh place. In exports per capita Canada in 1913 occupied seventh place and in 1927 she had advanced to second place, New Zealand being in first place. In aggregate trade per capita Canada in 1913 occupied sixth place and in 1927 she had moved up to second place, New Zealand being in first place.

In 1913 Canada occupied seventeenth position among the principal commercial nations of the world with reference to visible trade balance as indicated in the following table showing "Trade Balances of Ten Leading Countries of the World". In 1913 Canada's trade balance was unfavourable to the extent of \$222,900,000, or \$29.61 per capita, but in 1927 she was in third position, with a favourable trade balance of \$151,700,000. In 1927, as in 1913, the United States occupied first place and British India second in amount of favourable trade balance. Canada still leads the world, however, in favourable trade balance per capita, with Argentina a close second and New Zealand a good third. The standing is: Canada, \$15.93; Argentina, \$14.22; and New Zealand, \$10.73.

TOUR OF LATIN AMERICA

During the past year, by direction of the Honourable the Minister of Trade and Commerce, the undersigned made an extensive tour, embracing various Latin-American countries, the trip including Cuba, Mexico, Brazil, Argentina, Chile, Bolivia, Peru, Ecuador, and Panama, for the purpose of establishing more intimate and friendly relations between the various government departments having to do with foreign trade and the Department of Trade and Commerce.

The most friendly feelings were found to exist everywhere towards Canada, and a unanimous desire expressed in official circles and in the press to increase the trade and intercourse between them and the Dominion. In some of the countries mentioned, Canadian prestige of a high order is already firmly established by reason of banking, electrical, and other developments of Canadian capital. This should greatly assist and encourage Canadian exporters to pay more attention to these markets, which heretofore have been largely neglected.

The total imports of Latin America for the last year for which statistics from all are available, viz. 1926, amounted to \$2,370,977,000. During the same year, according to Canadian statistics of exports, Canada exported \$43,535,000, whereas for the fiscal year ending March 31, 1928, the exports from Canada to Latin America had fallen to \$34,286,480.

The undersigned, however, from the great interest which is now evident in South America, believes there will be a very much better showing in the exports at the close of the fiscal year ending March 31, 1929.

RESULTS

The tour was fruitful of important results. A Trade Commissioner office is to be established in Lima, with jurisdiction in behalf of Canadian exporters over Peru, Bolivia, and Chile.

The Trade Commissioner in Buenos Aires was instructed to pay more frequent visits to Uruguay and Chile, and an Assistant Trade Commissioner was sent to Buenos Aires to assist Canadian trade in this extended territory.

The Trade Commissioner in Mexico City was sent on a special trip to Central America and is now visiting those countries.

The Trade Commissioner in Buenos Aires, who accompanied the undersigned in his tour, made an extensive study of the trade conditions in each country visited and is now contributing special reports, in the *Commercial Intelligence Journal*, with regard thereto.

Following the visit of the undersigned, the trade negotiations with Cuba, seeking a trade agreement between Canada and that country, which were in abeyance owing to a misunderstanding, were resumed by the Honourable the Minister of Finance for Canada thereafter, and successfully consummated.

An arrangement was made for the distribution of Canadian Government motion picture films in every country in South America south of the equator.

One of the largest of the Canadian chartered banks has opened branch offices in one country following the representations made to the undersigned by some of the highest Government officials. Such action, they stated, would be the most important step towards increasing the trade between Canada and the country concerned.

The Canadian National Steamships has inaugurated a new steamship service to Brazil, Uruguay, and Argentina, under subsidy by this Department, and negotiations are now under way for steamship services from Canadian Pacific ports to certain other Latin-American countries.

During the visit of the undersigned to certain Latin-American countries, an entire absence of Canadian news was strikingly evident, hence arrangements have been made with one of the best known world news distributing agencies to furnish, by mail at regular intervals and as occasion warrants, to at least 100 of the principal newspapers in South and Central America, Cuba and Mexico, a minimum of 50,000 words annually of Canadian news calculated to promote and maintain interest in Canada and Canadian commercial, financial and industrial activities. These letters are being furnished in the Spanish language. This service began upon the 1st of May of this year,

during which month four news letters were sent to 115 newspapers in Spanish, and also to a number of English papers published in Latin-American countries.

Special thanks are due for the very great kindness and courtesy shown the undersigned by the British Ambassador in the Argentine, the British Ministers in Mexico and Bolivia, and the Acting British Ministers in Cuba, Chile, Peru, Ecuador and Panama. In every case their kindness was unlimited, doing everything within their power to assist the undersigned in the objects of his tour.

To Major E. L. McColl, the Canadian Trade Commissioner in Buenos Aires, who accompanied the undersigned during the arduous tour, special thanks are also due. His assistance and zeal never faltered in, at times, trying circumstances. To Major McColl therefore should be given the credit of having contributed in a very large measure to the success of the mission.

COMMERCIAL INTELLIGENCE SERVICE

The very nature of its work precludes the possibility of compiling a satisfactory or accurate resumé of the widespread activities of the Commercial Intelligence Service. It may suffice, however, to record that the year under review has been featured by a number of important changes in methods and personnel, with a consequent increase in efficiency and a corresponding effect upon the development of foreign markets.

While recognition of the value of the assistance which Trade Commissioners are rendering to Canadian manufacturers is more and more reflected in correspondence between the department, firms in the Dominion and importers abroad, practical evidence was secured as the result of a special effort to determine the amount of new business which had been influenced in their respective territories by the Trade Commissioners. Without indicating to what extent and in what way the inquiry was conducted, it may be stated that such surveys as were undertaken, both in Canada and abroad, showed a total of \$6,339,000 of new business directly or indirectly traceable to our offices. Last year's appropriation for the Commercial Intelligence Service amounted to \$425,000, so that for every dollar expended on the service last year, over \$14 came back to Canada in the form of new business.

In putting forward a claim of this kind, it must be clearly borne in mind how impossible it is to indicate, by any method of investigation, what has been accomplished in the development of Canadian export trade through the aid of Trade Commissioners. The mere statement that a number of agencies have been established on the recommendation of or through the assistance of Trade Commissioners is simply an indication that business has been initiated, but it is difficult, if not impossible, to obtain details as to the developments that may take place. The part which the Trade Commissioner plays in such negotiations naturally ends when the arrangement is completed, and thereafter it is no part of his duty to canvass firms thus aided as to present results or future developments. Nevertheless, the total mentioned should be the more significant when it is realized that the figures have been, in most cases, furnished voluntarily by the firms, both Canadian and foreign, who have been thus assisted.

CHANGES AFFECTING PERSONNEL

With the object of having available Assistant Trade Commissioners in every office, whose training will enable them to fill new posts and vacancies as they occur, a larger number of Junior Trade Commissioners than has been

customary was secured through competitive examinations conducted by the Civil Service Commission. During the year eleven Junior Trade Commissioners were appointed, one of whom resigned. Eight of these have been assigned to overseas offices.

The record of appointments, promotions and transfers for the period under review may be briefly indicated as follows:—

O. M. Armstrong, appointed Junior Trade Commissioner, July 18, 1927, and assigned to Buenos Aires as Assistant Trade Commissioner, March 31, 1928.

C. S. Beck, appointed Junior Trade Commissioner, July 25, 1927; resigned March 31, 1928.

P. W. Cook, resigned as Trade Commissioner at Kingston, Jamaica, March 31, 1928.

V. E. Duclos, appointed Junior Trade Commissioner, July 18, 1927, and assigned to London as Assistant Trade Commissioner, March 31, 1928.

J. H. English, Assistant Trade Commissioner, New York, transferred on March 16 to Jamaica to take charge of Kingston office, pending resignation of P. W. Cook.

L. S. Glass, appointed Junior Trade Commissioner, April 1, 1927, and assigned to Bristol as Assistant Trade Commissioner December 3, 1927.

J. J. Guay, Assistant Trade Commissioner at Milan, Italy, promoted to Canadian Trade Commissioner, Milan, May 5, 1927, and transferred to Brussels, March 12, 1928.

G. R. Heasman, appointed Junior Trade Commissioner, July 12, 1927, and appointed as Assistant Trade Commissioner to Batavia, Java, March 31, 1928.

J. C. Macgillivray, Assistant Trade Commissioner, Hamburg, Germany, promoted to Trade Commissioner and transferred to Rotterdam, Holland, January 23, 1928.

A. B. Muddiman, Trade Commissioner at Rotterdam, Holland, transferred to Milan, Italy, January 23, 1928.

F. H. Palmer, Canadian Trade Commissioner, Milan, Italy, resigned from the Service on May 5, 1927.

M. B. Palmer, appointed Junior Trade Commissioner, December 14, 1927.

J. G. F. Speers, appointed Junior Trade Commissioner, March 1, 1928.

J. A. Strong, appointed Junior Trade Commissioner, April 1, 1927, and assigned to Liverpool, England, as Assistant Trade Commissioner, December 3, 1927.

L. J. H. Turcot, Junior Trade Commissioner, promoted to Assistant Trade Commissioner, Milan, Italy, November 2, 1927.

APPOINTMENT OF DIRECTOR

C. H. Payne, Secretary of the Commercial Intelligence Service, who had been acting as director since the resignation of W. McL. Clarke, December 31, 1926, was confirmed in that appointment August 1, 1927.

OFFICIAL VISITS OF TRADE COMMISSIONERS TO CANADA

In accordance with long-standing practice, Trade Commissioners in rotation are allowed, after four years' residence abroad, to return to Canada in order to renew their knowledge of industrial conditions and to impart at first hand to exporters with whom they have been in communication, or to manufacturers who are contemplating entering the export field, advice and detailed

information as to marketing conditions in their respective territories. Nine Trade Commissioners made business tours during the past fiscal year, visiting the larger towns and cities from Halifax to Vancouver. The average length of their stay in Canada is about four months.

The following table gives the names of the Trade Commissioners who returned for this purpose and the dates of their tours:—

James Cormack, Trinidad.. . . .	March 21, 1926—June 23, 1927.
P. W. Cook, Kingston, Jamaica.. . . .	April, 1927—July 16, 1927.
Frederic Hudd, New York City.. . . .	May 2, 1927—June 30, 1927.
	October 18, 1927—November 6, 1927.
	November 18, 1927—December 13, 1927.
R. S. O'Meara, Batavia.. . . .	June 15, 1927—October 28, 1927.
C. M. Croft, Auckland.. . . .	July 23, 1927—November 16, 1927.
G. B. Johnson, Glasgow.. . . .	August 21, 1927—December 19, 1927.
Harrison Watson, London.. . . .	September 3, 1927—December 7, 1927.
Hercule Barré, Paris.. . . .	October, 1927—December 2, 1927.
J. A. Langley, Kobe.. . . .	November 19, 1927.
A. S. Bleakney, Rio de Janeiro.. . . .	February 15, 1928.

NEW OFFICES

Although authorization was obtained for the opening of a new office in Cuba before the close of the preceding fiscal year, the post was not filled until August 27. It was considered desirable that Mr. James Cormack, formerly Trade Commissioner at Port of Spain, Trinidad, who was selected for the position, should have an opportunity of completing a tour of Canada and thereafter to visit Venezuela and Colombia.

It has also been decided to open a new office at Lima, Peru, to have supervision over Peru, Bolivia, and Ecuador. The appointment of the Trade Commissioner for this post is now under consideration.

ASSIGNMENT OF TERRITORY

In October the Rhine Valley, extending from Holland to Switzerland, was assigned to the Rotterdam office. Following the tour of the deputy minister and Mr. E. L. McColl through South America, Peru, Ecuador and Bolivia were definitely assigned to the Buenos Aires office until such time as a Trade Commissioner should be appointed to have supervision over these three territories.

The Central American Republics which heretofore, with the exception of Guatemala, had not been visited by a Trade Commissioner, were allotted to the Mexico office, and Mr. C. Noel Wilde, Trade Commissioner to Mexico, will visit these new territories at an early date.

SPECIAL DUTIES

Yves Lamontagne, Trade Commissioner to Brussels, Belgium, has been loaned to the Egyptian Government for three years for special duties in connection with tariff and statistical work. He left Brussels for Cairo on November 5, 1927.

P. W. Cook, Trade Commissioner to Kingston, Jamaica, in September, 1927, conducted a special investigation in Cuba for the Department of Customs.

J. C. Macgillivray, while Assistant Trade Commissioner at Hamburg, Germany, and during the visit of Harrison Watson to Canada, was transferred to London to take charge of the office there.

ADVERTISING CANADA ON STEAMSHIPS

The experiment of furnishing steamship lines, operating from Canadian ports and also from New York, with a framed notice to be placed on vessels directing attention to the assistance which could be afforded by Canadian Trade Commissioners abroad, was repeated. The following steamship lines are now carrying notices on their vessels: White Star Line Canadian Service (5); Robert Reford Company (7); Canadian Pacific Steamships (18); Canadian Australasian Royal Mail (2); Royal Mail Steam Packet Company (6); the Grace Line (4); Lamport and Holt (4); South American Steamship Company (2).

TRAVELLING INSPECTOR OF TRADE COMMISSIONER OFFICES

A. E. Bryan, Travelling Inspector of Trade Commissioner Offices, continued the round of inspection commenced the preceding year by visits to the offices at Mexico City, Rio de Janeiro, Buenos Aires, Port of Spain and Jamaica, which occupied in all seven months.

CANADIAN TRADE INDEX

For several years an allotment of 2,500 copies of the Canadian Trade Index has been purchased from the Canadian Manufacturers' Association, Toronto, for distribution, through Trade Commissioners, to British Consular Offices, Chambers of Commerce and leading importers. Last year the same distribution was made, but with better supervision in that the copies were accompanied by a personal letter or card from the Trade Commissioners suggesting that inquiries looking to the establishment of connections in Canada be referred to them.

VISITS OF CANADIAN TRADE OFFICIALS TO CANADA

It is pleasing to record the many expressions of appreciation received by the department from exporters for the frequent visits to Canadian plants of Canadian Trade Commissioners from abroad and Junior Trade Commissioners in training for foreign service.

A few years ago exporters were inclined to take the view that no little inconvenience was caused them by Canadian Trade Commissioners and other officials from the Department of Trade and Commerce so frequently calling upon them to obtain information with reference to their production, export methods, foreign fields, etc. The idea in some cases was that after going over the details with one Trade Commissioner, the information thus received should be made available to the others, which of course is not practicable.

The Trade Commissioner from Japan, for example, after visiting one plant, has not only gathered considerable information for himself, but can visualize the situation from recollections of a personal call far better than he could in any other way, when he returns to his post. It would, of course, be quite impracticable for him to pass on to all the other Trade Commissioners the information and impressions thus received.

Of recent years, however, gratifying evidence has been afforded on every hand by exporters, in their reception of Canadian Trade Commissioners or officials from the department, of their intense desire to throw open their doors to them and give them every possible information and assistance. An interest has been created which did not exist before; difficulties have been smoothed out and the foreign situation from many parts of the world has been brought personally to the attention of the chief executives of the respective plants, and

this has been of immense value. Many Chambers of Commerce and Boards of Trade, the Canadian Manufacturers' Association and other trade associations, have been of great assistance to the department also in welcoming officials from the department and assisting them to meet local exporters.

THE WORLD'S CUSTOMS TARIFFS

Tariffs, commercial treaties, import and export prohibitions, customs formalities, and related conditions affecting international trade are subjects which were given a prominent place in the deliberations of the World Economic Conference held at Geneva, May 4 to 23, 1927. Reports prepared for the use of the Conference make a notable contribution to the literature on tariff problems of the present time.

The conference consisted of 194 members attended by 157 experts, drawn from 50 countries. It placed on record recommendations respecting tariffs and allied subjects with a view to facilitating exchange of goods between countries through lessening of artificial trade barriers. Effect can be given to these recommendations only by the action of individual states and the negotiation of treaties.

After the lapse of nearly a year from the meeting of the Conference the following reference to the world tariff situation was made (April 26, 1928) in the British House of Commons by the Parliamentary Secretary, Overseas Trade Department:—

Reductions of customs duties of varying magnitude have been effected since the Economic Conference, mainly as the result of the conclusion of tariff treaties, in Czechoslovakia, Germany, Greece, Hungary, the Serb-Croat-Slovene Kingdom, Switzerland, and Turkey. On the other hand, tariff increases covering a wide range of goods have been brought into operation in France, Chile, Salvador, and Poland. Tariff increases of a less extensive character have taken place in Italy and Portugal. In Austria, Cuba, and Belgium there have been changes in both directions. In most countries there have been no changes of duty of importance.

Through the operation of most-favoured-nation clauses in treaties, specific reductions in duty granted by one country to another usually have wide application and on this account tariff modifications in Europe in consequence of treaties have been extensive during 1927-28.

Even a summary of the world's tariff changes would be too voluminous for the present review, but the tariff and treaty developments in a few countries of some special interest to Canada may be mentioned.

TARIFF CHANGES IN VARIOUS COUNTRIES

France.—A comprehensive measure of tariff revision was made public in France in March, 1927. It was referred to the Customs Commission of the Chamber of Deputies and was much discussed but not carried to the final stage of a tariff law. A law, however, was promulgated on July 29, 1927, authorizing the Government to amend the tariff by decree to an extent necessary for the urgent conclusion of commercial treaties. With this law in view, France entered into a commercial agreement with Germany on August 17 which was an outstanding event of the world's tariff activities during the period under review.

A French decree increasing duties on numerous items and the Franco-German treaty both went into operation as from September 6, 1927. In consequence of the decree many intermediate rates (the pre-1921 general tariff) which applied to Canada and the United States lapsed. In consequence of this development, the United States was placed under the new general tariff for many products. Canada, on the items affected, was granted reductions from the general tariff in pursuance of the Franco-Canadian convention of commerce. After some Franco-American negotiations, a French decree of November 15,

1927, restored in a modified way the former concessions to the United States. Canada, through her convention with France, was also given the benefit of this decree wherever its rates were lower than those already in force.

In connection with new treaty arrangements with Italy, Belgium and Switzerland, a French decree was issued on March 2, 1928, effective on March 16, revising many rates of duty. This was accompanied by another decree adjusting duties applicable to Canada and the United States.

Czechoslovakia.—A convention of commerce between Canada (subject to approval by Parliament) and Czechoslovakia (subject to approval by the competent authority) was signed at Ottawa on March 15, 1928. It is to come into force fifteen days after exchange of final ratifications. The convention is binding for four years and thereafter until terminated upon one of the parties giving a year's notice. Under this convention the two countries are to accord each other most-favoured-nation treatment in tariff matters.

When the present Czechoslovakia formed part of the old Austria-Hungary, Canada under a British treaty (1876) exchanged most-favoured-nation treatment with that whole territory. The British treaty and the tariff relationship that it established ended automatically in 1914 with the outbreak of war.

Czechoslovakia, on becoming an independent state at the close of the war, adopted (1919) the old tariff of Austria modifying it extensively in subsequent years. There is now in force in Czechoslovakia a general tariff, a schedule of reduced duties on 54 items, as well as many conventional rates resulting from commercial treaties. A Canadian-Czechoslovakian agreement, effective from September 6, 1926, to the end of that year, gave Canada the special schedule of 54 items. A second agreement, also temporary, was brought into force as from January 1, 1927, which guaranteed to Canada most-favoured-nation treatment on 71 Czechoslovakian tariff items. In consequence of this agreement the reduced rates on any of the 54 items, not otherwise included in the agreement, were left in operation as regards Canadian goods. In return, Canada granted Czechoslovakia her intermediate tariff. This is the arrangement which is to be superseded by the 1928 convention, establishing full most-favoured-nation treatment on a reciprocal basis.

Cuba.—A new Cuban tariff law went into force on October 26, 1927, establishing two columns of duties, maximum and minimum, in addition to the preferential schedule applicable since 1903 to the United States. Formerly, Cuba had only one schedule of duties outside of the United States preferences. The maximum tariff is double the minimum. The Executive of the State are authorized, upon recommendation of the Technical Tariff Commission, to apply the maximum tariff wholly or in part, or intermediate rates, to merchandise from non-treaty countries or from countries which do not accord Cuba most-favoured-nation treatment.

Canada and Cuba entered into an agreement whereby the Cuban minimum tariff (or general tariff as it is frequently termed) will apply to Canadian goods and the Canadian intermediate tariff to Cuban goods, imported direct. This arrangement, set forth in a Canadian Order in Council of November 22, 1927, is to remain in force one year from that date unless a permanent convention is concluded earlier.

United States.—Changes were made in the duty on some commodities under the flexible provisions of the United States Tariff Act of 1922 (section 315 of Title III), which gives the President power to increase or decrease rates up to 50 per cent. The duty on cheese of the Swiss or Emmenthaler type, by a proclamation effective July 8, 1927, was increased 50 per cent, making the rate 7½ cents per pound, but not to be less than 37½ per cent ad valorem. The

principal competing country was stated to be Switzerland. Cherries, sulphured or in brine, stemmed or pitted, were the subject of a proclamation effective from January 2, 1928, whereby duty was increased from 2 to 3 cents per pound. In this case Italy was the principal competing country. The duty was reduced from 40 per cent ad valorem and 7 cents per pound to 20 per cent ad valorem and 34 cents per pound on cresylic acid (effective from August 19, 1927) and phenol (effective from November 30, 1927). Going into operation on December 10, 1927, the duty on crude magnesite and caustic calcined magnesite was increased by 50 per cent, making the rates about 47 and 94 cents respectively per 100 pounds. Another proclamation, operative from March 14, 1928, declared that certain cotton rugs should be dutiable at 35 per cent ad valorem, American selling price, instead of 35 per cent levied on the usual basis of foreign value or the export value.

British West Indies.—April 30, 1927, was proclaimed as the date for formally bringing into force new tariff preferences (bananas excepted) to be exchanged between Canada and the British West Indies, Bermuda, British Guiana and British Honduras under the 1925 trade agreement. The preference to be granted by Canada on bananas is not to take effect before the establishment of certain steamship service as provided for in Article XIII of the agreement. Otherwise the new Canadian concessions were in effect since 1926.

Some of the colonies had enacted tariffs also affording increased preferences (details in last annual report) before the formal proclamation was made. The preferences in the colonies became operative as follows: Bermuda, July 15, 1926; Bahamas, September 4, 1926; British Guiana, March 19, 1927; Jamaica, March 31, 1927; Trinidad, April 29, 1927; Barbados, April 30, 1927. The Leeward and Windward Islands, which were bound only to endeavour to grant some larger preferences, have done so to an appreciable degree. The general preference to be granted in British Honduras is to be not less than 33½ per cent with 50 per cent on a specified list of products. British Honduras has been granting Canada a 50 per cent preference on practically all dutiable goods under both the former and present agreements.

Australia.—An Australian tariff amendment introduced November 24, 1927, affected 135 items or parts of items. The measure was described as an adjustment of the tariff, there being both increases and decreases in duty as well as changes to rectify anomalies. Further alterations were later proposed. The tariff as amended received final assent on March 31, 1928. Textile gloves (item 113-B), one of the items on which Canada enjoys the British preference, were made free of duty under the British preferential tariff, instead of 10 per cent ad valorem, while the general tariff remained at 25 per cent ad valorem. Motor car chassis, upon which Canada is accorded the Australian intermediate tariff, were subjected to a 5 per cent ad valorem increase in duty under both the intermediate and general tariffs, the British preferential remaining unaltered.

In the case of many Australian deferred duties, when the proposed date of enforcement arrived, the operation of the duties was in nearly all cases further deferred. In the annual report of the Tariff Board (June 30, 1927) it was stated that deferments were renewed because the industry concerned had not made such progress as to warrant imposition of the proposed duties.

New Zealand.—New Zealand customs resolutions effective from September 14, 1927, and finally passed on October 25, 1927, established a new tariff. The report of the Tariff Commission which preceded the revision stated that the principle of according tariff preference to goods of Empire origin was a fundamental feature of New Zealand policy. To a large extent higher rates were

imposed on foreign goods, while increases in the British preferential tariff were comparatively limited in number, resulting in an enlarged measure of preference for Empire products. Canada and New Zealand for many years have exchanged their entire British preferential schedules, Canada also granting to New Zealand the benefits of the Australasian trade agreement.

The intermediate tariff column, adopted first in 1921, and never made operative, was dropped altogether. The new customs law therefore comprises only British preferential and general tariff schedules. The Tariff Commission had advised that more satisfactory than retention of the intermediate tariff would be negotiations with particular countries. An appendix to the tariff resolutions sets forth, for public information, proposed reduced duties on some commodities which are to be made subject-matters of negotiation for promotion of New Zealand external trade.

Great Britain.—A tariff change of interest to Canada was bringing rubber tires for motor vehicles, formerly duty free, under the same tariff as the vehicles, namely, 33.3 per cent general tariff and 22.2 per cent British preferential, effective from April 12, 1927.

Various Countries.—The following countries completely revised their tariffs, issuing new ones on the dates mentioned: Roumania (April 14, 1927); Ecuador (July 1, 1927); Norway (July 11, 1927; effective temporarily on May 15); Venezuela (July 20, 1927); Salvador (August 15, 1927; published in March); Bolivia (October 1, 1927); New Zealand (October 25, 1927); Cuba (October 26, 1927); Peru (January 2, 1928); Chile (February 27, 1928, for decreases; sixty days later for increases).

BRITISH MERCHANDISE MARKS ACT

The British Merchandise Marks Act, 1926, came into full operation on June 15, 1927. This date was fixed for enforcement of section 1, which prohibits the sale or exposure for sale in the United Kingdom of imported goods bearing marks which, without qualification, might be considered as indicating United Kingdom origin. The additional word "Empire" or "Foreign" or, alternatively, a definite indication of origin such as "Canadian Produce" or "Made in France" would be a satisfactory qualifying mark. Section 1 affects dealers in the United Kingdom who sell imported goods under their own labels, as such labels must bear these qualifying marks of origin.

Section 2 gives the Government power, after a hearing of interests concerned, to order the marking of origin on particular articles whether or not otherwise branded. Under this section an order of December 20, 1927, was made requiring that after three months imported woven labels, certain wire, brass water taps and other water fittings, cabinet furniture of metal, and castors bear a mark of origin at the time of sale or exposure for sale. The same order required that after six months imported rubber tires and tubes should bear an indication of origin both at the time of importation and sale. Many applications for compulsory marking on other goods were presented, affecting products of interest to Canada, including apples, and the usual investigations were ordered.

The Merchandise Marks Act of 1887, still in force, prohibits the importation of goods marked so as to suggest United Kingdom origin. On this account the name of the actual country of origin is often required on goods to counteract an otherwise misleading mark such as the name of a city in England.

DOMINION BUREAU OF STATISTICS

The activities of the various branches of the Dominion Bureau of Statistics during the fiscal year 1927-28 may be briefly summarized as follows:—

POPULATION

The final reports of the census of the Prairie Provinces taken as of June 1, 1926, were issued, and some further compilations completed of the 1921 Census of Occupations, Wage-earners and Employment. Progress was made with Census monographs on Origins and the rural and urban distribution of the population. The Fifth Annual Report on the Vital Statistics of Canada (births, deaths, marriages), collected in co-operation with the Registrars-General of the several provinces, was issued, the registration area now including the whole of Canada. The immigration returns of the year compiled by this Branch in co-operation with the Department of Immigration showed an increase.

AGRICULTURE

The annual agricultural statistics collected in co-operation with the several provincial departments of agriculture, and the annual crop-reporting service likewise co-operatively operated, followed much the same lines as in preceding years. Under both headings the relative number of returns received was increased. The Monthly Bulletin of Agricultural Statistics presented the results of the foregoing services, as well as those of several special inquiries and investigations. The monthly and annual statistics of the Canadian grain trade and of the marketing of live stock and animal products, cold storage stocks, etc., previously carried out in the Internal Trade Branch of the Bureau, were transferred to the Agricultural Branch in September, 1927, and will in future be issued by the latter.

THE INDUSTRIAL CENSUS

The usual annual reports on the Canadian fisheries, fur farms, trapping operations, dairy factories and manufactured animal products in general were prepared, in the branch on animal products, preliminary bulletins in mimeograph being issued in anticipation of the printed reports. A monthly record of boot and shoe production is issued by this branch for the use primarily of the Shoe Manufacturers' Association of Canada.

In the branch on forestry and allied manufactures, annual reports on saw-milling and pulp and paper were issued, together with mimeographed reports on primary forest production and the various wood-using industries of the Dominion.

In the mining, metallurgical and chemical branch of the bureau, co-operation with each of the mineral-producing provinces was continued, and annual reports were published on mining production, the chemical industries, the manufactures based on iron and steel and the various manufactures based on the metallic and non-metallic minerals respectively. Monthly bulletins on coal and iron and steel were maintained, the statistics of coke being included in the former. In addition, some seventy-nine annual leaflets and bulletins were issued in this branch.

The branch on general manufactures issued, in addition to a general report on the manufactures of Canada and each of the provinces as a whole, some twenty-nine bulletins on various industries not included under the branches above designated. The Industrial Census, under sections 20-21 of the Statistics Act, covers on an annual basis all phases of production outside of agriculture.

EXTERNAL TRADE

From the beginning of the fiscal year a quarterly trade report was substituted for the previous monthly report in detail, a mimeograph service being instituted for the provision of statistics up to date on specific commodities; there is a considerable demand for the latter. The annual trade report was prepared along much the same lines as in the previous year, showing the largest volume of trade in the history of Canada. This report was preceded by a "condensed preliminary" report issued in May, which has met a widely expressed demand for early statistics, especially for data on the trade in principal commodities with the leading countries. A departure of the year which met with general approval was the issuing during February of a special report on the general trade of Canada for the preceding calendar year, 1927; this report followed the format of the quarterly report on trade, but contained the accumulated totals for each item for the calendar year.

INTERNAL TRADE

An analysis of the data collected by the recent postal census of trading establishments was completed, and progress made on a census monograph dealing with housing and rentals—also in the assembling of data relating to capital imports and exports and the balance of international payments. The work on general prices (including wholesale prices, retail prices, security prices, prices of "services," interest and exchange and import and export valuations) was continued with certain improvements in detail. The base year of these indexes is being changed from 1913 to 1926.

TRANSPORTATION AND PUBLIC UTILITIES

The regular monthly and annual reports on steam railways, electric railways, canals and central electric stations were maintained, and some progress made on the construction of an index number of freight rates.

JUDICIAL STATISTICS

The annual reports on criminal statistics and juvenile delinquency were issued, a "separate" on the latter phase of the subject being projected.

GENERAL

The *Canada Year Book* as a compendium and précis of general statistics was issued with several improvements in detail; this volume has now reached the definite form laid down some years ago, with the gradual completion of the organization of official statistics. The monthly review of business statistics, commenced in mimeograph form in January, 1926, now serves a considerable clientele, the paid subscription list being in excess of 1,550. The library of the Bureau of Statistics received the usual accessions during the year, being maintained as an up-to-date reference library for statistical publications and works on statistical method throughout the world.

An incident of the year was the publication, in connection with the celebration of the Diamond Jubilee of Confederation of an illustrated booklet entitled *Sixty Years of Canadian Progress*. The circulation of this booklet was largely effected through the committee on the celebration, reaching the large total of 180,000 copies.

EXHIBITION COMMISSION

The Exhibition Commission of the Department of Immigration and Colonization was transferred to the Department of Trade and Commerce on December 1, 1927, and since that date has been administered by this department.

Since the creation of the Exhibition Commission of 1902, all exhibition work has been directed from the headquarters in Ottawa. This necessitated shipping exhibits backwards and forwards from Canada to the United Kingdom and Europe, where most of the exhibitions in which Canada participates have been held, every time an exhibition of any importance was held, and also transferring a staff from Ottawa abroad to look after the construction of building, preparing the exhibits, and so forth.

After careful consideration therefore, it was decided, in view of the extended exhibition work now contemplated—especially in the United Kingdom, and other large prospective exhibitions on the Continent of Europe—to transfer all the exhibition material stored in Ottawa, together with the greater portion of the staff, to London, Eng., for the purpose of enabling the department to carry on continuous exhibition work in the United Kingdom. It was also decided, for the present year at least, in view of the organization of the Exhibition Commission in England, and also of the large number of fairs and exhibitions which will take place in the British Isles, that Canada should not participate in any large fairs elsewhere, as the whole time of the Exhibition Commission now in London is fully taken up in making exhibits on behalf of Canada throughout the British Isles.

With a view to carrying out these proposals, an appropriation was passed at the recent session of Parliament for \$75,000 for the erection of a warehouse in London, England, in which would be provided cold storage space where fruit, dairy produce and other perishable goods can be stored and thus be available for display at any time.

This warehouse has been designed to do speedy work with the efficiency and economy so essential to exhibition work. The building—which will be under construction very shortly—will be equipped with wood-working machinery, paint shop, drafting room and so forth, and will serve as a distributing centre for shipping Canadian exhibition material to various exhibitions and fairs. While the initial expenditure may be heavy, it must eventually prove an economical move in view of the fact that the warehouse and storage place in Ottawa was costing in the vicinity of \$9,500 per annum, while an additional warehouse was necessary in England for exhibition work heretofore, costing in the vicinity of \$4,000 per annum.

Small warehousing premises have also been retained in Canada with a small staff in Winnipeg and St. Catharines, the former for the purpose of preparing grains and grasses for exhibition use, and the latter for processing and bottling fruits, vegetables and so forth, as well as building show-stands and panels for use at exhibitions in the United States.

Offices for the exhibition staff have been taken in London at British Columbia House, from whence, under the direction of Mr. J. O. Turcotte, Canadian Government Exhibition Commissioner, the work will be carried on for the department.

Arrangements have also been made through the Exhibition Branch of the department to continue the work hitherto done under the Department of Immigration and Colonization in the interest of immigration, and the sum of \$100,000 has therefore been set aside out of the total appropriation for the fiscal year for exhibitions, amounting to \$300,000. This will be used for the purpose of collecting and preparing, on behalf of the Department of Immigration and Coloni-

zation, samples of grain, grasses, vegetables, dairy produce and so forth for the usual exhibits and fairs which take place annually in the United States and Great Britain. This work is to be conducted in close co-operation with the principal officers of the two departments.

Since the arrival of the Exhibition Commission in England, Canada, has already been able to take part, in co-operation with the Empire Marketing Board, in the following exhibitions:—

Sheffield Ideal Homes Exhibition, Sheffield;
Grocers' and Allied Trades Exhibition, Manchester;
Olde Englysshe Fayre and Empire Exhibition, Alexandra Palace, London, N.;

at which very adequate displays of food products were shown.

During the current year Canada will be showing at the following:—

July 4-6.—Aldershot Command and District Horse Show. Canada will have a display of both natural resources and food products in a space of 3,000 square feet.

August 30 to September 12.—Bristol Annual Exhibition. At this exhibition Canada will have 800 square feet.

September 5-8.—National Show of Bees and Honey, Crystal Palace.

September 10-14.—Tobacco Trade Exhibition and Conference, Manchester. Canada will have at this exhibition a very good tobacco exhibit, which is now being prepared in Ottawa, and will show in co-operation with the Empire Marketing Board.

October 2-13.—Better Housing and Housekeeping Exhibition, Sheffield. Canada will have about 1,400 square feet, where food products will be shown.

October 30-November 8.—Bradford and District Grocers and Provision Dealers Exhibition. Canada will be showing in co-operation with the Empire Marketing Board.

October 30-November 10.—Empire Exhibition and Shopping Week, Cardiff. Canada has secured 2,600 square feet in addition to three or four of the most prominent shop windows in Cardiff during that week.

November 26-December 1.—31st Universal Food and Cookery Exhibition, Olympia, London. Canada will have about 2,000 square feet.

In addition to the above, there are under consideration many others and negotiations are being entered upon to secure space. Up to the present the Exhibition Branch has also been busily engaged in furnishing material for—and in many instances making displays of—Canadian products at more than seventy-five Empire fetes and bazaars. On these occasions all material has been returned to the Commission at the conclusion.

The commission is working in close co-operation with the Director of Publicity in Great Britain.

MOTION PICTURE BUREAU

The Director of the Motion Picture Bureau reports that the last fiscal year has been perhaps the most successful since its inception in 1917.

Pictorial publicity, especially the motion picture, as a propaganda and advertising force and as a factor in education, makes a universal appeal and is tremendous in its influence. The Motion Picture Bureau functions as the producer and distributor of motion and still pictorial matter of all kinds, designed to disseminate information throughout the world regarding Canada, its resources, attractions and opportunities, and to encourage development and the bringing in of tourists and settlers. The Bureau also acts as a central organization for the production of motion and still photographic material of a technical, informative and instructional nature, for all departments of the Federal Government and other affiliated organizations.

ACTIVITIES OF THE BUREAU

During the past fiscal year the volume of production and the amount of pictorial publicity placed in circulation has exceeded any previous year and the extent of the territory covered has been increased by nearly 40 per cent. As in

former years, close attention has been paid to the revenue-producing possibilities of the bureau, the revenue for the fiscal year under review amounting to \$17,912.26, an increase of \$2,783.18 over 1926-27. New revenue-producing distribution arrangements concluded during the past fiscal year are expected to substantially increase the revenue during the next fiscal year.

A clear idea of the expansion of the bureau may be gained by a comparison of its activities in the United States during the fiscal years 1926-27 and 1927-28. At the close of 1926-27, the bureau had in circulation in this territory slightly more than 450,000 feet of film, while at the end of 1927-28 this amount was almost 900,000 feet, a growth of approximately 100 per cent.

PRODUCTION AND DISTRIBUTION OF MOTION PICTURES:

"SEEING CANADA" SERIES

The bureau has, since a few years after its inception, specialized in the production of a series of one-reel films depicting Canada, its resources, attractions and opportunities, which have been circulated throughout the world, both theatrically and non-theatrically. From twelve to twenty of these subjects are produced each year.

The results achieved during the past fiscal year may be seen from the schedule below:—

Country	In Theatrical Circulation, either revenue- producing or sold outright	In Circulation theatrically and non- theatrically free
Australasia.....	150	
Austria and Jugo-Slavia.....		10
British West Indies—		
Jamaica.....		8
Trinidad.....		8
China.....		12
Cuba.....		11
Great Britain.....	40	20
France.....	15	10
Germany.....		16
Holland, Belgium and Scandinavian countries.....	32	10
India.....		4
Italy.....		6
Japan.....	4	10
Norway and Sweden.....		9
South Africa.....	30	10
South America.....	34	13
United States.....	68	1,057
	373	1,214

The average length of these films is 800 feet, and therefore the amount of film in circulation throughout the world (exclusive of Canada) during the fiscal year was approximately 1,269,600 feet.

DISTRIBUTION IN CANADA

In Canada, the bureau's film productions are distributed through the theatrical circuits by the Canadian Universal Film Company, one of the Dominion's most important commercial motion picture concerns, and a considerable revenue is derived therefrom. Recently a contract has been entered

into with the Famous Players Canadian Corporation for the distribution of a series of films throughout their entire circuit, the largest and most important in Canada and covering the Dominion from coast to coast.

A vast amount of circulation is also secured in the non-theatrical and educational fields in Canada through the provincial Governments and through various educational, forestry, patriotic and sporting organizations, and through railway agents. The bureau maintains a special library of films at Ottawa for this purpose and the films are furnished at a nominal rental.

DISTRIBUTION IN UNITED STATES

Through the agency of several large commercial film organizations, the bureau secures a worth-while circulation in the theatres of the United States, which brings in some revenue. This field is now being further developed to secure a wider theatrical circulation and probably larger revenue.

In the non-theatrical and educational fields, the bureau, through thirty-five distribution agencies—many of which are national in their scope—has in circulation approximately 845,600 feet of film. During the fiscal year, special efforts were made to further develop this field, with the result that it has secured a volume of circulation more than 50 per cent greater than in the previous year, and covering a much wider territory than heretofore. At the present time the bureau has in constant use in the United States approximately 1,057 films and they are being screened in every state.

DISTRIBUTION IN BRITISH EMPIRE

In Australasia the distribution secured ranks very high. In the theatrical field it is made through what is perhaps the largest and most important commercial concern in these territories and a substantial revenue is derived therefrom, and in the non-theatrical and educational field it is being developed through Government agents and is making good progress.

In South Africa distribution is made practically throughout the entire sub-continent, in association with African Films Limited, the largest and most important theatre-operating concern in that territory. The non-theatrical circulation is considerable and is effected through government agencies.

In the British West Indies, and other sections of the Empire, free theatrical distribution and non-theatrical distribution is being secured with increasing volume by government trade and other agents.

DISTRIBUTION IN UNITED KINGDOM

Arrangements have been concluded for the extensive circulation of our films, both theatrically and non-theatrically, throughout the United Kingdom and the Irish Free State.

In the theatrical field, a contract has been entered into with one of the largest and most important British film distributing companies to handle twelve Canadian Government films (approximately ten copies of each) annually and a minimum of 300 to 400 theatrical bookings for each subject is assured. If the Government's application for registration under the Cinematograph Films Act, 1927, now pending before the Board of Trade, is granted, it is expected that the minimum number of bookings for each film will be increased to between 600 and 700. The British film organization with which the contract has been concluded operates ten branches or exchanges throughout the United Kingdom and the Irish Free State, thus assuring bookings in every part of this territory.

This new arrangement should go into effect during the coming season and will continue for a number of years, with renewal privileges, and be a source of considerable revenue to the Motion Picture Bureau.

In the non-theatrical field, extensive circulation has also been arranged. The Federation of British Industries have, through arrangements just concluded, undertaken to make available through their organization some twenty or thirty of our film subjects and have already placed them in their catalogue. During the next fiscal year, the number of films to be made available to the non-theatrical field through this means will be increased. Arrangements have also been made to place films at the disposal of the Empire Marketing Board, Film Section; the Imperial Institute; the Director of Publicity, Department of Trade and Commerce; the High Commissioner's Office; the various representatives of the Canadian and provincial Governments in the United Kingdom; the agencies of the Canadian National and Canadian Pacific Railways and other interested organizations and individuals, for non-theatrical exhibition, and it is expected that comprehensive and valuable circulation will be achieved through this means.

Arrangements have also been concluded with a number of the most important topical and "magazine" film production and distribution organizations in the United Kingdom to supply them with material which, through their wide circulation, both theatrically and non-theatrically, not only in the United Kingdom but in certain countries of Europe, will have great publicity and advertising value.

DISTRIBUTION IN FOREIGN COUNTRIES

In South America, wide theatrical distribution is being secured, with prospects for the coming year of much greater circulation. Non-theatrically, considerable circulation is being secured through the co-operation of our Trade Commissioners and other agents.

In Holland, Belgium, and the Scandinavian countries considerable distribution in both the theatrical and non-theatrical fields has been and is being secured through a large commercial film company operating in these countries. Some non-theatrical distribution has been secured by our Trade Commissioners. In France, distribution theatrically is obtained through a large commercial film agency and non-theatrically through our trade and other agents and through educational organizations. In Germany, Italy, Austria, and Jugo-Slavia, though, owing to peculiar conditions existing in these states, considerable theatrical distribution has not been secured, a fair amount of non-theatrical distribution has been obtained through the efforts of our Trade Commissioners and other agents.

In the Far East, especially China and Japan, distribution, both theatrically and non-theatrically, is effected through the co-operation of our Trade Commissioners.

CO-OPERATIVE WORK WITH GOVERNMENTAL DEPARTMENTS AND ASSOCIATED ORGANIZATIONS

During the past fiscal year, the co-operative work with other Government departments, the Canadian National Railways, several of the provincial Governments, and with Dominion Government and railway representatives throughout the world, has largely exceeded that of any previous year.

Government departments and associated organizations for whom the bureau has produced motion picture and still photographic material, on a co-operative basis, during the fiscal year, include:—

Air Services, R.C.A.F.
 Board of Pension Commissioners.
 Canadian Legation, Washington, D.C.
 Canadian Small Arms School.
 Canadian War Graves Commission.
 Canadian National Railways.
 Canadian Pacific Railway.
 Canadian Government Trade Commissioners.
 Canadian Social Hygiene Council.
 Canadian Clubs, Association of.
 Central Experimental Farm (seventeen divisions).
 Civil Service Commission.
 Department of Agriculture (fourteen branches).
 Department of Finance.
 Department of Health and Soldiers' Civil Re-establishment.
 Department of Immigration and Colonization.
 Department of Insurance.
 Department of the Interior (four branches).
 Department of Labour.
 Department of Marine and Fisheries (three branches).
 Department of Mines (five branches).
 Department of National Defence (six branches).
 Department of Public Works.
 Department of Railways and Canals.
 Department of Secretary of State.
 Department of Trade and Commerce (nine branches).
 Dominion Archives.
 Dominion-Provincial Conference.
 Government of Canada.
 Government of Alberta.
 Government of British Columbia.
 Government of New Brunswick.
 Government of Nova Scotia.
 Government of Ontario.
 Government of Prince Edward Island.
 Government of Quebec and various departments.
 House of Commons, Speaker, Sergeant-at-Arms, etc.
 High Commissioner for Canada, London, England.
 National Tuberculosis Association.
 National Council of Women.
 National Committee for the Diamond Jubilee.
 Parliamentary Press Gallery and correspondents.
 Post Office Department.
 Prime Minister's Office.
 Quebec Department of Agriculture.
 Railway Commission.
 United States Legation, Ottawa, Canada.
 World's Poultry Congress.

CO-OPERATIVE WORK WITH COMMERCIAL FILM PRODUCERS

Several years ago, a policy of co-operating with commercial film producers, especially the large producers in the United States operating in Canada, was inaugurated, the idea being to encourage the greater production of films in the Dominion, and to ensure that depictions of Canada and Canadian life should bear the stamp of authenticity.

During the past fiscal year, this policy was enlarged to include a definite co-operative scheme with the so-called "news weekly" producers and the producers of films similar to those of the bureau. The value of this development was strikingly demonstrated during the celebration of recent great events in the Dominion—the Diamond Jubilee of Confederation, the visit of H.R.H. the Prince of Wales, the tour of the British Premier, the opening of the new Peace Bridge, and the holding of the World's Poultry Congress in Ottawa—when the co-operation of the bureau with the commercial film concerns was the means of securing wide pictorial publicity for Canada throughout the world.

PRODUCTION OF TECHNICAL, INFORMATIVE AND INSTRUCTIONAL FILMS AND PHOTOGRAPHS FOR GOVERNMENTAL USE

Until a few years ago the bulk of the technical, informative and instructional films produced for use by departments other than our own were made by commercial concerns, the bureau lacking the necessary equipment and facilities for this type of work. Of recent years, however, this branch of the bureau's work has been steadily developed and during the past fiscal year additional equipment has been secured and, in co-operation with the departments concerned, practically all films of this nature required are produced.

The bureau operates a plant for the production of still photographs of all kinds, exterior or interior, enlargements, transparencies, lantern slides, photographic copying, and reproductions and other material of this type. During the past fiscal year exceptional calls were made upon it, and among the new activities has been the handling of special assignments to produce all governmental official group photos and pictorial records of national events. Other developments have been the production of special technical and scientific photographic reproductions for research and record purposes, and development of greater world publicity co-operative measures with news and other agencies.

PROSPECTS FOR DEVELOPMENT AND EXPANSION

Further expansion of the bureau's activities and an increased volume of production during the coming year seem assured. With contracts already entered into and expected developments in other fields, it is confidently expected that the revenue of the bureau will be substantially increased. The expansion of the bureau's efforts in the production and distribution of pictorial publicity of the non-revenue bearing type is only limited by the capacity of the plant and by the funds available for this work. There is much new territory, hitherto undeveloped, in which, with the co-operation of our Trade Commissioners, the bureau can secure circulation, while fields in which circulation is now being secured can be further developed. Further general circulation within the Empire is in prospect through co-operative work with the Empire Marketing Board and other organizations.

In the theatrical field, there is a growing demand for material produced by the bureau. The enactment of Film Quota Laws in Great Britain, Australia, New Zealand and other parts of the Empire should open up a greater field for this bureau's activities within the Empire; and in other countries there is plenty of scope for expected development.

In Canada, South America, and South Africa, new contracts already entered into assure further development and increased revenue and it is hoped to be able to develop the theatrical circulation of our films on a favourable and profitable basis.

BOARD OF GRAIN COMMISSIONERS FOR CANADA

MOVEMENT AND HANDLING OF 1927 WESTERN CANADIAN GRAIN CROPS

Very wet weather during the early spring of 1927 seriously delayed the seeding of the crops throughout Western Canada. The excess moisture ensured a heavy growth, but the grain was far from maturity when early frosts occurred and large areas suffered so badly that the grain was entirely ruined or not worth cutting. Then for the third year in succession heavy rains were general during the greater part of the harvest season and much grain had to remain in the fields, where cut, until the spring before it could be threshed.

The effects of the inclement weather upon the quality of the grain were most marked, with the result that European importers showed a distinct preference for the better qualities available from the United States, Argentina and Australia. The marketing of Canadian wheat proceeded much slower than would have been the case under more normal conditions.

The province of Alberta reaped the largest wheat crop in its history. A large quantity of this was harvested before the continued wet weather set in and this fact, coupled with the plenitude of ocean tonnage from Pacific Ports at more favourable rates, and the lower rail rates to Vancouver and Prince Rupert, attracted a larger proportion of the export movement via the western outlet. Shipments via Vancouver have already exceeded those of previous years and will probably exceed 80 million bushels for the season.

The steady increase in the volume of grain production in Western Canada and the large addition to the acreage which is expected to be made this spring, have rendered necessary large increases in the elevator facilities at different points, in order to handle the expected volume expeditiously. At Vancouver, Victoria and New Westminster four elevators are being erected which will add approximately four and a half million bushels to the present 8,305,000 bushels storage capacity, ready for the movement of the 1928 crops. At Montreal an addition of three million bushels storage capacity is being made to the Harbour Commissioners' elevator No. 3, which will make a total of 15,160,000 bushels. At Toronto an elevator is being erected with a capacity of two million bushels, whilst one is nearing completion of approximately 500,000 bushels capacity. At Port Arthur a new house is being erected for the Canadian Pool of six and a half million bushels capacity, and an addition of two and a half million bushels capacity is to be made to the Reliance elevator. At Fort William a new elevator is being erected for the Searle Grain Company of three million bushels capacity. Only last year new buildings and additions to existing elevators increased the storage capacity at Fort William-Port Arthur by ten and a half million bushels, and the completion of the work now in progress will make a total capacity of eighty-four and a half million bushels at this port.

The large additions made to the drying capacity of elevators at terminal points during the past two seasons effectually prevented the accumulation of cars of grain out of condition. The following tables show the number of cars of grain graded "No Grade" and "Sprouted," as compared with the total inspected; also the total amounts dried at the public terminal elevators, as compared with the total quantity inspected, during the first eight months of the crop year.

AUGUST 1 TO MARCH 31

	Crop Year, 1927-28			Crop Year 1926-27		
	Total Inspected	Graded No Grade	Graded Sprouted	Total Inspected	Graded No Grade	Graded Sprouted
	cars	cars	cars	cars	cars	cars
Wheat.....	244,445	114,915	70	216,033	111,401	8,923
Oats.....	11,732	6,444		11,165	8,672	
Barley.....	15,770	11,148		23,918	20,040	
Flaxseed.....	2,417	638		2,943	2,032	
Rye.....	7,189	3,428		5,157	3,386	

AUGUST 1, 1927, TO MARCH 31, 1928

	Total Graded No Grade	Total dried at Public Elevators	
		No Grade Tough	No Grade Damp
	bushels	bushels	bushels
Wheat.....	151,687,800	4,255,437	2,201,404
Oats.....	12,533,600	31,505	62,547
Barley.....	16,331,800	116,057	474,154
Flaxseed.....	772,000	367,745	42,775
Rye.....	4,782,000	63,808	115,540
Mixed grain.....		10,211	12,759

The grain crops of 1927 in Europe were neither as large as those of 1926, nor of as good quality. A good deal of inclement weather was experienced over large areas at harvest time and much grain was seriously affected thereby, as in Canada. On the other hand, large crops were harvested in North America and Argentina and ocean tonnage was plentiful at low rates. Consequently, importers have not made heavy commitments ahead but have purchased according to requirements. The poor quality of domestic supplies and the heavy moisture content created a distinct preference for dry wheat of high gluten content, so that the United States and Argentine supplies were in greater demand in some markets than Canadian.

Total receipts at terminal points in the Western Grain Inspection Division for the first eight months of the crop year follow:—

AUGUST 1, 1927 TO MARCH 31, 1928

	Wheat	Other Grains	Total
	bush.	bush.	bush.
Fort William-Port Arthur.....	208,277,108	38,766,557	247,043,665
Vancouver.....	60,974,923	752,038	61,699,961
Prince Rupert.....	6,952,094	10,314	6,962,408

Moose Jaw.....	2,297,620	311,659	2,609,279
Saskatoon.....	1,611,653	783,410	2,395,063

WEIGHTS AND MEASURES INSPECTION SERVICE

The Director of the Weights and Measures Inspection Service reports that, notwithstanding the general salary increase of \$120 given to the Civil Service during the past fiscal year, adding some \$12,540 to expenditure on account of salaries, the service succeeded in maintaining its favourable balance of revenue over expenditure, and even added to it, as compared with 1926-27. The surplus amounted to \$44,578.26, showing an increase of \$12,724.26.

Total collections on account of revenue amounted to \$362,242.81, as against \$333,291.72 for 1926-27, showing an increase of \$28,951.09.

Total expenditure, including general salary increase charge, amounted to \$317,664.55, as against \$301,437.72 for 1926-27, an increase of \$16,226.83.

The mileage travelled—an important factor on the expense side—totalled 297,442 miles as against 288,885 in 1926-27—an increase of 8,557 miles—these figures not including the mileage covered in city inspection work, which alone runs into thousands of miles every year.

The surplus of revenue over expenditure amounts to \$44,578.26, as against a surplus of \$31,854 for 1926-27—showing an increase of \$12,724.26. There was a further slight reduction in the operating cost of the Service, the ratio being 88 cents on the dollar as against 90 cents for 1926-27 and 93 cents for 1925-26.

Of the \$16,226.83 increase in expenditure, \$12,540 is represented by the flat salary increase, leaving \$3,686.83 normal increase in expenses as against \$28,951.09 increase in revenue collected.

Of the surplus of revenue over expenditure, it might be remarked—lest it should be considered too large for a protective and a non-revenue service—that against it can fairly be charged the salaries of the staff in the director's office in the department, amounting to approximately \$20,000, and the rental of all the district and sub-offices throughout the Dominion, which is paid by the Department of Public Works, thus leaving the service little more than just self-supporting, which is the guiding principle in the adjustment of the statutory inspection fees.

In statistical form the record of the service since 1920 is as follows:—

	Inspectors	Expenses	Revenue	Deficit	Surplus
		\$ cts.	\$ cts.	\$ cts.	\$ cts.
1920-21.....	124	307,076 08	267,105 62	39,970 46
1921-22.....	120	313,982 04	272,137 02	41,845 02
1922-23.....	119	302,141 58	278,259 04	23,882 54
1923-24.....	116	312,744 34	290,450 18	22,294 16
1924-25.....	111	293,030 75	294,106 64	1,075 89
1925-26.....	111	293,193 65	315,841 41	22,647 76
1926-27.....	109	301,437 32	333,291 72	31,854 00
1927-28.....	108	317,604 55	362,242 81	44,578 26

The reduction in the staff by one inspector is explained by the death of one officer in Hamilton and the retirement of another in Winnipeg, where it was felt unnecessary to make replacements, as against the addition of one officer to the London District.

Responsive as weights and measures inspection must be to commercial and industrial expansion, an increase in staff here and there is unavoidable. Inspection work continually increases, although not uniformly throughout the Dominion. The modern extension of the motor car, for instance, has superimposed a whole new field of weights and measures activity in the distribution and sale of gasoline through the intermediacy of the tank car, compartment tank wagon, filling station pumps and meters, and the oil bottle. Hence the additional help in London, whilst conditions in Toronto and Montreal also call for more assistance, if field and city inspection in these districts is to be covered and the increasing demands of factory and importation inspections are to be met without delays.

INSPECTION DATA

Following is a statistical statement of the various appliances and articles inspected during the year:—

Articles	Submitted	Verified	Rejected	Per cent of Rejection
Weights.....(Dom.)	84,474	82,908	1,566	1.85
Weights.....(Metric)	641	630	11	1.7
Measures of Capacity.....(Dom.)	94,465	94,286	179	0.18
Measures of Length.....(Dom.)	7,954	7,915	39	0.49
Milk Cans.....	86,767	86,701	66	0.07
Ice Cream Containers.....	40,263	40,263		
Measuring Devices.....	34,776	31,926	2,850	8.19
Weighing Machines.....	182,310	163,926	18,384	10.08
Weighing Machines.....(Metric)	519	495	24	4.6
Babcock Glassware.....	49,235	48,447	788	1.6
Tank Wagons.....	184	184		
	581,588	557,681	23,907	

The above statistics show but a relatively small increase year by year, 581,588 for 1927-28, as against 573,221 for 1926-27. The reason is that Weights and Measures appliances, like all other industrial facilities, are becoming automatic or semi-automatic and power-driven, so that one modern machine displaces two, three or half a dozen of the old type.

Another important factor is the enormous increase in package goods and in the development of chain stores. Automatic machines put up package goods in hundreds per hour, whilst one scale will now do duty in most stores for the few sales made up from bulk. Fortunately new industries spring up, like the gasoline trade, with a new range of inspectable appliances, to compensate for the decline in other fields, and actually increase the work to be done.

SEIZURES AND PROSECUTIONS

During the year returns for some 126 seizures of defective and unjust machines and devices were made, and numbers of foreign importations were refused entry into the country at the Customs as being unapproved for use in Canada. It is certain that the actual eliminations were much larger than the figures indicate, as the officers frequently destroy such things as cheap and faulty measures, forgetting to make a return in the rush and preoccupation of their work and incessant travelling.

There were only nine prosecutions, resulting in nine convictions and the collections of \$170 in fines. Again the figures are small, almost to the point of criticism, but it has not yet become the policy of the department to prosecute each and every offence. Legally, an incorrect weight or measure is "false and unjust" and its use subject to prosecution, and in this connection some 18,384 gasoline machines were rejected and some 23,665 weights adjusted—but the prosecution of all such cases would be far too harsh a practice.

THE METRIC SYSTEM

During the fall of 1927 the International Bureau of Weights and Measures at Sèvres, France, held its seventh sexennial conference. The bureau is maintained jointly by some thirty-one countries in the interest of the advancement of metrological science, the establishment of international scientific and technological standards, and as the repository of the International Standards of the Metric System.

As a contributing state, Canada was represented by the Deputy Warden of the Standards, London, England, as Canada's interest in the metric system is largely identifiable with that of Great Britain and the rest of the Empire. The scientific work discussed at the Conference is a matter for specialists, but one essentially commercial proposal was advanced by the representatives of the Argentine and Mexico, and this was that the United States and Great Britain should adopt the metric system "particularly in connection with agricultural machinery, grain handling plant and the like". The inference to be drawn is that the machinery in question supplied to the Argentine and Mexican markets is made to English measurements and is therefore not as suitable or acceptable as it should be for these metric countries. There is a lesson here for the Canadian manufacturer that he would do well to study and turn to profit by making and quoting all manufactured products for metric markets in the metric system. This does not necessarily mean the redesigning or the duplication of any dies, jigs or plant machinery, but merely the conversion of dimensions into metric equivalents to the nearest millimetre, and the conversion of pounds weight into kilograms. A simple but very consequential detail in developing foreign markets.

ELECTRICITY AND GAS INSPECTION BRANCH

The Director of the Electricity and Gas Inspection Branch reports that the work of the branch continues to increase as shown by the following comparative statement for the past two years:—

<i>Electricity and Gas Inspection Acts—</i>	1926-27	1927-28
Electricity meters tested.....	283,297	293,325
Gas meters tested.....	109,196	122,684
Total meters tested.....	392,493	416,009
<i>Revenue—</i>		
Electricity Inspection.....	\$ 180,865 95	\$189,581 45
Gas inspection.....	76,890 20	85,715 60
Total revenue.....	\$ 257,756 15	\$ 275,297 05
<i>Expenditure—</i>		
Electricity inspection.....	\$ 121,585 92	\$ 146,189 40
Gas inspection.....	52,875 53	52,839 44
Total expenditure.....	\$ 174,461 45	\$ 199,028 84
<i>Electricity and Fluid Exportation Act</i>		
<i>Revenue—</i>		
Export tax.....	\$ 357,421 89	\$ 373,676 21
License fees.....	650 50	675 00
Total revenue.....	\$ 358,082 39	\$ 374,351 21
<i>Expenditure—</i>		
Travelling expenses.....	\$ 258 46	\$ 440,59
Total revenue for branch.....	\$ 615,828 54	\$ 649,648 26
Total expenditure for branch.....	175,833 15	199,469 43
Surplus.....	\$ 439,995 36	\$ 450,188 83

The total number of meters tested under the authority of the Electricity Inspection Act and the Gas Inspection Act was 416,009, an increase of 23,516 over the previous year and the increase in revenue amounted to \$17,540.90. There was a considerable increase in expenditure due to the purchase of several instruments to replace old ones and a general increase in the salaries of the

entire staff, and as a consequence there is a decrease in the surplus of \$6,026.49 as compared with the previous year. The surplus for this year—which does not take into account rent, fuel, furniture and the salaries of the officers in the Ottawa laboratory—was \$76,268.21.

GAS INSPECTION SERVICE

The falling off in the Gas Inspection work during 1926-27 was more than balanced this year, the increase in the number of meters tested being 13,488. This increase is due to the increase in the number of new meters that were tested: 41,628 this year as compared with 27,305 last year.

The number of gas meters in use on March 31, 1928, on manufactured gas was 482,433, an increase of 19,937 over the previous year.

Manufactured gas continues to be used in increasing quantities. During the fiscal year just closed 16,052,836,000 cubic feet of gas were sold as compared with 15,227,161,097 the previous year, an increase of 825,675,000 cubic feet.

The total production of natural gas has increased very rapidly during the past two years, 20,350,000,000 cubic feet having been sold in 1927-28 as compared with 17,863,000,000 cubic feet during 1926-27 and 13,000,000,000 during 1925-26.

The total number of meters measuring natural gas on March 31, 1928, was 98,915.

ELECTRICITY INSPECTION SERVICE

The work connected with the Electricity Inspection service continues to grow. There were 293,325 meters tested during the year, an increase of 10,028 over the previous year. The number of new meters tested increased from 85,946 to 95,496 and the total number of meters in service on March 31, 1928, was 1,422,566.

ELECTRICAL STANDARDS LABORATORY

The work performed in the laboratories at Ottawa, Winnipeg and Vancouver is most important. In order to carry on the inspection work in a satisfactory manner, it is essential that the inspection standards be compared frequently with the standard apparatus maintained in the laboratories. The main reference laboratory is at Ottawa and a check kept on the apparatus in the others.

During the past year the following instruments were checked: For our own inspection service, 125 rotating standards, 54 wattmeters, 29 voltmeters, and 28 ammeters. For outside companies, 27 rotating standards, 7 wattmeters, 9 voltmeters, and 7 ammeters. In addition to these, 20 electric meters and 6 gas meters were tested for approval for use in Canada. All approval tests on meters are made in the Ottawa laboratory.

EXPORTATION OF ELECTRICAL ENERGY

The number of kilowatt hours produced for export was 1,674,856,007, an increase of 66,198,833 kilowatt hours. The attached chart giving the particulars of electrical energy produced for export and produced for use in Canada by the exporting companies since the Electricity and Fluid Exportation Act was passed in 1907 may be of interest.

As shown in the preceding statement, the revenue received on account of the export duty amounted to \$373,676.21, an increase of \$16,254.32, and the expenditure was \$440.59, an increase of \$182.13. This increase in expenditure may be accounted for by the fact that a closer check was kept on the export meters.

MAIL SUBSIDIES AND STEAMSHIP SUBVENTIONS

During the year 1927-28, the Department of Trade and Commerce paid out \$844,590.76 in mail subsidies and steamship subventions. This amount was divided as follows:—

Services on the Atlantic ocean.....	\$ 99,999 96
Services on the Pacific ocean.....	124,000 00
<i>Local Services—</i>	
(a) Interprovincial Services—	
(1) Between Quebec and New Brunswick.....	3,000 00
Between Quebec Prince Edward Island and Nova Scotia.....	50,000 00
(2) Between Nova Scotia and Prince Edward Island.....	35,000 00
(3) Between Nova Scotia and New Brunswick.....	45,000 00
(b) Provincial Services—	
(1) British Columbia.....	92,907 14
(2) New Brunswick.....	30,500 00
(3) Nova Scotia.....	174,712 81
(4) Ontario.....	10,999 98
(5) Prince Edward Island.....	5,000 00
(6) Quebec.....	169,021 00

In addition to these amounts, \$4,449.87 was expended in the inspection of subsidized services in Quebec and the Maritime Provinces.

The volume of traffic carried by all subsidized services during the calendar year 1927 totalled 220,130 passengers, 380,050 tons of freight, and 251,343 bags of mail, together with 5,957 live stock. The mails were nearly all carried without any expense to the Post Office Department, this being provided for in the standard form of contract, except in the case of two or three services on the British Columbia coast, where the Post Office Department contributes a small amount in addition to the subsidy paid by this department.

The average volume of traffic carried by subsidized services on each day throughout the year was 603 passengers, 1,041 tons of freight, 689 bags of mails, and 16 live stock.

An important new subsidized service was commenced on the route between Vancouver, B.C., and Trinidad in the British West Indies, calling at other West Indian ports if sufficient cargo offers, or, in the case of small shipments, transshipping such goods on through bills of lading at Trinidad. The contractors are the Canadian Transport Company Limited, who undertake to make from eight to twelve sailings a year from British Columbia, according to the amount of business offering, at the very moderate subsidy of \$3,000 a trip. Up to December 31, 1927, six sailings had been made on the route, carrying about 4,000 tons of freight and over 6,000,000 feet of lumber. This service has been the means of encouraging many shippers in Western Canada to take an interest in the West Indian market, form trade connections, and commence the development of trade. This service does not accept cargo from any but Canadian sources. It is a one-way service only, as up to the present time it has been found that the cargo offering from the West Indies for British Columbia has been so small that it has not justified the establishment of a return service.

A new service has been established between Rivière du Loup and Tadoussac, P.Q., across the lower St. Lawrence. The contractors are the Quebec Navigation Company, Limited, of Quebec, who have placed on the route the steel steamer *Mercier*, which is capable of carrying 35 tons of freight and 100 passengers. There has been a considerable industrial development at points along the north shore, and from Tadoussac east a number of important pulp and paper companies have commenced operations, some of them on a very large scale. Several new towns have been established in the Saguenay and Lake St. John dis-

tricts within the last ten years, and the Quebec Navigation Company's service now gives this district a quick and convenient connection with the Canadian National Railways at Rivière du Loup, which is almost opposite the mouth of the Saguenay river.

The service between St. John and Bridgetown, performed by the Bridgetown Company, Limited, with the steamer *Valinda*, which was discontinued in 1926, was re-established in 1927-28 at an annual subsidy of \$1,000.

The service performed by the Hochelaga Shipping and Towing, with the steamer *Hochelaga*, between Charlottetown and Pictou, which was originally only carried on during the five months of the year between June and October inclusive, was extended to include the months of May and November. The traffic on this service shows a promising increase, and as the direction of the service has now been changed to leave Pictou every morning, returning to that port again in the evening, it has proved to be of very great advantage in connection with the carriage of the mails, giving a very fast service between all points of Nova Scotia and Cape Breton and points on Prince Edward Island. Letters which are mailed in Halifax on the afternoon of any day are now delivered in Charlottetown at noon on the next day. On the return trip, letters mailed before the departure of the steamer at four o'clock are delivered in Nova Scotia and Cape Breton next morning. A special gasoline electric car has been placed in service by the Canadian National Railways to connect with the steamer on her arrival in the evening at Pictou.

The Canada-South Africa service, performed by the steamers of Messrs. Elder Dempster & Company, Limited, continue to make calls at West Africa whenever freight offers, with a view to continuing the effort to develop Canada's trade in that part of the Empire. While the establishment of our trade in the British West African colonies is proving a very difficult task, owing to the conditions there, it is hoped that in the course of a short time Canada will be able to establish a footing in those countries. The West African trade, however, merely requires direct sailings, and it is proving a very difficult task to secure sufficient cargo from Canada to make such direct sailings possible.

As a result of the call for tenders issued in February, 1927, the Mulgrave, Arichat, and Petit de Grat service is now performed by the Albert Steamship Company of Halifax with the steamer *Prince Albert*, which has given satisfactory service throughout the last fiscal year.

The winter portion of the service between Mulgrave and Canso has now been taken over again by the steamer *Robert G. Cann*, which also runs on this route daily, except Sundays, during the remaining portion of the year. Last winter she performed the service in a satisfactory manner. The low passenger rates and also the low freight rates on fish from Canso were continued in effect.

The service between St. Catherine's Bay and Tadoussac, previously performed by Mr. E. O. Bouliane, was taken over on May 16, 1927, by Mr. J. C. Tremblay of Tadoussac, with the motor vessel *Pixie B*.

There was very little change during 1927-28 in the other subsidized services. The total amount paid for all subsidies, however, was \$164,408.16 less than in the previous year.

GOLD AND SILVER MARKING ACT

The Inspector under the Gold and Silver Marking Act reports that, through the medium of the trade journals and the jewelers' associations, the provisions of this act have been so instilled into the minds of the trade that there have been very few complaints of its violation, and none at all to warrant prosecution.

This, however, does not mean that the jewelers, silversmiths and kindred trades are satisfied with present conditions; on the contrary—they claim that, while the Gold and Silver Marking Act is a great protection to the buying public of Canada, they find it very difficult to compete with goods brought into Canada in parts and assembled here and the Canadian manufacturer's trade mark applied to them, thereby complying with the Gold and Silver Marking Act, but evading the proper valuation of such goods coming into the country.

The number of hands employed in Canada in the manufacturing of jewellery has fallen off 50 per cent in the last ten years, owing chiefly to the mass production of tool-made goods in other countries, and their importation in parts to be assembled and finished in this country.

The adoption of a national trade mark to be applied only to goods made in Canada might remedy conditions. This has been recommended in previous reports and designs for such marks have even been submitted, after the same had been submitted to the Hall Mark authorities of Great Britain, who offered no objection. The application of such a mark would enhance the reputation of goods made in Canada.

THE HISTORY OF THE

REVOLUTION

The following is a list of the names of the persons who were present at the signing of the Declaration of Independence on September 17, 1776. The names are arranged in two columns, with the names of the signers of the original Declaration on the left and the names of the signers of the later versions on the right.

John Adams	John Adams
John Jay	John Jay
Benjamin Franklin	Benjamin Franklin
Thomas Jefferson	Thomas Jefferson
Samuel Adams	Samuel Adams
John Hancock	John Hancock
James Oglethorpe	James Oglethorpe
George Washington	George Washington
Richard Henry Lee	Richard Henry Lee
Patrick Henry	Patrick Henry
John Witherspoon	John Witherspoon
Elbridge Gerry	Elbridge Gerry
John Rutledge	John Rutledge
Charles Carroll	Charles Carroll
Thomas Mifflin	Thomas Mifflin
Robert Morris	Robert Morris
George Clinton	George Clinton
William Livingston	William Livingston
David Livingston	David Livingston
John B. Matthews	John B. Matthews
James Smith	James Smith
John C. Calhoun	John C. Calhoun
Jefferson Davis	Jefferson Davis
Andrew Johnson	Andrew Johnson
Ulysses S. Grant	Ulysses S. Grant
Abraham Lincoln	Abraham Lincoln
Franklin D. Roosevelt	Franklin D. Roosevelt
John F. Kennedy	John F. Kennedy
Lyndon B. Johnson	Lyndon B. Johnson
Richard Nixon	Richard Nixon
Jimmy Carter	Jimmy Carter
Ronald Reagan	Ronald Reagan
George H. W. Bush	George H. W. Bush
Bill Clinton	Bill Clinton
George W. Bush	George W. Bush
Barack Obama	Barack Obama
Mit Romney	Mit Romney
Donald Trump	Donald Trump

DEPARTMENT OF TRADE AND COMMERCE

OTTAWA, CANADA

HON. JAMES MALCOLM, Minister

F. C. T. O'HARA, Deputy Minister

ANNUAL REPORT

OF THE

WEIGHTS AND MEASURES INSPECTION SERVICE

FOR THE FISCAL YEAR ENDING MARCH 31

1928

OTTAWA

F. A. ACLAND

PRINTER TO THE KING'S MOST EXCELLENT MAJESTY

1028

GENERAL REPORT

WEIGHTS AND MEASURES INSPECTION SERVICE

FOR THE YEAR ENDING 31st DECEMBER 1931

1932

By Appointment
To Her Majesty the King

REPORT
OF THE
INSPECTION OF WEIGHTS AND MEASURES

OTTAWA, July 6, 1928.

To the Honourable
The Minister of Trade and Commerce.

SIR,—I have the honour to submit the annual report on the Weights and Measures Inspection Service, together with statistical statements, for the fiscal year ended March 31, 1928.

F. C. T. O'HARA,
Deputy Minister.

Mr. E. O. Way, Director of Weights and Measures, reports as follows:—

In keeping with the expanding industry of the country, the Weights and Measures Service again shows a sympathetic increase both in the amount of inspection work done and revenue collected. Development is chiefly noticeable in the remarkable expansion of the gasoline and fuel oil industry, which for Weights and Measures is assuming an importance second only to the Grain Trade.

Incidentally, the Service found itself confronted with an increased salary charge of some \$12,540, arising out of the \$120 flat rate increase granted to the Civil Service at large in the 1926-27 Session, but it is gratifying to note that this has not only been offset by increased collections, but that the surplus of last year has been maintained and even increased by \$12,723.86.

In summary form, the financial status of the Service is as follows, details by Districts being more fully given in Appendix A.

For 1927-28 total collections on account of revenue amounted to \$362,242.81, as against \$333,291.72 for 1926-27, showing an increase of \$28,951.09.

Total expenditure, including general salary increase charge, amounted to \$317,664.55, as against \$301,437.72 for 1926-27, showing an increase of \$16,226.83.

The surplus of revenue over expenditure amounts to \$44,578.26, as against a surplus of \$31,854.00 for 1926-27, showing an increase or improvement of \$12,724.26.

The mileage travelled, an important factor on the expense side, totalled 297,442 miles, as against 288,885 in 1926-27, an increase of 8,557 miles, these figures not including the mileage covered in city inspection work, which alone runs into thousands of miles every year.

regard for efficiency is shown in a further slight reduction in the operating cost of the service, the ratio being 88 cents on the dollar as against 90 cents for 1926-27 and 93 cents for 1925-26, a showing which implies commendable industry and studied care on the part of the whole personnel.

Of the \$16,226.83 increase in expenditure, \$12,540 is represented by the flat salary increase, leaving but \$3,686.83 normal increase in expenses as against \$28,951.09 increase in revenue collected.

Of the surplus of revenue over expenditure, it might be remarked, lest it should be considered too large for a protective and a non-revenue service, that against it can fairly be charged the salaries of the staff in the director's office in the department, amounting to approximately \$20,000, and the rental of all the district and sub-offices throughout the Dominion, which is paid by the

Department of Public Works, thus leaving the service little more than just self-supporting, which is the guiding principle in the adjustment of the statutory inspection fees.

In statistical form the record of the service since 1920 is as follows:—

	Inspectors	Expenses	Revenue	Deficit	Surplus
		\$ cts.	\$ cts.	\$ cts.	\$ cts.
1920-21.....	124	307,076 08	267,105 62	39,970 46
1921-22.....	120	313,982 04	272,137 02	41,845 02
1922-23.....	119	302,141 58	278,259 04	23,882 54
1923-24.....	116	312,744 34	290,450 18	22,294 16
1924-25.....	111	293,030 75	294,106 64	1,075 89
1925-26.....	111	293,193 65	315,841 14	22,647 49
1926-27.....	109	301,437 72	333,291 72	31,854 00
1927-28.....	108	317,664 55	362,242 81	44,578 26

The above figures have been plotted in graphical form (page 15) and show at a glance the interrelation between revenue, expenses and personnel for each year, the notable feature being the steady reduction in staff parallel with the steady increase in revenue.

The reduction in the staff by one inspector for last year is explained by the death of one officer in Hamilton and the retirement of another in Winnipeg, where it was felt unnecessary to make replacements, as against the addition of one officer to the London District.

The staff, however, is now right down to rock bottom throughout the Dominion and from now on additional appointments, here and there, to meet the ever expanding trade and development of the country, will be an inevitable contingency. Inspection work continually increases, although not uniformly throughout the Dominion. The modern extension of the motor car and fuel oil industry, for instance, has superimposed a whole new field of Weights and Measures activity in the distribution and sale of gasoline and oil through the intermediacy of the tank car, compartment tank wagon, filling station pumps and meters and the oil bottle. Hence the additional help in London, whilst conditions in Toronto and Montreal also call for more assistance, if field and city inspection in these districts is to be covered and the increasing demands of factory and importation inspections are to be met without delays, against which those interested are understandably resentful.

INSPECTION DATA

Following is a statistical statement of the various appliances and articles inspected during the year, of which a detailed analysis will be found in appendices B and C.

Articles	Submitted	Verified	Rejected	Percent. of Rejection
Weights (Dominion).....	84,474	82,908	1,566	1.85
Weights (Metric).....	641	630	11	1.7
Measures of Capacity (Dominion).....	94,465	94,286	179	0.18
Measures of Length (Dominion).....	7,954	7,915	39	0.49
Milk Cans.....	86,767	86,701	66	0.07
Ice Cream Containers.....	40,263	40,263
Measuring Devices.....	34,776	31,926	2,850	8.19
Weighing Machines.....	182,310	163,926	18,384	10.08
Weighing Machines (Metric).....	519	495	24	4.6
Babcock Glassware.....	49,235	48,447	788	1.6
Tank Wagons.....	184	184
	581,588	557,681	23,907

The above statistics show but a relatively small increase year by year, 581,588 for 1927-28 as against 573,221 for 1926-27. The reason is that Weights and Measures appliances, like all other industrial facilities, are becoming automatic or semi-automatic and power driven, so that one modern machine displaces two, three or half a dozen of the old type simple devices.

Another important factor is the enormous increase in package goods and the chain stores. Automatic machines put up package goods in hundreds per hour, whilst one scale will now do duty in most stores for the few sales made up from bulk. Fortunately, new industries spring up, like the gasolene trade, with a new range of inspectable appliances to compensate, and actually increase the work to be done.

SEIZURES AND PROSECUTIONS

During the year, returns for some 126 seizures of defective and unjust machines and devices were made, and numbers of foreign importations were refused entry into the country at the customs as being unapproved for use in Canada. It is certain that the actual eliminations are always much larger than the figures indicate, as the officers frequently destroy such things as cheap and faulty measures, forgetting to make a return in the rush and preoccupation of their field work and incessant travelling.

There were only nine prosecutions, resulting in nine convictions and the collection of \$170 in fines. Again the figures are almost critically small, but it has not yet become the policy of the department to prosecute each and every offence. Legally, an incorrect weight or measure is "false and unjust" and its use subject to prosecution, and in this connection some 18,384 weighing machines were rejected and some 23,665 weights adjusted—but the prosecution of all such cases would be by far too harsh a practice.

OTHER ACTIVITIES OF THE SERVICE

During the year thirteen new types of weighing machines, five gasolene dispensing devices and one fabric measuring machine were examined and approved for sale and use in Canada, when made in accordance with general Weights and Measures regulations and the special conditions pertaining to each machine as set down in the official certificate of approval covering each device. This work, of course, is done in the Weights and Measures Branch of the Department at Ottawa.

Four machines were refused certificates of admission, the results of the examination being too unsatisfactory.

In addition, the distribution of gasolene and fuel oil by compartment tank wagons and the sale of oil in the modern glass bottle have been carefully studied and special regulations governing the inspection and use of both wagons and bottles have been prepared and established by Order in Council.

The relatively high co-efficient of expansion of gasolene still remains a serious problem in this industry, and the fruitful cause of many complaints and shortages. Incidentally, it represents but one of the many problems arising out of inherent physical properties that interfere with the weight and volume of commodities in transit, giving rise to discrepancies between shipping and receiving points, quite apart from the accuracy of the equipment used, and occasioning a good deal of trouble and investigation on the part of this Service.

DOMINION STANDARD YARD

During the year an interesting examination and comparison of the Dominion Standard Yard, procured from England in 1874, was made by the physicists of the Topographical Surveys, Department of the Interior, in their Physical Testing Laboratory. That Surveys should have done this work and not Weights and Measures is due to the fact that following Confederation the latter service

was attached to the old Department of Inland Revenue, the Commissioner of Inland Revenue being, *ex-officio*, the head of the Weights and Measures Service. All necessary standards and equipment were procured from England under the certificate of the London Board of Trade, so that the scientific and laboratory side of Weights and Measures work remained undeveloped for a long period of years. Had precision measures of length and their comparison become a matter of public importance and demand, there is no doubt that the Weights and Measures Branch would have expanded and made provision for such work. But such was not the case, and Weights and Measures pre-occupation has been more or less confined to the supervision, control and inspection of the wide range of weighing and measuring equipment used for trade and industrial purposes and the general administration of the Weights and Measures Act.

The Survey Branches of the Government, however, have been exclusively interested in Measures of Length.

As a consequence, Topographical Surveys, to ensure the absolute accuracy and constancy of their survey rules and tapes, have developed and equipped a Physical Testing Laboratory with the finest metrological apparatus and controls, whilst Weights and Measures, lacking any such direct justification, has, rightly or wrongly, deemed it more expedient to co-operate with Topographical Surveys than to move in the direction of laboratory duplication and overlapping of work, believing that the ultimate co-ordination of the scientific branches of the Government departments under a Bureau of Standards would rectify any anomaly and reflection the existing situation might contain.

In its pursuit, then, of metrological standardization, Topographical Surveys this last year suggested a comparison of the Dominion Standard Yard in the custody of this department with their standards, to see what changes, if any, had taken place in its value since its purchase from England in 1874.

This work has been done and the results will issue in a special technical paper by the Topographical Surveys, but it is sufficient here to note that the Dominion Standard Yard shows remarkable accuracy and constancy, having been found standard within $\cdot 00003$ inch.

Metrological work is possibly as intricate and comprehensive as any branch of modern science. The search after a natural constant as a reference of length has engaged metrologists since early times. The Pyramids are one expression of that search, the second's pendulum is another and the metre of the Metric System, based upon a meridian of the earth, is another. But none of these possessed the properties required in a natural constant as defined by Sir John Herschell in 1863, *viz.*:—

"Imperishable in its nature, unsusceptible to variation by lapse of time or decay and indestructible by accident or loss."

The solution, now, however, seems to have been found in the wave length of light, following researches on the part of Prof. A. A. Michelson of Chicago University in 1892. Research has since been centred upon perfecting the apparatus and use of this new natural constant, which seems to meet Sir John Herschell's requirements of "invariability, indestructibility and identical reproducibility," so that to-day the metre and the yard are defined in terms of the wave-length of red cadmium light, the latest values as determined from the observations of Messrs. Benoit, Fabry & Perot at the International Bureau of Weights and Measures, Sevres, France, in 1906, being as follows:—

Metre = $1,553,164 \cdot 13$ wave-lengths

Yard = $1,420,212 \cdot 04$ " "

Since the wave-length is extremely small, being equal to $\cdot 00064$ millimetre, it lends itself to the evaluation and comparison of the units of length with great accuracy, it being claimed that by using this new constant, the metre and the yard can be determined with an accuracy of one part in ten million.

Should this natural constant of the wave-length of light be finally adopted as the standard of reference, and this was suggested at the International Conference of Weights and Measures last year in France, but deferred for further research, metrologists and physicists will have found the object of their age-long search, an immaterial standard, constant in value, to which all material standards can be referred and in terms of which they can all be defined and inter-related.

THE METRIC SYSTEM

During the fall of 1927, the International Bureau of Weights and Measures at Sevres, France, held its seventh sexennial conference. The bureau is maintained jointly by some thirty-one countries in the interest of the advancement of metrological science, the establishment of international scientific and technological standards, and as the repository of the International Standards of the Metric System.

As a contributing state, Canada was represented by the Deputy Warden of the Standards, London, England, as Canada's interest in the metric system is largely identifiable with that of Great Britain and the rest of the Empire. The scientific work discussed at the conference is a matter for specialists, but one essentially commercial proposal was advanced by the representatives of the Argentine and Mexico and this was that the United States and Great Britain should adopt the metric system "particularly in connection with agricultural machinery, grain handling plant and the like." The inference to be drawn is that the machinery in question supplied to the Argentine and Mexican markets is made to English measurements and is, therefore, not as suitable or acceptable as it should be for these metric countries. There is a lesson here for the Canadian manufacturer that he would do well to study and turn to profit by making and quoting all manufactured products for metric markets in the metric system. This does not necessarily mean redesigning or the duplication of any dies, jigs or plant machinery, but merely the conversion of dimensions into metric equivalents to the nearest millimetre, and the conversion of pounds weight into kilograms. A simple but very consequential detail in developing foreign markets.

APPENDIX A

STATEMENT of Weights and Measures Expenditure and Revenue for fiscal year ended March 31, 1928

WEIGHTS AND MEASURES REVENUE AND EXPENSE CHART, 1921 to 1928

Figure 1

DEPARTMENT OF TRADE AND COMMERCE

OTTAWA, CANADA

HON. JAMES MALCOLM, Minister

F. C. T. O'HARA, Deputy Minister

ANNUAL REPORT
OF THE
ELECTRICITY AND GAS INSPECTION SERVICES

FOR THE FISCAL YEAR ENDING MARCH 31

1928

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1928

ANNUAL REPORT

OF THE

ELECTRICITY AND GAS INSPECTION SERVICES

IN CONNECTION WITH THE SUPPLY OF ELECTRICITY

1881

REPORT OF THE INSPECTION OF ELECTRICITY AND GAS

OTTAWA, July 6, 1928.

To the Honourable

The Minister of Trade and Commerce.

SIR,—I have the honour to submit the annual report on the Electricity and Gas Inspection Services, and also statements in connection therewith, for the fiscal year ended March 31, 1928.

F. C. T. O'HARA,
Deputy Minister.

ELECTRICITY AND GAS INSPECTION SERVICES

Mr. J. L. Stiver, Director of Electricity and Gas Inspection services, reports as follows:—

The following comparative statement for the past two years regarding the activities of the Electricity and Gas Inspection Branch shows that the work continues to increase:—

<i>Electricity and Gas Inspection Act—</i>	1926-27	1927-28
Electricity meters tested.....	283,207	293,325
Gas meters tested.....	109,196	122,684
Total meters tested.....	392,403	416,009
 <i>Revenue—</i>		
Electricity inspection.....	\$ 180,865 95	\$ 189,581 45
Gas inspection.....	76,890 20	85,715 60
Total revenue.....	\$ 257,756 15	\$ 275,297 05
 <i>Expenditure—</i>		
Electricity inspection.....	\$ 121,585 92	\$ 146,189 40
Gas inspection.....	52,875 53	52,839 44
Total expenditure.....	\$ 174,461 45	\$ 199,028 84
 <i>Electricity and Fluid Exportation Act—</i>		
<i>Revenue—</i>		
Export tax.....	\$ 357,421 80	\$ 373,676 21
License fees.....	650 50	675 00
Total revenue.....	\$ 358,062 30	\$ 374,351 21
 <i>Expenditure—</i>		
Travelling expenses.....	\$ 258 46	\$ 440 59
 Total revenue for branch.....	\$ 615,828 54	\$ 649,648 26
Total expenditure for branch.....	175,833 18	199,469 43
 Surplus.....	\$ 439,995 36	\$ 450,188 83

The total number of meters tested under the authority of the Electricity Inspection Act and the Gas Inspection Act was 416,009, an increase of 23,516 over the previous year and the increase in revenue amounted to \$17,540.90. There was a considerable increase in expenditure due to the purchase of several instruments to replace old ones and a general increase in the salaries of the entire staff and as a consequence there is a decrease in the surplus of \$6,026.49 as

compared with the previous year. The surplus for this year, which does not take into account rent, fuel, furniture and the salaries of the officers in the Ottawa laboratory, was \$76,268.21.

In order that a clear conception may be obtained of the increase in the work of the Electricity and Gas Inspection Services a chart has been prepared which shows at a glance the increase in the number of meters tested in the past fifteen years. It may be seen that the number of meters tested during 1928 is slightly more than double the number of meters tested in 1913. Curves number 1, 2 and 3 are for the Electricity Inspection Service and curves number 1a, 2a and 3a are for the Gas Inspection Service. Curve number 4 shows the total number of meters tested. Previous to 1920 no record was kept of new meters. Considerable information may be obtained from a study of these curves but the obtaining of same is left to those most interested.

For purposes of administration the Dominion of Canada is divided into twenty districts and three divisions. The districts are as follows: Charlottetown, in Prince Edward Island; Halifax, in Nova Scotia; St. John, in New Brunswick; Quebec, Three Rivers, Montreal, in Quebec; Ottawa, Belleville, Toronto, Hamilton, London, Sudbury, Fort William, in Ontario; Winnipeg, in Manitoba; Regina, in Saskatchewan; Calgary, Edmonton, in Alberta; Nelson, Vancouver, Victoria in British Columbia.

The three divisions are: (1) Eastern, which is composed of the districts in Prince Edward Island, Nova Scotia, New Brunswick, Quebec and Ontario with the exception of the district of Fort William. (2) Central, which is composed of the district of Fort William and the districts in Manitoba and Saskatchewan. (3) Western, which is composed of the districts in Alberta and British Columbia.

GAS INSPECTION SERVICE

The falling off in the gas inspection work during 1926-27 was more than balanced this year, the increase in the number of meters tested being 13,488. This increase is due to the increase in the number of new meters that were tested, there being 41,628 this year as compared with 27,305 last year.

The number of gas meters in use on March 31, 1928, on manufactured gas was 482,433, an increase of 19,937 over the previous year.

Manufactured gas continues to be used in increasing quantities. During the fiscal year just closed 16,052,836,000 cubic feet of gas were sold, as compared with 15,227,161,097 the previous year, an increase of 725,675,000 cubic feet.

The total production of natural gas has increased very rapidly during the past two years, 20,350,000,000 cubic feet having been sold, as compared with 17,863,000,000 cubic feet sold during 1926-27 and 13,000,000,000 during 1925-26.

The total number of meters measuring natural gas on March 31st, 1928, was 98,915.

ELECTRICITY INSPECTION SERVICE

The work connected with the Electricity Inspection Service continues to grow. There were 293,325 meters tested during the year, an increase of 10,028 over the previous year. The number of new meters tested increased from 85,946 to 95,496 and the total number of meters in service on March 31st, 1928, was 1,423,078, an increase of 97,415.

Applications for certificate of registration covering over 1,800 places in which electrical energy is sold were received and the certificates issued.

LABORATORIES

The work of the laboratories forms a very important part of the work of the Electricity and Gas Inspection Services. All instruments and apparatus

DEPARTMENT OF TRADE AND COMMERCE

ELECTRICITY AND GAS INSPECTION SERVICES

used for inspection work are sent to these laboratories regularly for test and calibration in order to ensure that the highest degree of accuracy may be maintained.

The laboratories at Vancouver and Winnipeg take care of the instruments in the Western and Central divisions respectively. The laboratory at Ottawa is the main laboratory to which everything of a special nature is referred and to which all meters are submitted for test and approval before they can be sold in Canada. The primary standards, consisting of Weston Cells and Standard Resistances of the best make, for which certificates from the National Physical Laboratory in London, England, have been secured, are kept in the Ottawa laboratory and the standards in the other two laboratories are compared with them periodically.

During the past year the following instruments were checked: For our own inspection service, 125 rotating standards, 54 wattmeters, 29 voltmeters and 28 ammeters. For outside companies, 27 rotating standards, 7 wattmeters, 9 volt meters and 7 ammeters. In addition to these 20 electric meters and 6 gas meters were submitted for approval tests.

EXPORTATION OF ELECTRICAL ENERGY

The number of kilowatthours produced for export was 1,674,856,007, an increase of 66,198,833 kilowatt hours.

As shown in the preceding statement the revenue received on account of the export duty amounted to \$373,676.21, an increase of \$16,254.32, and the expenditure was \$440.59, an increase of \$182.13. The increase in expenditure may be accounted for by the fact that a closer check was kept on the export meters.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

The Canadian National Committee of the International Electrotechnical Commission was represented by its chairman, Mr. John Murphy, Electrical Engineer of the Department of Railways and Canals, at the General Conference held at Bellagio, Italy, last September. To this conference Great Britain sent forty delegates, United States twenty-one, France seventeen and Germany fifteen. Australia and Canada were represented by one delegate each.

The head office of the International Electrotechnical Commission is in London, England. The National or Home Committees carry out the work assigned to them at the plenary meetings or conferences of the parent body and their reports are considered and amended or approved at plenary meetings such as that mentioned in the previous paragraph.

To assist in carrying on the work of the commission the Department of Trade and Commerce contributed £75. This contribution was made through the Electricity and Gas Inspection Branch.

STAFF

During the past fifteen years the personnel of the Electricity and Gas Inspection staff has changed considerably. No less than forty-eight persons are employed now who were not on the staff in 1913. Part time inspectors have been replaced by full time inspectors and the work to-day, although demanding greater accuracy and a wider knowledge of measuring equipment, is being performed better and more efficiently than ever before.

During the past year the class of senior inspector was created for the benefit of the inspectors doing the more advanced work in the larger offices, and as a result fourteen inspectors were promoted to this class. In addition two inspectors were promoted to the position of district inspector and four permanent appointments and one temporary appointment were made. Two resignations were accepted and one death occurred.

APPENDIX B

STANDARDS, SURVEY AND APPEAL BOARDS

PART 1.—THE GRAIN STANDARDS BOARDS

1. *Western*.—K. Campbell, Vancouver, B.C. (Chairman); C. S. Langille (Vice-Chairman), Winnipeg, Man.; T. J. Harrison, Winnipeg, Man.; Geo. Serls, Winnipeg, Man.; H. Sellers, Winnipeg, Man.; Jas. Carson, Winnipeg, Man.; W. A. Matheson, Winnipeg, Man.; C. N. Bell, Secretary, Winnipeg, Man.; Samuel Larcombe, Birtle, Man.; Donald MacRae, Regina, Sask.; Hon. C. M. Hamilton, Regina, Sask.; J. H. Robson, Leney, Sask.; A. E. Wilson, Indian Head, Sask.; W. J. Rutherford, Saskatoon, Sask.; J. Wellbelove, Estan, Sask.; T. O. King, Raymond, Alta.; W. H. Fairfield, Lethbridge, Alta.; Geo. Bennett, Manville, Alta.; J. Gillespie, Edmonton, Alta.; R. A. Thompson, Lynden, Ont.; C. B. Watts, Toronto, Ont.; H. Sellers, Fort William, Ont.; R. E. Lee, Vancouver, B.C.; Wm. Mohler, Strome, Alta.; W. W. Cumming, Calgary, Alta.

2. *Eastern*.—Toronto: H. H. Goode, F. W. Hay, A. O. Hogg, R. I. Braiden, H. L. Rice, C. B. Watts, S. Hisey, C. W. Band, Murray Brown, T. D. Duncombe, J. S. Jeffrey, W. H. McCarthy, F. D. Tolchard, Secretary.

Montreal: H. D. Dwyer, N. Wight, A. G. Burton, A. A. Bowen, W. MacDonald, F. A. Heywood, H. C. Beatty, Secretary.

GRAIN STANDARDS BOARDS

MONTREAL, QUE.

COPY OF THE MINUTES OF THE MEETING OF THE EASTERN GRAIN STANDARDS BOARD HELD SEPTEMBER 23, 1927

Present: N. Wight, chairman; W. MacDonald, A. Geo. Burton.

The board fixed the standard for the following grades of United States grain, samples of which were deposited with the Inspector and myself:—

No. 2 Amber Durham (temporary standard).

No. 2 Hard Winter Wheat (permanent standard for season's crop).

The meeting adjourned.

COPY OF THE MINUTES OF THE MEETING OF THE EASTERN GRAIN STANDARDS BOARD HELD OCTOBER 4, 1927

Present: N. Wight, chairman; A. Geo. Burton, H. D. Dwyer.

The board fixed the standards for the following grades of United States grain, samples of which were deposited with the inspector and myself:—

No. 1 Northern Spring Wheat.

No. 2 Northern Spring Wheat.

The meeting adjourned.

MONTREAL, QUE.

COPY OF THE MINUTES OF THE MEETING OF THE EASTERN GRAIN STANDARDS
BOARD HELD OCTOBER 17, 1927

Present: N. Wight, Chairman; A. Geo. Burton, Wm. MacDonald.

The board fixed the standards for the following grades of United States grain, samples of which were deposited with the Inspector and myself:—

No. 2 Rye Western.

No. 2 Red Winter Wheat.

No. 2 Mixed Durum Wheat.

No. 2 Red Durum Wheat.

No. 2 Amber Durum Wheat.

The meeting adjourned.

MONTREAL, QUE.

COPY OF THE MINUTES OF THE MEETING OF THE EASTERN GRAIN STANDARDS
BOARD HELD NOVEMBER 14

Present: Leslie H. Boyd, Chairman; M. Snow, Jas. Robinson, representing the Board of Grain Commissioners; N. Wight, A. Geo. Burton; H. D. Dwyer, E. S. Jaques; Wm. MacDonald, representing the Corn Exchange Association, together with A. A. Bowen, Inspector, and H. C. Beatty, Secretary.

Mr. Boyd explained that the reason for coming to visit the Standards Board was found in a letter from Mr. Jas. D. Fraser, under date October 31, the contents of which were forwarded to the members of the Standards Board. After some discussion the whole question was centred in the matter of dockage. Finally it was understood that the Standards Board would set the standard for seaboard inspection of Durum Wheat as follows: "All such grain containing foreign matter under two per cent will be free of dockage; all such grain containing foreign matter from two per cent up to two and one-quarter per cent inclusive, a dockage of one-half per cent will be set; all such grain containing foreign matter over two and one-quarter per cent and not exceeding two and one-half per cent a dockage of one per cent will be set. This arrangement to become effective immediately."

The Chairman of the Board of Grain Commissioners asked the secretary to write to Mr. T. H. Reeves and advise him that, owing to his inability to attend meetings of the Grain Survey Board, he had been replaced by Mr. Alfred Chaplin, also to notify Mr. Chaplin; and that Mr. E. S. Jaques, at his own request, be relieved of his duties. Mr. Robert Hume was appointed in place of Mr. Jaques.

The meeting adjourned.

(Sgd.) H. C. BEATTY,
Secretary.

TORONTO, ONT.

COPY OF THE MINUTES OF THE MEETING OF THE EASTERN GRAIN STANDARDS
BOARD HELD NOVEMBER 1, 1927

Present: Messrs. Murray Brown, J. Carrick, F. W. Hay, S. Hisey, A. O. Hogg, H. L. Rice and C. B. Watts.

Chairman.—On motion, Mr. Samuel Hisey was appointed chairman of the meeting.

Minutes.—The minutes of the meeting of the Grain Standards Board held November 5, 1926, were read and confirmed.

Commercial Grades.—Samples of wheat collected from various parts of the province were examined with a view to setting the Commercial Grades for the season 1927-28. It was agreed that one Standard only, No. 1 Commercial Wheat, should be set, and it was moved by Mr. F. W. Hay and seconded by Mr. Murray Brown that the sample as defined in the minutes of the meeting of the board held on November 5, 1926, be confirmed, namely: No. 1 Commercial Wheat shall be either red, white, or mixed winter or spring wheat, reasonably clean, shall weigh not less than 56 pounds to the bushel, shall allow a maximum of 10 per cent sprouted grain, and shall not contain a greater percentage of smut than the standard sample—Carried.

On motion, Messrs. A. A. Bowen and W. J. MacNeill, Grain Inspectors, were requested to prepare a sample in accordance with the resolution adopted.

The sample of No. 1 Commercial Wheat with sprouts and smut, as prepared by the Grain Inspectors, was examined and it was moved by Mr. H. L. Rice, seconded by Mr. C. B. Watts, that the sample prepared by Messrs. A. A. Bowen and W. J. MacNeill, Grain Inspectors, and submitted to the Grain Standards Board, be accepted as the Standard for No. 1 Commercial Wheat—Carried.

The meeting then adjourned.

F. D. TOLCHARD, *Secretary*, S. HISEY,

WINNIPEG, MAN.

COPY OF THE MINUTES OF THE MEETING OF THE WESTERN GRAIN STANDARDS BOARD HELD ON OCTOBER 9 AND 10, 1928

Present: Mr. K. Campbell (Chairman); Mr. C. S. Langille (Vice-Chairman); Prof. T. J. Harrison; Messrs. S. Lacombe, D. MacRae, A. E. Wilson; Dean Rutherford; Messrs. J. H. Robson, J. Wellbelove, T. A. King, Geo. Serls, W. H. Fairfield, Geo. Bennett, J. Gillespie, C. B. Watts, H. Sellers (Fort William), Mr. H. Sellers (Winnipeg), Wm. Mohler, W. W. Cumming, Jas. Carson, W. A. Matheson, and C. N. Bell, Secretary.

Members assembled at 10 a.m. October 9. Minutes of the meeting held October 24 and 25, 1927, were read and confirmed.

A general interchange of views on the condition and character of the grain included in the crop of Western Canada this season then took place. Mr. Jas. D. Fraser, Chief Grain Inspector, and Dr. Birchard, Chemist, answering many inquiries for information.

Moved by W. A. Matheson and A. E. Wilson, "That the Board of Grain Commissioners be recommended that the Hon. W. R. Motherwell, Minister of Agriculture, be appointed to membership in this Board"—Carried unanimously.

Moved by C. B. Watts and A. E. Wilson, "That the Board of Grain Commissioners be recommended to place in membership on this Standards Board, the sitting Minister of Agriculture for the Dominion, and the sitting Ministers of Agriculture for the provinces of Manitoba, Saskatchewan and Alberta."—Carried unanimously.

The members then adjourned to the room containing the grain samples of the crop as procured by the Chief Grain Inspector, and during the remainder of October 9 and on October 10, prepared samples for acceptance as standards.

In each case by unanimous vote, the standards for Commercial Grades, Four, Five and Six wheat were selected and established.

The following resolutions were then passed by unanimous vote of all present, viz:—

1st. "That all barley not good enough to grade as No. 4 be graded as 'Feed' in the discretion of the inspector."

2nd. "That all wheat not good enough to grade as No. 6 be graded 'Feed' in the discretion of the inspector.

3rd. "A committee be, and is hereby appointed under the provisions of the Canada Grain Act, to meet, and if it proves to be necessary on account of climatic conditions, to select and establish other Commercial Grades of grain. The members of this committee to be the chairman, vice-chairman and all members of this board resident in Winnipeg."

4th. "Moved by George Bennett and J. H. Robson, That the Board of Grain Commissioners be requested to provide that in addition to the railway and sleeping car fare, members of the Western Grain Standards Board be allowed fifteen dollars (\$15) per diem allowance to cover maintenance expenses, while en route, and during the time taken in selecting the grain standards."—Carried unanimously.

The meeting adjourned.

(Sgd.) C. N. BELL,
Secretary.

CHAPTER II

REPORT OF MR. J. D. FRASER, CHIEF GRAIN INSPECTOR

WINNIPEG, MAN., November 1, 1928.

The Secretary,
Board of Grain Commissioners,
Fort William, Ont.

DEAR SIR,—Herewith is my annual report for the crop year ending July 31, 1928.

WESTERN INSPECTION DIVISION

The crop of the year 1927 was the third largest produced in the Western Inspection Division, being surpassed only by the crop of 1915 by 769 cars, and by the crop of 1923 by 3,452 cars.

The ripening and harvesting of the crop was much later than usual, and while the cutting was practically all completed during September, the harvesting and threshing operations were frequently and seriously delayed during September and the first part of October by rain and snow, which not only delayed operations but caused a very large proportion of the crop to be graded as No Grade Tough or Damp, on account of excess moisture. Better weather conditions during the later part of October, dried out much of the grain and substantially reduced the proportion of tough and damp grain. About 75 per cent of the threshing was completed by the end of October. Rain and snow during November made it impossible to complete the threshing before winter set in, with the consequence that quite a large quantity of grain had to be left in stook in the fields and threshed in the spring of 1928. Rust in Manitoba and parts of Saskatchewan, and frost in parts of Saskatchewan and Alberta, together with excess moisture, materially lowered the quality and grade of a very large proportion of the crop of 1927.

The total inspections for the crop year of 1927-28 in the Western Division, amounted to 353,253 cars, as against 305,903 cars for the previous year.

The total inspections from August 1, 1927, to July 31, 1928, are made up as follows:—

	Cars		Cars
Wheat.....	300,879	Mixed grain.....	860
Oats.....	19,936	Buckwheat.....	8
Barley.....	19,065	Speltz.....	—
Flax.....	3,481	Corn.....	5
Rye.....	8,892	Screenings.....	127
Total.....			353,253

The grades of wheat show as follows:—

	Cars	Percentage
1 Hard, 1 Northern, 2 Northern, 3 Northern.....	92,606	30.78
No. 4, No. 5 and No. 6.....	60,381	20.07
No Grade Tough or Damp.....	130,428	43.34
Other grades.....	4,754	1.58
Amber Durum—All grades.....	11,342	3.77
White Spring—All grades.....	974	.32
Kota—All grades.....	63	.03
Winter—All grades.....	234	.08
Red Durum—All grades.....	97	.03
	300,879	100%

The grades of oats show as follows:—

	Cars	Percentage
No. 1, 2 and 3 Canada Western.....	4,224	21.19
Ex. 1 Feed, 1 Feed and 2 Feed.....	5,458	27.38
No Grade Tough or Damp.....	10,151	50.92
Other grades.....	103	.51
	<u>19,936</u>	<u>100%</u>

The grades of barley show as follows:—

	Cars	Percentage
No. 3 Extra, No. 3 and 4 Canada Western.....	4,864	25.51
Feed and Rejected.....	533	2.80
No Grade Tough or Damp.....	13,668	71.69
Other grades.....	—	—
	<u>19,065</u>	<u>100%</u>

The grades of flax seed show as follows:—

	Cars	Percentage
No. 1 Northwestern and 2 Canada Western.....	2,364	67.91
No. 3 Canada Western.....	287	8.25
No Grade Tough or Damp.....	791	22.72
Other grades.....	39	1.12
	<u>3,481</u>	<u>100%</u>

The grades of rye show as follows:—

	Cars	Percentage
No. 1, 2 and 3 Canada Western.....	4,170	46.90
No Grade Tough or Damp.....	4,222	47.48
Other grades.....	500	5.62
	<u>8,892</u>	<u>100%</u>

The number of cars of grain inspected at the various inspection points in the Western Division were as follows:—

	Cars		Cars
Winnipeg.....	235,410	Medicine Hat.....	3,480
Calgary.....	40,784	Superior.....	836
Edmonton.....	36,337	Vancouver.....	1,755
Moose Jaw.....	20,644	Prince Rupert.....	261
Saskatoon.....	4,746		
Total.....			<u>353,253</u>

A reinspection was called on 84,103 cars, or 23.80 per cent of total inspections, with results as follows:—

	Cars	Percentage	Percentage of Total Inspections
Left as graded.....	73,279	87.13	20.75
Grades raised.....	7,934	9.43	2.24
Grades lowered.....	825	.98	.23
Dockage raised.....	790	.94	.22
Dockage lowered.....	1,275	1.52	.36
	<u>84,103</u>	<u>100%</u>	<u>23.80%</u>

An appeal was called at Winnipeg on 1,994 cars with results as follows:—

	Cars	Percentage
Left as graded originally.....	1,842	92.37
Grades raised.....	131	6.57
Grades lowered.....	21	1.05
Dockage raised.....	nil	—
Dockage lowered.....	nil	—
	<u>1,994</u>	<u>100%</u>

An appeal was called at Calgary on 1,639 cars, with results as follows:—

	Cars	Percentage
Left as graded originally.....	1,296	79·07
Grades raised.....	241	14·70
Grades lowered.....	23	1·40
Dockage raised.....	5	·31
Dockage lowered.....	74	4·52
	<u>1,639</u>	<u>100%</u>

An appeal was called at Edmonton on 1,485 cars, with results as follows:—

	Cars	Percentage
Left as graded originally.....	1,167	78·58
Grades raised.....	163	10·98
Grades lowered.....	30	2·02
Dockage raised.....	48	3·24
Dockage lowered.....	77	5·18
	<u>1,485</u>	<u>100%</u>

Corn.....	94,766-44	Corn.....	97,093-46

Yours truly,

(Sgd.) W. T. TODD,
Deputy Registrar.

CHAPTER IV

REPORT OF MR. J. G. WHITE, CHIEF WEIGHMASTER

The Secretary,
Board of Grain Commissioners,
Fort William, Ontario.

DEAR SIR,—Herewith is my annual report for the crop year ending July 31, 1928.

ELEVATORS

The annual report covering the work of the Government weighing service presents little variation from year to year except as showing the increasing quantities of grain officially weighed into, and out of the elevators, and the continued expansion of elevator equipment and storage to keep pace with requirements for the more expeditious handling of the crop and to prevent as far as possible any congestion in the flow of grain from the producers to the sea board.

The report for the crop year ending July 31, 1927, showed thirty-two (32) elevators at Fort William and Port Arthur, six (6) public terminal and twenty-six (26) private, with a total storage capacity of seventy-one million seven hundred and five thousand (71,705,000) bushels.

During the crop year ending July 31, 1928, there have been thirty-three (33) elevators in operation at the Head of the Lakes, five (5) public and twenty-eight (28) private and hospital, which with additions to existing plants brings the total storage to eighty-three million, seven hundred and eighty thousand (83,780,000) bushels, an increase of 12,075,000 bushels over last year, thus enabling Fort William and Port Arthur to maintain their outstanding position as the largest grain handling and storage ports on the continent.

There has also been a very marked increase in the quantities of grain weighed into and out of the elevators at Vancouver. During the crop year under review there was weighed in and out over one hundred and eighty million (180,000,000) bushels of grain against about eighty and a half million (80,500,000) bushels in the previous year.

Due to the increase in elevators and the amount handled, it was necessary to increase the weighing staff at Vancouver in order to meet the demands of the trade.

The equipment for weighing and transferring grain in the elevators has been kept in good condition.

SCALES

There are 199 scales of varying capacity up to 75 tons in constant use in the elevators at Fort William and Port Arthur, over which approximately 695,984,250 bushels of grain has been weighed during the crop year ending July 31, 1928, and notwithstanding the enormously heavy duty to which they have been subjected, they have (with the constant services of an expert scale mechanic) been kept in good repair to meet the requirements for official weighing.

In addition to the above there are 91 scales in use in the Government Interiors at Moose Jaw, Saskatoon, Calgary, Edmonton, Prince Rupert, and the terminal elevators at Vancouver, or a total of 290 scales which have been subjected to a thorough inspection twice during the year. The semi-annual test

was made to insure the continued accuracy of the scales and for which no charge was made, and the regular annual inspection as provided for by the Weights and Measures Act was carried out—certificates of verification were issued and fees collected and remitted to the following district inspectors:—

Mr. J. B. Attridge, Winnipeg.....	\$ 2,283 75
Mr. E. B. Lorrimer, Regina.....	79 60
Mr. W. Wallace, Saskatoon.....	77 60
Mr. A. E. H. Cable, Calgary.....	75 30
Mr. J. McLeod, Edmonton.....	68 80
Mr. A. H. Dutton, Prince Rupert.....	68 85
Mr. A. H. Dutton, Vancouver.....	542 60
	<u>\$ 3,196 50</u>

(See detailed statement attached.)

EASTERN DIVISION SCALE INSPECTION

The inspection of scales in the elevators at Goderich, Sarnia, Owen Sound, Port McNicoll, Depot Harbour, Midland, Tiffin, Port Colborne, Peterborough, Montreal, Quebec, St. John, and Halifax was carried out by Mr. A. A. Bowen, Inspector in charge at Montreal.

LEAK AND SEAL INSPECTION

Following is a report of the work of the Leak and Seal Inspectors in the railway yards at Winnipeg and Transcona for the year ending July 31, 1928:—

	Cars inspected	Cars leaking and defective	Per cent.
Canadian Pacific Railway yards.....	152,176	45,449	29.1
Canadian National Railway yards.....	71,813	13,055	18.1
Grand Trunk Pacific yards.....	53,108	8,415	15.8
Total.....	<u>277,097</u>	<u>66,919</u>	<u>Avg. 21</u>

SUMMARY

Cars inspected.....	277,097
Cars leaking and defective.....	66,919
Condition reports completed for the grain trade.....	41,723

In completing the above large number of condition reports, their own forms partly filled in are supplied by the different companies, and a great amount of clerical work is required in the Weighmaster's office in searching the records, checking entries already on the forms, and supplying further information required, such as date of inspection, kind and grade of grain, seal record and condition at inspection, seal record at destination, date and where unloaded, depth of load and weight per bushel, outturn weight and condition of car at unloading, making the condition report practically a complete record of the car on that particular trip.

As condition reports assist shippers in the collection of claims for shortages, arrangements have been made to charge a fee for supplying these records.

WEIGHING

Following are the quantities of grains which were weighed into and out of the elevators at Fort William, Port Arthur and western points during the crop year ending July 31, 1928:—

SHORTAGES—CARS

The primary object of the Government grain weighing service is for the protection of both the seller and the buyer, thus making it a very vital factor in the grain trade. As a matter of fact all the business in the terminals is based on correct weights, and to this end the scales and weighing equipment in the terminals are under constant observation and kept in first-class condition and every care is taken to get accurate weights and maintain confidence in the validity of the government weight certificates.

During the crop year ending July 31, 1928, there were 30,508 leak reports sent out to shippers and only 218 complaints came to us direct; investigations showed that the greater number of the latter were due to leaking cars, and where evidence was found indicating that a mix or mistake had occurred at unloading, adjustments were secured or recommended for 5,012 bushels, including leaks.

Considering that 446,846 cars were weighed during the crop year, the number of complaints of shortages on the outturns are remarkably small and indicates that the Government grain weighmen have exercised close and careful supervision over the weighing.

SHORTAGES—VESSELS

Cargoes loaded at Fort William and Port Arthur for the crop year, and unloaded at Canadian ports reported shortages varying from 2 pounds to 40 pounds per 1,000 bushels on wheat, an average of 18 pounds per 1,000 bushels, and on coarse grain 37.5 pounds per 1,000 bushels. Conditions prevalent at Canadian ports show little variation from previous years, some elevators continue to report outturns with an average shortage of only 7 pounds per 1,000 bushels and others with an average shortage of 34 pounds per 1,000 bushels on wheat.

Outturns on Canadian cargoes unloaded at American ports show from 5 pounds over to 22 pounds short per 1,000 bushels, or an average shortage of 5 pounds per 1,000 bushels on wheat, and the average shortage on coarse grains was 34 pounds per 1,000 bushels.

On total lake shipments of 253,734,822 bushels of wheat to Canadian and American ports during the crop year ending July 31, 1928, the general average shortage was reported as 5 pounds per 1,000 bushels, which remarkably low average would apparently be due to overages reported on a number of cargoes unloaded at American ports.

There were a number of serious shortages reported on the outturn of cargoes, but a recheck showed the loading weights to be correct, and on a careful investigation at the loading elevators, nothing was found to cause a shortage at loading.

ANNUAL WEIGH-UP

Stocks in the five (5) public terminals at the head of the lakes were heavy in July, 1928, and to avoid unnecessary handling it was found advisable to allow them to be reduced by shipment before commencing the weigh-up, which was carried on at intervals during August and completed on the 31st, some three and a half million bushels being weighed and transferred and the usual itemized statements of the correct quantities of each grade in store were prepared and forwarded to the board.

The inspection of scales and the annual audit of all grain in store at the Government interior elevators at Moose Jaw, Saskatoon, Calgary, Edmonton, and the Terminals at Vancouver was made in August and a report of the correct quantities and grades in store was prepared and sent to the board.

At their own request, a number of private elevators were weighed-up and for this service a fee of 50 cents per 1,000 bushels was charged.

ORGANIZATION

Owing to the increase in elevators and expansion of trade, it was necessary to increase the weighing staff to take care of the work. The men have shown themselves competent and loyal, and under the supervision of Mr. J. T. Hollinshead, Assistant Chief Weighmaster at the head of the lakes, Mr. W. Adams, Weighmaster at Winnipeg, and Mr. S. M. Capon, Weighmaster at Vancouver, they have carried out their duties efficiently and their work has been satisfactory to the trade wherever they have been stationed.

J. G. WHITE,

Chief Weighmaster.

January 2, 1929.

CHAPTER V

"A"—REPORT OF LICENSING AND BONDING FOR THE SEASON
OF 1927-1928

During the license year of 1927-28, commencing September 1, 1927, and ending August 31, 1928, 254 firms and individuals applied for licenses as required by the provisions of the Canada Grain Act.

Five thousand and ten applications were received, an increase of 341 over the previous season; 9 of the applications were withdrawn for various reasons, and 5,001 licenses were issued.

APPLICATIONS RECEIVED AND LICENSES ISSUED

Kind of License	Applications		Licenses issued
	Received	Withdrawn	
Track buyers.....	85	1	84
Commission merchants.....	92		92
Primary grain dealers.....	3		3
Public terminal elevators.....	11		11
Private elevators.....	81	1	80
Public elevators.....	18		18
Manufacturing elevators.....	16		16
Elevator space.....	1		1
Country elevators.....	4,703	7	4,696
	5,010	9	5,001

At August 31, 1928, there were 4,856 elevators in the Western Inspection Division, with a total storage capacity of 265,193,350 bushels, an increase since August 31, 1927, of 309 elevators, with increased storage of 21,307,150 bushels.

ELEVATOR STORAGE CAPACITY—WESTERN INSPECTION DIVISION—AS AT
AUGUST 31, 1928.

Kind of Elevator	Number of Elevators	Capacity
		Bushels
Country elevators.....	4,751	156,947,200
Public terminal elevators.....	10	39,025,000
Private elevators.....	78	66,735,000
Manufacturing elevators.....	17	2,486,150
	4,856	265,193,350

The records of the board show that 78 of the 4,856 country elevators, with an approximate storage capacity of 2,340,000 were not in operation at any time during the season.

Of the 10 public terminal elevators 5 are located at the head of the lakes, with total storage capacity of 24,925,000 bushels; 4 at interior points, capacity 12,000,000 bushels; and 1 at Vancouver, with storage capacity of 2,100,000 bushels.

**PUBLIC TERMINAL AND PRIVATE ELEVATORS IN THE WESTERN INSPECTION
DIVISION, AS AT AUGUST 31, 1928**

Location	Public Terminal Elevators		Private Elevators	
	No.	Capacity	No.	Capacity
Fort William.....	2	7,750,000	15	25,290,000
Port Arthur.....	3	17,175,000	12	22,325,000
	5	24,925,000	27	47,615,000
Interior Points.....	4	12,000,000	39	11,725,000
Pacific coast.....	1	2,100,000	12	7,395,000
Totals.....	10	39,025,000	78	66,735,000

In the Eastern Inspection Division, the only elevators under the jurisdiction of the board are the public elevators, of which there are 27, with a total storage capacity of 47,610,000. Fifteen of these elevators are located in Ontario, with capacity of 28,600,000 bushels; 7 at Montreal and Quebec, storage 15,310,000 bushels; and 5 at the Atlantic coast, in the Maritime Provinces, with storage capacity of 3,700,000 bushels.

The appended statements shows:—

Licenses issued during the past 17 years.

Comparative summary of elevators, together with storage capacities, from 1911-12 to 1927-28.

Summary of elevators in the Western and Eastern Inspection Divisions, as at August 31, 1928.

"B"—LOADING PLATFORMS

During the season of 1927-28 the board dealt with a number of petitions for the erection and extension of grain loading platforms.

At May 1, 1928, there were loading platforms at 2,273 points in Western Canada, at which farmers could load grain, without putting such grain through country elevators, into 5,574 cars simultaneously.

"C"—CARS OUT OF TURN

By virtue of section 192 of the Canada Grain Act, the board is accorded certain discretionary powers in connection with the supplying of cars for the shipment of grain at country points. During the year 1927-28 the Board ordered one hundred and thirty (130) cars to be supplied out of turn for the relief of elevators in danger of collapse, for the shipment of seed grain, for grain urgently required for feeding and milling purposes, and for grain out of condition or insufficiently housed.

"D"—COMPLAINTS

During the year ending August 31, 1928, the board dealt with four hundred and thirty-eight (438) complaints relating to inspection and weighing of grain, shipments ex country elevators, etc.

CHAPTER VI

MAXIMUM TARIFF OF PUBLIC TERMINAL ELEVATOR CHARGES
AT FORT WILLIAM AND PORT ARTHUR TERMINALSFOR THE YEAR ENDING AUGUST 31, 1929. EFFECTIVE
SEPTEMBER 1, 1928

Subject to the capacity of the elevator and the nature of its equipment, shipments will be received upon the following terms and conditions, and under the provisions of the Canada Grain Act, 1925.

ELEVATION CHARGES

On straight grade, tough, damp, or wet grain, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days: flax, 2 cents per bushel; rye, $1\frac{1}{2}$ cents per bushel; wheat, oats and barley, $1\frac{1}{4}$ cents per bushel.

All tough, damp, wet condemned, heating, heated or fireburnt grain may always be refused. If received and stored, it will be only at the owner's risk of deterioration. All damp grain and tough and damp flax will be dried without notice as soon after unloading as facilities will permit.

On mixed grains handled as mixtures, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, two cents (2c.) per hundred pounds.

On screenings, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, three cents (3c.) per hundred pounds.

STORAGE CHARGES

On straight grade and tough grain, not otherwise specified, including insurance against fire for each succeeding day or part thereof after the first fifteen days, one-thirtieth of one cent ($\frac{1}{30}$ c.) per bushel.

On mixed grain handled as mixtures, storage, including insurance against fire for each succeeding day or part thereof after the first fifteen days, two-thirtieths of one cent ($\frac{2}{30}$ c.) per hundred pounds.

On screenings, storage, including insurance against fire for each succeeding day or part thereof after the first fifteen days, one-tenth of one cent ($\frac{1}{10}$ c.) per hundred pounds.

SCREENINGS

On wheat carrying a dockage of three per cent (3 per cent) or more, after deducting one-half of one per cent ($\frac{1}{2}$ per cent) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On oats and barley carrying a dockage of five per cent (5%) or more, after deducting one half of one per cent ($\frac{1}{2}$ %) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On rye and flax carrying a dockage of five per cent (5%) or more, after deducting one per cent (1%) of the gross weight of the car to cover outward dockage and waste in cleaning, a return will be made for the balance of the screenings.

If disposition of screenings covered by outstanding returns is not received within thirty (30) days from the date of unloading, they may be disposed of for account of whom it may concern.

The holder of warehouse receipts or shut-outs covering dockage shall be entitled to receive such average quality of screenings as shall be determined by the Inspection Department in accordance with sample tests which shall be made in such manner and when deemed necessary by said department.

CLEANING CHARGES

On wheat, for removal of dockage, other than commercial grain, there will be cleaning charges as follows:—

Dockage under 3 per cent, no charge.

Dockage 3 per cent to 5 per cent inclusive, one-half cent ($\frac{1}{2}$ c.) per bushel.

Dockage $5\frac{1}{2}$ per cent to 10 per cent, one cent (1c.) per bushel.

Dockage over 10 per cent, one and one-half cent ($1\frac{1}{2}$ c.) per bushel.

On wheat carrying a return of other grain of commercial value, except flax, computed on gross weight of car, an additional separating charge of one cent (1c.) per bushel.

On wheat carrying a return of flax, an additional separating charge computed on gross weight of car, two cents (2c.) per bushel.

On oats, barley and rye, for removal of dockage, other than commercial grain, there will be cleaning charges as follows:—

On all cars carrying a dockage of—

Less than 5 per cent, no charge.

Five per cent to 10 per cent inclusive, one cent (1c.) per bushel.

Over 10 per cent, one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

On oats, barley and rye carrying a return of flax computed on gross weight of car, an additional separating charge of two cents (2c.) per bushel.

Flax cleaned from any other grain containing broken particles that cannot be separated, shall be classified as "Flax and Broken Wheat."

On flax, for removal of dockage, other than commercial grain, there will be cleaning charges as follows:—

On flax carrying a dockage of—

Less than 5 per cent, no charge.

Five per cent to 10 per cent inclusive, one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

Over 10 per cent, two cents (2c.) per bushel.

On flax carrying a return of other grain of commercial value, computed on gross weight of car, an additional separating charge of one cent (1c.) per bushel.

DRYING CHARGES

On tough grain, three cents (3c.) per bushel.

On damp or wet grain, five cents (5c.) per bushel.

ALLOWANCE FOR INVISIBLE LOSS AND SHRINKAGE ON ALL CARS

Wheat..	30 pounds per car.
Oats..	50 "
Barley..	50 "
Mixed Grain..	50 "
Rye..	56 "
Flax..	56 "

ALL CHARGES

All charges for cleaning, drying or other treatment will be computed on gross weight of car, for elevation and storage on net weights. All charges accruing after issue of initial completed out-turn and expense bill will follow the grain. All charges whatsoever must be paid before shipment.

BULKHEADS

On bulkheads for their removal and other additional expense in handling and unloading car, five dollars (\$5) per bulkhead.

UNLOADING SACKED GRAIN

A charge of five cents (5c.) per sack will be made for unloading all sacked grain.

PREPARING CARS FOR LOADING

When paper is used in preparing cars, there will be a charge of four dollars (\$4) for each car.

UNSPECIFIED GRAIN

Unspecified grain will only be received, stored and treated subject to special charges to be agreed upon at the time, subject to the approval of the Board of Grain Commissioners.

Upon the application to the board of any public terminal elevator, the above tariff may be reduced insofar as that elevator is concerned, but such reduced charges must apply to all grain received at such elevator during the crop year 1928-29.

This tariff of rates is published by the Board of Grain Commissioners for Canada in accordance with section 127 of the Canada Grain Act and shall become effective as from September 1, 1928.

BOARD OF GRAIN COMMISSIONERS FOR CANADA,

F. J. RATHBONE,
Secretary.

FORT WILLIAM, ONT., September 4, 1928.

MAXIMUM TARIFF CHARGES—GOVERNMENT INTERIOR TERMINAL ELEVATORS AT SASKATOON, MOOSE JAW, CALGARY AND EDMONTON

FOR THE YEAR ENDING AUGUST 31, 1929, EFFECTIVE SEPTEMBER 1, 1928

Subject to the capacity of the elevator and the nature of its equipment, shipments will be received upon the following terms and conditions, and under the provisions of the Canada Grain Act, 1925, and amendments thereto.

ELEVATION CHARGES

On straight grade, tough, damp or wet grain, not otherwise specified, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, one cent (1c.) per bushel.

All tough, damp, wet, condemned, heating, heated or fire-burnt grain may always be refused. If received and stored, it will be only at the owner's risk of deterioration and under special contract. Except that from November first

to April first tough grain will be received and stored under the terms and conditions applying to straight grade grain as provided in Sections 130 to 139 Canada Grain Act.

On mixed grains handled as mixtures, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, one and one-half cents ($1\frac{1}{2}$ c.) per hundred pounds.

On screenings, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, three cents (3c.) per hundred pounds.

On grain unloaded from wagons, or teams, receiving, elevating, cleaning, shipping, insurance against fire, storage for the first fifteen days, one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

STORAGE CHARGES

On straight grade and tough grain, not otherwise specified, including insurance against fire for each succeeding day or part thereof, after the first fifteen days, one-sixtieth of one cent ($\frac{1}{60}$ c.) per bushel.

On mixed grain handled as mixtures, storage, including insurance against fire for each succeeding day or part thereof, after the first fifteen days, one-thirtieth of one cent ($\frac{1}{30}$ c.) per hundred pounds.

On screenings, storage, including insurance against fire for each succeeding day or part thereof, after the first fifteen days, one-tenth of one cent ($\frac{1}{10}$ c.) per hundred pounds.

SCREENINGS

On wheat carrying a dockage of three per cent (3%) or more, after deducting one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On oats and barley carrying a dockage of five per cent (5%) or more, after deducting one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On rye and flax carrying a dockage of five per cent (5%) or more, after deducting one per cent (1%) of the gross weight of the car to cover outward dockage and waste in cleaning, a return will be made for the balance of the screenings.

If disposition of screenings covered by outstanding returns is not received within thirty (30) days from the date of unloading, they may be disposed of for account of whom it may concern.

The holder of warehouse receipts or shut-outs covering dockage shall be entitled to receive such average quality of screenings as shall be determined by the Inspection Department in accordance with sample tests which shall be made in such manner and when deemed necessary by said department.

CLEANING CHARGES

On wheat, when the dockage contains no other grain of commercial value, there will be cleaning charges as follows:—

Dockage under 3 per cent, no charge.

Dockage 3 per cent to 5 per cent inclusive, $\frac{1}{2}$ c per bushel.

Dockage $5\frac{1}{2}$ per cent to 10 per cent inclusive, 1c. per bushel.

Over 10 per cent, $1\frac{1}{2}$ c. per bushel.

On wheat carrying a return of other grain of commercial value, except flax, computed on gross weight of car, an additional separating charge of one cent (1c.) per bushel.

On wheat carrying a return of flax, an additional separation charge computed on gross weight of car, two cents (2c.) per bushel.

On oats, barley and rye, when the dockage contains no other grain of commercial value, there will be cleaning charges as follows:—

On all cars carrying a dockage of,—

Less than 5 per cent, no charge.

5 per cent to 10 per cent inclusive, 1c. per bushel.

Over 10 per cent, 1½c. per bushel.

On oats, barley and rye carrying a return of flax, computed on gross weight of car, an additional separating charge of two cents (2c.) per bushel.

Flax cleaned from any other grain containing broken particles that cannot be separated shall be classified as flax and broken wheat.

On flax, when the dockage contains no other grain of commercial value, there will be the following cleaning charges:—

On flax carrying a dockage of,—

Less than 5 per cent, no charge.

From 5 per cent to 10 per cent inclusive, 1½c. per bushel.

Over 10 per cent, 2c. per bushel.

On flax carrying a return of other grain of commercial value, computed on gross weight of car, an additional separating charge of one cent (1c.) per bushel.

DRYING CHARGES

On tough grain, three cents (3c.) per bushel.

On damp or wet grain, five cents (5c.) per bushel.

ALLOWANCE FOR INVISIBLE LOSS AND SHRINKAGE

On all grain received, deductions from the gross weight of each car to cover invisible loss and shrinkage in handling will be made as follows:—

Wheat.. . . .	30 Pounds
Oats.. . . .	50 "
Barley.. . . .	50 "
Flax.. . . .	56 "
Rye.. . . .	56 "
Mixed grain.. . . .	50 "

ALL CHARGES

All charges for cleaning, drying or other treatments will be computed on gross weight, for elevation and storage on net weights, all charges accruing after issue of initial completed outturn and expense bill will follow the grain. All charges whatsoever must be paid before shipment.

BULKHEADS

On bulkheads for their removal and other additional expense in handling and unloading car, five dollars (\$5) for each bulkhead.

UNLOADING SACKED GRAIN

A charge of five cents (5c.) per sack will be made for unloading all sacked grain.

SACKING GRAIN

Sacking grain and loading to cars or other vehicles will be subject to rate agreed upon.

PREPARING CARS FOR LOADING

When paper is used in preparing cars there will be a charge of four dollars (\$4) for each car.

UNSPECIFIED GRAIN

Unspecified grain will only be received stored and treated subject to special charges to be agreed upon at the time subject to the approval of the Board of Grain Commissioners.

This tariff of rates is published by the Board of Grain Commissioners for Canada in accordance with section 127 of the Canada Grain Act and shall become effective as from September 1, 1927.

BOARD OF GRAIN COMMISSIONERS FOR CANADA.

F. J. RATHBONE,
Secretary.

FORT WILLIAM, ONT., September 16, 1928.

COUNTRY ELEVATORS

MAXIMUM TARIFF OF CHARGES FOR LICENSED COUNTRY ELEVATORS FOR THE PERIOD ENDING AUGUST 31, 1929. EFFECTIVE SEPTEMBER 1, 1928

Subject to the capacity of the elevator and the nature of the construction, all grain tendered must be taken into store upon following terms and conditions, and under the provisions of The Canada Grain Act, 1925, and amendments thereto.

Maximum Rates—Special Bin Grain receiving, elevating, spouting, insurance against fire, storing for the first fifteen (15) days and putting into cars on track; no elevator shall charge more than three cents (3c.) per bushel for flax, two and one-half cents (2½c.) per bushel for wheat, barley and rye, and one and three-quarter cents (1¾c.) per bushel for oats.

Graded Storage and Subject to Grade and Dockage Grain.—Receiving, elevating, spouting, insurance against fire, storing for the first fifteen days and putting into cars on track: no elevator shall charge more than three cents (3c.) per bushel for flax, two cents (2c.) per bushel for wheat, barley and rye and one and three-quarter cents (1¾c.) per bushel for oats. Storage not otherwise provided, including insurance against fire, for each succeeding day after the first fifteen (15) days shall not exceed one-thirtieth of one cent (1/30c.) per bushel.

Cleaning.—The rate for cleaning grain shall be mutually agreed upon by the elevator operator and the owner of the grain according to the nature of its dockage, but in no case shall the rate exceed a maximum of two cents (2c.) per bushel.

Shrinkage.—No elevator shall take more than the allowance for shrinkage, waste in handling, storing and transmitting the grain to a terminal than the weight in pounds set forth in the shrinkage table as authorized by the Governor in Council and declared to form part of the tariff and Rules and Regulations for country elevators.

All shrinkage on tough and damp grain shall not be more than double the allowance as set forth in the aforesaid schedule.

Such shrinkage table shall be placed conspicuously in all licensed country elevators for free inspection of the public.

Dockage on Cash or Stored Grain.—No elevator shall take a greater dockage than that shown by a proper test over a number ten sieve, except where the grains contain foreign grain or seeds which cannot be taken out by a number ten sieve.

Every elevator must be equipped with the necessary sieves and scales for making proper tests, and the elevator operator must make the test in the presence of the owner of the grain when requested.

General.—When tough, damp or wet grain is taken into store it shall be at the owner's risk, and the elevator operator shall have the right to ship it immediately to a terminal elevator for treatment.

All tough, damp or wet grain, containing an excessive amount of snow and ice, may be handled subject to agreement between the owner of the grain and the operator.

RULES AND REGULATIONS FOR COUNTRY ELEVATORS

1. The owner or operator of a country elevator shall post in the elevator in a conspicuous place, a diagram to a scale of not less than one-half inch to one foot, showing the location and numbers of the several bins in such elevator.

2. In shipping or delivering any grain stored in a country elevator, the net weight on the ticket or tickets shall be final, unless an investigation by the Board of Grain Commissioners shows reason for the contrary. The shipper to be paid in case of short shipment up to the amount of his or her ticket or tickets for the full billing capacity of the car, at the same price as the car was disposed of.

3. All shipping bills for grain shipped through an elevator shall be made out by the elevator agent, and he shall advise such parties as the owner may instruct.

4. The owner of grain in an elevator wishing such grain shipped to any point other than a terminal point, or where Government weights cannot be obtained, the owner of the grain must then accept the elevator weights at the shipping point as final unless it is proved that the shipping weights are not correct. Provided, moreover, the owner of the grain can always demand an affidavit as to the actual grain shipped and delivered from the elevator operator and receiver of said grain respectively.

5. No owner or operator of a country elevator or warehouse shall sell, assign, mortgage, pledge, or hypothecate any grain stored in such elevator or warehouse, for which storage tickets have been issued, and the owner or operator may be required by the Board to produce at any time proper registered warehouse receipts or bills of lading for such grain as has been shipped from the country elevator or warehouse, and for which there is still outstanding storage tickets.

6. No license will be granted for the operation of any country elevator the agent or buyer of which is subject to a shortage bond, and in the event of a shortage bond being entered into after license has been granted, such license will be subject to immediate cancellation.

RULES AND REGULATIONS FOR HANDLING GRAIN FOR WHICH SPECIAL BIN OR SUBJECT TO GRADE AND DOCKAGE TICKETS HAVE BEEN ISSUED, OR WHERE THERE IS DISAGREEMENT AS TO GRADE AND DOCKAGE

1. The ticket or tickets issued where there is a disagreement as to grade and dockage or where grain has been received subject to inspector's grade and dockage must have incorporated thereon at the time of issue the grade offered by the elevator owner or operator to the owner of the grain and the following words: "Subject to Inspector's Grade and Dockage."

2. The owner of the grain can only demand the quantity that the storage ticket or tickets call for.

3. In case there is a dispute as to the weighing accuracy of the receiving scales, it shall be incumbent upon the owner of the elevator to prove that the scales are weighing accurately.

4. In the case of special bin or subject to grade and dockage grain a proper sample must be drawn from each load by the elevator operator at the time of delivery, in the presence of the party delivering same, and such sample must be drawn satisfactorily to both the deliverer and the operator, and all such samples must be placed in a suitable receptacle satisfactory to the Board of Grain Commissioners, and must be properly mixed in such receptacle. The receptacle shall be provided by the warehouseman and the sample shall be placed therein in the presence of the owner. The receptacle shall be secured by padlock which the owner of the grain shall provide, and the key of which he shall retain. The warehouseman shall be the custodian of the receptacle and of the sample.

5. In the case of subject to grade and dockage grain, a fair and proper sample of at least two quarts shall then be drawn in the presence of the owner of the grain from such receptacle, and forwarded in a suitable receptacle properly tied and sealed, and marked "Subject to Inspector's Grade and Dockage" to the Chief Inspector of Grain, and shall be accompanied by a request in writing of either or both parties aforesaid that the Chief Inspector will examine the sample and report on the grade and dockage the grain is in his opinion entitled to, and would receive if shipped to a terminal point and subjected to an official inspection.

6. After receiving the inspector's judgment, showing the grade and dockage the elevator operator shall in the case of cash tickets make settlement on the basis of the grade and dockage given by the Chief Inspector, and shall, in the case of subject to grade and dockage tickets, issue graded storage tickets showing the grade and dockage as given by the Chief Inspector for the full amount of grain so taken into store, such graded storage tickets to bear the same date as the original subject to grade and dockage tickets, after which the grain shall be subject to the rules and regulations covering graded stored grain.

7. Notwithstanding any regulation provided in paragraphs five and six of these regulations, if the identity of the grain has been preserved even though subject to grade and dockage tickets may have been issued therefor, if agreeable to the owner, the grain then may be handled in accordance with the provisions of the Canada Grain Act and rules and regulations relating to the special binning of grain in country elevators.

8. At the time of delivery of any grain where a ticket of this kind is being used, and it is agreed upon by the owner of the grain and the elevator operator that the grain is tough, damp or wet, and the elevator operator marks such ticket or tickets: "Out of condition, tough, damp or wet," then whatever grade such sample may receive from the Chief Inspector, it will still grade "tough, damp or wet."

9. If the elevator operator fails at any time to draw and preserve such sample in the manner stated herein, the owner or operator must account to the owner of the grain for the grade designated by the said owner.

10. When submitting samples of grain to the Chief Inspector, elevator operators must have such samples properly marked either "Special Bin" or "Subject to Inspector's Grade and Dockage" as the case may be.

Approved by Board of Grain Commissioners for Canada.

F. J. RATHBONE,
Secretary.

Authorized by Order in Council P.C. 1601.
Dated at Ottawa, August 30, 1928.

All shrinkage on tough and damp grain shall not be more than double the allowance as set forth in this schedule. This shrinkage table shall be placed conspicuously in all licensed country elevators for free inspection of the public.

The above Table applies to Cash, Special Binned and stored to grade grain.

Approved by Board of Grain Commissioners for Canada,

F. J. RATHBONE,

Secretary.

Authorized by Order in Council, P.C. 1601—Dated at Ottawa, August 30, 1928.

MAXIMUM TARIFF OF PUBLIC TERMINAL ELEVATOR CHARGES AT VANCOUVER, BRITISH COLUMBIA

FOR THE YEAR ENDING AUGUST 31, 1929. EFFECTIVE SEPTEMBER 1, 1928

Subject to the capacity of the elevator and the nature of its equipment, shipments will be received upon the following terms and conditions and under the provisions of the Canada Grain Act, 1925, and amendments thereto:—

MAXIMUM ELEVATION CHARGES

On straight grade, tough, damp or wet grain, not otherwise specified, receiving, elevating, shipping, storing and insurance against fire, for the first fifteen days, one and one-quarter cents (1¼c.) per bushel.

All tough, damp, wet, condemned, heating, heated or fire-burnt grain may always be refused, if received and stored it will be only at the owner's risk of deterioration and under special contract, except that tough grain will be received and stored under the terms and conditions applied to straight grade grain as provided in the Canada Grain Act and provisions included in the special provisions made for the port of Vancouver. (See Canada Grain Act, 1925, and amendments thereto.)

On mixed grains, handled as mixtures, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, two cents (2c.) per hundred pounds.

On screenings, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, three cents (3c.) per hundred pounds.

STORAGE CHARGES

On straight grade and tough grain, not otherwise specified, including insurance against fire, for each succeeding day or part thereof, after the first fifteen days, one-thirtieth of one cent ($\frac{1}{30}$ c.) per bushel.

On mixed grain handled as mixtures, storage, including insurance against fire, for each succeeding day or part thereof, after the first fifteen days, two-thirtieths of one cent ($\frac{2}{30}$ c.) per hundred pounds.

On screenings, storage, including insurance against fire, for each succeeding day or part thereof, after the first fifteen days, one-tenth of one cent ($\frac{1}{10}$ c.) per hundred pounds.

SCREENINGS

On wheat carrying a dockage of three per cent (3%) or more, after deducting one-half of one per cent ($\frac{1}{2}$ %) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On oats and barley carrying a dockage of five per cent (5%) or more, after deducting one-half of one per cent ($\frac{1}{2}$ %) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On rye and flax carrying a dockage of five per cent (5%) or more, after deducting one per cent (1%) of the gross weight of the car to cover outward dockage and waste in cleaning, a return will be made for the balance of the screenings.

If disposition of screenings covered by outstanding returns is not received within thirty (30) days from the date of unloading; they may be disposed of for account of whom it may concern.

The holder of warehouse receipts of shut-outs covering dockage shall be entitled to receive such average quality of screenings as shall be determined by the Inspection Department in accordance with sample tests which shall be made in such manner and when deemed necessary by said Department.

CLEANING CHARGES

On wheat, when the dockage contains no other grains of commercial value, there will be cleaning charges as follows:—

Dockage under 3 per cent, no charge.

Dockage 3 per cent to 5 per cent inclusive, one-half cent ($\frac{1}{2}$ c.) per bushel.

Dockage $5\frac{1}{2}$ per cent to 10 per cent, one cent (1c.) per bushel.

Dockage above 10 per cent, one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

On wheat carrying a return of other grain of commercial value, except flax, computed on gross weight of car, an additional separating charge of one cent (1c.) per bushel.

On wheat carrying a return of flax, an additional separating charge computed on gross weight of car, two cents (2c.) per bushel.

On oats, barley and rye, when the dockage contains no other grain of commercial value, there will be cleaning charges as follows:—

On all cars carrying a dockage of:—

Less than 5 per cent, no charge.

Five per cent to 10 per cent inclusive, one cent (1c.) per bushel.

Over 10 per cent, one and one-half cents (1½c.) per bushel.

On oats, barley and rye carrying a return of flax, computed on gross weight of car, an additional separating charge of two cents (2c.) per bushel.

Flax cleaned from any other grain containing broken particles that cannot be separated, shall be classified as "Flax and Broken Wheat."

On flax when the dockage contains no other grain of commercial value, there will be the following cleaning charges:—

On flax carrying a dockage of:—

Less than 5 per cent, no charge.

From 5 per cent to 10 per cent inclusive, one and one-half cents (1½c.) per bushel.

Over 10 per cent, two cents (2c.) per bushel.

On flax carrying a return of other grains of commercial value, computed on gross weight of car, an additional separating charge of one cent (1c.) per bushel.

DRYING CHARGES

On tough grain, three cents (3c.) per bushel.

On damp or wet grain, five cents (5c.) per bushel.

Allowance for invisible loss and shrinkage on all cars as follows:—

Wheat..	30 pounds per car.
Oats..	50 "
Barley..	50 "
Mixed grain..	50 "
Rye..	56 "
Flax..	56 "

ALL CHARGES

All charges for cleaning, drying or other treatment will be computed on gross weight of car; for elevation and storage, on net weights. All charges accruing after issue of initial completed outturn and expense bill will follow the grain. All charges, whatsoever, must be paid before shipment.

BULKHEADS

On bulkheads for their removal or installation and other additional expense in handling and unloading cars, \$5 for each bulkhead.

UNLOADING SACKED GRAIN

A charge of five cents (5c.) per sack will be made for unloading all sacked grain.

SACKING GRAIN

For sacking grain the following charges will be made:—

1½ per bushel on sacks not exceeding 125 pounds

2 c. per bushel on sacks not exceeding 160 pounds

2½c. per bushel on sacks not exceeding 220 pounds

For double sacking one cent (1c.) per sack in addition to above.

For sacking screenings a charge of ten cents (10c.) a sack for sacking will be made.

Sacking of screenings will be done only when conditions warrant it, and the superintendents of such terminal elevators will be the sole judge as to this.

Sacks and twine to be furnished by shipper or supplied at his expense. In case of machine sewing, one-half cent ($\frac{1}{2}$ c.) per sack will be charged for twine.

STENCILLING

A charge of one-half cent ($\frac{1}{2}$ c.) per sack will be made for stencilling.

PREPARING CARS FOR LOADING

When paper is used in preparing cars, there will be a charge of four dollars (\$4) for each car.

UNSPECIFIED GRAIN

Unspecified grain will only be received, stored and treated subject to special charges to be agreed upon at the time, subject to the approval of the Board of Grain Commissioners.

This tariff of rates is published by the Board of Grain Commissioners for Canada in accordance with section 127 of the Canada Grain Act and shall become effective as from September 1, 1928.

BOARD OF GRAIN COMMISSIONERS FOR CANADA.

F. J. RATHBONE,

Secretary.

FORT WILLIAM, ONT., September 4, 1928.

CHAPTER VIII

SESSIONS HELD BY THE BOARD DURING CROP YEAR 1927-28

Date	Place	Subject matter
1927		
Sept. 6	Winnipeg, Man.	Investigation of complaints and routine matters.
" 21	Ottawa, Ont.	Conference with Hon. Jas. Malcolm, Minister of Trade and Commerce, Hon. W. R. Motherwell and Hon. Chas. A. Dunning, re inspection of grain at interior terminal points.
" 23	Montreal, Que.	Meeting representatives of the grain trade for discussion of matter relating to the handling and inspection of grain passing through the port of Montreal.
" 24	Montreal, Que.	Conference with the officials of the Montreal Harbour Commissioners relating to the handling of grain passing through the port of Montreal.
Oct. 5	Winnipeg, Man.	Investigation of complaints and routine matters.
" 17	Winnipeg, Man.	Investigation of complaints and routine matters.
" 17	Winnipeg, Man.	Meeting with the Grain Committee of the National Research Council.
" 18	Winnipeg, Man.	Meeting with representatives of the grain trade for the purpose of discussing a resolution passed by the United Farmers of Manitoba regarding the re-inspection of "Inspect Cars."
" 19	Winnipeg, Man.	Meeting with the Grain Committee of the National Research Council and representatives of the grain trade to discuss a report prepared by the Grain Committee, with reference to the drying of grain.
" 21	Winnipeg, Man.	Routine matters.
" 26	Winnipeg, Man.	Routine matters.
Nov. 5	Winnipeg, Man.	Meeting with representatives of the Railway companies and grain trade, regarding shortage of cars in the Province of Alberta.
" 8	Winnipeg, Man.	Investigation of complaints and routine matters.
" 25	Winnipeg, Man.	Investigation of complaints and routine matters.
Dec. 2	Winnipeg, Man.	Routine matters.
" 14	Winnipeg, Man.	Investigation of complaints and routine matters.
1928		
Jan. 25	Winnipeg, Man.	Routine matters.
" 27	Winnipeg, Man.	Routine matters.
Feb. 14	Winnipeg, Man.	Complaints and routine matters.
Mar. 7	Winnipeg, Man.	Complaints and routine matters.
" 8	Winnipeg, Man.	Complaints and routine matters.
" 9	Winnipeg, Man.	Complaints and routine matters.
" 19	Montreal, Que.	Meeting with representatives of the grain trade for discussion of a complaint received by the Board regarding the endorsement of certificates tendered covering a shipment of 3 Northern Wheat shipped on S.S. "Albertic" by Messrs. James Richardson & Sons.
" 19	Montreal, Que.	Conference with officials of the Montreal Harbour Commissioners re handling of grain.
" 20	Montreal, Que.	Meeting for the purpose of considering the report of the Committee appointed regarding the method of endorsing certificates covering grain shipments from Montreal.
" 24	Montreal, Que.	Routine matters.
April 4	Winnipeg, Man.	Complaints and routine matters.
May 3	Winnipeg, Man.	Complaints and routine matters.
June 11	Winnipeg, Man.	Meeting with representatives of the Scottish Co-operative Wholesale Society with regard to cargoes of grain received by them during the last three years.
" 13	Edmonton, Alta.	Complaints and routine matters.
July 16	Montreal, Que.	Meeting with Canadian National and American Railway officials re movement of U.S. grain through Montreal.
" 16	Montreal, Que.	Meeting with Survey and Standards Boards and representatives of the Montreal Harbour Commissioners regarding American grain for export passing through the port of Montreal.
Aug. 8	Winnipeg, Man.	Complaints and routine matters.
" 22	Winnipeg, Man.	Tariff of Charges, Public Terminal Elevators and Country Elevators; also Rules and regulations governing Country Elevators for the season 1928-29.
" 24	Camrose, Alta.	Investigation of complaint filed by Mr. O. A. Hastings, of Heisler, Alta., against the N. Bawlf Grain Co., Ltd.
" 27	Vancouver, B.C.	Tariff of charges for Public Terminal Elevators at Vancouver, B.C., for crop year 1928-29.
" 29	Victoria, B.C.	Meeting with the Premier and Executive Council of the Legislative Assembly of British Columbia for the purpose of discussing the matter of the sale of screenings to B.C. dairymen and poultry breeders.

REPORT OF THE DEPARTMENT OF THE INTERIOR

1927-28

Hon. CHARLES STEWART,
Minister of the Interior,
Ottawa.

SIR,—I have the honour to submit the fifty-fifth Annual Report of the Department of the Interior for the fiscal year ended March 31, 1928.

Perhaps the most outstanding feature of the year under review, from a national standpoint, was the celebration of the Sixtieth Anniversary of the Confederation of the older of the Canadian provinces. The Department of the Interior, one of the earliest administrative organizations of the federal Government, was established in 1873, six years after Confederation, and in view of its instrumentality in organizing, consolidating, populating, and exploring the interior of British North America the Jubilee year of Confederation was a landmark of achievement in the affairs of the department, as well as an opportunity for all Canadians to view with pride the great changes and accomplishments which sixty years have wrought.

The year 1927 found Canada in many respects one of the most enviable countries of the world, and in the enjoyment of a tide of natural and, therefore, enduring prosperity, which had not then, nor has not yet, reached its flood. As no time has it been possible for a rising generation to reach out for such chances of fortune or such a heritage of Empire as is offered to-day in the wide spaces of this Dominion. Using the achievements of the past, and the present knowledge of our resources as measures of future accomplishment, there is every indication that the period of sixty years which has passed since Confederation is merely the overture in the full process of national growth, expansion and development.

With the development of the country there has naturally been a great increase in the work of administration, and many functions of the Department of the Interior in the earlier years of Confederation have now become the work of separate departments of state, such as the Geological Survey, Royal Canadian Mounted Police, Immigration, and Indian Affairs. It is not too much to say that at one time or another by virtue of its administration of the lands and resources of the Canadian West and the initiation of policies which have fallen within its responsibilities, the Department of the Interior has been an important agent in influencing the development of the foremost primary industrial movements in Canada.

To-day the department administers, or keeps in close touch with, forest and mineral resources of great potential wealth; tremendous water-power resources which are vital to industrial development; and game, wild-life, and scenic resources of growing importance. The total area for the territorial management of which the Department of the Interior is responsible still comprises more than half the Dominion. With the growth of efficient administrative departments in the older provinces the need for a central national co-ordinating organization which, though not interfering in the slightest degree

in the provincial field, serves a useful and necessary purpose in weaving together the strands of provincial effort and interpreting them nationally, has been emphasized. Thus the Water Power and Forestry Branches, in addition to administrative work in their own fields, on Dominion lands, also collect and combine data of general utility and conduct educational campaigns which present Canada to the world as a well-knit unit, and not merely as a number of individual provinces. The Natural Resources Intelligence Service is national in scope and its maps and the records of its investigations are available to all.

Naturally, this function of the department—to represent the national viewpoint in those fields of effort paralleling its own administrative responsibilities, and to strike a note of progress in new fields of nation-wide interest related thereto—becomes more important with the passing of time and is nowhere shown to better advantage than in the striking way in which the provinces and business interests have got behind and effectively supported the post-war efforts of the Department of the Interior to exploit those national assets in which Canada excels, such as scenery, climate, and winter sports. Six years ago the officially estimated balance of expenditures of tourists in Canada, after deducting the expenditures of Canadian tourists in other countries, was below the fifty million dollar mark; to-day it is more than three times that figure; but of greater importance than this is the general realization that the trade offers a field of almost limitless opportunity for future development. Thanks to adequate and well placed publicity, the general movement towards the construction of good roads; the splendid hotel, railway, and steamboat facilities; and the enthusiasm of civic, banking, and commercial interests throughout the land, Canadians are now reaping the benefits of a trade which has long remained comparatively dormant. Nor are these benefits all financial. The tourist business in its stimulation of intercourse between nations makes for harmonious relations and better understanding. Locally, along all the arteries of traffic, the benefits accruing from the trade are seen in the improvements effected in the appearance of towns and villages. In catering to the psychological appeal which such attractive arrangements have to the incoming tourist, local communities have so to speak found for themselves a better place in the economic scheme of things. Many attractive places, eminently suited for tourist resorts, were vying not so many years ago with typically industrial sites for the attraction of manufactures, whereas to-day they are pursuing a more enlightened policy of preserving their natural beauty and developing their attractions to the increased profit of their citizens and to the benefit of the country generally.

In the matter of forest administration the Forest Service has furthered and made more effective the policy of the department to conserve timber resources and, where possible, plan well ahead for permanence of supplies. Canada is one of the few countries of the world whose forests provide a large surplus over and above the home consumption. Nearly one-half of the total cut is exported in various manufactured and unmanufactured forms, and unless a policy of scientific forest management is vigorously developed by the governments concerned in conjunction with the operating industries as well, our export position must suffer in the course of time. Over a period of years the Forest Service has urged and done much in the interests of forest protection through intensive publicity campaigns, and a profound impression has been made on the public conscience to resist carelessness in the use of fire. The results are decidedly encouraging and there is ground for the feeling that the public mind is becoming seized of the urgent necessity for forest conservation.

The pulp and paper industry is now facing a period of over production. This situation may best be met by a wise policy of forest management which will set out the areas to be logged, limit the amounts to be cut, and indicate the methods to be followed to ensure most successful reproduction.

The fire situation on Dominion lands protected by the Forest Service was the most favourable in the past ten years due to exceptionally good weather conditions and more efficient organization for fire protection. Fires within and outside national forests totalled 661, as compared with 1,398 in 1926-27, 1,165 in the fiscal year 1925-26, and 1,487 in the year 1924-25.

An increased desire is noted on the part of the public to use the national forests for purposes of recreation and sport. The primary objects for which national forests are set aside are, of course, the conservation and production of timber supplies and the retention or establishment of a forest cover on important catchment areas. It is only in conformity with these objects that other uses can be permitted, but experience has shown that the reserves may serve several other purposes which are not incompatible with those objects. The public and the tourist may be admitted with benefit to all concerned if reasonable precautions are taken.

Many areas of the national forests serve a very useful purpose to the live stock industry by providing summer range for the grazing of stock. Here also, although grazing is not a primary purpose in the establishment of forest reserves, it is possible under careful regulation and with great advantage to all concerned to serve the requirements of this important industry.

As regards the timber crop from national forests, this is carefully harvested with a view to maximum reproduction and improved growing conditions. It is sold both for commercial purposes and for settlers' use. Agriculture, the foremost industry of the Dominion, enjoys a preference in national-forest timber and requirements of neighbouring farming settlements are among the first to be provided for. An important step in the management of national forests has been the framing of more flexible regulations in connection with the disposal of the relatively small quantities of timber to settlers. Similarly the regulations for the sale of timber for commercial purposes are being constantly improved. Generally operators are co-operating to a greater extent in the matter of restrictive cutting and proper methods of slash disposal, and with the increasing development of the country the national forests are contributing more and more to local industry.

The tree-planting program as related to prairie farms has been continued. In the spring of 1927 seven and half million trees were distributed to farmers. During the period for which this tree-planting policy has been in effect thousands and thousands of farm plantations and shelter-belts have been established. In addition to greatly improving the conditions surrounding the prairie home, from an aesthetic standpoint, shelter-belts have rendered possible the growing of fruits and finer vegetables which formerly could not be produced under the exposed conditions which obtained.

Substantial progress has been made in the work of the Forest Products Laboratories. Under an agreement between the Department of the Interior and the Pulp and Paper Association of Canada, when the main laboratories were moved to Ottawa, the Pulp and Paper Division was left in Montreal, where the association has erected a splendid building in which the division is accommodated. The laboratory at Vancouver is an outpost of the main laboratories, established to deal with problems relating essentially to the coast province. Excellent progress has been made during the year, the institution having thoroughly entrenched itself with the timber industry.

In water-power development there has been 221,655 horse-power added to the water-wheel and turbine installation throughout the Dominion, and at the end of the fiscal year the total installation amounted to 4,777,921 horse-power. Developments have been spread broadly throughout the country. Cheap and conveniently located power is almost as vital to industry as is raw material and inasmuch as our chief industrial provinces are not coal-producing the

hydro-electric resources have been given an added value. The first twelve years of this century saw the romance of opening up our rich prairie lands for wheat-growing. Then followed the striking rise of the pulp and paper industry. The future gives promise of greatly accelerated progress in the exploitation of the rich mineral wealth of the Laurentian Shield. The pulp and paper industry in Canada owes its position of leader in a world competitive market to the extensive water-powers which can be developed at a relatively low cost and are found in proximity to pulpwood resources. The metal mining industry is dependent largely upon the availability of cheap hydro-electric power. These things, apart from the numerous domestic uses in cities and rural districts, which increase the comfort and help to maintain the high standard of living of Canadian citizens, show at once the dependence of our industrial populations on water-power. Canada's good fortune in regard to this source of energy will be more apparent as time goes on, for the Water Power and Reclamation Service estimates that the present total water-power installation is only a little more than 11 per cent of the possible development. The Minister of the Interior, in addition to his other duties, advises the Government on international questions relative to the joint waters of Canada and the United States. The extent and scope of these questions, the present activity of many of them and their importance to both Dominion and provincial interests, has resulted in this feature of the activities of this service becoming one of growing responsibility and importance.

In the field of irrigation the season of 1927 was exceptionally favourable as regards natural precipitation and little water was required for this purpose. The sugar-beet crops on areas tributary to the Raymond sugar factory have proved of great value to settlers on irrigated lands. This factory was erected in 1925 and has a capacity of 1,000 tons of beets per twenty-four hours. Since beginning operations the guaranteed rate paid to farmers for beets has increased from \$5.75 per ton in 1925, and \$6.25 in 1926, to \$7 in 1927.

The policy of setting aside national parks dates back to 1885 and is closely linked with the desire to preserve for posterity the most typical or beautiful spots of Canada in their original state. As time goes on and our country becomes more populous such reservations will be even more highly appreciated than they are to-day. All the national parks are sanctuaries of wild life but certain of them were specially reserved to that end. Thus Buffalo, Elk Island, and Nemiskam parks in Alberta are the homes of valuable herds of big game including buffalo, elk, moose, muledeer, and antelope. Other parks have become world renowned resorts, unsurpassed for their scenic beauty. Among this group Jasper, Rocky Mountains, Waterton Lakes, Yoho and Glacier stand out supreme. Still others are outstanding for their historic associations.

In all there is now an area of more than 11,000 square miles reserved as national parks and the Department of the Interior maintains many hundreds of miles of first class motor highway and about two thousand miles of trails within and linking the parks.

In road construction the fiscal year under review has been marked by the completion of the Field-Golden section of the Kicking Horse Trail, linking Lake Louise, Alta.; and Golden, B.C. The year 1926 saw the opening of the Lake Louise-Field section of this highway so that the Kicking Horse Trail is now completed. The official opening took place on July 9 and the relatively heavy traffic which passed over the road during the first short season portends the popularity which this newly created highway route is destined to have.

The completion of the western link of the Trans-Canada highway which has been under consideration for some time awaits the construction of a stretch of motor road between Golden, B.C., and Revelstoke, B.C. The choice of the

route which this final link should take has been a matter of very careful thought by the department and the Big Bend or Columbia River route has finally been decided upon.

In Jasper park a stretch of over two miles of road was experimentally surfaced with bituminous sands obtained from the McMurray region. Experience has now shown that the tar sands of Alberta are particularly suited to this purpose. The material gives an even and dustless surface with little or no tendency for cars to slip or skid in wet weather; it also compares very favourably, as regards cost, with other materials. The rapidly growing demands for good highway surfaces bring nearer the commercial development of the McMurray deposits and there is little doubt that these bituminous sands will prove one of Alberta's important natural resources.

Towards the close of the fiscal year a reservation was set aside, known as Prince Albert national park, in Saskatchewan. It contains some of the finest scenery in this part of the country and will benefit the people of the Prairie Provinces not only as a health and recreational resort but also as a magnet for tourist travel. The park is situated about 35 miles north of Prince Albert. The area is well timbered and its many lakes are plentifully supplied with fish. The park is the gateway to a maze of waterways rich in historic interest and full of the romance of pioneer exploration.

The growing appreciation of the value of outdoor recreational areas is emphasized by the demands being made, from Manitoba to the Atlantic coast, for the setting aside and early development of lands that either meet the high standards of national parks or that are especially suitable for outdoor recreational purposes. In view of this the National Parks Branch is making a survey of the Dominion from coast to coast with regard to outdoor recreational features and areas. Once detailed information in this connection is secured, the various areas will be classified with a view to the development of methods for their utilization to their fullest extent. With this will naturally be associated plans for a co-ordination of effort by all organizations concerned in recreation and recreational areas, it being felt that much can thus be accomplished for Canada.

The revenue of the National Parks Branch increased by over 15 per cent compared with the previous fiscal year.

The use of aeroplanes has greatly facilitated the work of prospecting and opening up that portion of the Dominion which lies north of the fringe of settlement in the Prairie Provinces. So far as this relates to the northern portions of Manitoba and Saskatchewan the development stage has been reached and the new enterprises in the metal-mining field promise to bring about a diversification in basic industry and provide a stability and balance which as a wheat country alone the West could hardly hope to have. With mines and water-power there exists the foundation of all forms of manufacturing industry, and viewed from this angle the future of the Prairie Provinces is very bright. There is no geological formation known which combines within itself such a variety of mineral resources as the great Laurentian Shield has exposed in those sections which have been prospected. Commercial and financial interests are now confidently working along the little known northwest flank of the Shield, with the assurance that the results will amply repay their labours and investments. Prospecting operations have, in fact, reached the area about Great Slave lake where a group of claims containing zinc and lead is undergoing careful examination.

The oil and gas fields of Alberta continue to be the centre of much interest both in the matter of steady development and in regard to their latent possibilities. Substantial progress in both respects has been made during the year. The Turner Valley area, some forty miles southwest of Calgary, has again been the

focus of drilling activities, although the strike of oil made in the Devenish Well near Skiff in southern Alberta attracted much attention, as opening up a wide potential area, capable of yielding oil at moderate depths.

The deepening of many of the wells started during previous years in Turner valley and the addition of a number of new ones, have fully justified the hopes raised in regard to this field. The results indicate that the dolomitic limestone, to the importance of which as producer of naphtha-laden gas Royalite No. 4 first called attention in 1924, yields the same grade of naphtha combined with phenomenally high pressure gas when penetrated by other wells, although the individual yields, of course, vary. The continual growth in the gas production in this field has called for the enlargement of facilities for its utilization. These have been provided by the operators without, however, their being entirely able to keep pace with the situation, the consumption being still largely subject to much seasonal variation. The increase in production has enabled the older producing areas of Bow Island and Foremost to be taken in hand for repairs and for experiments in repressuring with the surplus gas.

In this and other ways it is becoming evident that the labours of past years of the engineering advisers of the Department of the Interior in bringing home to operators the need for careful and adequate methods of drilling and protecting wells have borne fruit, for not only is excellent work in the development and conservation of these important natural resources being done by lessees on Dominion lands, but in the majority of cases lessors and lessees of other lands are showing their appreciation by co-operation in this direction. The oil production for the fiscal year amounted to 358,000 barrels, and the gas consumed during the calendar year 1927 amounted to over twelve thousand million cubic feet.

The territories north of the provincial boundaries are entirely administered by the North West Territories and Yukon Branch of this department. There is a sincere realization that in the development of the possibilities of the hinterland, particularly the Arctic regions, the native population is destined to play a very important part. Serious study is being given the problem of providing convenient opportunities for the natives to develop themselves by practising the handicrafts for which nature has fitted them and implanting firmly in their minds the necessity for conservation in its broadest terms as affecting not only forests and wild life but human health, energy, and economic well being.

To-day the staple industry in the Northwest Territories is still the fur trade. The policy of the department as regards the destruction of predatory animals has been developed over a number of years to successfully combat the natural enemies of the more valuable fur-bearers and of those forms of wild life upon which the natives depend for subsistence. Before the fiscal year 1925-26 the bounty system for the destruction of such predatory animals was set at \$20 for each wolf killed, the pelt not being surrendered. Since that year a bounty warrant for \$30 has been issued in consideration of the surrender of the whole pelt to the Government. The results of the new system were immediate and striking. In the first year of its application the number of wolves killed was 576, almost double that of the previous year. By 1926-27 the number had increased to 680 pelts and during the last fiscal year not far short of 1,000 pelts (actually 974) have been turned in. Equally satisfactory is the steady increase in the average sale price of the pelts. In 1925-26 this was \$16.14, in 1926-27 it had reached \$17.41, and in the fiscal year under review it was \$24.

The total value of the furs traded in the Northwest Territories in 1926-27 is estimated at nearly three million dollars—65 per cent greater than the estimated value of the previous year's trading.

In Yukon mining is, as it has always been, the basic industry, and the future as regards lode-mining never looked as promising as it does to-day. The

gold production from placer claims for 1927-28 was valued at \$568,221, as compared with an output valued at \$497,504 for the previous fiscal year. The value of minerals taken from quartz properties including, silver, lead, and some gold, exceeded \$1,937,300. The copper mines of the Whitehorse district will shortly be at a producing stage again. It is of interest to note that the value of the furs exported from Yukon territory during the year ended 30th June, 1927, totalled \$382,261.

All general Dominion lands business, including minerals and timber in the Prairie Provinces, the Railway Belt and the Peace River Block of British Columbia, and all that concerning School lands, is carried on by the Dominion Lands Administration. The work has shown increased activity during the year. From Dominion lands, as distinct from School lands which are held in trust for the provinces, there was received for the fiscal year a total revenue of \$3,763,-408.56, which is the greatest revenue recorded since the fiscal year 1920-21. The revenue from School lands increased by 33 per cent over the previous fiscal year.

The average prices obtained for School lands at the sales conducted by the department during the year have exceeded all expectations. They were the best on record and, since the conditions under which the sales took place precluded speculation, the good average prices indicate a healthy condition of agriculture in the Middle West. No previous general sales of this nature have been held since 1920 because, owing to the quick recession in land values the provinces concerned preferred to wait until conditions were more favourable. Altogether more than 480,000 acres were sold in 1927 and the average price obtained was \$18.70 per acre (the lowest was \$7 per acre and the highest \$79). The purchasers were largely neighbouring farmers who knew the land and its value for production purposes, so that the results of the sales are evidence of a growing confidence in the future of prairie agriculture and the present strong financial position of the farming communities.

Agriculturists and ranchers are making increased use of Dominion lands for the grazing of stock. This suggests a betterment of conditions in the live stock industry which has suffered from a combination of circumstances affecting markets. During the fiscal year, on Dominion lands in the provinces of Manitoba, Saskatchewan, Alberta, and in the Railway Belt of British Columbia and the Peace River Block, there were 10,601 grazing leases in existence. These covered an area of approximately 6,727,015 acres.

The Dominion Observatory at Ottawa and the Dominion Astrophysical Observatory at Victoria, B.C., have continued their investigations in the fields of isostasy, terrestrial magnetism, seismology, solar physics, astrophysics, and general astronomy. Their work is purely scientific and although it does not directly touch the economic field it materially influences human advancement and well being.

All the survey work of the department including geodetic surveys, topographical surveys and International Boundary surveys has been co-ordinated since 1922 through the Surveys Bureau under the Director General of Surveys.

Surveying as carried on by this department in the early days had one object in view, namely to provide the incoming settlers with secure title to their homesteads. Mapping of large areas, if thought of at all, was confined to compilations of existing plans and sketches, and the recording of exploratory surveys. During this period the maps produced were necessarily detached sheets some of them possibly lacking in accuracy and completeness. Triangulation and levelling for the very accurate fixing of selected points throughout the country were begun about twenty years ago and this work is being continued and extended by the Geodetic Survey. More recently, the demand for farm lands having diminished temporarily, the Topographical Survey has been able

to devote increasing attention to the making of an accurate topographical map series that will eventually cover the whole country. The more settled parts are being mapped first but several sheets have been produced covering the rapidly developing mineral areas in the great northern hinterland. This work has been made possible by the assistance of aerial photography and its application to mapping. In this new development there is the closest co-operation with the Royal Canadian Air Force.

During the year the town planning activities of the department, formerly carried on under the National Parks of Canada Branch, were transferred to the Surveys Bureau and the staff will henceforth function as the Town Planning Division of that organization.

The total revenue received from all sources was \$6,194,476. This is the highest revenue which has been recorded by this department for any of the last seven fiscal years and shows an increase of over 15 per cent compared with the year 1926-27.

Outlines of the work of the various branches of the department follow.

LANDS PATENTS

Letters Patent.—The number of letters patent issued during the fiscal year was 5,490, covering an area of 938,652 acres, made up by provinces as follow:—

Province	Patents	Acres
Manitoba.....	495	66,507
Saskatchewan.....	2,534	382,644
Alberta.....	2,142	461,715
British Columbia.....	295	27,056
Yukon Territory.....	18	725
Northwest Territories.....	6	5
Totals.....	5,490	938,652

Homestead Entries.—Seven thousand two hundred and thirty-three (7,233) homestead entries were granted during the year, aggregating an approximate area of 1,157,280 acres, being an increase of 1,473 in the number of homesteads granted, as compared with the previous year.

By provinces the entries were made up as follows: Manitoba, 688; Saskatchewan, 2,961; Alberta, 3,411; British Columbia, 173; total, 7,233.

There were 504 soldier grant entries made during the year, aggregating an approximate area of 80,640 acres, made up by provinces as follow:—

	Number of entries	Acres
Manitoba.....	35	5,600
Saskatchewan.....	226	36,160
Alberta.....	216	34,560
British Columbia (Railway Belt and Peace River Block).....	27	4,320
Totals.....	504	80,640

Accounts and Revenue.—During the fiscal year \$701,382.27, including \$328,759.36 interest on deferred payments, was received on account of purchased homesteads, pre-emptions and ordinary sales, showing an increase of \$174,003.46 as compared with the payments received during the previous year.

The sum of \$131,031.30 was received for entry fees, improvements and sundries, making a total revenue for the fiscal year of \$832,413.57.

Refunds were made amounting to \$27,207.20 as follow:—

Value of improvements collected on cancelled homesteads.....	\$ 22,867 73
Overpayments on sales; and on moneys on account of purchased homesteads and pre-emption sales, entries for which had been cancelled.....	4,339 47
	<u>\$ 27,207 20</u>

SCHOOL LANDS

During the fiscal year ended March 31, 1928, school lands were disposed of by public auction and private sales in the provinces of Manitoba, Saskatchewan and Alberta as follow:—

Province	Area in acres	Value	Average per acre
Manitoba.....	41.02	\$ 296 14	\$ 7 22
Saskatchewan.....	276,800.14	5,446,630 23	30 81
Alberta.....	210,932.70	3,556,163 55	16 85

The approximate net areas disposed of to March 31, 1928, after making deductions for cancelled sales and adjustments in regard to changes in area, were as follow:—

Province	Area in acres	Value	Average per acre	Value of town lots
Manitoba.....	637,585.67	\$ 6,118,637 26	\$ 9 60	\$ 5,240 00
Saskatchewan.....	1,441,203.49	24,145,618 59	16 75	13,701 00
Alberta.....	949,225.57	13,663,537 24	14 30	39,380 00

The revenues collected for the fiscal year (less principal moneys and less expenditure) and paid over to the provinces were as follow: Manitoba, \$25,486.86; Saskatchewan, \$279,889.03; Alberta, \$299,053.92.

The amounts of interest paid in the fiscal year on the investments to the three provinces were as follow: Manitoba, \$292,350; Saskatchewan, \$752,700; Alberta, \$390,125.

MINING LANDS

Mining on lands controlled by the Department of the Interior has, in the past, been confined to the mining of coal and the production of natural gas, particularly in the province of Alberta, and the mining of placer gold in the Yukon Territory. The production of these minerals has been of great economic importance, but while the production of coal and the use of natural gas from Dominion lands are increasing, the production of placer gold has fallen off considerably and is succeeded by the production of silver and lead from mines situated in the Mayo District of Yukon.

The production of natural gas in southern Alberta has been on a commercial basis for nearly twenty years, and new markets for the surplus product are being sought. Edmonton and surrounding towns and villages in central Alberta are now being served with ample supplies of natural gas.

The outstanding events during the last fiscal year in the way of mining developments on Dominion lands were the 'bringing in' of a number of oil wells in Alberta, and the taking over of the Flin Flon Mine by the Hudson's Bay Mining and Smelting Company.

The additional oil-producing wells of Alberta have established that province as an oil-producing area, and have been the means of focusing the attention of large oil-producing concerns on the possibilities of Alberta as a field for exploitation, and some companies have made large expenditures for geological research and for the purpose of acquiring leases.

To develop the metallic minerals found in the rocks of northern Manitoba a railway is under construction to the Flin Flon Mine, and on its completion in December, 1928, the erection of a smelter to treat the ores of this mine will be commenced. The present expectations are that the Flin Flon Mine will be one of the largest copper mines on the continent. In the same district development work on a number of properties, such as the Sherritt-Gordon Mine and the Mandy Mine, indicate that there will be many large mines in operation within a few years.

In central Manitoba, owing to the availability of hydro-electric power and the short distance from railway transportation, the Central Manitoba

Mines Limited have had in operation since the fall of 1927 a mill capable of treating one hundred and fifty tons of ore per day, and they employ about one hundred and forty men in the mill and mine. This is a gold mining proposition.

There are many thoroughly equipped, well-financed prospecting expeditions organized and now in the field searching for minerals in the Northwest Territories. The use of aircraft has made it possible to explore in any portion of northern Canada.

All signs indicate that the production of metallic minerals from Dominion lands will, in the near future, assume as great importance as the production of non-metallic minerals, such as coal, petroleum, and natural gas.

TIMBER AND GRAZING

The increase in revenue from timber, grazing and hay lands was \$198,806.02 over the revenue for the previous fiscal year, or a little over 16 per cent advance, as against 10 per cent advance in the year ended March 31, 1927. The comparative statement shows a growth in revenue from \$534,381 in 1917 to \$1,416,719 in 1928, an increase of nearly \$900,000. The amount of bonus received during the year averaged \$16,000 a month.

In regard to the areas affected, timber berths cover 6,466 square miles and grazing leaseholds 6,727,015 acres, as against 6,912 square miles and 6,202,255 acres, respectively for the previous year. About 120 more berths were granted, and over 800 were operated out of a total of 1,332. The net increase in the total amount of revenue received from timber is \$188,147.37, and from grazing and hay \$7,931.73 as compared with the preceding year.

The largest revenue from timber was received through the New Westminster agency, which was nearly \$410,000, as against about \$376,000 for the previous year. In the Prairie Provinces the Edmonton agency had the largest revenue, with the Prince Albert agency coming second.

As regards material manufactured, there were increases of over 50,000,000 feet board measure of lumber, 219,000 linear feet of piling, etc., nearly 700,000 linear feet of mining timber, nearly 48,000 cords of pulpwood and 436,000 railway ties.

ORDNANCE, ADMIRALTY AND RAILWAY LANDS

The work of inspecting and surveying Ordnance Lands has been carried on steadily, and more of these lands are continually being placed under remunerative occupation. A number of valuable reserves are yet to be dealt with when certain legal impediments are removed but the most valuable of such parcels as are available for disposition have been placed under occupation or are now receiving attention.

NATIONAL PARKS OF CANADA

A wider national interest in the parks of Canada is evidenced in two directions, first, in the greatly increased travel to the existing national reservations, and second, in the demand for the establishment of further recreational areas in other parts of the country.

The number of visitors to the parks in the past year was the highest yet recorded, reaching a total of approximately 360,000. The fact that approximately two-thirds of these visitors were motorists indicates the part now played

by the automobile in holiday travel. The most popular objective was the three-park unit comprised of the Rocky Mountains, Yoho, and Kootenay national parks, which are now linked together by a circle motor highway having direct connections with main through highways on both the east and the west. Over 127,000 motorists, or approximately 35 per cent of the total travel to all parks entered this unit by one of its three gateways. Since the opening up of the Rocky Mountains park to through travel by the completion of the Banff-Windermere highway—now the southern arc of the Circle route—there has been a marked growth in this class of travel and it is interesting to note that the volume of motor travel for each month during the past season exceeded the yearly total of six years ago. The final link of the Circle route was completed during the year by the construction of the Field-Golden highway. This road, which is one of the most spectacular in Canada, opens a new western gateway to the Rockies and permits through travel across Yoho national park. From Golden, B.C., the western terminus, connection is made by way of the Columbia valley with the western end of the Banff-Windermere highway, thus completing a Rocky Mountain Circle route of over 300 miles. Although the new road was not opened until July 9, between that date and the end of the season over 5,500 cars, registering from all parts of Canada and the United States, went over the road.

The addition of one more region to Canada's already fine system of national reservations by the establishment of the Prince Albert park, in Saskatchewan, and the extension of the boundaries of Jasper park so as to include the magnificent region extending from the Columbia ice-field to the northern limits of Rocky Mountains park, were two of the most interesting events of the year.

The Jasper extension sets aside a region as yet little visited but which must come to attract increasing interest. It is here that the Canadian Rockies reach their highest mean elevation and the climax of their snow and ice deposits. The new area contains five great ice-fields of which the Columbia, with an area of approximately 110 square miles, is the largest.

The condition of the Canadian buffalo herd gives cause for satisfaction. The thinning out in recent years has had a beneficial effect both through the weeding out of old and surplus males and through the better forage conditions resulting from decreased numbers. Additional shipments to the Far North, totalling over 1,900 animals, were successfully made throughout the summer, the loss involved being practically nil.

The work of marking and preserving the historic sites of Canada was prosecuted during the year and twenty-four additional sites were marked. Preliminary steps were taken towards the creation of a new historic park, comprising about 300 acres, surrounding the ancient fortress of Louisbourg, N.S., one of the most interesting landmarks in Canada.

The enforcement of the Migratory Birds Convention Act was carried on under the direction of the Commissioner of National Parks as in former years. As a result of surveys of bird conditions carried on by the branch, additional protection was given to certain species which were reported in lessening numbers. The branch is co-operating with the Bureau of Biological Survey of the United States in securing a waterfowl census of the continent with a view to obtaining information upon which future legislation may be based. The serious loss to bird life due to dumping of oil from vessels in navigable waters received much consideration. In November a national conference in which Canada took part was held in Washington and a draft convention was drawn up for submission to the Maritime Powers with a view to preventing this heavy menace to bird life.

FORESTRY

The Forest Service reports an unusually favourable season in so far as forest fire protection is concerned. The total number of fires on Dominion lands protected by this service was only 661—the lowest number for the past ten years at least. Of these only forty were in the national forests. In one inspectorate only one fire occurred within the national forests and the damage from it was negligible. In Saskatchewan a system of aerial patrol of the northern forests was inaugurated. On the Rocky Mountains forest in Alberta a system of lookout towers was begun. The greatest damage is traceable to neglected camp-fires; fires originating in this way caused 75 per cent of the total loss. Fires arising from railways were more numerous than those originating from camp-fires, but caused less than one-half of one per cent of the total losses; in other words, fires that had their origin in neglected camp-fires caused 250 times as much damage as the fires originated by the railways. Ranking next to camp-fires in point of damage done were, in the order given, incendiary fires (which caused almost one-seventh as much damage as neglected camp-fires), lightning, settlers' brush-burning fires, and smokers.

The largest item of Forest Service revenue continues to be timber sales and permits. The revenue from timber sales shows a substantial increase over 1926-27, though the revenue from timber permits fell off slightly. The total number of timber sales was 157, a marked increase over the total for 1926-7, which was 120. The increase in British Columbia during recent years has been especially marked, the number of timber sales in 1925-6 being 22; in 1926-7, 33; and in 1927-8, 50.

In spite of slight decreases in grazing and hay permits, surface rentals, and special-use permits, the revenue of the service showed a net increase of over \$9,000.

The number of grazing and hay permits shows a further decrease. Of late years the favourable seasons have given stock-owners of the Prairie Provinces the opportunity to secure the fodder they needed from their own lands without resorting to the national forests, while the general depression in the industry has had its effect on the demand for forest range.

Experimental seeding and planting in the national forests were continued. A tract of 200 acres, in British Columbia, sown to western cedar, was the largest single area seeded. In Saskatchewan a scheme of nurseries in national forests is being developed which will soon be capable of supplying several millions of trees yearly for planting in the forests.

A very extensive survey was made in the summer of 1927 in Manitoba, the area covered amounting to between 12,000,000 and 13,000,000 acres. This was rendered possible by the co-operation of the Topographical Survey and the Directorate of Civil Government Air Operations. Other smaller areas in the same province were covered by similar surveys, and numbers of more intensive surveys were made in other provinces.

Considerable quantities of forest-tree seed have been extracted, the bulk of which was sent to Great Britain for the Forestry Commission and to New Zealand.

The season for tree plantations was unusually favourable. Considerable damage was done in the permanent birch plantations at the Indian Head nursery station by the bronze birch borer.

The summer resorts in the national forests continue to be visited by many thousands of visitors during the season; in addition, many persons visit various localities in these forests for the purpose of fishing and camping. This use of the forests tends greatly to increase the appreciation of their value on the part of the public, and is encouraged in every possible way.

The publicity work of the service was continued and extended, mainly by means of Canadian Forest Week. The conduct of this special effort this year was marked by the closest co-operation yet achieved with the United States forest authorities, and by even greater enthusiasm and effort on the part of the press than in previous campaigns. The work in connection with the exhibitions was extended, as was also the lecture service to boys' and girls' camps.

During the year the Forest Products Laboratories underwent an extensive re-organization. The work carried on in the East in timber testing, wood preservation, timber physics, and timber pathology was transferred to Ottawa, where greatly enlarged accommodation was made available; the work in pulp and paper investigation was retained in Montreal. The Vancouver laboratory continued its work, especially along the line of timber conditioning. The increasing importance of the work of these laboratories in the industrial life of the country is manifested by a rapid and steady increase in the number of inquiries of a technical nature that are being received.

WATER POWER AND RECLAMATION

International Waterway Matters.—The Minister of the Interior is charged with the responsibility of advising the Government with respect to international waterway problems and the Dominion Water Power and Reclamation Service has been called upon to devote much time to these matters. From the nature of the International Boundary line between Canada and the United States, there naturally arises a variety of waterway problems with respect to those waters through which the boundary runs, and to rivers and streams crossing the boundary. These questions continue to grow in number and in variety, and many of them are of vital import to the Dominion.

Each of the provinces along the boundary is confronted with one or more of these international waterway matters. British Columbia is interested in the proposed Columbia Valley Reclamation Project in the United States, with its influence on the water-powers of the Pend d'Oreille river, and in the matter of reclamation of Kootenay flats, with its influence on power and navigation. The Prairie Provinces are interested in the apportionment between the two countries for irrigation purposes of the waters of the St. Mary and Milk rivers and their tributaries; in the effect of drainage operations on the flooding of the Red and Roseau rivers; and in the Lake of the Woods, Rainy Lake and Upper Boundary Water storage problems with their influence upon the power resources of the lower Winnipeg river. Ontario and Quebec are vitally concerned with the problems arising along the Great Lakes and St. Lawrence Waterway system, including the diversion through the Chicago Sanitary canal, problems having to do with compensatory works at the lake outlets; with the preservation of Niagara falls; and with the proposed deep waterway. International waters such as lake Champlain and lake Memphremagog in southern Quebec, and the St. John river with its contingent power and storage problems, and the St. Croix river in the province of New Brunswick, also provide issues requiring investigation and, in some cases, international supervision.

International boards exercise control over the apportionment of the St. Mary and Milk rivers waters, over the regulation of lake of the Woods when the domestic storage range has been exceeded, over the regulation of lake Superior, over the apportionment of the water permitted to be diverted under the Boundary Waters Treaty at Niagara, over the withdrawal of water from the St. Lawrence at Massena and over the regulation of the flow of the St. Croix river. A special International board is also investigating the matter of preserving the scenic beauty of Niagara Falls and, consistent with such preservation, of determining what additional water might be permitted to be diverted for power purposes.

Water-power.—The past year was particularly noteworthy for the strides made in building up a power transmission system in southern Alberta; this system is based upon hydro-electric systems on the Bow river but is linked and exchanges power with several large steam plants which were already in existence. The system now embraces an area extending from Red Deer and Calgary in the north to Lethbridge and Macleod in the south and supplies many towns, villages and individual farms. It is expected that the system will shortly embrace the whole area from Edmonton to the International border and extend eastward to connect with other towns or systems which are being projected in Saskatchewan. Mining in northern Saskatchewan and Manitoba is rapidly progressing and the development of water power for mining purposes appears to be imminent. On the Winnipeg river in Manitoba the capacity of the three developed sites will shortly be reached and the development of further sites will be required to cope with the rapidly growing power load in Winnipeg and surrounding territory. In Canada as a whole there was no sign of any abatement in electrical development; hydro-electric installations increased during 1927 by 221,655 to 4,777,921 horse-power with work in progress that will increase this figure to 5,100,000 horse-power before the end of 1928.

Irrigation.—As precipitation during the growing season was considerably above normal throughout the Prairie Provinces, little irrigation was practised or required. The generous and well distributed rainfall provided ample moisture and all indications pointed to an abundant crop throughout the irrigation districts. These high expectations were however not entirely realized due to the unusually low temperatures experienced during September and recurring with greater intensity early in November, but on the whole production was well above average in the irrigation belt.

In addition to the major irrigation districts operating as units there is now a total area of 105,000 acres of land in Alberta and Saskatchewan irrigated by individual water users who have constructed and operate their own projects.

Fifty-one such applications were received during the year, the total number of these privately owned projects being about 1,500.

Drainage.—The drainage investigations carried out by this department during the past year have been restricted largely to inspections and surveys of small schemes. Supervision was maintained over the scheme of the McArthur Land Company Limited and the Western project of the Manitoba Dairy Farms Limited in Manitoba, the Waterhen Lake drainage district in Saskatchewan and the Low Water Lake drainage project in Alberta. An investigation of the large Eastern project of the Manitoba Dairy Farms Limited in southeastern Manitoba was carried out and the report and plans are now being prepared by the engineers. Satisfactory arrangements were made with the provinces of Alberta and Saskatchewan regarding fur-farming schemes. In connection with the provincial drainage schemes a considerable area of reclaimed Dominion land was disposed of to the provinces of Alberta and Saskatchewan under the provisions of the Dominion Drainage Regulations.

NORTH WEST TERRITORIES AND YUKON

Northwest Territories.—The revenue received under the administration of the Northwest Game Act increased from \$34,195.50 in 1926-27 to \$43,481.96 during the present fiscal year. The main item of increase was "Sale of Wolf Pelts," which brought in \$23,364, as compared with \$11,842 for the previous year.

The investigation of the resources of the region north of the provincial boundaries has been actively carried on. An important step was taken in the

work of conserving the musk-ox by the setting aside of an area of 15,000 square miles stretching from Artillery and Clinton-Colden lakes eastwards, on both sides of the Hanbury and Thelon rivers, to Beverley lake. There are no trading posts in this region which is known to contain some of the remaining musk-ox herds and the district is in every way an ideal sanctuary for wild-life. For three years the experiment of transferring plains buffalo from Wainwright park, Alberta, to Wood Buffalo park near Fort Smith, N.W.T., has been carefully watched. Its success has now been demonstrated. Two thousand more plains buffalo were transferred to Wood Buffalo park during the fiscal year. A reindeer investigation is also under way to ascertain with certitude to what extent these animals can be introduced into the Mackenzie district.

The usual annual patrol of the posts in the Eastern Arctic was carried out on the ss. *Beothic*. The expedition in charge of Mr. G. P. Mackenzie was engaged on this work for about seven weeks and accomplished all the purposes for which it set out.

The administration of the Northwest Territories covers Eskimo affairs, hospital and educational facilities, health of the natives, the issuing of permits and licences to trade. All these matters have received the increased attention which the growing importance of the territories warrants.

The inspectional work with regard to mining, petroleum and natural gas on Dominion lands in the Prairie Provinces as well as the Northwest Territories is conducted by this branch. Details regarding the progress in the various fields are given in the director's report in Section V.

The amount of coal mined from Dominion lands in Alberta increased from 6,508,908 tons to 6,936,780 tons, although the number of mines operating shows a decrease of 55. Operating mines in Saskatchewan reported an increased output of about 20,000 tons.

Yukon.—The prestige of the Yukon as a tourist land continues to grow. Last year over seven thousand tourists visited the territory, exclusive of the hunting parties who go north for big-game every autumn.

The progress of the territory in mining though not spectacular is steady and very satisfactory.* The administration of the territory as regards public health, schools, roads, navigation, etc., was carried on satisfactorily.

OBSERVATORIES

Dominion Observatory, Ottawa

Observations on the regular meridian circle program were obtained on 185 days, covering 439 hours of right ascension. There were obtained 1,481 measurements of right ascension and declination of program stars, 962 of clock stars, 407 of azimuth stars, 61 of planets and 115 of the sun. Of nadir and other constants there were 949 sets of measurements and of underground azimuth marks 105.

The computations in connection with the international longitude program mentioned in the last report were completed. A mimeographed list of times of reception of wireless signals at Ottawa and Vancouver was distributed to the various co-operating observatories. A detailed report of the operations and results is being prepared for publication.

The time service, comprising 4 primary clocks, 15 secondary clocks, 595 minutes dials, 18 seconds dials, 2 tower clocks and various relays, chronographs and seismograph shutters, was maintained as usual. In addition to maintenance of Observatory equipment, 63 clocks, 97 watches and 10 chronometers were overhauled for other branches and departments. Wireless signals were received

* Mining in the Yukon is dealt with in the report of the Mining Lands Branch, Section I.

throughout the year from the United States, France, and Germany, and since January from Rugby, England. Wireless time signals are sent out daily through the local broadcasting station, and experimental work on short-wave transmission of these directly from the Observatory is being carried on.

An underground clock-vault was constructed during the year, and its equipment has been partially completed.

With the eighty-foot reflecting telescope and twenty-three foot spectrograph, 474 observations, each containing 9 strips of spectrum of solar limbs, centre, midway and comparison spectra, were photographed. Sunspots were recorded on 159 photographs of the solar disc with reference lines, and prints were supplied to the Radio Branch of the Department of Marine and Fisheries for the study of the effect of sunspots on radio. Over 500 spectrograms were measured, and 624 computations of radial velocity and heliographic positions were made. A statistical comparison of the Hudson's Bay Company's fur records with sunspots showed a striking relationship. An instrument for reading heliographic latitudes and longitudes of points observed spectroscopically, or of sunspots recorded on photographic plates, was designed and is under construction.

The spectrograph attached to the 15-inch equatorial telescope was used in further study of Cepheid variables and other interesting systems such as σ Scorpis and ϵ Aurigae. During the year 311 spectrograms were secured. The photo-electric photometer was also in regular use, and 89 observations were made. The light variations of several stellar systems were studied, and light curves for δ Cephei and η Aquilae were obtained. The observing program was so arranged that the same stars were studied with the spectrograph and the photometer. Work on variation of ionization in Cepheid variables was continued in collaboration with McGill University. As usual, the equatorial telescope was available on Saturday nights for observation by the public.

Observations were continued with the eight-inch doublet for determining the magnitudes of comparison stars in Cepheid fields, about one hundred plates being obtained. The short-focus triple camera was in use on every clear, moonless night for the determination of the light curves of some forty Cepheids, and about two hundred plates were secured. The measurement and reduction of the comparison stars have been continued, over twenty-five plates having been measured; the results are now being prepared for publication. The six- and eight-inch doublets were used also in following the Pons-Winnecke comet, and direct photographs were taken whenever possible.

During the year 333 earthquakes were recorded, of which 39 were reported to the press, and by telegram to Science Service, Washington. The more outstanding shocks occurred as follows: in Chile (April 14, 1927); in Alaska (October 24, 1927); and in Mexico (February 10, 1928, and March 22, 1928). The co-operative work in the province of Quebec, mentioned in the two immediately preceding reports, is under way. Records have been obtained at Shawinigan Falls since November, 1927, and at Seven Falls since August, 1927. The records at Seven Falls have been greatly interrupted, but the results already obtained show at least 12 earthquakes recorded there which have not appeared on the records at Ottawa. Continuous recording there will thus be of particular value. At the request of Harvard University, the seismologist was sent to that institution for a short time for the purpose of organizing the seismological work there. The Bibliographical Bulletin, mentioned in the last report, is growing through international co-operation. It continues to appear, as originally, in mimeographed form, but is being printed, in arrears, in the Bulletin of the Seismological Society of America.

Magnetic work was carried out in accordance with a program which was begun in 1924, and had for its object the securing of secular change data over

that part of the Dominion already covered by the magnetic survey. Observations for the determination of the three magnetic elements, declination, inclination and horizontal intensity, were made at seventy-two stations, fifty-six of which were occupied previously. The area covered is included between longitudes 78° W. and 131° W., the Canada-United States boundary, and latitude 56° N. Office work has included the computation of observations of the past season and the preparation of a publication covering the results of the period 1924-26.

Gravity observations were made at 16 stations, 6 of these being in Ontario, 1 in Quebec and the remaining 9 in Western Canada. In view of the increasing interest in the application of gravity and other geophysical methods to prospecting, some attention has been given to the problems involved, and, in collaboration with the Geological Survey, some tentative investigations have been planned.

Two of the regular series of Dominion Observatory publications were issued and distributed, Vol. 8, No. 8, Magnetic Results, 1921-1923, and Vol. 9, No. 4. The Spectroscopic System Nu Eridani. A number of papers have been presented to scientific societies and published in various journals; numerous scientific lectures have been given, and lantern slides have been loaned for illustration of lectures given in various places by amateur astronomers.

Dominion Astrophysical Observatory, Victoria, B.C.

This is the tenth annual report of the work of this institution, which commenced actual observations on May 6, 1918. The details of the work carried on are published in complete form in the publications of the observatory, of which four were issued during the year. Seven more are in press, being numbers 4 to 11 inclusive, of volume IV.

As in previous years, the whole time of the telescope, except two hours for visitors every Saturday evening, was devoted to photographing stellar and nebular spectra. The number of spectra obtained was 1,124 as compared with an average of 1,637 for the past nine years. Plates were secured on 182 nights, of which 102 might be classed as good, when 962 spectra were obtained, and 80 as fair to poor, when only 162 were secured. On several nights in addition, though the dome was opened and exposure started, no usable spectra were obtained. The actual number of hours observing was 997, as compared with a nine-year average of 1,244. Thus the year from the point of view of observing was decidedly below the average.

The program of observation of the B-type stars which has been under way for about four years is making satisfactory progress, and may possibly be completed in another year. About 500 spectrograms are yet required. Practically all the plates have been measured and about 135 spectroscopic binaries have been discovered in the course of the work. An interesting investigation carried out was an analysis of the radial velocities of all the O-type and B-type stars determined here as a test for the hypothesis of a galactic rotation as advanced by Lindblad and previously tested by Oort. To that end a complete catalogue of the velocities of all O-type and B-type stars observed here or elsewhere was compiled. The material was thus more complete and homogeneous than that of Oort and the distribution of the velocities of some 550 B-type and O-type stars strongly confirms the existence of a rotation of the sidereal system in the galactic plane around a distant centre in longitude 325° .

Considerable work remains yet to be done on the winter section of the A-type program. The spectra of about 900 A-type stars have now been secured but many of these require additional plates so that reliable values of the radial velocities may be obtained. Measurement has kept pace with observation. Some experimental work has been done in determining the intensities of absorption lines.

Nine spectroscopic orbits were completed during the year and revision made of one other. The orbits of the secondary components of two other binaries were also determined. A spectrophotometric determination of the continuous spectrum of *epsilon* Sagittarii showed that the metallic and not the helium spectrum was the fundamental one. Photometric observations of 12 Lacertae indicated that the periods of light and velocity variations were the same.

The origin and resulting velocities given by all the lines in the composite spectrum of Z Andromedae were determined. The diameter of the surrounding nebula and the temperature of the star were also derived and the physical nature of the system discussed from the observed data.

The wave lengths of the oxygen and nitrogen lines between $\lambda 3800$ and $\lambda 4700$ on third order grating plates have been measured. The study of the molecular spectrum of silver between $\lambda 3280$ and $\lambda 3576$ has also been undertaken with the hope of being able to determine the distance apart of the atomic nuclei.

Drawings to various scales of the solar and stellar systems were prepared for purposes of illustration. Graphs were also constructed to facilitate transformation from equatorial to galactic co-ordinates and for the determination of the distance and position angle of any star from the solar apex.

Including day visitors, about 30,000 people visited the observatory during the fiscal year.

SURVEYS BUREAU

In general the work of surveying proceeded along the lines indicated in previous reports. The Geodetic Survey triangulation net was extended in northern British Columbia and across Vancouver island; in Alberta and Saskatchewan north towards Edmonton and east towards Battleford; in the Kirkland Lake mining area in Ontario; in the Rouyn mining area and the Gatineau valley and from St. Lawrence river to Chaleur bay in Quebec; and southwestward from Halifax in Nova Scotia. Four base lines incidental to this work were measured.

Precise levelling was carried on in five provinces and fundamental bench marks were established in four. In the office the precise level net of Canada was adjusted and the results of research work by members of the staff have provided material for the publication of several pamphlets. Progress is being made in the preparation of the results of precise levelling and these will eventually be issued in nine pamphlets of convenient size.

A mapping program, which has for its objective the preparation of a topographic map of Canada in map sheets of various scales depending upon the nature, needs and state of development of the areas mapped, was vigorously followed up by the Topographic Survey, surveys being made in eight provinces and in the Northwest Territories.

Aerial photography is now recognized as a very important aid to the usual ground methods of mapping. During the year an area of 45,850 square miles in ten localities was covered by aerial photography, necessitating the indexing of 62,000 photographs.

Legal surveys of Dominion lands were carried on as required. The results of the magnetic survey for declination were enriched by over 1,300 observations, the total number now on record being over 23,000. The facilities of the Physical Testing Laboratory in the examination, testing and repair of scientific instruments are increasingly used by Government departments and the public. An outstanding proof of this is the testing and standardization of thermometers of which 4,345 were dealt with during the year. A total of 60,077 maps, publications and official plans was distributed, being an increase of over 5 per cent above last year.

The boundary between Canada and the United States has a length of 5,500 miles and is probably the longest of its kind in the world. Constant inspection is necessary as monuments become displaced or are destroyed from time to time. Also the line becomes choked up with young trees which obscure the view between monuments. During the year the United States Section cleared the vista on the Quebec-Vermont boundary, and the Canadian Section that on the north line between New Brunswick and Maine.

After a tour of inspection in the west the Canadian Boundary Commissioner discussed with the Deputy Provincial Secretary of Manitoba at Winnipeg the question of the ratification of the federal Government's proposed action in presenting to Manitoba the two small water areas in the Northwest Angle inlet of lake of the Woods, which were transferred to Canada by the United States under the treaty of 1925, and also the question of permanently maintaining as a public reserve the road allowance along the International Boundary.

NATURAL RESOURCES INTELLIGENCE SERVICE

During the year there was a large increase in the demand for information regarding Canada's natural resources, especially with regard to information on the tourist and recreational resources. Over 3,150,000 cars entered Canada, during the past season, for periods varying from one day to six months. This is an increase of more than 50 per cent over the previous year and takes no account of the tourists who entered by boat or railway.

Maps, pamphlets, and recreational literature were distributed on a larger scale than before to all organizations interested in the development of tourist traffic. A series of blotters picturing the provincial capitals of the Dominion in contrast with their appearance of 1867, and carrying an invitation to visit Canada was widely distributed throughout the United States. Special articles, photographs, engravings and plates were furnished to newspapers, magazines and other periodicals. Assistance was given to papers publishing special editions featuring Canada's resources and their development. Routes of travel were outlined for individual inquiries and every endeavour made to furnish information which would be of assistance to those who travel, settle or otherwise interest themselves in the Dominion.

General Information

There are two main phases to the general information work of the service; first the continuous building up of all available and accurate data on Canada's resources and recreational and tourist attractions, and second, the wide and systematic distribution of this information in the most effective channels.

Assembling of Information on Canada's Resources.—As has been pointed out on former occasions, it is necessary to have readily available the most complete and up-to-date data that can be assembled, in order that the service may function most efficiently as a central bureau of information on Canada's natural resources. Prompt access to such data is provided by the Natural Resources Index which is a fundamental phase of the service's regular activity. The work of collecting the data and of classifying and recording them in such a manner as to be readily available in order to maintain and improve this index required a considerable amount of continuous detailed work during the year.

The land available for agriculture ranks first among the natural resources of Canada. For many years the work of supplying prospective settlers with adequate land information was met by the furnishing of economic, cereal, elevator, physical and climatic, vegetation and forest cover reports. Recently, however, many of the requests for information have been such as could not be

met by printed publications and which required special investigations in order to furnish the information desired. These requests have been varied and consisted of inquiries relative to climate, crop production, land settlement, railway and transportation facilities, etc.

Interest in Canada's fur resources, particularly in regard to fur-farming, continued to grow and requests for information regarding the various phases of this industry increased from month to month. These requests came not only from Canada but from the United States and Europe. The general interest in the various aspects of the fur industry is evidenced by the number of inquiries received. These included requests for information regarding prices, fur markets, pelting, trapping locations, regulations, royalties, bounties, etc., as well as the raising of the various fur-bearers in captivity.

As lack of proper information relative to the handling of raw furs is responsible for a very considerable loss in the value of the fur take, a booklet was compiled describing the best methods of preparing pelts for the market. This booklet was widely distributed to fur companies and to individuals, and so great was the demand that a second edition was necessary.

Tourist Information.—During the year requests for information of a recreational nature increased greatly. As usual every endeavour was made to give inquirers the best possible assistance in laying out their trips and planning their holidays.

Tourist maps and publications were in great demand from boards of trade, chambers of commerce and automobile clubs in the United States.

In connection with the World's Poultry Congress held in Ottawa, a number of descriptive automobile tours, with maps, were prepared for delegates coming from the United States. Copies of these descriptive tours, together with road maps and recreational literature, were sent to each delegate.

Many requests continued to be received from persons interested in canoeing as a holiday. Several new trips were prepared and added to the list already available.

A booklet "Vacations in Canada", containing the kind of information generally sought by the tourist who intends to visit Canada, was issued and widely distributed. In addition to general information on the recreational attractions in each of the provinces, the Northwest Territories, and the Yukon, this booklet gives specific information on motoring regulations in each of the provinces, a summary of the Canadian customs regulations regarding the entry of automobiles for touring, pleasure boats, tourists' outfits, and travellers' baggage; also a summary of the fishing, hunting and game regulations of the various provinces. Although available for a comparatively short time the booklet was very much in demand.

New and revised editions of the map of Canada and the United States and of the sectional maps showing the main connecting highways between the two countries were prepared and widely distributed. New editions were also prepared of the maps of Nova Scotia, New Brunswick, and Prince Edward Island showing the motor roads and recreational resources.

Distribution of Published Information.—During the year 416,570 maps and 187,989 reports and booklets were distributed, of which 323,861 were mailed to points within Canada, 270,752 went to the United States and 9,946 to other countries. Requests for information which could not be supplied by printed maps and literature totalled 40,301, an increase of 9,755 over the previous year, such interest being due to the interest in land settlement opportunities and the tourist attractions of Canada.

In the latter connection close co-operation was established with tourist bureaus, automobile clubs, tourists' camps, hotels, banks, fish-and-hunt, golf, country and social clubs, motor dealers, boards of trade, fraternal societies, educational institutions, libraries, the press and similar bodies in touch with prospective tourists. In this manner, the various maps and booklets of the service were placed in the hands of those in a position to derive the greatest benefit therefrom.

The completion of negotiations for the development of mining properties in Manitoba and Saskatchewan and the publicity following the announcement resulted in a marked demand for maps and reports pertaining to that section of the Dominion.

The facilities of the service to supply libraries with data regarding Canada's resources were placed before the annual convention of the American Library Association. The Immigration Bureau of the Overseas League in London was furnished with publications which would assist members who were contemplating settlement in Western Canada. An ex-officer of the French army was furnished with data to assist in organizing a project to purchase 10,000 acres of agricultural land in the western provinces. The officer in charge of Overseas Settlement at Army Headquarters, India, was furnished with quantities of reports and maps showing the attractions of the various provinces, to be placed with each British unit for the information of those going on the reserve or discharge list.

The service continued to issue the weekly news bulletin containing items relating to the Dominion's resources and their development. Material in the form of brief bulletins and short articles was supplied regularly to radio and broadcasting stations.

Development Investigations.—Investigation of opportunities for intensifying the development of natural resources within the Dominion required increased attention of the service. The number of inquiries from interested manufacturers and business corporations for both detailed and general information on problems associated with Canada's raw products increased considerably during the year. Although some of these inquiries could be answered by printed reports, economic maps, and other published material, there were very many which could not be dealt with in this manner but required special investigation.

As a result of the continuous demand for information of this nature, it has been necessary to undertake a definite program of investigation for the purpose of effecting a more intensive utilization of the domestic raw products within the Dominion. The prosecution of these investigations entailed a digest of information concerning the location and extent of raw materials, transportation, domestic and foreign markets, tariffs, taxes, royalties, patents, processes, machinery and all other such matters of special interest to the industry under review.

Among the investigations carried on during the past year, might be mentioned the leather, fertilizer, paperboard, and edible gelatine industries, the production of palm-kernel cake and oil, the production of oil from grape seeds, the textile industry of Canada, and the manufacture of porcelain products.

It might be mentioned that much of the investigatory work of this service is conducted, and in some cases initiated in co-operation with other branches of the public service.

Geographic and Economic Mapping.—The work of the Chief Geographer's office showed considerable progress in the geographic mapping of Canada. New editions of the land district maps were issued, one for each of the seven districts. Fourteen sheets of the standard geographic map of Canada were

revised and brought up to date and new editions published, as well as new editions of the maps of Manitoba, Saskatchewan and Alberta on a scale of 12½ miles to an inch. Considerable work was also done on the preparation of other sheets of the standard geographical map; a relief map of Canada on a scale of 60 miles to an inch; and maps of Quebec and the Maritime Provinces, Ontario, Manitoba, Saskatchewan and Alberta, and British Columbia, on a scale of 35 miles to an inch.

The work in economic, as distinct from geographic mapping, uses the latter maps as bases for maps showing the nature and distribution of the country's resources, the extent of their development, and a wide range of physical and economic data of aid in throwing light on the character and volume of Canadian national property from a development standpoint. The increased demand for accurate and useful tourist and recreational information necessitated the preparation of a number of maps showing such information.

Maps prepared or under preparation during the year included: Trade Routes Map of the World; Map of Dominion showing Vegetation and Forest Cover; Map of Dominion, scale 100 miles to an inch, showing Natural Resources and Transportation Routes; Land Maps of Manitoba, Saskatchewan, and Alberta; Maps of New Brunswick and Nova Scotia indicating Motor Roads and Recreational Resources; Maps showing main Automobile Roads between Canada and the United States; Map showing Commercial Development in Manitoba and part of Saskatchewan; Map showing Commercial Development in Central Canada. In addition to published maps, many maps were prepared for reproduction by line-engraving, blue-print, and other processes.

In addition to the preparation of maps for publication by the service, the mapping facilities were utilized by other branches of the Department, by other departments of the federal service and by many organizations requiring maps of an economic nature. Interest in the study of the economic geography of Canada has increased during recent years and every possible assistance was given to educational publishers, universities, newspapers, and others, both in Canada and abroad, by furnishing maps and such other material as would be of use in carrying on these important studies.

Technical Plant.—This plant, comprising photographic laboratories, blue-printing map-mounting, photostat, mimeograph, and other technical facilities, continued to give prompt service to the Department of the Interior and to other departments which made use of it from time to time, as well as to effect substantial savings over the costs which would have been entailed to the department if it were not so equipped. While the plant is maintained primarily to meet the Department's own requirements, it is used extensively by other public services, there being very few departments of the federal Government which do not take advantage of these facilities in one way or another.

In this plant is maintained the photographic and lantern slide library. Lantern slides are made up into sets and these along with lectures or lecture notes are loaned to educational and other institutions or organizations where they will be of assistance in the development of the natural resources of Canada. The demand for lantern slide lectures showed a steady increase during the year. A number of the lecture sets were revised and new lectures were added. A brief summary for the calendar year 1927 shows that 405 lectures were given in Ottawa, 400 at other points in Canada and 400 in centres outside Canada, chiefly in the United States, and in Great Britain. Eighty lectures reached fourteen different countries outside Canada and in addition one lecturer used "Canada, Coast to Coast" in upwards of twenty countries.

Photographic prints for reproduction purposes were furnished to newspapers and other periodicals in increasing numbers.

DETAILED STATEMENT OF SURVEYED AREAS IN MANITOBA, SASKATCHEWAN AND ALBERTA, JANUARY 1, 1928

	Manitoba	Sas- katchewan	Alberta	Total
	acres	acres	acres	acres
Area under homestead (including military homesteads).....	8,311,400	29,003,400	19,066,900	56,381,700
Area under pre-emptions, purchased homesteads, sales, half-breed scrip, bounty grants, special grants swamp lands transferred to province of Manitoba, etc.....	5,241,200	6,727,800	3,491,100	15,460,100
Area granted to railway companies.....	3,566,997	15,177,063	13,038,595	31,782,655
Area granted to Hudson's Bay Company.....	1,273,500	3,351,000	2,402,300	7,026,800

Appended hereto are individual reports of the Commissioner of Dominion Lands; the Director of the Forest Service; the Commissioner of National Parks of Canada; the Director of Water Power and Reclamation; the Director of the North West Territories and Yukon Branch; and the Director General of Surveys. The Geodetic Survey, the Topographical Survey, the Water Power and Reclamation Service, the Forest Service, and the National Parks of Canada Branch publish separate annual reports which review the work of the year in greater detail.

Your obedient servant,

W. W. CORY,
Deputy Minister.

November 1, 1928.

I

DOMINION LANDS

REPORT OF THE COMMISSIONER, J. W. GREENWAY

Applications for Patent		1927-28
Number examined.....		7,983
New applications.....		3,821
Applications accepted and notifications issued.....		3,037
Certificates of recommendation sent out.....		48

SUPERINTENDENT OF WESTERN LAND AGENCIES

Report of Agencies

Agency	Homestead entries granted	Land Sales	Applications for patent received	Land entries cancelled	Permits issued	
		Ordinary and school lands			Timber	Hay
<i>Manitoba—</i>						
Dauphin.....	305	16	251	637	713	359
The Pas.....						
Winnipeg.....	383	129	253	1,180		
<i>Saskatchewan—</i>						
Moose Jaw.....	949	94	570	1,075	53	928
Prince Albert.....	2,006	90	1,179	1,463	1,494	1,322
<i>Alberta—</i>						
Calgary.....	176	34	156	353	244	194
Edmonton.....	1,450	86	721	1,378	2,083	826
Grande Prairie.....	909	15	294	448	358	102
Lethbridge.....	125	26	60	560	1	55
Peace River.....	854	23	185	712	439	209

REPORT OF THE CONTROLLER OF THE LAND PATENTS BRANCH AND REGISTRAR OF DOMINION LANDS PATENTS

With statements, A to K, in relation thereto

LETTERS PATENT

During the fiscal year ended March 31, 1928, there were 5,490 letters patent issued, covering a total area of 938,652 acres, divided according to provinces as follows:—

Province	Patents	Acres
Manitoba.....	495	66,507
Saskatchewan.....	2,534	382,644
Alberta.....	2,142	461,715
British Columbia.....	295	27,056
Yukon Territory.....	18	725
Northwest Territories.....	6	5
Totals.....	5,490	938,652

The various kinds of grants are summarized below and are later dealt with in detail in statements A to G, inclusive.

Grants	Patents	Acres
Homesteads.....	2,164	327,782
Sales.....	1,643	353,874
Pre-emption.....	676	107,250
Purchased homesteads.....	77	10,923
Railways.....	102	12,580
Special grants.....	297	42,100
Military bounty grants.....	5	800
Northwest Halfbreed grants.....	28	4,487
Licence of Occupation.....	11	36
Soldier grants.....	468	70,666
Hudson's Bay Company grants.....	15	7,919
Commutation grants.....	1	23
Manitoba Act grants.....	1	52
Northwest Mounted Police grants.....	2	160
Totals.....	5,490	938,652

There was a decrease of 53 letters patent and an increase in the area patented of 137,446 acres, as compared with the previous year.

There are recorded in the Land Patents Branch 479,442 letters patent, aggregating 105,348,651 acres, which have been issued between May, 1873, and March 31, 1928.

LANDS DISPOSED OF

Seven thousand two hundred and thirty-three (7,233) homestead entries were granted, aggregating an approximate area of 1,157,280 acres, made up by provinces as follows: Manitoba, 688; Saskatchewan, 2,961; Alberta, 3,411; British Columbia, 173; total, 7,233.

There was an increase of 1,473 in the number of homestead entries granted, as compared with the previous year.

By land agencies the 7,233 homestead entries were made up as follows:—

Manitoba.—Dauphin, 305; Winnipeg, 383; total, 688.

Saskatchewan.—Moose Jaw, 950; Prince Albert, 2,011; total, 2,961.

Alberta.—Calgary, 176; Edmonton, 1,450; Grand Prairie, 845; Lethbridge, 125; Peace River, 815; total, 3,411.

British Columbia.—Grande Prairie, 64; Kamloops, 33; New Westminster, 11; Peace River, 39; Revelstoke, 26; total, 173.

The 7,233 homestead entries represented 16,489 persons as compiled from information obtained from each entrant. Of these entries, 2,268 were made by residents of the several provinces of the Dominion; 947 by persons who had previously obtained homestead entries, which had been cancelled by default or at the request of the entrant in order, in most cases, that he might enter for other lands; 734 were made by persons from the British Isles; 955 by persons from the United States; 403 by Austrians; 163 by Hungarians; 282 by Russians; 25 by Finlanders; 289 by Norwegians; 159 by Swedes; 188 by Germans; 50 by Frenchmen 27 by Belgians and the remaining 743 were made up of citizens of various other countries.

There were 504 soldier grant entries made during the year, aggregating approximately 80,640 acres made up as follows:—

	Number of entries	Acres
Manitoba.....	35	5,600
Saskatchewan.....	226	36,160
Alberta.....	210	84,560
British Columbia (Railway Belt and Peace River Block).....	27	4,320
Totals.....	504	80,640

By land agencies the soldier grants were as follows:—

Manitoba—Dauphin, 9; Winnipeg, 26; total, 35.

Saskatchewan—Moose Jaw, 75; Prince Albert, 151; total, 226.

Alberta—Calgary, 27; Edmonton, 90; Grande Prairie, 37; Lethbridge, 14; Peace River, 48; total, 216.

British Columbia—(Railway Belt and Peace River Block) Grande Prairie, 11; Kamloops, 5; New Westminster, 6; Peace River, 3; Prince Albert, 2; total, 27.

CANCELLED ENTRIES

There were cancelled 7,315 entries as follows:—

	Manitoba	Saskatchewan	Alberta	British Columbia
Homesteads.....	1,034	1,522	2,203	262
Soldier grant entries.....	212	201	333	23
Pre-emptions.....		740	546	
Purchased homesteads.....		49	27	
Sales.....	27	20	20	40
Totals.....	1,273	2,532	3,179	331

SALES

Three hundred and ten (310) sales were made during the fiscal year 1927-28 for 27,800 acres, with an average for each sale of about 89½ acres.

The increase in the average area as compared with an average area of 41½ acres last year is due to the fact that one sale to the Department of Indian Affairs comprised 14,951.51 acres.

REVENUE

The sum of \$701,382.27 including \$328,759.36 interest on deferred payments, was received on account of purchased homesteads, pre-emptions and ordinary sales, showing an increase of \$174,003.46, as compared with the payments received during the previous year.

The sum of \$131,031.30 has also been received for entry fees, improvements, and sundries, making a total revenue for the fiscal year of \$832,413.57.

REFUNDS

There were 583 refunds, amounting to \$27,207.20, as follows:—

455 refunds—Value of improvements collected on cancelled homesteads.....	\$ 22,867 73
128 refunds—Overpayments on sales; and on moneys on account of purchased homesteads and pre-emption sales, entries for which had been cancelled.....	4,339 47
Total.....	\$ 27,207 20

NEWLY SURVEYED LANDS THROWN OPEN TO HOMESTEAD ENTRY

Newly surveyed lands comprised in fifteen townships were made available for homestead entry as follows:—

Manitoba—Dauphin in 4 townships.

Saskatchewan—Prince Albert in 3 townships.

Alberta—Calgary in 2 townships; Peace River in 1 township; total, 3 townships.

British Columbia—Kamloops in 1 township; Revelstoke in 4 townships; total, 5 townships.

Special.....		4	44	1,136 21

Registration Fees.—During the fiscal year 485 assignments of sales and leases were registered, comprising lands in the provinces of Manitoba, Saskatchewan and Alberta. The fees amounted to \$1,700.84.

REVENUE AND EXPENDITURE STATEMENTS

The total net revenue collected for the fiscal year was as follows:—

Manitoba.....	\$ 58,575 96
Saskatchewan.....	1,170,889 31
Alberta.....	838,693 83
	\$2,068,159 10

The revenues collected for the fiscal year (less principal moneys and less expenditure) and paid to the provinces of Manitoba, Saskatchewan and Alberta, were as follow:—

Province	Revenue other than principal moneys	Expenditure	Amount paid to province
	\$ cts.	\$ cts.	\$ cts.
Manitoba.....	38,776 13	13,289 27	25,486 86
Saskatchewan.....	336,819 40	56,930 37	279,889 03
Alberta.....	337,617 56	38,563 64	299,053 92

The balance standing to the credit of the School Lands Fund for each province as on March 31, 1928, and the interest paid on the investment for the fiscal year 1927-1928 were as follow:—

Province	Total amount at credit of fund	Amount invested in debenture stock	Interest paid on investments
	\$ cts.	\$ cts.	\$ cts.
Manitoba.....	5,864,858 95	5,864,000 00	292,350 00
Saskatchewan.....	15,679,674 47	15,679,000 00	752,700 00
Alberta.....	8,278,645 61	8,278,000 00	390,125 00

Statements herewith lettered A, B, and C respectively show the revenue collected in respect of each of the provinces of Manitoba, Saskatchewan, and Alberta for the fiscal year, duly classified.

Statements herewith lettered D, E, and F respectively show the balance standing to the credit of the School Lands Fund for each province as on March 31, 1928, after deducting amounts invested in debenture stock as provided for by Order in Council.

REPORT OF THE SUPERINTENDENT, MINING LANDS BRANCH

The administration of those regulations which govern the disposal of mining rights on Dominion lands, that is, the mineral rights the property of the Crown in the provinces of Manitoba, Saskatchewan, Alberta, and in the North-west and Yukon Territories, is the duty of the Mining Lands Branch. The principal metallic minerals produced in these areas are gold, silver, copper and lead. The non-metallic minerals are coal, petroleum, natural gas, clay, building material, and deposits or natural accumulations of soluble mineral salts and associated marls.

The most important mines on areas controlled by this department are the coal mines of the provinces of Alberta and Saskatchewan. These give employment to a large number of persons and the output for the last calendar year was 7,399,274 tons of coal, an increase of nearly 6 per cent over 1926-27.

The production of natural gas from Dominion lands in Alberta during the year was 12,933,801 M. cubic feet, and the production of petroleum, including naphtha, was approximately 321,154 barrels.

In central Manitoba there is now one mill operated by hydro-electric power for the purpose of treating the gold ores from the mines of the Central Manitoba Mines Limited.

In the vicinity of the Flinflon lake, Herb lake and Cold lake numerous mining companies are actively engaged in prospecting their properties. The Flin Flon Mines Limited have completed their investigations and exercised their options on certain properties and are preparing plans for the building of a large smelter and concentration works, the erection of which will be commenced as soon as the branch line of railway now being constructed reaches their properties.

The Yukon Territory during the year produced for export 37,478.68 ounces of fine gold, 1,645,825 ounces of silver, and 4,157,713 pounds of lead. The total value of these mineral exports exceeded \$1,937,300. The concentration mill installed at Wernecke in the Mayo district, was in continuous operation during the year. The concentrates produced by this mill, together with the high-grade ore, are shipped for final treatment outside the territory.

All mineral rights are disposed of by lease, licence or permit for limited periods of time, and not by sale. The sources of revenue are confined to fees, rentals and royalties, and from these several sources there was collected during the last fiscal year the sum of \$885,941.37.

Expenditures incurred in the actual development of petroleum and natural gas rights acquired under lease may, under the regulations, be accepted in satisfaction of rentals which should otherwise be paid in cash, and under this provision, rentals due the Crown, amounting to \$324,903.84 were satisfied by such expenditures, and so reduced the revenue of the branch to that extent. The total revenue in cash, together with expenditures accepted in lieu of rental, amounted, therefore, to \$1,210,845.21 during the year.

Statements lettered A and B showing in different forms how the mining revenue is made up, are attached. The statement lettered A shows the total revenue and the statement lettered B shows the revenue collected at each departmental agency in the western provinces and territories. That portion of the revenue of the Yukon Territory derived from mining rights only, including the export tax on gold shipped from the territory, amounted to \$48,219.65.

Petroleum and Natural Gas.—There are now in force 6,908 petroleum and natural gas leases affecting Dominion lands, and embracing a total area of 725,635.33 acres, distributed as follows: In Manitoba, 128 leases, comprising 28,147 acres; in Saskatchewan, 305 leases, comprising 71,296 acres; in Alberta, 6,139 leases, comprising 584,822 acres; in British Columbia, 331 leases, comprising 37,317 acres; and in the Northwest Territories, five leases, comprising 4,053.33 acres.

Of the above number, 1,603 petroleum leases were issued during the year, comprising an area of 318,605 acres, and the total revenue derived from this source during the year amounted to \$298,402.99.

The total number of petroleum and natural gas leases which have been issued on Dominion lands under the regulations is 38,932, and the total revenue which has been derived from this source since the beginning amounts to \$5,601,873.34, the total expenditures accepted in lieu of rental during the same period being \$3,027,271.46.

On lands leased from the Crown about 400 wells have been drilled to depth for the discovery of oil and gas. Of these wells 141 produced gas in volume, and from 88 of the wells drilled, a considerable production of oil has been obtained.

From lands in the province of Alberta where the mineral rights are not the property of the Crown, there have been produced during the year approximately 321,154 barrels of crude naphtha.

In the Wainwright district, located southeast of Edmonton, about 30 wells have been drilled, six of which are capable of producing gas in quantity, and in eight of these wells oil has been obtained.

Natural gas has been piped from several of the fields of southern Alberta, and is being utilized for domestic and industrial purposes in Edmonton, Tofield, Viking, Calgary, Macleod, Lethbridge, Medicine Hat, Okotoks, Claresholm, and in a number of other centres of population. This gas is disposed of at from twenty-five to forty-seven and one-half cents per thousand cubic feet, and its efficiency is greater than that of manufactured gas.

Coal.—Prior to the year 1906 coal mining rights were disposed of by sale, at a price varying from seven to ten dollars an acre, and subject to the payment of a royalty of ten cents per ton on the quantity of coal mined, which royalty, however, has since been reduced to seven cents per ton. Such rights have since been disposed of by terminable lease, at a rental of one dollar an acre per annum and a royalty at the rate of five cents per ton. The area of coal mining rights disposed of by sale was approximately 245,000 acres, and the total revenue which was collected from the sale of such rights was \$1,565,833.88. The total number of coal mining leases in force at the close of the fiscal year

was 596, comprising a total area of 214,577 acres, distributed as follows. In Alberta, 517 leases, comprising 205,090 acres; in Saskatchewan, 72 leases, comprising 3,257 acres; in British Columbia, five leases, comprising 6,090 acres; in the Yukon Territory, one lease, comprising 40 acres; and in the Northwest Territories, one lease, comprising 100 acres.

The total number of coal mining leases issued during the year was 73, comprising 26,788 acres, and the total revenue collected during the year for rental of such rights was \$172,949.95.

The following statement shows the amounts which have been collected on account of royalty on coal mined from lands in the western provinces, the Northwest Territories and the Yukon Territory, respectively, during each of the past twenty years:—

Year	Alberta	Saskatchewan	British Columbia	Yukon	Northwest Territories

The total revenue derived from fees, rentals and royalties collected in connection with coal mining rights during the year amounted to \$414,589.29.

Quartz and Placer Mining.—Placer mining claims are held under yearly lease, subject to an annual expenditure in development work. Quartz mining claims are similarly held until development has sufficiently progressed and the claim has been surveyed under proper instructions. A lease is then issued for a continuous period of twenty-one years, subject to royalty only.

During the year entries were granted for 4,478 quartz mining claims, of which number 4,328 were for claims in the western provinces, for the most part in Manitoba. Entries were also granted for 70 placer mining claims staked and applied for during the year, and 2,081 such claims, previously acquired, were renewed for another year.

Final leases have been granted for 868 mineral claims, comprising a total area of 47,175 acres, of which number 91 leases were issued during the fiscal year, comprising an area of 3,892 acres.

Quarrying.—Under the Quarrying Regulations, which provide for the disposal of Dominion lands containing limestone, granite, slate, marble, gypsum, marl, gravel, sand, clay and other like substances, 210 leases are now in force, comprising an area of 7,411 acres. The revenue collected from this source during the year amounted to \$7,395.27.

Bituminous Sands.—The deposit of bituminous sands, commonly known as tar-sands, on the Athabaska river and its tributaries, covers an area of approximately five thousand square miles, of varying depth, density, and richness. Regulations have not been made for the disposal of this product, but no application for a location is considered until the applicant has submitted satisfactory evidence that he has acquired a process for the commercial recovery of the hydro-carbon content of such tar-sands, and has demonstrated the feasibility of such process. An area of 140 square miles of this deposit, being that of greatest richness and least overburden, has been reserved for tar-sand development purposes only.

The total revenue which has been derived from the disposal of tar-sand rights amounts to \$40,733.89. Three leases are in force, comprising a total area of 3,643 acres, and on one of the locations a plant has been erected at a cost of over \$30,000, for the recovery of the oil and bitumen.

Alkali.—Regulations have been made for the disposal of natural accumulations of soluble mineral salts, comprising, for the most part, sodium and magnesium sulphates, found in a comparatively pure condition in certain of the sloughs and shallow lakes of southern Saskatchewan. Under these regulations, 20 leases have been granted, comprising a total area of 9,815 acres, and the revenue derived from this source during the fiscal year amounted to \$1,496.19. A number of these locations have been developed, plants for the purification and refining of the product have been erected at a very considerable cost, and large quantities of the refined salts have been disposed of to the different pulp and paper companies for use in the manufacture of certain grades of paper.

Gold Royalty.—The total amount which has been collected for royalty on gold obtained from placer deposits in the Yukon Territory up to March 31, 1928, was \$4,935,350.71, of which amount \$14,205.55 was collected during the fiscal year.

For the purpose of estimating royalty, the gold is valued at \$15 an ounce, which is below its real value. The total value of the gold which has been produced from placer mining operations in that territory might conservatively be placed at \$166,249,560.

Dredging.—Three leases to dredge for minerals in the beds of rivers in the Yukon Territory are now in force, comprising a total river stretch of 14.43 miles. The total revenue derived from this source up to March 31, 1928, amounted to \$202,108.62. These leases comprise portions of the bed of the Klondike river.

For the purpose of gold recovery there are three dredges engaged in mining in the Yukon Territory, all of which are being operated by hydro-electric motive power.

Thirty-nine leases to dredge for minerals in the beds of rivers in Saskatchewan and Alberta, are now in force, having a total frontage of 187½ miles. Of these leases thirty-seven are in Alberta and two in Saskatchewan. The total revenue derived from this source amounted to \$63,717.98, of which amount \$4,644.61 was collected during the fiscal year.

Hydraulic Mining.—The regulations for the disposal of hydraulic mining locations in the Yukon Territory were withdrawn by Order in Council dated February 4, 1904, but the leases then in force were not affected by such withdrawal. There are still five hydraulic mining locations held under lease, comprising a total area of fifteen square miles. Rentals, amounting to \$172,201.71, have been collected on account of such locations, the amount collected during the fiscal year being \$1,573.89.

Water Rights.—There are now in force in the Yukon Territory 497 grants to divert water for mining purposes under the provisions of the Yukon Placer Mining Act, which grants aggregate a total of 12,832 miner's inches.

The report for the fiscal year from the Gold Commissioner of the Yukon Territory dealing with mining in that territory is attached.

REPORT OF THE GOLD COMMISSIONER, DAWSON, YUKON TERRITORY,
REGARDING MINING

Placer Gold Mining.—The amount of placer gold mined during the year on which royalty export tax was paid was 37,478.68 ounces, which is an increase over the previous year, export tax having been paid on 33,166.94 ounces in 1926-1927.

Burrall and Baird, Limited.—This company operated dredge *Canadian No. 2* on Hydraulic Mining Lease No. 18, below Bear creek. This dredge commenced digging on June 15, and closed down on December 5, having dredged 1,143,703 cubic yards of virgin ground. In all some one million cubic yards of ground were thawed by cold water process, the water for which was pumped from the Klondike river, and distributed by means of four electrically driven pumps. The constant use of three keystone drills was required throughout the season and one hundred and seventy-nine holes, totalling 4,784 linear feet, were sunk.

Dredge *Canadian No. 4* similar to *Canadian No. 2*, was sunk in the spring of 1924. It was raised by May 1 last year, and was repaired, equipped and in operation by November 14. The dredge is in a position to resume operations this year.

Dredge *Canadian No. 3* has not been operated since 1914 and was dismantled to keep the other two dredges of identical build supplied with necessary repair parts. New machinery has been ordered, and it is intended that this dredge will be placed in a position to commence operations during the coming season in the Klondike valley opposite Jackson gulch.

Included in the new equipment added in 1927 were three caterpillar tractors which were used for hauling supplies and materials to the different fields of operations.

The Twelvemile ditch which conveys water from the Twelvemile river to serve the hydraulic operations on the hillsides above the Klondike river and on Bonanza creek, was placed in a state of efficient repair. The first water reached the hydraulic mines on Lovett and Jackson gulches the early part of August.

A saw-mill with a capacity of 10,000 feet per day was erected at Bear creek, and the board roadbed of the Syphon bridge, crossing the Klondike river, at that place, was redecked.

The average number of men employed during a period of seven months was eighty-two, in addition to an average of thirty-six men employed for six months on the Twelvemile ditch and hydraulics.

The New North West Corporation, Limited.—Extensive operations were carried on during the season by this company and its subsidiaries, the Dominion Mining Company, Limited, the Big Creek Mining Company, Limited, and the Calder Mining Company, Limited.

The hydro-electric plant at North Fork was operated continuously throughout the year and generated a total of 8,019,500 K.W.H. Power was furnished to Burrall and Baird, Limited, to operate their dredges and other enterprises; to the Dominion Mining Company, Limited, the Big Creek Mining Company, Limited; also to the Dawson Electric Light and Power Company, Limited, for lighting the city of Dawson; and to the Dawson City Water and Power Company, Limited, to pump and heat the water furnished the city. The sixty miles of transmission lines connecting the power plant with the several sub-stations were maintained in an efficient state of repair.

A new high tension transmission line was constructed from Granville to Quartz creek, a distance of twenty miles, and a sub-station erected at Quartz creek.

Dredge *New North West No. 1* commenced digging on June 1, on Creek Claim No. 5 above Lower Discovery, on Dominion creek, and closed down on November 7, on Creek Claim No. 7-A. Gravel and bedrock to the amount of 582,771 cubic yards were dug. More than half of this was frozen ground and

had to be thawed by artificial means. A thawing plant of 1,600 points was operated by two electrically driven pumps, which supplied 6,000 gallons of water a minute under the pressure of approximately thirty pounds at the points.

Dredge *New North West No. 2*, of a type and capacity similar to *New North West No. 1*, commenced digging on May 16, on Creek Claim No. 240 below Lower Discovery, on Dominion creek, and closed down on November 7, having dug 636,615 cubic yards of gravel and bedrock, all of which was frozen. A thawing plant of 1,000 points was operated and for the greater portion of the season the water was furnished entirely through ditches constructed under authority of Water Grants Nos. 9024 and 9025. This was supplemented at times by the output from an electrically operated pump supplying 3,000 gallons a minute. The ditches were continually patrolled and maintained in a state of good repair. An area of 71,878 square yards was thawed in 1927.

A modern electric shovel was assembled and erected on Creek Claim No. 255 below Lower Discovery, on Dominion creek, and is ready to commence operations during the summer of 1928.

A steam shovel was erected on No. 38 Gold Run creek to be used in open-cut mining in connection with a cableway, which it is proposed to instal in the coming summer.

Operations on Quartz creek for the Calder Mining Company, Limited, a subsidiary of the New North West Corporation, Limited, consisted of the setting up of an electric shovel on Creek Claim No. 35 below A. Mack's discovery. The work was completed and the shovel started to dig in the month of October.

An average of one hundred men was employed for a period of seven months.

Assessment work on 1,111 mining claims owned or controlled by this company, its subsidiaries and associates, was done and renewal fees paid to the Mining Recorder.

Other Placer Operations.—In addition to what may be termed the large scale operations referred to above, many individuals and miners working in partnership were engaged in placer mining throughout the various parts of the Territory, and on the whole had a successful season.

Lode Mining.—Dawson District.—Development work has been continued on the Lone Star group of claims on Victoria gulch, but no ore was shipped during the year. An attempt is being made to obtain additional capital to prosecute development vigorously during the coming year.

A number of claims have been kept in good standing at the mouth of Fifteenmile on the Yukon river, and a few tons of ore have been taken out for shipment.

No development work has been done on the Indian River conglomerate, but a large number of claims are still being held with the hope of obtaining capital for development.

During the year a small group of claims has been staked on Eldorado creek and some development is being done, but no report of the results has yet been received.

Claims on Little Twelvemile river and on Gold Run are still being held but only representation work has been done.

Mayo District.—The principal producer in this district still continues to be Keno Hill, although a considerable quantity of ore has been shipped from Galena and Sourdough Hills. The principal operator is the Treadwell Yukon Company, Limited. This company mined some 35,000 tons of ore. The mill

operated 93 per cent of the total time and treated 44,687 tons of ore of which 25,284 tons were for their own company, 2,531 tons for the Keno Hill, Limited, and 16,872 tons from the Sadie claim under lease agreement. The company's mill in addition to treating its own ore, has also treated a large quantity for individual miners in the vicinity, which has been of great service to the smaller operators.

Shipments of ore have been continued from the Settlemier and Bermingham property on Galena Hill. A considerable amount of development work has been done on other properties in this vicinity. Small shipments have been made from Gordon and Johnson properties on Sourdough Hill.

In the Beaver River district prospecting and development has been carried on quite extensively, both by individual miners and by the Consolidated Mining Company of Canada, Limited. Many promising leads of ore have been uncovered and the district is rapidly progressing beyond the development stage.

In the southern end of the territory mining has been very active during the past twelve months, and the outlook is brighter than it has been for several years. In fact the future of the Yukon Territory as to lode mining never looked as promising as it does to-day. The Beaver country with its big lead deposits is rapidly coming to the front, the copper mines in the Whitehorse district will shortly be in the producing stage again, the Wheaton river is going ahead with outside capital, the silver-lead deposits below Dawson have possibilities, and high grade galena has also been located on Rude creek although considerable development work will have to be done yet to determine the extent of the deposits.

The territorial assayer at Keno has been kept busy during the year; 1,672 samples were received from various parts of the Territory, and 2,607 assays or quantitative analyses were made.

The advent of aeroplane service to different parts of the territory will undoubtedly be an inducement to those outside mining engineers who wish to come in, but cannot afford to spend the time usually taken to get into the country.

Coal.—The Five Fingers Coal Company operated their mine at Tantalus Butte during the year and shipped a considerable tonnage to Dawson.

REPORT OF THE CONTROLLER, TIMBER AND GRAZING LANDS BRANCH

The total amount of revenue derived from timber, grazing and hay lands, for the fiscal year ended March 31, 1928, was \$1,416,719.84, and is the largest amount of revenue collected by this branch, to date. This is an increase of \$198,806.02 over the amount of revenue for the previous fiscal year.

*In compiling the returns by agencies, moneys which were paid direct to Head Office, Ottawa, have been allocated to the agencies concerned.

TIMBER

The areas of timber berths held under licence and under permit are as follow:—

Province	Square miles under licence	Square miles under permit
Manitoba.....	1,037-08	1,011-66
Saskatchewan.....	754-06	136-57
Alberta.....	1,537-66	359-86
British Columbia.....	1,588-05	42-64
	4,916-85	1,550-73

During the year there were 432 new berths granted, namely: 20 licence, 23 permit, 149 fire-killed, 31 portable saw-mill, 200 cordwood and 9 fringe.

The total number of berths held under licence and under permit was 1,332, this being an increase of 102 berths over the previous fiscal year.

The following statements show the number of berths upon which operations were conducted, and also quantities of material which were manufactured and marketed, during the year under review.

Boxwood.....cords	2,672	2,672		
Mine ties.....number			8,569	8,569
Fence rails.....number			2,650	4,019

NOTE.—Where the material sold is in excess of the quantity shown as manufactured, such excess has to be considered as being part of the material manufactured in the previous fiscal year, but not marketed during that year. In addition to the material shown in the above table there were 127 cords of lath bolts and 263,828 pieces of lath bolts manufactured and marketed under permit.

Owing to the comparatively favourable conditions which existed in Manitoba, Alberta, Saskatchewan and British Columbia during the past year, there was an increased activity in the lumber industry both as regards operations and sales, which increase is reflected in the quantities manufactured and marketed, as compared with previous years, and also in the net increase in the amount of revenue derived from timber dues and rental, etc., this latter increase amounting to \$188,147.37 above the revenue for the previous year; the collections at every agency, with one exception showed an increase.

With regard to commodities manufactured and marketed during the fiscal year under review, it will be observed from the following table that there has been an increase in the quantities of practically every class of material over those of the previous year:—

Material	Increase	
	Manufactured	Marketed
Lumber.....ft. B.M.	49,624,293	87,264,004
Railway ties.....number	435,496	807,991
Mining timber.....lin. ft.	691,509	790,805
Telephone poles.....lin. ft.	582,612	3,013,647
Pulpwood.....cords	47,760	47,096
Cordwood and slabs.....cords	16,485	52,934

GRAZING

The total area held under lease as of March 31, 1928, was 6,727,015 acres, comprised in 10,601 leases as follow:—

Province	Number of leases	Area under lease
Manitoba.....	231	70,386
Saskatchewan.....	6,517	3,329,484
Alberta.....	3,562	2,965,359
British Columbia.....	291	361,786
	10,601	6,727,015

This is an increase of 524,760 acres over the acreage in the previous fiscal year. During that period there were 2,073 new leases issued.

On December 31, 1927, there were 9,777 grazing leases in existence covering an area of 6,607,183 acres. During the year 1927 stock returns were received showing the cattle grazing on 9,272 ranches, which was approximately 95 per cent of the whole number of Government grazing leaseholds. These returns indicated that the following numbers of live stock were being maintained: cattle, 263,742 head; horses, 127,782 head; sheep, 123,068 head; total, 514,592 head.

REPORT OF THE SUPERINTENDENT, ORDNANCE, ADMIRALTY, AND RAILWAY LANDS BRANCH

The work of administering lands dealt with in the Ordnance, Admiralty, and Railway Lands Branch has, as in the year previous, shown an increase both in the area of the lands dealt with and the revenue obtained as a result of placing new lands under remunerative occupation.

Ordnance and Admiralty Lands.—The established policy followed in former years has been consistently observed, that of bringing as many of these properties into a revenue-producing state as possible, and of clearing these lands of such encumbrances as may have become attached to them. The localities in which the work was carried on are widely scattered, as in addition to the work in Ontario and Quebec, negotiations and other operations were carried on in British Columbia and the Maritime Provinces. A very small percentage of Ordnance Lands is suitable for agricultural purposes, the greater portion of such lands being located in cities and towns. They are therefore more suitable for commercial, industrial and residential purposes than for farm lands, and, as might be supposed, are usually dealt with in very small parcels.

Thirty-three parcels of land which hitherto were not a source of revenue to the department were placed under lease, the annual rental value of the same being \$1,523.90. The amount when estimated on the basis of the rents is 6 per cent of the valuation, and represents an addition of \$25,000 to the valuation of the lands of the branch.

In handling these lands, as a result of observation of the disposal of private lands in similar localities, it has been decided that the expenditure of a limited amount of money upon improvements of Ordnance parcels would be advisable, such as the construction of roads to make them accessible, the planting of trees to make the parcels attractive to prospective tenants, and the draining of certain low lands where such could be done cheaply. These works were begun or carried out in several localities by the survey and engineering staff of the branch as part of the regular administration of the properties. As many of the parcels of Ordnance lands were located, and the surveys thereof made, more than 100 years ago the boundaries have, in many cases, suffered consider-

able changes. These changes have been due to the natural changes in water boundaries and the construction of roadways, railways and other works, and also due to the disposal of small portions from time to time. These conditions make it necessary in most cases to have a resurvey of the boundaries made. These surveys and the resultant plans are all closely made in conformity with the acts and regulations of the province in which the lands are situated.

The Ordnance lands in British Columbia, most of which have only recently come under the control of this department, were inspected during the summer of 1927 with a view to deciding the best use to which each parcel could be put, and several valuable areas in regard to ownership having been settled were valued to ascertain what revenue could ultimately be expected.

On the basis of the reports received steps are being taken to develop these lands to best advantage, but some time will elapse before tangible results can be obtained.

Since, as already explained, Ordnance lands are widely scattered in British Columbia and in the eastern provinces, and as it is not generally known what lands constitute Ordnance lands, many requests from the general public in respect to vacant lands are forwarded to this branch for attention. All such requests receive careful consideration and searches are made to ascertain if the land is administered by any department at Ottawa. If such is found to be the case the letter is forwarded direct to that department for reply, but if the land is provincial land or privately controlled, the applicant is definitely advised how to proceed to obtain the information required.

Railway Lands.—The work of this division relates to the granting of lands to railway companies as an aid to construction, and to the administration of Government townsites.

During the past year 4,800 acres were patented to the Canadian Pacific Railway Company on Main Line Exchange Account, and 5,755.81 acres to the Alberta Railway and Irrigation Company on Exchange Account. Negotiations have been carried on with the Canadian Pacific Railway Company relative to the revestment of over 7,000 acres of lands required by the National Parks of Canada Branch.

Considerable time has been spent in negotiations and adjustments of claims by certain railway companies in respect to the mineral rights of lands, the surface rights of which have been patented to the companies or the nominees of the companies. Considerable progress has been made in this respect. The dealings with regard to these matters have become very much involved, but it is expected that satisfactory conclusions will be reached.

While the final transfer of lands to the railway companies on subsidy account is about concluded there remain several matters, such as the above, to be disposed of before these accounts can be closed out.

REPORT OF THE FINANCIAL CONTROLLER

SUMMARY of net revenue collected from various sources during the fiscal year 1927-28

FORESTRY

REPORT OF THE DIRECTOR OF FORESTRY, E. H. FINLAYSON

Of considerable significance to Forest Service administration is a greater manifestation of an enlightened public opinion taking cognizance of the importance of science in the development of natural resources. Nowhere is this more evident than in the steady change in the public attitude towards the work of the Forest Service and in the recognition of its place in the scheme of economic development throughout Canada. Indicative of advance is the increasing interest in the practical application of scientific methods in numerous basic industries, resulting in requests for technical information, advice, and assistance received by every division of this service.

Timber losses from fire were relatively low during the season of 1927. This was largely due to generally favourable weather conditions, but also in no small part to increased efficiency in fire-protective organization. This has been brought about largely through the acquisition of larger supplies of up-to-date fire-fighting equipment, the continued study of fire-weather forecasting, and the construction of more improvements, so ensuring better facilities for detection, communication, and transportation. The value of aircraft has been demonstrated more fully for both detection and suppression of fire, particularly in the unsettled northern portions of the Prairie Provinces, while aerial surveying has proved of great value in forest reconnaissance.

Forest research continues to expand in every part of the Dominion, the service co-operating in many instances with provincial governments and private companies. Each year sees a fuller realization of the economic and aesthetic value of the tree-planting work on the prairies. Forest-products research is more and more becoming of the greatest concern to wood-using industries, as shown by the rapidly increasing number of requests for information, by the application of the results of laboratory tests, and by active industrial co-operation in many experimental projects.

A distinct advance has been made in publicity work as a result of better organized campaigns, more extensive exhibits, and carefully prepared courses of lectures. That such work is bearing fruit is evidenced by more requests for active participation in publicity work of all kinds and the quickened general interest in the extent of the timber resources and their protection and proper utilization. Steadily and surely there is developing in the people of Canada a forest-conscious mind.

FIRES AND FIRE PROTECTION

The fire season was an unusually favourable one, the total number of fires reported being much less than that reported annually for many years past.

In Manitoba, the spring fire-hazard was absent. There were many lightning fires in the northeastern part of the province. The season, on the whole, was satisfactory, and the number of fires was the lowest for several years. The total number of fires reported was 110; fires inside national forests, 18; area burned over within national forests, 179 acres; total area burned over, 26,225 acres (the lowest for seven years); area of merchantable timber burned, 10,889 acres; area of young growth, 9,209 acres. Both detection and suppression were carried on largely from aeroplanes; by May 29 all sub-bases were in operation, and they continued their work until the middle of October. A marked strengthening of public opinion in favour of forest protection is noted in this province.

In Saskatchewan, the season was a normal one. There were four short seasons of fire-hazard. The largest fires occurred in the north of the province. Air patrol was extended over the northern part of the province, both for detection and suppression. All machines were busy from July 23 to the end of August. Patrols were again started in March, 1928, with the object of locating trappers' fires. Total number of fires, 109; fires in national forests, 12; area burned over inside national forests, 3,281 acres; total area burned over, 234,278 acres; area of merchantable timber burned, 79,796 acres; area of young growth burned, 83,182 acres.

In Alberta, the weather conditions were unusually favourable, the precipitation being very abundant generally. Some danger arose in the country north of the 56th parallel from the latter part of August to the first week of November and elsewhere (especially on the Eastern slope) through no rain having fallen. The frosts, however, were unusually late, and so conditions were ameliorated. A few dry thunderstorms occurred. The aeroplane patrol was carried out as in several years preceding, and a system of lookout towers was started. The fire-permit system inaugurated by the provincial authorities for the burning of settlers' slash now seems to be working pretty well. Total number of fires, 211; fires in national forests, 5; area burned over within national forests, 1 acre; total area burned over, 36,998 acres; area of merchantable timber, 6,433 acres; area of young growth, 3,901 acres.

In British Columbia, the fire-hazard was the lowest for years, owing to weather conditions. Heavy rains were frequent during all the summer except in the latter part of July and August. The total number of fires was 231; fires within national forests, 7; total area burned over within national forests, 1,382 acres; total area burned over, 2,977 acres; area of merchantable timber burned over, 1,079 acres; area of young growth burned over, 661 acres.

The total number of forest fires on Dominion lands protected by the Forest Service was thus 661; total number of fires within national forests, 40; total area burned over within national forests, 4,746 acres; total area of Dominion lands under the protection of the Forest Service burned over, 293,503 acres; area of merchantable timber burned over, 98,207 acres; area of young growth burned over, 100,308 acres.

Ready co-operation was secured from the staff of the Directorate of Civil Government Air Operations in the fire-protection work of this service.

GRAZING

The grazing of live stock under permit continues to be one of the most important secondary uses of national forest lands. For the past seven or eight years, however, there has been a marked period of depression in the stock industry. Naturally, therefore, herds were cut down with a consequent curtailment of production. Within the last year there has been an upward trend in market prices of both cattle and sheep. At the present time there is a general optimistic outlook throughout the country in connection with the industry.

In the three Prairie Provinces there were decreases during the year in the number of stock grazed on forest ranges. This was no doubt due in part to the very favourable growing season which provided abundant forage on lands outside of national forests. In British Columbia there was an increase in the use of forest range, and there are indications that the demand for high-altitude sheep range for the summer months will rapidly increase in the near future.

Regulated grazing is a protection to forests. Unutilized forage may constitute a serious autumn fire-hazard. It is most desirable, therefore, that the forest ranges should be fairly well stocked, both from the standpoint of forest protection and from that of efficient utilization of forest resources. With more encouraging market conditions in sight for the stock-raising industry, it is expected that the national forests will be called upon to care for a greatly increased number of stock.

TIMBER OPERATIONS

The report of the Manitoba inspectorate shows eleven active timber sales and a keen demand for timber permits. Cutting on the pulpwood berths was supervised by the Forest Service, as were also the operations of a large lumber company on lake Winnipeg.

The report of the Saskatchewan inspectorate shows fifty-two active sales. Twenty-eight new sales were awarded during the year. There has been a large increase in the sales of pulpwood. Brush disposal has been satisfactory. In one instance the operator has found that his logging costs showed a decrease, owing to the fact that the logs are more easily handled after brush disposal, with the result that he can get the work done with a smaller number of 'swampers'.

In the Alberta inspectorate there were twenty-two timber sales, of which eight were new. Several applications for large sales were being dealt with.

In British Columbia there was a great increase in timber-sale business and a correspondingly increased revenue from this source. The increase in the cut in the Tranquille Forest district was especially noteworthy. Twenty-two new sales were inaugurated, fourteen of which were in the Shuswap Forest district and eight in the Tranquille district. The revenue for the whole inspectorate from timber sales and timber permits is greater than that of any previous year.

During the year a new feature of forest management was introduced into the field operations of the service by the establishment of supervisors' timber sales dealing with bodies of timber of moderate size.

SEEDING AND PLANTING ON NATIONAL FORESTS

Approximately 200,000 seedlings were planted on various national forests, covering in all about 100 acres. In Alberta 33 acres were seeded, and experimental seeding was carried on in the Sandilands national forest in Manitoba. In British Columbia 200 acres were seeded to Western cedar. The seeding and planting so far carried on in the national forests is of an experimental nature only. In Saskatchewan a number of nurseries are being developed in connection with the national forests, with the idea of ultimately undertaking a definite yearly planting program. These nurseries contain a stock of over 3,000,000 seedlings.

RECREATIONAL USES OF THE NATIONAL FORESTS

The use of the national forests for purposes of recreation and sport affords a most valuable means of educating the public as to the value of the forests, and efforts are continued to meet the general desire for this forest use.

Manitoba now has five summer resorts, and plans are under way for the creation of another resort at Clear Lake, in the Riding Mountain national forest. It is estimated that the number of visitors to the resorts of this province during the season was about 8,400. Some work was done in restocking Madge and Clear lakes with pickerel.

Saskatchewan has three resorts, and it is estimated that the number of visitors for the season was 10,500. Of these, 8,000 visited the Fish Lake summer resort, in the Moose Mountain national forest.

Alberta has one resort at Elkwater lake in the Cypress Hills national forest; this had about 3,750 visitors. There are also many localities throughout the national forests of this district that are particularly well adapted for camping and fishing; some of these are visited by large numbers of persons.

British Columbia has two resorts, and two automobile camps have been built in the national forests. New trails are also being cut to Hyas Long lake, the haunt of large-sized Kamloops trout. Six thousand feet of ditch were dug from Walloper lake to Trout lake in order to facilitate the spawning of fish. The excellent fishing within national forests continues to attract tourists from distant points.

SURVEYS

The most extensive survey work of the year was that carried on throughout the summer in the Manitoba pulpwood selection area. Ten parties of ten men each were at work, and covered a total area of between 12,000,000 and 13,000,000 acres. The work of this survey was greatly aided by the Directorate of Civil Government Air Operations and the Topographical Survey, who co-operated in the preparation of aerial maps. These maps, which were prepared from oblique photographs taken from lines flown at six-mile intervals at an altitude of from 4,500 to 5,000 feet, showed all the topographical features, such as lakes, streams, and open muskegs, with such accuracy that it was unnecessary to run base-lines. The forested area was classified into five grades based on the density of crown cover. With these maps and the photographs, the ground parties were able to concentrate their attention on the areas carrying merchantable timber and young growth of future value, and a very great deal of time was saved by not having to traverse the unproductive land. Further, no timbered areas escaped observation.

Similar surveys were made in an area of 150,000 acres along the Nelson river near Norway House, and 200,000 acres along the west coast of lake Winnipeg, north of the Saskatchewan. In January, February, and March, 1928, 180,000 acres on the Overflowing river, in Manitoba, were surveyed.

More intensive surveys were also made of areas in national forests, aggregating 50,000 acres. In Saskatchewan, a working-plan survey of 10,700 acres was made in the Fort à la Corne national forest, and sample plots were laid out to cover an area of 49,000 acres in the Lost River Block, in that forest. In the Pasquia national forest a stock-taking survey was made of 87,680 acres, and a number of land-classification surveys were made in the Keppel and Big River forests.

SEED COLLECTION AND EXTRACTION

The New Westminster seed-extraction plant furnished the largest proportion of forest tree seed obtained during the year; here a total of 2,706½ pounds of seed was extracted. Of this quantity, 1,547 pounds were Sitka spruce, and 567 pounds lodgepole pine, with smaller quantities of Douglas fir, Western hemlock, Western (red) cedar, Western white pine, Western yellow pine, Engelmann spruce, and Western larch. The Sitka spruce was nearly all sent to the British Forestry Commission, and the Douglas fir to New Zealand. New Zealand also received cedar, Western white pine, and yellow pine. Small quantities were also sent to investigators and experimenters in many other places. At the other seed-extraction plants, seed was produced for local use, Red pine from Manitoba, white spruce and jack pine from Saskatchewan, and lodgepole pine from the Cypress Hills forest, Alberta.

TREE-PLANTING ON PRAIRIE FARMS

After a long cold winter weather conditions through the spring and summer were very favourable for nursery work and general tree-planting operations, and, on the whole, the season was the most favourable for many years for start-

ing new plantations. There was considerable damage from hail-storms in some localities, but with rare exceptions plantations soon recovered from damage of this description. There was practically no winter-killing. Considerable damage was caused by rabbits, but apparently a satisfactory protection has been found in lightly smearing the young trees with axle grease.

Over seven and one half million trees were sent out in the spring of 1927—7,430,350 broad-leaved seedlings and cuttings and 117,240 evergreens. Recipients of broad-leaved trees numbered 5,923 and those of conifers 1,170. National forests in Manitoba received 92,500 trees.

The inspection list included 12,530 names—1,350 more than that of the previous season; of these, 3,600 were new applicants. One additional inspector had to be employed, making nine in all. The inspection showed 98 per cent of the maple, ash, and caragana seedlings planted in the spring were thriving, and 95 per cent of willow and poplar cuttings well rooted. Of the evergreens only six per cent of the spruce, four per cent of the jack pine, eight per cent of the Scotch pine, and six per cent of the lodgepole pine were failures. This showing is exceptionally good.

The influence of the farm shelter-belt on horticultural development is very marked. Where, not many years ago, it was the exception to find a farm with a good garden, inspectors last season found that 90 per cent of the farms visited had good vegetable gardens. Still more marked is the increase in fruit growing as a result of the shelter-belts, even in districts considered least favourable for tree growing. Another favourable result of the planting of wind-breaks is shown by the splendid success obtained in growing evergreens under their shelter.

At Indian Head the stock was the best produced for several seasons. At Sutherland growth was not as vigorous, and hence a certain proportion of the stock was carried over for an extra year. Results with coniferous transplants and seed-beds at Indian Head have been much improved owing to the installation of an efficient artificial watering system.

An attack of mites threatened the white spruce transplant beds, but was controlled by spraying. Pine leaf scale and red spiders are proving somewhat troublesome on the white spruce. The bronze birch borer has caused the death of a large number of birch trees in the permanent plantations. The necessity of cutting out the birches so destroyed has increased the amount of thinning done in the permanent plantations. In addition to fuel-wood, fence-posts and pickets were obtained in the larch (tamarack) plantations, where the Siberian species seems to be making a better showing than the native species.

Tests of treated fence-posts are being continued, creosote and zinc chloride being the preservatives used. Creosoted Russian poplar fence-posts, set in the spring of 1917, continue sound, though untreated posts of the same species, set at the same time, rotted out in three years at most.

Many thousands of visitors again visited the nursery stations during the year.

The permanent plantations have now reached the stage where research work, such as has been already begun on a small scale, will give very valuable results.

FOREST PRODUCTS LABORATORIES OF CANADA

Forest-products research has been carried on in Canada for several years in two laboratories, the main one in Montreal and a branch laboratory in Vancouver devoting attention to problems relating particularly to British Columbia timbers.

The year under review was marked by the reorganization of the work of the main laboratories in Eastern Canada. The timber-testing, wood-preservation, timber-physics, and timber-pathology laboratories have been transferred from

Montreal to Ottawa, where greatly enlarged accommodation has been provided. The pulp and paper laboratory remains in Montreal. Substantial progress has been made in the work of all the laboratories in spite of the interruptions in the main laboratories due to the changes.

The chief problems being investigated in regard to the preservation of wood are the protection of timber from marine borers, which frequently infest wood in salt water; the creosote treatment of hard maple railway ties at high moisture contents; the investigation of the possibilities of shale oil as a wood preservative, by itself or in combination with other toxic constituents, and the behaviour of ties (especially those affected with red rot and red stain) in track under actual service conditions.

Among the problems of fundamental research in timber physics now being undertaken is an investigation into the relation between the rate of growth and the density of the wood of white spruce. This is a matter of considerable importance from a silvicultural standpoint, and is also of particular significance to the pulp and paper industry. The study of the structure of the different Canadian woods is being continued. Investigations of the seasoning of lumber both by kiln-drying and air-seasoning have been actively carried out at the Ottawa and the Vancouver laboratories. Since the establishment of a semi-commercial dry-kiln in Vancouver, courses in kiln-drying have been conducted which have been well attended by representatives from coast mills. A study of the 'sinkage' of logs during 'driving' from the woods to the mills has been inaugurated in co-operation with the Canadian Pulp and Paper Association in an effort to curtail serious losses on this account.

Standard tests of small clear specimens of Canadian timbers, and tests of the nail-holding powers of Canadian woods have been advanced in both the eastern and Vancouver laboratories. The testing of wooden boxes and small containers, with the improvement of design and consequent curtailment of heavy transportation losses as its aim, is being carried out by means of a modern hazard machine. In the Vancouver laboratory a comprehensive investigation was made of the effect of fire-killing on the strength of cedar of pole size. This study was enlarged to include cedar poles infested with borers.

Studies in the pathology of timber include the rots of white cedar telephone poles, tests on the toxicity to fungi of certain water-insoluble substances, and the development of red stain in jack pine ties under service conditions. In addition to these, progress has been made in assembling a reference collection of representative wood-rots. Considerable work was done in the Vancouver laboratory on the study of the deterioration of cottonwood logs in fresh-water storage for different periods.

The work of the pulp and paper division in Montreal was by circumstances already mentioned limited chiefly to problems of a fundamental character. These fell into two main classes, namely, (1) the chemical and physical properties of the 'cooking liquor' used in the sulphite process of pulp manufacture, and (2) the chemical composition and properties of the individual constituents of the wood, particularly of lignin.

Exhibits were prepared in co-operation with the Canadian Forestry Association for the Vancouver exhibition. A more comprehensive exhibit was also arranged by the laboratory for the provincial exhibition at New Westminster. This latter work was done in co-operation with the New Westminster Lumbermen's Educational Class and the Dominion Crown Timber office. Arrangements were made for the Ottawa laboratory to put a permanent exhibit in the National Museum in Ottawa.

Appreciation of the services of the laboratories to the timber industries was manifested by the increase in the number of technical inquiries made to the laboratories. In some departments these exceeded requests of the previous year by over 25 per cent.

FOREST RESEARCH WORK

Research work at the Petawawa experiment station (Ontario) was very largely confined to the remeasurement of many of the eighty permanent sample plots established there from time to time since 1918. The results show remarkably good rate of growth, in some cases as much as a cord and a half per acre per year being produced. They also show the value of careful thinning.

In New Brunswick a survey to determine the rate of growth of pulpwood species on cut-over lands was conducted on the Miramichi watershed. A series of permanent sample plots was established in connection with this survey. Measurements were taken for the study of form of cedar from which it is hoped ultimately to prepare form-class volume tables.

Four members of the research staff having been withdrawn for urgent survey work in the West, the field activities of the research division were confined to the stations at Petawawa, Ontario, and in the province of New Brunswick. Compilation of data on permanent sample plots and preparation of reports of studies of rate of growth at the stations in New Brunswick and Quebec employed members of the research staff during the winter months.

Research work was also undertaken in the several inspectorates. Considerable attention was given to work in mensuration, particularly the development of a volume table for white spruce, and to the application of Cajander's classification of forest types to Canadian conditions.

Experimental work in thinning of jack pine was conducted in Manitoba and Saskatchewan, and, on a larger scale, in the Cypress Hills national forest, in the Alberta inspectorate. In the case last mentioned, it has been found that increased growth of the trees in thinned stands was quite noticeable at the end of three or four years. In British Columbia experimental work was done in seeding and planting, particularly in the broadcast sowing of western cedar.

PUBLICATIONS

In the early part of the year, work on Bulletin No. 78, "Some Commercial Softwoods of British Columbia," was completed, and the distribution commenced. Bulletin No. 79, "Taper as a Factor in the Measurement of Standing Timber," and a revised edition (the 8th) of Bulletin No. 1, "Tree Planting on the Prairies," were brought out. An additional tree pamphlet (No. 13), "Western Yellow Pine," was published in English. French versions of Tree Pamphlets Nos. 7 to 13 (inclusive), were also printed. Two new circulars, both dealing with the work of the Forest Products Laboratories, were published. These were Nos. 21, "Tests of Green-cut Western Cedar Poles," and 22, "Report on Tests of the Relative Strength of Green-cut and Fire-killed Western Cedar Pole Timbers."

Probably the most important publication of the year was the report of the 1923 British Empire Forestry Conference, of which the Forest Service assumed the publication. This makes a large volume of over four hundred pages, giving in full the proceedings of the Conference.

PUBLICITY

The annual Forest Week Campaign opened this year (1927) on April 24, and lasted until April 30 (inclusive). The 1927 campaign marked the closest co-operation and co-ordination yet achieved with the United States authorities in their equivalent campaign. The campaign resulted in a greater number of newspaper articles than ever before, with a greatly increased average length. A new feature in forest-protection literature was a children's playlet entitled "Betty in Dreamland," written and donated to the cause by an Ottawa lady.

A corps of lecturers was again maintained for the purpose of visiting boys' and girls' vacation camps; three lecturers visited 29 camps and established contact with 2,267 campers, an increase of five camps and 688 campers.

As in previous years a representative of this service supervised the forestry displays at the Western exhibitions and took personal charge of this work at all "Class A" fairs. Two "Class A" fairs were added to the usual quota—Brandon and New Westminster—making, along with Calgary, Edmonton, Regina, and Saskatoon, six major points at which exhibits were made; and exhibits were also placed at seven minor fairs throughout the four western provinces. A fine log cabin was built on the Edmonton fair grounds for publicity purposes.

It has been found that the log cabins built on the Calgary and Edmonton exhibition grounds to house Forest Service exhibits are a great attraction, and it has been decided, in consequence, to place similar buildings on the Saskatoon and Brandon grounds for the 1928 fair season.

Some of the outside offices of this service have also given considerable attention to publicity work affecting their particular spheres of action. Particular attention has been given to publicity at various exhibitions, and to radio talks, articles in the press, and addresses at gatherings of different natures, including a course of lectures at one of the Manitoba normal schools and another at a short course for farm boys and girls.

REVENUE

In comparison with the fiscal year ending March 31, 1927, the revenue from all sources for this fiscal year shows a net increase.

There were 37 more timber sales with an increase of \$11,746.81, due to an increase in the sales of pulpwood in Saskatchewan and a general increase in the demand for timber sales throughout the Prairie Provinces and especially in British Columbia. There was an increase of \$1,253.60 from tree seed and \$6,108.82 in miscellaneous revenue. Timber permits showed a small increase of over \$200.

There were, however, 163 fewer grazing permits, with a decrease in revenue of over \$600, which was apparently due to a very favourable growing season, giving sufficient fodder on lands outside the national forests. Decreases of over \$400 from hay permits, \$1,300 from surface rentals, and \$2,000 from special use permits were also shown, but the decreases were more than offset by the increases above shown, the net increase amounting to \$9,158.37 over the previous fiscal year.

In connection with the statement of Revenue, under the heading "Timber Permits," the kinds and total quantities of timber authorized to be cut from all reserves were as follows:—

Fuel-wood (cords).....	30,025
Fence-posts, rails and piling (number).....	296,977
Fence-posts, rails and piling (lin. ft.).....	1,630
Telephone poles (lin. ft.).....	1,075
Railway ties (number).....	6,310
Saw-timber (foot board measure).....	6,410,231
Mining timber (lin. ft.).....	2,422,658
Mining timber (cords).....	Nil.
Mining timber (ties).....	924
Building logs (number).....	28,921
Building logs (lin. ft.).....	380,818
Miscellaneous (lin. ft.).....	673
Miscellaneous (cords).....	399
Miscellaneous (number).....	21
Miscellaneous (cords of pulpwood).....	4,683

The quantity of saw-timber given above is, of course, quite distinct from that cut under Timber Sales as given in the Statement of Revenue which follows:—

STATEMENT OF REVENUE, FOREST SERVICE, FISCAL YEAR 1927-1928

National Forest	Number of timber sales operating	Revenue from timber sales	Number of timber permits	Revenue from timber permits, etc.	Number of grazing permits	Revenue from grazing permits, etc.	Other Sources of Revenue					Total revenue all sources

III

NATIONAL PARKS OF CANADA

REPORT OF THE COMMISSIONER, J. B. HARKIN

National Parks

GENERAL

The past year was one of the most satisfactory from every point of view yet experienced in connection with the National Parks of Canada. The season itself was a favourable one with frequent rainfalls which obviated practically all danger of forest fires and relieved those in charge from the heavy anxiety of the two previous years. The weather, moreover, was seldom continuously wet so that tourist traffic was not interfered with, and the absence of dust and smoke added to the pleasure of travel and tended to increase the number of visitors. The total registrations to all parks was approximately 359,582. Of those registered, 268,362 came by motor, and 91,220 by other means of transportation.

The largest traffic was to the three-park unit comprising Rocky Mountains, Yoho, and Kootenay parks. These three reservations adjoin each other along part of their boundaries and are linked together by the loop motor highway now circling the Central Rockies. Consequently it is more convenient to treat them as one unit in compiling motor traffic figures. There are three entrances to the unit: the Leachcoil gateway at the western boundary of Yoho park; the Sinclair Radium Hot Springs gateway, at the western entrance to Kootenay park; and the Kananaskis gateway, at the eastern entrance to Rocky Mountains park. Rocky Mountains park has no gateway on the west while Kootenay and Yoho parks have none on the east, so that the aggregate traffic to the three parks can be compiled only by totalling the motors entering through each of the above gates. Traffic was heaviest at the Kananaskis or eastern gateway, as the following table shows:—

<i>Kananaskis Gateway, Rocky Mountains park—</i>			
Canadian cars entering.....	25,800	Passengers.....	91,450
United States cars entering.....	1,535	Passengers.....	4,222
	<hr/> 27,335		<hr/> 95,672
<i>Radium Hot Springs Gateway, Kootenay park—</i>			
Canadian cars entering.....	6,234	Passengers.....	18,976
United States cars entering.....	2,206	Passengers.....	7,175
	<hr/> 8,440		<hr/> 26,151
<i>Leachcoil Gateway, Yoho park—</i>			
Canadian cars entering.....	1,417	Passengers.....	4,750
United States cars entering.....	227	Passengers.....	663
	<hr/> 1,644		<hr/> 5,413
Total Canadian cars.....	33,451	Total Canadian passengers....	115,176
Total United States cars.....	3,968	Total United States passengers	12,060
	<hr/>		<hr/>
Total cars entering.....	37,419	Total passengers.....	127,236

A large percentage of these cars undoubtedly visited all three of the connected parks, and all 'through' travellers must have traversed two, but in the absence of any means of arriving at complete figures the original entries alone have been given. As it is, however, these figures represent more than one-third of the total travel to all the parks, and serve to emphasize the importance of high class motor highways as a factor in modern travel for pleasure.

Waterton Lakes park, in southern Alberta, attracted 15,547 motor tourists, while Buffalo and Elk Island parks had 12,679 and 16,138 visitors respectively. Over 45,000 persons visited Point Pelee park in southern Ontario; 15,000 went to Fort Anne national park, Nova Scotia; 8,032 to Vidal Point, a recreational area in Saskatchewan; and 500 to the new Prince Albert park in the same province. Jasper park, which is accessible as yet only by railway, had approximately 12,000 visitors; Mount Revelstoke park, accessible by both rail and motor, 8,000.

It is especially gratifying to note the large percentage of Canadians among parks' visitors. Foreign visitors have in the past frequently remarked that it sometimes seemed to them that the people of Canada did not realize the outstanding character of their own great possessions. If this were ever true it can be said with truth no longer. The coming of the motor and the building of motor highways have completely changed travel conditions with respect to the national parks and in a new sense it may be said that Canadians are taking possession of their own country. Motor registrations to the five mountain parks accessible by highway show that over 87 per cent of cars were Canadian and about 13 per cent from other countries. Long distance travel by rail, on the other hand, appears still to show a majority drawn from outside countries. In Jasper park, where the railway still provides the only means of access, travel showed 42 per cent Canadians, 52 per cent United States citizens, and 6 per cent from other countries.

The completion of the Kicking Horse Trail from Lake Louise, Alta., to Golden, B.C., was one of the outstanding events of the year. It opened a new route across the Rockies and created a loop highway within the mountains of nearly 300 miles. The first section of this road—from Lake Louise to Field—was opened last year. Work on the second section—from Field to Golden—was prosecuted with vigour during the fall of 1926 and the spring of 1927 and by July 1 the road was ready for traffic. The official opening was held on July 9, the ceremony taking place on a high hill above the town of Golden in the presence of a number of distinguished representatives of the federal and provincial Governments and of local organizations. Hon. Charles Stewart, Minister of the Interior, and Hon. Dr. J. H. King, Minister of Public Health, officiated. From the date of the opening of this highway to the closing of the season over 5,600 cars went over the road in both directions and its thrilling character, particularly the traverse of the Kicking Horse pass, the descent of the west slope, and the provincial section via the tremendous Kicking Horse canyon aroused enthusiastic comments.

The new highway will form a link in the projected trans-Canada motor highway and for the completion of the Western Section only one link—between Golden, B.C., and Revelstoke, B.C.—requires to be constructed. The demand that this final gap should be bridged as speedily as possible has naturally been great and during the past year investigations were made looking to this end. Two possible routes were available, the first crossing the Selkirk range by Rogers pass, the second by way of the Big Bend of the Columbia river. The former route was considerably shorter but it presented serious disadvantages. Owing to the shortness of the season due to the heavy snowfall in the Selkirk range—in some years this is over 50 feet—it is usually late in the summer before the high passes are clear of snow. The route about the Big Bend on the other

hand has a milder climate and can be kept open for from six weeks to two months longer each year. Another very important consideration was the character of the Rogers Pass district in Glacier park. As is well known this is one of the worst sections of the Rockies so far as snow slides are concerned, so much so that the Canadian Pacific Railway was finally driven to build, at enormous expense, the Connaught tunnel, five miles in length. Moreover, approximately only six miles of the Glacier route can be said to possess scenic attractions of the first order and these slide conditions unfortunately occur where the scenery is at its best.

The Big Bend route on the other hand follows the Columbia river and passes through one of the most historic regions of the west. It is a low-level route, permitting a steady down grade from Golden (2,500 feet), to Revelstoke (1,496 feet). The Glacier route would involve a climb to Rogers pass (4,361 feet) of nearly 3,000 feet on the west and 2,000 on the east. Another argument in favour of the second route was that from Boat Encampment, at the elbow of the Big Bend, a motor highway could be constructed without much difficulty into Jasper park, thus establishing a second trans-Canada route. In view of these considerations, after carefully weighing both schemes, the department decided to lend its support to the second, or Big Bend route.

New Park Established.—An important addition was made during the year to the Dominion's already fine system of national reservations by the setting aside of an extensive area in northern Saskatchewan. North of the great fertile belt devoted to agriculture there lies in this province a region of rocks, woods and water which seems almost to have been formed by nature as a special playground for man. Here are found thousands of crystal lakes, from tiny rock basins only a few hundreds of yards across to great bodies of fresh water over 50 miles long. Between, tying one to another into an intricate network of waterways, run innumerable little rivers and streams offering to canoeists and lovers of the wilderness water routes extending for hundreds of miles. The white birch, the jack pine, and the white spruce grow here in unusual beauty and size and clothe the shores with their diverse greens. Scores of white sand beaches, shelving out gently and clean as a floor, invite one to linger and bathe. Pickerel, pike, and gray trout are found in abundance in the lakes and streams, while moose, deer, bear, and many species of game birds abound.

A generous and typical example of this interesting region has been set aside in Prince Albert park. The area covers approximately thirty townships and includes 1,377 square miles. The reserve is less than 600 miles distant from Winnipeg by motor highway and 500 miles from the international border. Its southern boundary lies about 33 miles north by west of the city of Prince Albert and is at present accessible by a secondary highway. A similar road gives access to lake Waskesiu, the most southerly of the large lakes found in the park. The western boundary is formed in part by the Sturgeon river; the eastern by the 3rd meridian as far as the 54th parallel, where the line turns easterly so as to touch but not include the waters of Montreal lake. Within the park lie three important bodies of water—Waskesiu lake, Kingsmere lake and Crean lake—as well as some forty or fifty smaller lakes. These large lakes in the northern part of the park are so closely connected by waterways that, with only a few short portages, a continuous trip can be made by water visiting them all, affording a circular canoe route of approximately 100 miles.

But aside from its own immediate attractions the park makes another appeal, irresistible to the adventurous. For its lakes and streams form a natural gateway to the great system of linked waterways which lead to the hinterland of Canada, extending like the links of a chain for many hundred

miles. On the northwest these waterways finally reach the Arctic ocean, whereas those on the northeast extend to Hudson bay. Innumerable possibilities for travel are, therefore, open to the canoeist and in addition to the numerous canoe expeditions afforded within its own boundaries it seems likely that the park will become a popular outfitting and starting point for journeys to these remote regions.

The Order in Council setting aside the park was passed on March 26, 1927, and the department immediately took steps looking towards its development. Major J. A. Wood, who had been assistant to the Superintendent of Rocky Mountains national park, was placed in charge of the new park and a staff of wardens appointed. As there were few data in connection with this region the first step was the securing of definite information regarding it. The principal lakes and waterways were explored and an examination of the park and surrounding territory was made by the Commissioner of National Parks and the Acting Superintendent. Surveys were later begun for the relocation of certain sections of the road from the southern park boundary to lake Waskesiu and plans made for the improvement of other sections. A site for a public camp ground was cleared fronting the big beach on Waskesiu lake; trails were cleaned out; cabins for the warden staff improved or rebuilt; and an up-to-date fire-fighting equipment installed. It is expected that the park will be formally opened to the public in August, 1928.

Extension to Jasper Park.—By an Order in Council dated April 7, 1927, an important addition was made to Jasper park, by the extension of its boundaries to the south so as to include the great alpine region extending along the Great Divide from the Columbia ice-field to the northern limits of Rocky Mountains park. The area involved covers 980 square miles, bringing the total extent of Jasper park up to 5,380 square miles. This region represents the climax of the snow and ice deposits of the Rockies and is one of the most outstanding from the point of view of alpine features on the continent, containing five great ice-fields and innumerable snow-capped peaks and glaciers. By the creation of this new reservation, national park conditions are now established along the eastern slope of the main Rockies for a distance of 225 miles.

In view of this considerable addition the possible revision of the existing boundaries of the Rocky Mountains and Jasper parks has been under consideration. In the more easterly sections of both parks, approaching the outer ranges, there are regions less outstanding from the scenic point of view, and this has suggested the possibility of reducing or readjusting boundary lines. Last summer, the Minister of the Interior accordingly arranged that Mr. R. W. Cautley, D.L.S., of the Topographical Survey undertake a survey of these sections of the park. His report is now receiving the consideration of the department.

This widespread interest in national parks reveals the awakening of a new consciousness, the development of a national pride in the beauty of country, and a recognition of the value of these great public reservations. There is no doubt that the remarkable growth of tourist travel in recent years, due to the coming of the motor, has given national parks a new economic value which has helped to establish their importance even in the eyes of the most practical. The increasing noise and strain of city life, and the rush of traffic along all the highways of the country have given a heightened value to regions of solitude and peace. These conditions are likely to increase rather than to diminish and Canada may look forward in the next half century to increasing travel by highway to every part of the continent, and in the no distant future, by air. In the past difficulty of access has preserved many regions in their primeval simplicity. It is clear that the time is coming when this will no longer be true

when even the remote Arctic may become a playground. The value of great wilderness reservations, therefore, such as are found in the national parks must become even greater and the importance of setting them aside while there is yet time is clearly seen. But, as becomes increasingly clear to those charged with their administration, the mere setting aside of such reservations is not enough. A constant vigilance will be required to preserve their wilderness and unspoiled character, to develop a policy which will permit of the freest use but which will jealously guard what is, perhaps, their richest endowment. The time has gone by when such a movement can be considered sentimental or condemned as impractical. We are coming to see that whatever makes for general human welfare is practical in the last and best sense, and in the end is economically sound. "There is nothing," said the late Theodore Roosevelt, "more practical in the end than the preservation of beauty—than the preservation of anything that appeals to the higher emotions of mankind". If we were to think of national parks merely from the economic standpoint, from the point of view of their ability to continue to attract tourist travel, the above dictum would undoubtedly be sound. When we think of the parks in their larger values, as a means for the enlargement and betterment of life, and for the satisfaction of deeply based instincts of mankind, it becomes incontrovertible.

Distinguished Visitors.—The growing reputation of the national parks of Canada abroad is reflected in the number of distinguished names among the visitors' list. Practically every important personage or party of notables which crosses Canada now arranges to visit the national parks and usually to stay over for a few days' rest and relaxation. Among such guests last year were Their Royal Highnesses the Prince of Wales and Prince George, who with Premier and Mrs. Baldwin and the other members of the Royal party spent several days informally at Banff and Lake Louise. Earlier in the year Banff was honoured by a visit from Their Excellencies Lord and Lady Willingdon, who spent a few days there on their first trip to the West. In the autumn Their Excellencies returned for a couple of weeks' holidaying in Jasper park, and with their party enjoyed fishing, golf, and motoring.

The number of private parties, many of which travelled in special trains, was also unusually large and included a special party of delegates to the Pan-Pacific Relations Congress at Honolulu, among whom were Sir Frederick Whyte, Viscount Castlereagh, Mr. Lionel Curtis, famous founder of the Round Table, Mr. Malcolm MacDonald, the Hon. William Astor—the son of Lord and Lady Astor—the Hon. Hugh Wyndham, Sir Arthur and Lady Currie, and a number of other prominent citizens of the Empire. Other visitors were the party of British Press Representatives numbering about 120, a party of delegates from the World's Poultry Congress comprising over 100, and 300 delegates to the Triennial Congress on Mining and Metallurgy. Special parties from the United States included 400 members of the Investment Bankers' Association, travelling in four special trains; the New Outlook Magazine party numbering 200; and delegates to the Convention of Real Estate Men, who toured in two special trains. Several large special parties came also from Ontario and Quebec, including one of about 150 visitors who travelled under the auspices of Laval University, Montreal.

WILD LIFE IN THE PARKS

The success of the national parks of this continent as game sanctuaries has been firmly established during the past ten years. Their usefulness in this respect is now widely recognized not only at home but abroad and many countries are supporting the creation of similar national parks as the best means for the conservation of wild life. The new national park in the Dominion of South Africa, Kruger park, follows closely the lines of the Canadian parks, that is, the combination of a game reserve with a scenic reserve.

The Right Honourable the Earl of Onslow, President of the Society for the Preservation of the Fauna of the Empire, in his presidential address at the last general meeting of the society said:—

The whole world is becoming so speedily opened up to travellers, traders, tourists and settlers and so much uncultivated land is coming under the plough that unless some more or less drastic measures are taken to preserve the distinctive fauna it must obviously disappear entirely. . . . I am sure I should be only quoting what big game sportsmen themselves would say when I suggest that national parks are the very best sanctuaries for big game. . . . I believe that is the only way in which you can be perfectly certain they will continue to breed and multiply and so to carry on. Most of the countries have taken steps in this direction. In fact, in those countries where it has been done for some time the fact of the establishment of these parks has obtained the general approval of the people so that it is really a method of the preservation of animals which can be considered as thoroughly satisfactory. It is a policy that among other things is financially sound.

While no complete census of the big game now in the mountain parks can be arrived at, a steady growth in many species from year to year is apparent to even the casual observer. Sheep and goat are extending their ranges in many places and larger herds are continually seen. Black bear are also increasingly numerous and grizzly are reported more frequently in the remoter areas. Elk, which were introduced into both Rocky Mountains and Jasper parks, are noticeably spreading out in both reserves. Young elk seem to be in particularly good condition. Moose are reported increasing in Waterton Lakes, Kootenay, Banff and Jasper parks. Caribou are found only in Jasper park. A small band of these interesting animals came into the Tonquin valley some years ago from British Columbia. This herd has very considerably increased its numbers and in the past few years other herds have come in along the northern boundary and are also apparently making that region their habitat.

During the year a request was received from the province of British Columbia for Rocky Mountain sheep for restocking. In view of the satisfactory condition of the park herds the department decided to donate fifty sheep from the Rocky Mountains park for this purpose. The animals were captured by the park wardens and successfully shipped without loss.

Government Buffalo Herd.—The condition of the Government buffalo herd in the Buffalo national park, Wainwright, is very satisfactory. Thinning by means of annual shipments to the north and the slaughter of an additional number for sale has reduced the herd to numbers which the park is well able to support. The animals are now in prime condition and show a large percentage of young and vigorous stock. In the autumn a contract was made with a Calgary packing company for the slaughter of 1,000 animals, and from the meat and the hides a satisfactory revenue was obtained.

Three superb buffalo robes, mounted as floor rugs, from the Government herd at Wainwright park, were presented by the department to Their Royal Highnesses the Prince of Wales and Prince George, and to Premier Baldwin, as souvenirs of their Canadian trip. The gifts were accompanied by a small brochure bound in buffalo leather, with hand coloured illustrations of Indian designs, relating the story of the growth of the herd and Canada's success in the restoration of this interesting native species.

Antelope Herd.—The Government antelope herd in the Antelope reserve, Nemiskam, Alta., which had reached the gratifying number of 450 since the creation of the park in 1915, suffered a severe loss during the winter. On December 27 last during a blizzard the antelope drifted against the fence, apparently bunching together so that their weight broke through the centre wires of the 8-foot fence and all but nineteen of the animals drifted away during the storm. Every effort was made to recover them during the winter but as the weather in the succeeding months was unusually mild, food was plentiful

and only about 152 were secured. Fortunately 110 of these were does. The antelope is one of the most difficult native animals to drive or capture but it is hoped that next winter, when food again becomes scarce, a number of those which escaped will return to the park of their own accord in quest of food.

Fish.—Through the valuable assistance and co-operation of the Department of Marine and Fisheries, the restocking of lakes and streams in the parks, was again carried on. The above department has now two hatcheries in Rocky Mountains park, the main hatchery at Banff and the subsidiary one at the Spray lakes.

Early in the season about forty lakes and streams in Rocky Mountains park were stocked with cut-throat trout fry, 747,000 fry being liberated. Brown trout fry were also placed in the waters of Waterton Lakes park and in the Bow river. In July 71,840 eyed cut-throat eggs were buried in Marvel lake, Spray river and Leman lake and in August 205,800 cut-throat fry were liberated in these waters and in the Spray lakes and Bryant creek. Lake O'Hara was also stocked with 12,000 cut-throat fry.

In Waterton Lakes park the usual shipments of fry were received through the kindness of officials in Glacier national park, Montana, and 13,000 were placed in the Waterton lakes and tributary streams. The difficulty of transplanting fry from Banff to Waterton Lakes park made it seem desirable that a small hatchery should be established in the latter park. By an agreement therefore between this department and the Department of Marine and Fisheries a small hatchery was erected at the Waterton townsite.

In Jasper park, under the direction of the Biological Board of Canada and following out the recommendations submitted by them as a result of their two years' investigation of some of the principal waters of the park, small aquatic plants for fish food were placed in sheltered, shallow bays in lakes Mildred, Annette, Edith, and Beauvert. Under the supervision of Mr. J. E. Martin, Superintendent of the Banff hatcheries, 15,000 brown trout fry were placed in lake Mildred, 10,000 in lake Edith, 10,000 in lake Annette, and 5,000 in Big Trefoil lake. To give the fish a chance to develop it was decided to close these lakes for two years.

The restocking of Maligne and Medicine lakes and the connecting section of Maligne river had also been strongly recommended by the Board, and appeared very desirable both as a biological experiment, since this unit is now barren of fish life, and on account of the increasing importance of these lakes as tourist attractions. The difficulty of transporting fry the long distance from Banff—the nearest fish hatchery—to Jasper and then to Maligne lake presented a formidable obstacle and the fishery experts agreed that a small hatchery at Jasper would be essential before the work could be undertaken. In December last the Dominion Inspector of Fisheries for Alberta visited Jasper park and went over the ground with the superintendent and decided to convert an unused construction cabin into a temporary hatchery. A water service was laid to the building and ten troughs installed. Later 250,000 eggs of speckled trout were shipped to Jasper and cared for by park officials during the remainder of the year. In June next these will be transported to Medicine and Maligne lakes and liberated there. The outcome of this experiment will be watched with much interest both by the fishery experts and the National Parks of Canada.

HIGHWAY CONSTRUCTION IN PARKS

Highway construction during the year included a stretch of three and a half miles on the highway from Jasper along the Athabaska valley to the eastern boundary of the park. This road will form a section of the projected Jasper highway from Edmonton. The distance now completed in the park is thirty-four miles.

A final section about a mile in length was constructed on the Mount Revelstoke highway, completing the road from the park entrance to the summit of the mountain according to the original plan. On August 17 the road was opened by His Royal Highness the Prince of Wales, who stayed over at Revelstoke during his brief trip across Canada for the event.

In Waterton Lakes park surfacing work was done on the Akamina highway and the road finally completed from park headquarters to the summit of the Akamina pass. In Elk Island park work was begun on the construction of a road from the north gate to Sandy Beach and from Sandy Beach to the south end of the lake and thence to headquarters. In Yoho park two miles of new road were constructed between Field and the Natural Bridge and the remaining mile widened and improved to meet the demands consequent upon the opening of this park to motor travel. On the Banff-Windermere highway widening and improvements were carried out at various points and the road generally brought up to a condition where it is comfortably wide and safe throughout.

In Jasper park a further experiment was made with the use of tar sands from the McMurray region and a stretch of 2.13 miles was surfaced. This section was completed by the middle of August and its condition during the rest of the season was very satisfactory. The total area surfaced amounted to 20,771 square yards and the cost of the work to about \$1.26 per square yard. The material gives an even and dustless surface and a very great point in its favour is that during the wet weather there is no tendency for cars to skid. As in the previous year the Department of Mines supervised the operations at the quarry at McMurray, looked after the transportation of material and operated a heating and mixing plant for the manipulation of the sand. The heating and mixing of the sand for road surfacing presented no difficulty although the plant constructed and operated at Jasper represented a radical departure from the generally accepted methods. Its outstanding features were the low cost of construction, simplicity of operation, and low operating costs.

Particular interest attaches to this stretch of road since it represents the first experiment in the commercial utilization of these Canadian bituminous sands. The behaviour of this pavement and the success of several small test pieces put down in the city of Edmonton in 1915 now make it clear that these bituminous sands can be used for the construction of the highest class of asphalt wearing surfaces. They indicate that the bituminous sands of the McMurray region constitute one of the great natural resources of Canada, and a gratifying result of the investigation is that it renders available data which would enable capital to undertake the development of these sands with the minimum of preliminary expense and delay.

The following table gives the present mileage of roads, trails and telephone lines maintained in western parks:—

Park	Number of miles		
	Roads	Trails	Telephone lines
Kootenay.....	57	78.0	64.0
Revelstoke.....	18	26.5	17.25
Rocky Mountains.....	145	747.0	179.5
Jasper.....	84	623.75	304.50
Yoho.....	55	154.0	40.50
Glacier.....	9	113.0	7.0
Buffalo.....	11	64.50
Elk Island.....	6
Waterton Lakes.....	34	162.75	56.50
Totals.....	425	1,930.50	609.25

New Motor Campsite, Banff.—The reacquisition by the Canadian Pacific Railway Company of the Banff golf course and the plans for its enlargement and reconstruction involved the taking over of the Mount Rundle motor campsite, at the junction of the Bow and Spray rivers. Several sites for a new camp were proposed but after consideration of their various advantages a location on Tunnel mountain was decided upon, which combined fine views, good air, freedom from mosquitoes, ample shade and superior natural hygienic conditions. A plan for the area was prepared, the necessary clearing was undertaken and the site laid out in lots. A water supply, electric light, shelters, community stoves, washrooms and other conveniences necessary to an up-to-date camp will be provided as soon as conditions permit in the spring.

FIRE PROTECTION

Owing to the favourable season there was practically no loss from forest fires. A few outbreaks were reported but they were all small and were easily got under control. Each year new equipment is added to the fire-fighting service and at the present time all the parks are reasonably well equipped from this point of view. There are now 66 portable pumpers, 31 light pumpers, 4 railway speeders, and 4 railway velocipedes in use in the different parks.

TRAIL RIDERS OF THE CANADIAN ROCKIES

The Trail Riders of the Canadian Rockies held their annual meet in Rocky Mountains park August 5-7. This organization which was started to encourage trail riding in the Rockies, now numbers over 800 members. Of these approximately 100 have qualified for the gold button signifying that they have ridden 2,500 miles or upwards in the mountains; 75 have ridden 1,000 miles or upwards; 125 have ridden over 500 miles, and approximately 350 over 100 miles.

The wide appeal of the organization is shown by the international character of its membership list, which includes many well-known artists, writers and travellers, not only from Canada but also from the United States and overseas. The annual ride, which usually follows trails unbeaten by the regular tourist, is helping to bring to notice some of the beautiful but lesser known parts of the parks and enabling many people to enjoy this most delightful of all ways of establishing an acquaintance with the peaks. The route selected for last year's ride was from Sundance canyon, near Banff, via Brewster and Allenby creeks and Assiniboine pass to the Assiniboine camp. From this point a new trail opened by the Marquis degli Albizzi and the Duke of Leuchtenberg was followed to lake Magog and mount Assiniboine. Nearly sixty members took part. At the annual Pow-wow, held at Sunshine camp, the Lake of the Hanging Glaciers, B.C., was selected as the objective for next year's ride. Return was made by the Valley of the Rocks, the historic Simpson pass—first travelled by Sir George Simpson in 1841—and Healy creek.

RECREATIONS

Winter Carnivals.—The winter carnivals held at Banff and Revelstoke last season were both highly successful and attracted a larger number of visitors than ever before. This was due not only to the increasing interest which Canadians as a whole are taking in winter sports but also to the growing realization of the unique enjoyment and attractions offered by a winter holiday in the parks. Conditions at Banff for a good part of the winter are practically ideal. The absence of wind, the dry air and the abundant sunshine serve to tone the physical system and make outdoor exercise a delight. For people who become debilitated through indoor confinement or the smoke-darkened air of our large cities during the winter, an outdoor holiday in the Rockies would

afford great benefit. Canadians were somewhat late in recognizing the value of these great regions from the scenic point of view and they have perhaps as yet scarcely awakened to their usefulness from the health point of view. Dr. C. W. Saleeby, F.R.S.C., the well-known British scientist, declared that it seemed to him that "the cold and sun of Canada, playing upon the well-fed, produce a splendour of physique, a low rate of disease, an abundant energy of mind, a *joie de vivre*, or national euphoria, which must rejoice every lover of mankind." Referring to Leysin in the Alpes Vaudoises, the site of a famous sanatorium for sunlight treatment, he says:—

In or near such a spot as Banff, for instance, in the Canadian Rockies, all the advantages of Leysin and more could be reproduced on any scale. My own observations in Canada, and what I saw at Leysin, lead me to believe that we should find a friend in the clear, cold air. It stimulates. The nervous system, the muscles, the processes of metabolism respond to it. Light and cold seem to be the ideal combination. Perhaps the real merit of altitude resides not in the higher proportion of ultra-violet rays, but in the coolness of air combined with the light.

Indian Days.—The Indian Day celebrations at Banff were carried out most successfully last year and attracted greater attention than ever before. Several thousand attended the sports and witnessed the native games, competitions, and dances. The full dress procession, with the Indians on horseback in full regalia, which is now one of the most picturesque Indian displays that can be seen on the continent, was nearly a mile long and the beautifully decorated costumes and trappings, many of them handed down for generations, aroused the admiration of all spectators.

Highland Festival.—In September a Highland Festival was held at Banff for the first time, under the auspices of the Canadian Pacific Railway Company. It included a program of Scottish dances, games, and music in which a number of outstanding artists took part and drew competitors from many parts of the Dominion. The festival was so successful that it is understood it will be made an annual event in connection with the Banff Springs hotel.

Banff Golf Course.—In July last the Banff golf course was taken over by the Canadian Pacific Railway Company and plans were immediately made for a complete reconstruction of the course with a view to bringing it up to the standard of the best in America. Mr. Stanley Thompson, the architect of the Jasper links, was commissioned to prepare the new layout and submitted designs which called for practically a new course. Work was at once begun on the first nine holes and good progress made. The course will have three sets of tees, for the beginner, average and expert player respectively. Holes 1, 2, 3, 4, 5, 13, 14, 15, 16, 17 and 18 will be in full view of the windows and terraces of the Banff Springs hotel and each fairway will afford a delightful vista.

SUPERINTENDENTS' CONFERENCE

In January the first conference of park superintendents was called at Ottawa and attended by the superintendents and acting superintendents of all the western parks. The meetings took the form of a round table discussion on the principal phases of park administration and protection viewed from the standpoint of those actually engaged on the ground. The mutual exchange of views and experiences was very useful and should lead to a greater efficiency in the administration of the parks. At the conclusion a number of resolutions were drawn up relating to the handling of tourist affairs, training of wardens, protection of game, maintenance of roads and trails, handling of tourist travel, the administration of townsites, as well as a uniform control of the parks generally.

PUBLICITY

The value of adequate publicity as an indispensable adjunct to the development of the parks has been kept in mind and there has been built up a series of publications giving information concerning each of the main parks and its attractions. During the year two new booklets were prepared, one, *The Kicking Horse Trail*, descriptive of the new highway from Lake Louise to Golden, the other, *Prince Albert Park*, a descriptive guide to the new park in Saskatchewan. A revised edition of *The Banff-Windermere Highway* was also prepared and sent to press and the compilation of material for the forthcoming *Guide to Jasper Park* completed. In addition to these more comprehensive publications the need for small folders which will give information in a compact form to visitors has been much felt. A beginning was made this year by the preparation of a small guide covering the motor highways and principal attractions of Banff, Yoho, and Kootenay parks. A mileage card showing distances between the parks and provincial points was also compiled and printed. Total distribution of pamphlets numbered 144,259.

A number of new movie films of the different parks and of wild life were secured. These were prepared and titled by parks officers and were largely distributed. The public lecture work was continued by the Director of Publicity and the official lecturer. The total number of lectures given was 147, estimated attendance 40,360. Moving picture reels shown at Ottawa totalled 1,368; outside, 498. Reels loaned numbered 451. Several hundred negatives and slides were added to the photographic library. During the year 14,222 prints were distributed, 1,129 enlargements, and 525 transparencies. Lantern lectures loaned numbered 79. Material for 430 articles and lectures was also prepared and sent out to writers and speakers, and 389 engravings were loaned.

REVENUE

Revenue collected by the National Parks of Canada during the fiscal year ended March 31, 1928, exceeded by \$36,633.46 the amount collected in 1926-27. The following statement shows the net increases and decreases from the different sources:—

Source	1927-28	1926-27	Increase	Decrease

Three additional areas—Waweskesy park and Minissawok park for the preservation of antelope, and Fort Howe park, St. John, N.B.—have also been set aside but have not yet been developed.

DETAILED REPORTS OF PARKS

ROCKY MOUNTAINS PARK

Travel to Rocky Mountains park was the heaviest in the history of the park. Rail travel showed a considerable increase and motor traffic was 50 per cent greater than the previous year. The total number of visitors was 166,521, or an increase of 29,858 over the previous year.

No registrations are made of motorists entering Rocky Mountains park on the west. Registrations at the Kananaskis, or eastern gateway, however totalled 53,363 cars, eastbound and westbound, or an increase of 15,405 over the preceding year. The number of passengers carried was 95,672 or 26,890 greater than in 1927. Of these 91,450 were Canadians and 4,222 from the United States.

An idea of the growth of travel to this park is shown by the figures for the past five years:—

1923-24.....	94,930
1924-25.....	104,241
1925-26.....	124,749
1926-27.....	136,663
1927-28.....	166,521

In many cases monthly travel now exceeds the total yearly travel of a few years ago.

A new record for the number of cars using the Banff-Kananaskis highway in one day was established on July 3, when 1,533 cars passed through the Kananaskis gateway. A new record for week-end travel was established on July 1-3 with 3,731 cars. The previous week-end record was for May 22-24 with 1,937 cars.

The growth of travel has naturally been reflected in a larger use of all park facilities, which in some cases were placed under a heavy strain to meet the demands laid upon them.

This was particularly true of the two Government bath houses at the Hot

Sulphur springs. At the Cave and Basin springs a total of 66,233 bathers passed through the turnstiles while on more than one occasion 1,500 bathers were accommodated in one day. In the past nine years there has been a growth of approximately 85 per cent in the use of these springs. The number of bathers rose from 35,969 in 1919 to 66,233 in 1927. Records for bathers in one day show a rise from 945 in 1921 to 1,611 in 1927.

The number of bathers at the Upper Hot springs which are used more for therapeutic than recreational purposes, was also the largest recorded. Records show a growth of almost 100 per cent in the use of these springs in the past nine years.

The growth in motor travel involved also a much larger use of the public campsites, particularly of the Mount Rundle Camp at Banff. This camp was opened in 1923 and has shown a steady growth in use. In 1923 there were 1,828 cars carrying 7,469 people registered at the camp, and 1927 the numbers had increased to 6,017 cars with 21,620 people.

Museum, Zoo and Animal Paddocks.—A lively interest was manifested by tourists in the Banff Museum and its exhibits of native animals, plants and geological specimens. Over 30,000 persons signed the register as compared with 15,000 last year. No record is kept of the number of persons entering the zoo, but it is clear from the crowds who visit it that it is one of the major attractions of the park. The walks, lawns and cages were kept in good condition and elicited favourable comments from many visitors. The total number of animals now engaged is thirty-three as follows: 1 polar bear, 2 grizzly bears, 3 black bears, 1 cinnamon bear, 2 mountain lions, 1 bobcat, 4 timber wolves, 4 coyotes, 1 wolverine, 1 badger, 2 marten, 2 gophers, 1 marmot, 1 Canada lynx, 2 great horned owls, 1 peacock, 3 Canada geese, 1 golden eagle.

The animal paddocks, containing the exhibition herd of buffalo, elk, sheep, and goat, are a constant source of attraction. This year 89,841 persons visited these enclosures, as compared with 65,585 persons in 1926-27. The animals at present number: buffalo, 19; elk, 18; angora goats, 7; rocky mountain sheep, 5; rocky mountain goat, 1; horned sheep, 4; yak, 5.

Licences.—The growth in the general business of the park is well indicated by the variety and number of the licences issued. In the past year these totalled over 35,000, including 18,040 transient auto licences; 540 grazing; private auto, 515; motor cycle, 440; and park season auto, 298.

Fire Protection.—Owing to the favourable season there were few forest fires. Five outbreaks occurred but none of them became large, the whole area burned over being less than half an acre. The total cost of extinguishing these fires, including warden labour, was \$104.73.

The Banff Fire Brigade, which consists of a voluntary staff of 25 men and officers, responded to 14 alarms. The total loss was approximately \$1,750.

Mosquito Control.—The work in connection with the control of mosquitoes in the vicinity of Banff was carried on as in former years, through the assistance of the Entomological Branch, Department of Agriculture. Owing to frequent rains, often followed by extremely warm days, conditions were unfavourable and necessitated careful and continuous work. It is gratifying to note that in spite of these difficulties the nuisance was kept well in hand.

Accommodation.—The large new wing of the Banff Springs hotel built by the Canadian Pacific Railway Company to replace the old north wing which was destroyed by fire was opened for the 1927 season. The new addition is of fire-proof construction throughout and greatly enlarges and improves the appearance of this fine hotel, which now takes an outstanding place among the most luxurious hotels either on this continent or abroad.

Banff now possesses in all 12 hotels with a total of nearly 1,000 rooms and accommodation for approximately 1,600 persons per day. In addition there are 400 private houses renting rooms and 160 tent houses.

As described on page 84, a new motor campsite was laid out on Tunnel mountain and a sufficient area set aside to accommodate about 4,000 persons per night.

JASPER PARK

Development work in Jasper national park was carried on steadily with a view to meeting the demands created by the increasing use of the park. In Jasper townsite a number of improvements were made to the principal streets, new sidewalks laid and the boulevard on Connaught Drive planted with indigenous shrubs and trees. All the principal streets were given a coating of road oil to keep down the dust. The water service was extended to serve four new blocks. The town is now fairly well equipped with hydrants. These have a pressure of eighty pounds and with the completion of the service next year the town should have adequate protection in the event of fire.

The new dam at Cabin lake was completed. This dam raises the level of the lake three additional feet and should provide an ample supply of water for some years.

Several substantial buildings were added to the townsite, the total new construction being estimated at \$80,000. Extensions and new buildings at Jasper Park lodge totalled approximately \$240,000. A log chalet for the use of tourists was also erected at Maligne lake.

The roads and trails were maintained in exceptionally good condition and a number of improvements and extensions made to the system. The Mount Edith Cavell highway was improved by additional gravel surfacing and by the construction of a strong guard rail along the full length of the Portal Creek hill. The first 11 miles of the highway were also coated with road oil. At the terminus of the Cavell highway an additional mile of new road was built and a large park area cleared for the use of cars near the foot of the moraine. This brings the highway practically to the foot of the glacier. Trails to good view points and to the nose of the glacier were also constructed. Work was commenced on the construction of a tote-road, suitable for wagons, from Smoky Hollow to the bridge over the Whirlpool river. As there is already a rough road from the Cavell highway to Smoky Hollow, this now provides a wagon road from Jasper as far as the Whirlpool. In case of emergency such as a forest fire along the Whirlpool or upper Athabaska, this would be of great assistance. About two and a half miles were also added to the tote-road to Medicine lake, making it possible for cars to travel from Jasper practically to the lake. This not only shortens the trail journey for tourists who desire to visit Maligne lake but is also a great convenience for the teaming of supplies and for fire protection purposes.

Portal Creek trail, which affords a new route to the Tonquin valley, was completed and a number of improvements made on the Meadow Creek trail which is usually used as a return route. Work was continued on the new trail up the Smoky River valley to the warden's cabin at Smoky river, and at the end of the season 19 miles of new standard trail had been completed. A large bridge 90 feet long was built over Bess creek. A site for a motor camp was cleared adjacent to the Jasper highway, about one and a half miles north of the town.

The forest telephone system, which now totals 277 miles of line was inspected and kept in good condition. A new line was built from Hoodoo creek to Smoky River cabin, a distance of 26 miles. A great improvement was made by extending all forest lines from the Administration building to the cabin of the supervising warden. This enables all wardens to be in touch at any time of the night or day with headquarters.

WATERTON LAKES PARK

The opening last summer of the large Prince of Wales hotel built by the Great Northern Railway marked the beginning of a new era for Waterton Lakes park. This provision for high class tourist trade had an immediate effect upon travel and greatly increased the number of foreign registrations. Unfortunately the wet season impaired the condition of the connecting roads and interfered considerably with traffic. As it was, however, 14,134 visitors registered at the park of whom 11,374 were from Canada, 2,734 from the United States, 22 from transatlantic and 4 from transpacific points. The total number of motor cars entering the park was 4,823.

The wet weather also interfered with play on the golf links until the middle of July, but from that time to the end of the season the total number of rounds played was in excess of the previous year. Marked improvements were made in the townsite by the planting of trees and flower beds and the grading, gravelling, and oiling of the streets. The entrance roads were also widened and otherwise improved. A blacksmith's shop, storehouse and wagon-shed were erected at headquarters and improvements made to the administration building. The growth of the townsite has been very marked in the last few years. Buildings erected last season included a number of private residences, a business block of a good type, a new barracks building for the Royal Canadian Mounted Police and a new Anglican church. After the main building of the Prince of Wales hotel was completed, construction was begun on a large building for the accommodation of the help.

Trails.—Work was continued on two trails which will greatly extend the opportunities open to the tourist. The new Bosphorus trail was completed by the construction of three additional miles. This trail follows the east shore of Waterton lake and joins the trail to Hell Roaring canyon. Two miles more were also built on the Hell Roaring Canyon trail and 2½ on the trail to mount Carthew.

Game.—Nearly all species of big game are still increasing in the park. Mule deer, mountain sheep and goat, elk, and both black and grizzly bears are seen in larger numbers. Moose have been reported in the Belly River district and white-tailed deer were seen for the first time near Cameron lake. Marten and beaver are also plentiful.

Fishing.—Fishing, which is one of the great attractions of the park, proved better than ever this season, excellent catches being reported, especially from the Bertha Lake district. As in former years valuable donations of fry were received from the Glacier national park, Montana. They comprised 13,000 eastern brook trout fry which were distributed in Hell Roaring creek and Cameron creek.

KOOTENAY PARK

Kootenay national park also had a very successful year. Owing to the heavy snowfall on the Vermilion and Sinclair summits, the Banff-Windermere highway did not open until the first of June. Travel, however, began almost immediately and during that month 1,544 cars went over the road.

The Banff-Windermere highway was in unusually good condition throughout the whole season. Improvements and widening were carried out at various points, particularly between Kootenay crossing and Vermilion summit. Clearing was done on the areas adjoining the highway which were burnt over in the bad fire of last year, and grass sown. The moist season allowed the seed to get a good start and it is evident that the clearing is not only improving the scenery by permitting longer vistas but is also providing additional pasture for game.

While Kootenay park is primarily a highway park created to preserve national park conditions throughout the region traversed by the Banff-Windermere highway, as time goes on and the territory within its borders is more thoroughly explored, it is becoming evident that it possesses many features of special interest to tourists. The number of visitors who remain over in the park and undertake hiking or pony trips is steadily increasing. Last year two new trails were constructed, one up Prospector's valley about eight miles in length, and the other from the highway at Hawk creek to Floe lake, a distance of seven and a half miles. The latter will provide an interesting one-day excursion. The trail is a steady ascent but it affords fine views, and the long cascade of Floe creek is very picturesque.

The number of bathers at the Government swimming pool and Radium Hot Springs from April 1 to October 15 showed a very large increase. These included, adults 12,189; children 2,040; total 14,229; an increase of 3,345 over the previous season.

The most important project was the building of the new baths at these springs. The old building, which was small and of temporary construction, had proved inadequate for present demands. The new building, which was begun in September, will contain dressing rooms, lockers, showers, and rest rooms and an enlarged swimming pool. It is expected that construction will be completed in time for the opening of the tourist season of 1928.

YOHO PARK

The most important event in Yoho park was the completion of the Kicking Horse Trail and the consequent throwing open of the park to through travel. As soon as the weather conditions permitted in the spring, large crews of men were put to work on the completion of the western section of the new highway a distance of 21 miles from Field to Leancoil. The provincial Government also rushed operations on the final section from Leancoil to Golden and by the first of July the road was completed and ready for travel. The official opening took place on July 9 and through travel at once began. Between July 1 and October 30, 5,638 cars eastbound and westbound, carrying 18,541 persons, passed through the western gateway. Of these 4,640 were Canadian cars carrying 15,612 persons, while 998 were foreign cars carrying 2,929 persons.

The increased motor traffic due to the completion of this trunk road placed a heavy strain upon the existing roads to the Yoho valley and Emerald lakes. Practically every car entering the park visited these two popular points. Work on the widening of the Yoho road was continued and practically the whole distance, with the exception of about a mile, was brought up to a standard width of 18 feet. Additional widening was also carried out on the Emerald Lake road and a parking space for cars provided at the terminus of the road.

The increased motor traffic created also an immediate demand for camping accommodation. At the Kicking Horse campsite, three and one half miles east of Field, early in the year shelters with stoves, lavatories, etc., were erected. On July 1 a caretaker was appointed to handle the crowds and care for the cleanliness and sanitation of the camp. He remained on duty till September 6. During this period 1,483 cars carrying 5,418 persons camped overnight. As the facilities provided had been at times severely taxed it was decided in the autumn to erect an additional shelter building and to extend the water supply service.

A second campsite was also laid out on the western end of the road about six and one-half miles from the west boundary of the park, near the Kicking Horse river. This camp, which will be known as the Chancellor Peak campground, was also equipped with shelters and the other necessary conveniences.

During the summer, following the opening of the Kicking Horse highway, the gate-keepers at the western entrance were placed in temporary quarters

but in the autumn a substantial and attractive gateway building was erected. The structure is of stucco and contains, in addition to other quarters, a rest room and facilities for the use of the public.

The streets of Field were kept in good condition and economically treated with fuel oil waste, supplied by the Canadian Pacific Railway Company free of charge. Streets and sidewalks were improved with mine tailings, a material which makes a very satisfactory surface at slight cost.

Game and Fish.—No marked increase in game was apparent in Yoho park during the past year. It is believed this may be partly due to the severe forest fires of the previous summer when large numbers of animals apparently became terrified or were driven by the fire out of the park. Moose, too, have suffered heavily in the last two years. A considerable number have been killed by railway trains and others have wandered beyond park boundaries where they were shot by hunters.

Fishing conditions are improving in this park each year. During the past season all anglers reported excellent catches. The only re-stocking was done at lake O'Hara in which 12,000 rainbow trout fry were placed in September.

GLACIER PARK

The closing of the old Canadian Pacific Railway hotel, Glacier House, a couple of years ago deprived Glacier park of practically its only tourist accommodation and consequently reduced tourist travel. The park officers, however, have availed themselves of the quiet seasons to put the roads and trails into first class condition. Last year one new trail about three miles in length, was constructed up the Beaver valley running from the Beaver Valley trail up to the Prairie hills. This trail, which will be especially valuable for fire protection purposes, gives access to a wide open country on the Prairie hills from which the warden may overlook the whole Beaver valley.

Further development work at the Nakimu caves was carried out by the caretaker and assistants. Work was continued on the opening up of the passageway between No. 4 entrance and the exit near Beaver falls and practically completed. At one point a perpendicular rise of eighty feet was encountered which gave considerable difficulty. By building a flight of steps up to this level, however, the passage was continued and in future the tourist will be able to travel through No. 4 cave, the most extensive of the series, without having to retrace his footsteps. A survey of all the caves was made in the autumn by Mr. C. M. Walker, D.L.S., and his report has furnished valuable information from which a map can be made for the convenience of tourists and which will assist greatly in further developments.

MOUNT REVELSTOKE PARK

The motor highway, 18 miles in length, from the park gateway at the base of mount Revelstoke to Balsam lake on the summit was completed last year and officially opened by His Royal Highness the Prince of Wales on August 17. This road climbs back and forth across the face of mount Revelstoke ascending 4,515 feet in the course of the 18 miles. The views from the higher elevations are extremely fine. As a result of the completion of the road, traffic to the park was greatly increased. The building of a provincial highway through Eagle pass to Revelstoke has now established through connections with the Coast, and last year a large number of western cars from both Vancouver and the United States came to the park by this route. In view of this increasing travel it was decided to undertake new development work giving access to some of the chief places of interest. Two new trails were constructed, one running along

the western slope of the mountain towards the head of Six-mile creek, the other, from Greely creek depot towards the slopes of Clach-Na-Cuddin, which will assist visitors in reaching the ice-field.

In connection with their fire-protection service, with the consent of this branch, the Forest Service erected a lookout station at the summit of mount Revelstoke and maintained a warden there during the summer months. The park headquarters was connected by telephone with this station, which will afford both the national parks and the forest reserves valuable protection from fire.

The annual ski carnival took place in the park under the auspices of the Revelstoke Ski Club in January. The ski-jumping contests which provide the principal feature have become outstanding on the continent and attract some of the best skiers from Canada and the United States. Last year both snow and light conditions on the hill were perfect and hundreds of spectators were afforded a thrilling exposition of this sport at its best. Nels Nelson, world's champion, won the Class "A" event. While he did not exceed his previous world's record of 240 feet his splendid attempts to surpass it may perhaps never be equalled in the annals of skiing. Bob Linburne, a seventeen year old Revelstoke boy, won the Class "B" contest for the longest standing jump, with a perfect jump of 183 feet, surpassing the present world's record by 35 feet. Bob Crowle, in junior Class "E" made a splendid jump of 64 feet, beating the previous record of 43 feet held by Master Arthur Johnson. Ernie Field, of Revelstoke, won the gruelling cross country race of 7 miles, his time being 45 minutes and 5 seconds.

During the year a number of improvements were made by the National Parks of Canada on the ski hill. The long trestle take-off above the main jump was reconstructed and the angle of the incline increased. A new judge's stand was also built.

BUFFALO PARK

The shipments of buffalo to the Great Slave Lake region were, as in the two preceding years, a matter of first importance in Buffalo park. In the late autumn, during the round-up of the beef-stock, approximately 1,100 yearling calves were cut out of the herd and placed in a separate enclosure. During the winter these animals were fed and watered daily, and they came through in splendid condition. Early in April the usual spring round-up took place and approximately 800 more young animals were cut out and corralled.

On June 6 the first train load left Wainwright for the north. Additional shipments followed on each succeeding Monday up to the end of July, until a total of 1,940 buffalo had been sent forward. The animals were all sturdy one-, two-, and three-year-olds and, as in former years, the loss in corralling, loading and shipping was very small.

Aside from the normal decrease due to age there was practically no loss in the main buffalo herd during the winter. Grazing conditions in winter quarters were good so that little extra feeding was required and the herd was in an exceptionally good condition with the arrival of spring. A census taken at the close of the fiscal year showed a total of 4,241 buffalo in the park. Increases and decreases for the year were as follows:—

On hand as per census report dated May 12, 1927.....	6,027
Decrease since May 12, 1927, including animals shipped, slaughtered and natural decrease.....	2,986
	<hr/> 3,041
Increase, season 1927.....	1,200
	<hr/> 4,241
Buffalo in park, March 31, 1928.....	

At the time the above census was taken the herd was distributed as follows:—

In winter quarters.....	2,366
" shipping inclosures.....	1,123
" home paddock.....	115
" cattalo inclosure.....	8
" cattalo lane.....	3
" main park.....	626
Total.....	4,241

The count included 76 yearlings in the main park and 32 yearlings in the Home Paddock herd. The remainder of the herd, other than the shipping stock segregated, were nearly all five-year-olds and older. These animals included 425 males of from four to seven years; 566 males from eight to fifteen years and 47 males over fifteen years. Females four years old and upwards totalled 1,897.

Other animals in the park include elk (estimated), 475; mule deer (estimated), 1,650; moose, 54; antelope, 3; yak, 26; domestic cattle, 11; mixed stock, 38.

Farming operations were carried on as usual and approximately 500 acres were seeded with oats. About 55 acres were left for green feed and from the remainder 15,799 bushels were threshed. This yield was sufficient to meet all the requirements of the park including seed for the next crop and to allow shipment of 8,000 bushels to other national parks as well. Two hundred and fifty acres of land were summer-fallowed and ten acres of new ground broken.

Approximately 350 tons of straw were secured from the oat crop and this made splendid winter feed for the buffalo. About 850 tons of hay were also secured from the Ribstone meadow and 22 tons from the Home paddock. The usual maintenance necessitated the ploughing of 122 miles of fire-guard, repairs to 95 miles of fence and construction of three miles of new fencing, and repairs to 35 miles of telephone lines.

Sixty-one coyotes were destroyed in this park by the wardens, 45 being caught by dogs and the remainder shot.

Visitors.—The records kept at the different gates show that 12,679 people entered the park. The actual number of visitors greatly exceeds the above figures as, in the absence of a gatekeeper many do not register.

Each year the picnic grounds at Mott lake are becoming more popular. Picnic parties from every direction make use of these grounds and the improvements made for their convenience have been very much appreciated.

ELK ISLAND PARK

In Elk Island park the increased area has tended to improve the condition of the buffalo herd maintained there. Last year the buffalo fed out on the range the whole year and came through with a loss of only three animals. The total numbers of animals in this park are now: buffalo 729, moose 227, elk 454, deer 288.

Haying operations were interfered with by heavy rainfall; however 246 tons were stacked for the winter's feed.

POINT PELEE PARK

This charming reservation in southern Ontario is of increasing value as a sanctuary for bird life and as serving the recreational needs of this part of the province. The park is distant only about thirty-five miles by motor highway from the city of Detroit and is, consequently, visited by a large number of people from that section of the United States. Last year approximately 11,350 cars registered in the park carrying about 45,400 passengers. Two hundred and

fifty-five camping permits were issued, 210 of which were for less than three days. Of these, 150 were taken out by United States residents registering from 8 different states, while 60 showed Ontario registrations.

Next to its beautiful sand beaches fronting lake Erie the bird life forms, perhaps, the greatest attraction of the park. Thousands of birds visit the reserve during the spring and fall migrations and large numbers make it their breeding ground. Quail and pheasant, which remain throughout the year, are steadily increasing in numbers. Both black and grey squirrels are found in the park and appear to be rapidly increasing. An open season is allowed each year for shooting of duck during four days of each week from October 1 to December 15. Three hundred and twenty permits were issued to hunters during this period last year. Muskrats are also very numerous and an open season of ten days for trapping was allowed last year. On account of the severe cold which froze the marshes, only four days good trapping was possible, but in this period 400 more rats were taken than in the previous year.

FORT ANNE HISTORIC PARK, ANNAPOLIS ROYAL, NOVA SCOTIA

This interesting reservation continues to be one of the most attractive sites in the Maritime Provinces. Last year about 15,000 visitors entered the park of whom 9,787 registered and were personally conducted through the museum, an increase of 1,630 over the previous year. At times three attendants were necessary to handle the crowds. The visitors' book shows an increase in the number of persons conducted through the museum during the past nine years, from 2,152 in 1919 to 9,787 in 1927.

A number of interesting exhibits were added to the museum during the year including a collection of coins from 1604 to the present date. Lt.-Col. Prideaux, the expert numismatist, kindly gave his time and valuable advice to the making of this collection, and the expense in connection therewith was met by the Historical Association of Annapolis Royal. Collections of native birds, rocks, and minerals of the county of Annapolis were also added. A gift to the museum included a rare silver medal cast by the British Government in 1867 to commemorate the Confederation of Canada, the gift of an anonymous friend, and a rare engraving from the picture by Harris of the Fathers of Confederation.

The most important construction work was the building of a new pavilion on the site of the old British block house pulled down in 1882.

PRESERVATION OF TOTEM POLES

The interdepartmental committee for the preservation of totem poles in the Indian villages of British Columbia, of which the Commissioner of National Parks is a member, met several times during the year and laid out plans for the furtherance of the work. Mr. Harlan I. Smith, the well-known archaeologist, whose services were loaned by the National Museum of Canada, and who for the two previous years had been in charge of preservation work at Kitwanga, B.C., again directed operations, this year at the Kitselas canyon. Fifteen poles in all were found here. Of these twelve had already fallen and upon examination almost all of the poles were found to be badly decayed. Eight specimens however were restored. In each case a well-seasoned, creosoted supporting pole was inlaid at the back of the original pole, the old pole was thoroughly oiled to preserve it from the weather and re-erected in a cement foundation immediately below the soil. Attempts were made to restore the original colouring of the poles in harmony with their antiquity. To date twenty-six poles, all within easy access, have been restored. Mr. Smith reports, however, that there are still twenty-four poles standing within sight of the railway and sixty others within a radius of 15 miles which should be preserved. It is gratifying to note that the Indians themselves evinced great interest in the work and with very few exceptions showed a willingness to assist the Government in every way.

Protection of Migratory Birds

The work in connection with the protection of migratory birds and the enforcement of the Migratory Birds Convention Act was carried on by the Migratory Birds Division of the National Parks of Canada as in former years. There was complete co-operation with provincial authorities, to whom the enforcement of bird protection measures has largely been left. As in former years, hundreds of honorary game officials also lent their assistance and furnished this office with valuable information respecting bird conditions in their localities. By a system of circular letters sent from Ottawa they were kept informed of the work of other honorary game officials and of bird conditions generally. Officers of the Royal Canadian Mounted Police helped materially in the enforcement of the law and the conduct of investigations.

The Chief Federal Migratory Bird Officer for the provinces of Ontario and Quebec, with a staff of temporary assistants, patrolled the gulf of St. Lawrence during the summer with a view to protecting the abundant sea bird life of the north shore. During the winter he made patrols in both provinces and delivered addresses on birds and bird protection.

The Chief Federal Migratory Bird Officer for the western provinces made patrols throughout these provinces and supervised the sanctuary and public shooting grounds. In co-operation with the Biological Board of Canada he also carried on a study of the food habits of marine birds with special relation to the spawning of herring.

In June last, following suggestions from provincial game officers and the chief federal migratory bird officers, a number of amendments were made to the regulations for the enforcement of the Migratory Birds Convention Act. These included a close season throughout the year for yellow-legs and an earlier season for geese and brant in the western section of British Columbia north of the 52nd parallel, a change in the western and eastern districts of British Columbia and the inclusion of Queens county, Nova Scotia, with the district of Yarmouth, Shelburne, and Digby for ducks and rails. The close season for wood ducks was continued; and the protection for eider ducks in Quebec continued throughout the year; the use of the rifle for taking migratory game birds was prohibited in the electoral districts of Chilliwack, Dewdney, Delta, Richmond, Point Grey and South Vancouver, in British Columbia. A provision was placed in the regulations regarding the issue of permits allowing the capture of migratory birds for banding. A consolidation of the Migratory Birds Convention Act and of regulations containing these amendments was printed and distributed prior to the opening of the hunting season.

To ascertain whether continued protection for the wood duck was desirable letters were sent to people in the provinces of Ontario and Quebec familiar with bird conditions in their respective districts inquiring about the status of the species. The information received indicated that this species is scarcely holding its own and that continued protection should be given it under the Migratory Birds Convention Act.

In January, 1928, a Dominion Game Conference was called at Ottawa by the Minister of the Interior. Representatives from each province and chief federal and provincial game officers were present, as well as the Chief of the United States Bureau of Biological Survey, Washington, D.C. The conclusions reached by the conference were expressed in the form of fourteen resolutions which dealt with the following matters: Changes in the provincial regulations respecting the hunting of game mammals and birds; the reduction of daily and seasonal bag limits; the prohibition of auto-loading firearms; the licensing of hunters and the recording of all game killed and taken; the formation of a Dominion Fish and Game Protective Association; further protection for the wood duck until January 31, 1931, coupled with the proposal that sanctuaries be set

aside for this species; the establishment of additional public shooting grounds; an amendment to the Migratory Birds Convention Act Regulations in respect to damage done to crops by migratory birds; the protection of western bird sanctuaries, and the checking of shipment of game trophies taken in Canada and being sent to foreign countries. The conference also approved the policy of reserving suitable areas wherein Indians alone may trap.

Oil Pollution.—A serious loss in bird life due to the dumping of oil from vessels in navigable waters, or reaching navigable waters in other ways, received much attention. During the week of November 14, a national conference in which Canada took part was held at Washington and a draft convention on oil pollution of the high seas was prepared and is now before the Maritime Powers.

Waterfowl Census.—This branch is co-operating with the United States Bureau of Biological Survey in undertaking a waterfowl census throughout Canada. Plans are being made to carry out this work during the next few years so that it may be decided whether waterfowl are increasing or decreasing during any given period and that shooting restrictions may be modified accordingly.

Bird Banding.—The central registry in connection with the banding of wild birds, a work which is affording much valuable information with respect to the distribution, breeding habits, and migratory flights of wild birds, was maintained as usual in the branch. During the year 11,287 records of birds banded by Canadian co-operators, and 7,872 repeats and returns on birds already banded were received. Mr. Jack Miner, of Kingsville, Ont., who since 1909, has banded several hundred Canada geese and many ducks, has transferred to the branch all letters which he has received reporting returns on his banded birds. This information proved a valuable addition to the Official Canadian Record of Bird Banding Returns and has been prepared for publication.

Bird Sanctuaries and Public Shooting Grounds.—Minor changes have been made in the boundaries of Quill Lake bird sanctuary and Crane Lake bird sanctuary, Saskatchewan. Minor changes have also been made in the boundaries of the following public shooting grounds: Jackfish Lake, Saskatchewan; Lake Francis, Manitoba; and Marshy Point, Manitoba.

Educational Work.—Educational work was carried on as formerly through the distribution of pamphlets, posters, the Migratory Birds Convention Act and abstracts of the regulations. Circular letters regarding the changes in the regulations for 1927 were distributed to the Canadian press. A reprint of 100,000 copies of the pamphlet "Lessons on Bird Protection", in English, and 20,000 of "Bird Houses and their Occupants", in French, was necessitated by numerous demands. Lectures on bird protection were given by members of the permanent staff and lantern slides were furnished to honorary game officials and others for lecture purposes. Various camps attended by young people were also visited during the summer and instructions given in bird protection and natural history subjects.

The lantern slide library now contains 4,770 slides, covering 948 subjects, and showing 338 different species of birds. Slides totalling 4,241 were lent during the year.

The radio was also utilized for lecture purposes and from time to time items of interest were broadcasted to explorers and others in the far north.

Trumpeter and Whistling Swans.—During the spring swan migration a number of whistling swans alighted above Niagara falls during a thunder storm and were swept over the falls, several of the birds being killed and many injured. This department co-operated with the Ontario Department of Game in caring for the injured birds. Several of these were sent to the Ontario Provincial Game Farm and a number of dead birds were forwarded by the province to recognized

museums. While accidents of this nature are extremely regrettable they are, fortunately, rare, occurring only when the spring migration reaches the upper Niagara river during stormy or foggy weather.

Bird Census.—A Christmas bird census was made at many points by members of the various naturalists' clubs and by officers of this branch. At Ottawa 22 species were found and 1,935 individuals. These winter bird censuses taken from year to year give a comparative idea of the distribution of bird life at a time when it is at its lowest ebb.

Eggs of Marbled Murrelet.—The most outstanding ornithological event of the year in Canada was, probably, the discovery of the eggs of the marbled murrelet. These were found by Mr. Solomon John Darcus, of Penticton, B.C., while collecting specimens for scientific purposes on the west coast of Queen Charlotte Islands, B.C. The nesting of this species has been unknown since the discovery of the species in 1789.

Prosecutions.—Eighty-seven prosecutions were instituted by Dominion officers in connection with the enforcement of the Migratory Birds Convention Act. These resulted in 69 convictions, 14 suspended sentences, and 4 cases were dismissed. Fines imposed amounted to \$1,102. Prosecutions instituted by provincial officers are not included in this summary.

Permits and Licences.—Permits and licences were issued as follows (calendar year 1927):—

Collection of birds for scientific purposes.....	270
Possession of birds for propagating purposes.....	448
Capture of birds for propagating purposes.....	36
Destruction of certain birds when found to be seriously damaging agricultural or fishery interests.....	54
Taking of birds for banding purposes.....	103
Practising taxidermy.....	80
Shooting of geese and brant in Queens and Shelburne counties, Nova Scotia, in the open season provided by law.....	296

Historic Sites and Monuments

The preservation, restoration, and marking of historic sites of national importance throughout Canada has been carried on throughout the year. The usual sitting of the Historic Sites and Monuments Board was held in Ottawa in May. Of the sites considered twenty were selected for commemoration. During the past year twenty-four sites were marked, making a total of one hundred and three since the inception of the work seven years ago.

The public interest and sympathy felt for this national undertaking is increasingly manifest not only in the number of inquiries received concerning them but in the increase of visitors to the sites themselves.

MARKING OF HISTORIC SITES

The work done in the different sections of the country was as follows:—

MARITIME PROVINCES

Louisbourg, N.S.—Preliminary steps were taken in the matter of acquiring approximately three hundred acres of land for the creation of a national historic park surrounding the historic fortress.

A cairn, to which is affixed a tablet, was erected on a plot of ground, provided for this purpose by Mr. Hugh Ross, K.C., near the original west gate of the fortress, to mark the site of Dauphin bastion, built by the French in 1738 and demolished by the British after its capture in 1758.

Sydney, N.S. (Joseph Wallet des Barres).—A tablet was affixed to the front of the Post Office building on Dorchester street to commemorate the public services of Joseph Wallet des Barres, the distinguished military engineer employed by the British Government to survey and chart the eastern coast of North America and later first Lieutenant-Governor of Cape Breton (1784-87) and the founder of Sydney.

Battle of Shannon and Chesapeake, Halifax, N.S.—A monument of cut granite with a bronze tablet was erected on the grounds at Admiralty House, Halifax, to commemorate the notable defeat and capture of the United States frigate *Chesapeake* off Boston harbour, by H.M.S. *Shannon*, of Halifax, June 1, 1813.

Yorkshire Settlement, Chignecto.—A cut-stone monument of special design, to which is affixed a bronze tablet, was erected in Fort Beausejour historic park to commemorate the Yorkshire settlers of the counties of Westmoreland and Cumberland who during the American Revolutionary war loyally supported the authorities and helped to quell the Eddy rebellion of 1776.

Tonge's Island (Ile de la Valliere), N.B.—A cut-stone monument to which is affixed a bronze tablet, was erected in Fort Beausejour historic park to commemorate events connected with the site of Ile de la Valliere, once capital of Acadia, situated between Fort Beausejour and Fort Lawrence. The island was granted to Michel Le Neuf de la Valliere, Seigneur of Chignecto, in 1676, who acted as Commandant and Governor there under Count de Frontenac, 1678-84.

QUEBEC

Fort Ste. Therese, near St. Johns.—A boulder with tablet was placed in the Bunker United Empire Loyalist burial grounds to mark the site of Fort Ste. Therese, built in 1665 by M. de Salieres, for defence against the Iroquois. The fort remained in existence until 1760, when it was burned by Major Robert Rogers.

Battle of Lacolle, Lacolle.—A cairn with tablet, surrounded by a suitable fence, was erected on a small plot of land, donated by Mme. Joseph Boudreau, to perpetuate the memory of the officers and soldiers of the 13th Regiment, Royal Marines, from Ile-aux-Noix, and of the Canadian Fencibles and Canadian Voltigeurs, who lost their lives at the Battle of Lacolle, March 30, 1814. The United States troops, after a severe attack on the stone mill on Lacolle creek, near the present bridge on the highway, were compelled to retire with heavy losses and to abandon their plan of campaign.

Madeleine de Vercheres, Vercheres.—A tablet was affixed to the existing monument, located near the river St. Lawrence, at Vercheres, to perpetuate the memory of Madeleine de Vercheres, who, in 1692, with her two brothers, an old servant and two soldiers, successfully defended Fort de Vercheres against a war party of Iroquois.

Battle of the Cedars, Cedars.—A cairn with tablet was erected on a plot of ground donated by Mr. Adolphe Tessier, opposite his residence, to commemorate the events associated with the Battle of the Cedars May 19-21, 1776, when two invading United States forces were surprised by a company of Canadians and Indians and forced to surrender.

Battle of Ile-aux-Noix, Fort Lennox.—A tablet was affixed to the gateway at the north entrance to Fort Lennox to commemorate the events associated with the naval battle which took place on the Richelieu river nearby on June 3, 1813, ending in the capture of the United States sloops *Eagle* and *Growler*.

Sir Wilfrid Laurier, St. Lin.—A cairn with tablet was erected on a plot of ground in front of the town hall to commemorate the public services of Sir Wilfrid Laurier, late Premier of Canada, who was born at St. Lin. This work was carried out at the request of the National Committee for the celebration of the Diamond Jubilee of Confederation.

ONTARIO

Pointe au Baril, Maitland, Grenville County.—By permission of Dr. R. E. Webster, a tablet was affixed to the old stone tower adjacent to the Montreal-Toronto highway, to mark the site of Point au Baril, where the last French ships of war that navigated lake Ontario were built.

Fort Norfolk, Turkey Point, Norfolk County.—With the consent of the provincial Government a cairn with tablet was erected on lot 14, concession A, township of Charlotteville, to mark the site of Fort Norfolk, built 1812. The famous missionary, Dollier de Casson, and party encamped at this site March 26, 1670. It was selected by General Simcoe as a site for a fort and naval station in 1795 and during the war of 1812-14 it served as a defence for that part of Upper Canada.

Point Pelee, Leamington, Essex County.—A cairn with tablet was erected near the new pavillion in Point Pelee park to commemorate the several early events which took place there. These were: the encampment of Dollier and Galinee, April, 1670; the landing of Brock's forces, August 12, 1812, on the way to the famous attack upon Detroit; the defeat of an American detachment on the beach by Wyandottes, during the Pontiac war; the battle of Pelee Island, March 3, 1838, during the Upper Canada rebellion.

McKee's Point, Sandwich, Essex County.—A cairn with tablet was erected on a plot of ground provided by the town at the intersection of Sandwich and Main streets to mark the starting point of General Brock's expedition, August 16, 1812, to attack Detroit—the notable expedition which resulted in the surrender of the Detroit garrison, although greatly superior in numbers.

Sir John A. Macdonald, Adolphustown, Addington County.—A cairn with tablet was erected on a plot of ground in Lot 19, third concession of the township of Adolphustown, which was donated by Mr. A. R. Davis, to mark the old home of Sir John A. Macdonald. This work was carried out at the request of the National Committee for the celebration of the Diamond Jubilee of Confederation.

Sir John A. Macdonald, Kingston.—A tablet was affixed to the outer front wall of the building at 102 Rideau street, Kingston, the boyhood home of Sir John A. Macdonald. This work was also carried out at the request of the National Jubilee Committee.

Kaministiquia Portage, Pointe de Meuron, Fort William.—A cairn, tablet, and fence were placed on a plot of ground, donated by Col. S. C. Young, on lot 19 in the first concession north of the Kaministiquia river, between Fort William and Port Arthur, to mark the site of the canoe landing at the beginning of the long "Portage Route" to the Great West. This trail was used by the Indians long before the arrival of the white man and subsequently by French, British and Canadian discoverers, explorers and traders.

WESTERN CANADA AND BRITISH COLUMBIA

Chuny, Alta. (Indian Treaty No. 7).—A cairn with tablet was erected on the southerly half of section 21, township 21, range 21, west of the 4th meridian, in the Blackfoot Indian reserve, to commemorate the events associated

with the signing of Indian Treaty No. 7, September 22, 1877, whereby the Blackfeet, Blood, Piegan, Sarcee, Stony and other Indian tribes surrendered their rights to 50,000 square miles of territory lying in southwestern Alberta.

Jasper House, Alta.—A cairn with tablet was erected along the Jasper highway, near the Rocky river, Jasper national park, to mark the site of the old Jasper House, built at the northern end of Brulé lake by the North West Company about 1813 and about 1837 removed to a site on the west bank of the Athabaska, opposite the mouth of the Rocky river. For half a century this post was a main support of the trade route across the mountains.

New Westminster, B.C.—A cairn with tablet was erected on a grassy plot immediately in front of the entrance to the British Columbia penitentiary to commemorate the several historic events associated with New Westminster, the first capital of the colony of British Columbia.

Nanaimo, B.C.—A granite block, to which is affixed a tablet, was erected in Dallas square to commemorate the discovery of the first coal mine in British Columbia, in 1852, and the consequent inception of an industry which has largely contributed to the industrial life of the province and aided in the growth of trade on the western coast of Canada.

Fort Hope, Hope, B.C.—A cairn with tablet was erected at the foot of Wallace street, near the Fraser river, to mark the site of the stockaded post at Hope, built in 1848 by the Hudson's Bay Company, and the building of the old "Brigade Trail". The post was an important point in the company's transportation system and the place of transfer from water to land travel. Hope was also the centre of the earliest gold mining on the Fraser.

PRESERVATION WORK

At a number of the larger sites controlled by the department, preservation and other improvement works were carried out on the structures located thereon and to the grounds, of which the following are the most important:—

Fort Cumberland, N.B.—A pavilion was erected in the park, repairs made to the old powder magazine, the entrenchments were cleared of debris and the site generally cleaned up.

Martello Tower, Halifax, N.S.—Extensive repairs were carried out on the masonry of the exterior wall of the tower in Point Pleasant park. The inner stairs and floors were renovated.

Fort Chambly, Chambly Basin, P.Q.—Repairs were made to the living quarters, the observation tower, the dungeon and magazine, and to the stone retaining wall facing the Richelieu river. Trees were planted on the picnic grounds and camp stoves provided for the convenience of tourists.

Fort Lennox, Ile-aux-Noix, P.Q.—Repairs and improvements were made to several of the old buildings. The chimneys and embankment of the old ovens were repaired and camp stoves constructed for the convenience of tourists and campers.

Fort Wellington, Prescott, Ont.—The exterior woodwork of the blockhouse was painted, new conveniences installed, inner palisades repaired, and electric lights placed in the museum.

ACQUISITION OF SITES

Action was also taken in regard to the acquisition of other sites recommended by the Board for future marking, and control of the following has been obtained:—

MARITIME PROVINCES

Admiral d'Anville's Encampment, Bedford Basin, N.S.—Mr. E. Clayton has donated a plot of ground 20 feet square adjacent to the old French landing road on the outskirts of Halifax to mark the site of the landing place of the ill-fated squadron under the command of duc d'Anville, in 1746, which attempted the re-capture of Acadia.

QUEBEC

Battle of Two Mountains, near Senneville.—Mr. and Mrs. Waldo W. Skinner have donated a plot of ground, 25 feet square, adjacent to the Senneville road, for the erection of a memorial to commemorate the events associated with the engagement which took place in 1689 on the lake of Two Mountains, between the French and Iroquois, which resulted in the defeat of the Indians and the saving of the island of Montreal.

Chateauguay Ford Battle, Allan's Corners.—Mr. Wm. Kerr, of Howick, has donated a plot of ground, 25 feet square, adjacent to the Montreal-Malone highway, on which to erect a memorial to commemorate the events connected with the flank engagement of the battle of Chateauguay which took place on October 26, 1813, between the Canadian forces and the invading United States troops.

ONTARIO

Battle of Ridgeway, Ridgeway, Welland County.—The Council of the Township of Bertie has donated a plot of ground, 25 feet square, adjacent to the Garrison road, for the erection of a memorial to commemorate the engagement of June 2, 1866, between a force of Canadian militia and a body of Fenians.

Battle of York, Toronto.—The Provincial Government and the city of Toronto have granted authority for the placement of a bronze tablet on the Province of Ontario building, in the Exhibition Grounds, to commemorate the events associated with the battle and capture of York, April 27, 1813.

PRAIRIE PROVINCES AND BRITISH COLUMBIA

Lower Fort Garry, near Winnipeg, Man.—The Hudson's Bay Company has granted permission to place a tablet at the gateway of Lower Fort Garry to mark the site on which Indian Treaty No. 1 was signed.

Lethbridge, Alta.—The civic authorities have provided an area in Galt park for the erection of a cairn and tablet to mark the development of the first coal mine in Alberta and the services of Nicholas Sheran, the first man to recognize and assist in developing the coal resources of the province.

Fort Steele, B.C.—The executors of the R. T. Galbraith estate have donated a plot of ground, 25 feet square, adjacent to the Fort Steele-Bull River highway for the erection of a memorial to mark the site of Fort Steele, the first fort of the North West Mounted Police in British Columbia.

APPENDIX

Report of the Secretary of the Alpine Club of Canada, Little Yoho Camp, 1927

The twenty-second annual camp of the club was held in the Little Yoho valley from July 19 to August 2, 1927. The lovely site familiar to many members as that of the last camp before the war was as attractive as before, though owing to the long preceding winter, flowers and growth generally were late in making their appearance. The weather was delightful. Only one storm occurred, certainly a bad one, but it was in the evening and no one was inconvenienced.

The attendance was smaller than usual, but there were no outlying camps and the camp membership was compact and congenial.

Construction was under the experienced direction of Mr. C. A. Richardson, of Calgary, and all went well. Members motored to the Canadian Pacific Railway camp at Takakkaw falls and thence walked along the upper trail and across the open alplands to camp. A few travelled via Burgess pass and some by Emerald lake.

Most of the graduating climbs were made on mounts President and Vice-President. Mount Marpole, an interesting rock climb, was accepted as entitling to the badge. Mount des Poilus, still often spoken of by its former name, mount Habel, was climbed several times but was a long distance from camp. The isolated peaks, mount Kerr and mount McArthur, being near the camp, were very popular. One first ascent was made. On July 31 Messrs. L. Grassi, G. A. Gambs, N. L. Goodrich, and M. Cropley climbed mount Olive, near mount Gordon, by a difficult route, returning by a much simpler way. The mountain was named by Prof. Harold Dixon, in 1897, from the colour of its rock.

The Yoho region abounds in opportunities for delightful excursions. Twin falls, the Yoho glacier, Kiwetinck lake and the pass beyond, Takakkaw falls, Yoho (miscalled Summit) lake, Burgess pass, all attracted members again and again.

Dr. Bell, the President, ill in Vancouver, was greatly missed, as was also Mr. A. O. Wheeler, the popular director of the club for many years, who was called elsewhere on business. This is the second camp in the whole history of the club from which Mr. Wheeler has been absent. Other members of the executive were unable to be present but those there worked hard and all went well.

Among the guests of the club, Mr. N. E. Odell, of mount Everest fame, was outstanding. He delighted the camp by his story of the last attempt told in vivid language at the camp fire. Mrs. Odell, Mr. W. H. Lewin, from England, Mr. Murray Gibbon, of the Trail Riders and the C.P.R., were welcome visitors. Senator Bostock was the first visitor of political standing to visit camp. One hundred and one persons were placed under canvas, among them being representatives of the Alpine Club of England, the American and Swiss Alpine Clubs, the Climbers Club, the B.C. Mountaineering Club, the Appalachian Mountain Club, the Ladies' Alpine Club, and the Royal Geographical Society. Members present were drawn from England, Scotland, Canada and the United States.

Report of the Secretary of the Alpine Club of Canada, Banff Club House, 1927

Registrations at the club house were the largest since 1920, in which year the annual camp being held at mount Assiniboine, many members stayed in Banff on their way.

Considerable addition was made to the domestic equipment and gifts were received from various sections of the club and from friends. It is hoped to make various improvements during the coming season. The canvas tent houses, built in 1909, are nearing their end and timber huts will be substituted as opportunity offers.

The season, from the weather point of view, was not a very favourable one, and the club house was closed early in September.

Several climbs were made of mount Edith, and mount Louis was again climbed without professional guides. Mount Norquay is always a popular training climb made several times a season. Mounts Cascade and Rundle are voted dull.

The new climbing hut in Prospectors' valley has proved a great success. It makes a fine base for climbing the Ten Peaks and other mountains in the neighbourhood. The club is greatly indebted to the National Parks of Canada for improving the Prospectors' Valley trail which will probably be well used in future. The club hopes, as conditions permit, that huts will be erected on other suitable sites. This will encourage original climbing and develop the mountaineering art.

Several important expeditions were made during the season. Mr. W. A. Don Munday again led an attack on the so-called "Mystery" mountain and again Fate said "No." It is hoped that in 1928 the result of previous experience will avail to ensure the conquest of this fine peak.

Mr. A. J. Ostheimer III led an important expedition in the Columbia ice-field country, details of which are not yet to hand.

Many distinguished visitors were at the club house, including General Sir W. Furse, of the Imperial Institute; Capt. Douglas King, Secretary of the War Office; General C. H. Mitchell, of Toronto; Colonel Crookshank, M.P., of His Majesty's Body Guard; General Ross, of Montreal; Mr. N. E. Odell, one of the Mount Everest expeditioners; and others. As always, the club house was a centre of information on mountain matters to many visitors.

The attendance at the club house was 339, drawn from England, Scotland, Ireland, Belgium, Tasmania, the United States and Canada.

IV

WATER POWER AND RECLAMATION

REPORT OF THE DIRECTOR AND CHIEF ENGINEER OF WATER POWER, J. T. JOHNSTON

INTRODUCTORY

The organization of this service remains the same as for previous years and the reader is referred in this connection to the Annual Report of the Department of the Interior for the fiscal year ended March 31, 1926.

INTERNATIONAL WATERWAY MATTERS

During the year international waterway problems continued to receive close consideration, and appropriate action was taken from time to time in connection with the various matters arising.

The special International Niagara Board, appointed by the Governments of Canada and the United States to determine how the scenic beauty of Niagara falls and rapids can best be maintained and by what means and to what extent the impairment thereof by erosion or otherwise can be overcome, and, consistent with the preservation of the scenic beauty of the falls and river, to determine what quantity of water might be diverted from the river for power purposes, submitted to the two Governments on December 14, 1927, an interim report recommending the early construction of certain initial remedial works designed to rewater the presently bared flanks of the Horseshoe falls, to ensure an adequate supply of water to the rapids in the vicinity of the Three Sisters islands and a dependable flow over the American falls.

Following the submission of the interim report the board continued **its compilation and study** of the basic data underlying the problem, preparatory to formulating its final report.

The suit between the complainant States of Wisconsin, Minnesota, Pennsylvania, and Ohio vs. the Chicago Sanitary District, before the United States Supreme Court, in reference to the diversion of water from the Great Lakes system through the Mississippi watershed, has been closely followed, in view of its importance to Canadian interests. Following various hearings held by Special Master Charles E. Hughes, oral argument was presented on May 31, June 1, 2, and 3, 1927, and Mr. Hughes' report to the United States Supreme Court was made on November 23, 1927. On June 3 the Supreme Court allowed thirty days in which exceptions to the Special Master's findings might be filed. The complainant States filed their exceptions and a further hearing will be held at an early date before the Supreme Court of the United States at which the contending parties will present their final argument. The court's decision may be expected on some date following the hearing of the final arguments.

The Lake of the Woods Convention between Canada and the United States, executed on February 24, 1925, embodied a number of provisions which require departmental action. The Canadian Lake of the Woods Board has continued its regulation of Lake of the Woods between elevations 1056 and 1061 sea level datum, as elsewhere recorded in this report. The International Lake of the Woods Board, appointed under the Convention, is called upon to exer-

cise its responsibilities whenever the lake rises above elevation 1061 or falls below elevation 1056 sea-level datum. On April 22 last, the abnormally high water conditions in the watershed resulted in the lake rising above the upper limit and the International Board accordingly automatically took over the regulation. The board exercised its regulatory control until August 15, on which date the lake had dropped to elevation 1061 and the Canadian Board resumed its control. In accordance with the requirements of the Convention, the International Board, in July, 1927, approved the plans of the reconstructed Norman dam and of the enlargement of the western outlet from the lake.

The Convention also provides for the securing of flowage easement up to elevation 1064 on the United States shores of lake of the Woods. Officials of the department have been, during the past season, in active co-operation with the United States officers charged with the responsibility for carrying out this provision of the convention.

Incorporated in the Lake of the Woods Convention is the Rainy Lake Reference to the International Joint Commission, which has to do with the provision of storage in Rainy lake and in the boundary waters above, and with the development of power in connection therewith. Intensive field and office investigatory work in connection with this reference has been under way during the year and excellent progress has been made. The investigations will be continued during the forthcoming season.

The St. Lawrence River Power Company filed with the United States War Department, on June 9, 1927, an application to raise the crest of the Company's existing submerged weir in the South Sault channel of the St. Lawrence river near Massena, N.Y., and in January, 1928, the company's application was filed with the International Joint Commission. The commission arranged for a hearing on the company's application, to be held upon the occasion of the April meeting of the commission in Washington.

The Creston Reclamation Company, on October 14, 1927, submitted a formal application to the International Joint Commission for approval of its project for the reclamation by dyking on 8,600 acres of land in Kootenay flats on the Kootenay river. The commission held a hearing *re* this matter on November 29, 1927, at Nelson, B.C., at which all parties interested submitted representations. The issuance of the commission's order was withheld to permit of further investigations being made.

Other international problems have been active, such as those in connection with drainage and flooding on the Roseau river in Manitoba, and the Columbia River reclamation project in the United States and its effect upon the Pend d'Oreille river in British Columbia.

The various International Waterway Boards have functioned as usual throughout the year.

In accordance with the rulings of the International Joint Commission made on October 4, 1921, in conformity with the Boundary Waters Treaty of 1909, the measurement and apportionment of the stream flow in the St. Mary and Milk rivers and their tributaries in the provinces of Alberta and Saskatchewan and in the state of Montana, were continued throughout the past year by an engineer of this service, in co-operation with an engineer of the United States Reclamation Service. The report covering the year's operation has been prepared and submitted to the commission for review upon the occasion of its regular semi-annual meeting in April.

The International Lake Superior Board of Control continued to exercise its responsibilities with respect to the regulation of lake Superior throughout the year. Records of discharge through the rapids, navigation canals and power plants on both sides of the river were systematically reported to the board. The precipitation in the Lake Superior basin continued the marked improvement

which began in 1926. The influence of this increased precipitation is apparent in the gradual bettering of the lake levels. During the year the repainting and reconditioning of the Canadian section of the control dam were completed, following the completion of similar work on the United States end of the dam in 1926. The work of recalibrating the sluices of the control dam and other outlets was continued.

The International Niagara Board of Control has continued its close regulation of the diversions from the Niagara river for power purposes as permitted by Article V of the Boundary Waters Treaty. Continuous records of the withdrawal of water by all power stations on both sides of the river are obtained by the board, and the control exercised is such as to ensure that the limits of diversion set forth in the treaty are not exceeded.

Conditions obtaining with respect to the submerged weir in the South Sault channel of the St. Lawrence river and the regulation of flow through the Massena canal were subject to the supervision of the International Massena Board of Control throughout the year, in accordance with the order of the International Joint Commission dated December 6, 1922. The board was in receipt of monthly reports showing the amount of water diverted and the power-house performance from day to day. No abnormal conditions developed during the year.

The International St. Croix River Board of Control continued to exercise its supervision over the discharge of the St. Croix river past the Grand Falls dam, in accordance with the orders of the International Joint Commission dated November 9, 1915, and October 3, 1923. The board was in receipt of systematic reports of the discharge of the river and of the water elevations above and below the Grand Falls dam. No abnormal conditions developed during the year. A satisfactory flow of water has been maintained in the river below the dam for the benefit of the power users and for the supply of water for the fishways.

WATER POWER

Lake of the Woods Control Board

The Director of the Dominion Water Power and Reclamation Service and the Chief Engineer of the Department of Public Works represent the Dominion Government on the Canadian Lake of the Woods Control Board. The province of Ontario is represented by provincial officials. The responsibilities of the board are concerned with the regulation of the levels and outflow of lake of the Woods and for the proper performance of these duties the collection of hydrological data relating to the watershed is pre-requisite. The board is now deriving the benefit of comprehensive basic records which have been gathered by Dominion officials over a period of years.

During the fiscal year the board was called upon to regulate the levels and outflow of the lake in the face of the highest flood inflows on record.

The lake of the Woods had reached elevation 1060.01 on April 1, 1927, and in spite of continued increases of the regulated outflow, the level rose above elevation 1061.00 on April 22. By virtue of the provisions of the Lake of the Woods Convention, the regulation of the lake on reaching this elevation automatically passed into the hands of the International Lake of the Woods Control Board. Close co-operation was maintained between the Canadian and the United States members of the International Board and Dominion officials continued to operate the control structures at the lake's outlets under the International Board's supervision. With the whole watershed in a state of flood, high inflows continued until lake level had risen to a maximum elevation of 1062.90 on June 1. Subsequent to this date the inflows gradually decreased and by maintaining maximum outflow rates lake level was gradually brought

down until it passed below elevation 1061.00 on August 15, and the regulation of the lake reverted to the Canadian Board. The rate of outflow was at once reduced but it was necessary to maintain a comparatively high rate of outflow throughout the remainder of the year in order to keep lake level below the upper storage limit and to provide a safety margin of storage capacity to handle possible high spring inflows. On March 31, 1928, lake level was at elevation 1060.10 and there was no indication of a recurrence of the excessive run-off conditions of the past year.

Throughout the fiscal year and especially during the flood period the board was indebted to the Department of Public Works for run-off records on Rainy and Namakan lakes, and to the Dominion Meteorological Service and the United States Meteorological Service for precipitation records at the numerous stations throughout the watershed.

In November the second stop-log winch was installed for the operation of the sluices in the southern end of the Norman dam, making possible the efficient control of level and outflow, in accord with treaty stipulations with the Government of the United States.

Water Power Regulations and Legal Research

While no new rights have been granted under the Dominion Water Power Regulations during the past year, several licences, based upon applications for water-power developments, have been prepared and are awaiting executive action.

The study of water-power administration as shown by provincial legislation and jurisprudence has been continued and a large amount of material collected and analysed. The scope of the inquiry has been extended to include interprovincial and international rights to the use of boundary waters.

British Columbia Administration

The waters in the Railway Belt of British Columbia are administered by the province in accordance with the Railway Belt Water Act, passed by the Parliament of Canada in 1912 and amended in 1913, 1926, and during the present (1928) session. The plan adopted by Parliament is that these waters are administered under the provincial laws so as to secure a uniform system of granting water privileges throughout the province.

The waters in the Railway Belt, however, together with the ungranted Crown lands therein, are public property of the Dominion, and for that reason the water privileges granted in the Railway Belt by the provincial authorities are examined in this department for the due protection of Dominion interests. Rights in Dominion lands required to be used or occupied in connection with grants of water are issued by the department in accordance with the Water Lands Regulations.

Applications for water rights required for the improvement of Indian reserves throughout the province of British Columbia are prepared by officers of this service, and surveys and investigations made in furtherance of those applications where necessary. Evidence in support of Indian claims to the use of water is also prepared and assistance given in connection with the hearing of such claims before the Board of Investigation under the Water Act.

Engineering Co-Operation With Department of Indian Affairs

At the request of the Department of Indian Affairs and under the direction of the District Chief Engineer at Winnipeg, repairs were made to the water supply system of the Sioux Lookout Indian school and a report prepared as to the condition of the sewage system at the MacIntosh Indian school, both in Ontario. In Manitoba, a report was prepared on the reclamation of marsh

areas in the Peguis Indian reserve, repairs made to the sewage system at Sandy Bay Indian school and the water supply system at the Fort Alexander school, also a report made on the water supply of the Guy school near Sturgeon Landing.

Under the direction of the Commissioner of Irrigation, plans and specifications were prepared for the water supply and sewage systems at the new Onion Lake school in Saskatchewan. Tenders have been called and it is expected that the work, to cost about \$14,000, will be completed during the coming summer.

As in previous years, the local staff of the service in British Columbia have conducted a number of investigations and supervised the construction of important irrigation and other improvements in connection with Indian reserves, villages and schools. The investigations carried out numbered 28, of which 17 were for irrigation schemes and improvements; water supply, 8; electric lighting systems, 2; while one was in connection with erosion by stream flow. There were 27 separate construction projects under supervision of the local engineers of the service, not all of which were completed at the end of the fiscal year. Of these 17 were irrigation and storage projects, 7, water supply systems; 2, sewage disposal; and 1, electric lighting system. The total cost of these improvements was slightly over \$32,000, which is small as compared with the benefits derived from them.

Further details as to this co-operative work will be found in the reports of the District Chief Engineers of the western provinces.

Water Resources Index Inventory

The Index Inventory system for recording and collating the water resources data of the Dominion has been in actual use for a number of years and has provided a most efficient method for the referencing, analysis, standardization, and filing of all data relating to the subject of water resources. A detailed description of the system has appeared in the Annual Report for 1916-17 and in the combined reports for the years 1917-18-19.

The system has been applied to practically all phases of the work carried on by the service, among the more outstanding of which may be mentioned the complete census of developed water-power, the analysis of central electric station activities, undeveloped water-power resources, stream measurement activities, and storage investigations.

This work has been largely carried on in co-operation with provincial organizations, notably the Hydro-Electric Power Commission of Ontario, the Quebec Streams Commission, the British Columbia Water Rights Branch, the Nova Scotia Power Commission, and the New Brunswick Electric Power Commission. The data compiled are being continually revised in accordance with the most up-to-date information and, resulting from a number of years of effort, a very large amount of information in standardized form is now available.

Water Power Resources of Canada

The estimates of the total capacity of developed and undeveloped water-power sites of the Dominion were revised during the fiscal year to conform with the latest data compiled in connection with the water resources inventory referred to in the last paragraph. These estimates place the capacity at 20,197,000 horse-power under conditions of ordinary minimum flow or 33,113,200 horse-power dependable for at least six months of the year. These figures are based upon rapids, falls, and power sites of which the actual existent drop or the head possible of concentration is definitely established, or at least well authenticated. In addition there are many rapids or cascades on various rivers and streams which are not as yet recorded and also many power concentrations possible on rivers of gradual gradient regarding which sufficient data

have not yet been secured to justify their inclusion in the estimates which, therefore, may be increased as further information becomes available. An analysis of the available power and the turbine installations at developed sites throughout the country indicates that in commercial practice installation is about 30 per cent in excess of the power ordinarily available for six months of the year and that this excess is even greater in some of the more modern plants. Taking the 30 per cent excess as the basis in this instance, the figure given above for the six months power available in Canada indicates that a turbine installation of 43,000,000 horse-power would be justified by the present recorded water-power resources.

On January 1, 1928, the total water-wheel and turbine installation throughout the Dominion amounted to 4,777,921 horse-power or only a little more than 11 per cent of the possible development. A very conservative estimate places the capital investment in the generation, transmission, and distribution at \$875,000,000, a sum greater than that invested in any other single manufacturing industry in Canada.

An analysis of the utilization of the present installation indicates that

- (1) 3,904,678 horse-power, or 81.7 per cent of the total, is installed in central electric stations for general public distribution.
- (2) 528,731 horse-power, or 11.1 per cent, is installed in pulp and paper mills which, in addition, use power purchased from the central electric stations to the extent of approximately 775,000 horse-power.
- (3) 344,512 horse-power, or 7.2 per cent, is installed in general industrial enterprise for electro-chemical reduction, manufacturing lumber, flour milling and other purposes.

The fact that the high average of 502 horse-power of hydraulic installation is available per 1,000 of population, is significant in an era when the industrial prosperity of a country is so closely linked with the amount of mechanical power available to its workers, and in this regard Canada occupies a most advantageous position amongst the countries of the world.

New installation during 1927 amounted to 221,655 horse-power, or a little less than during 1926. This figure gives no indication of the intense activity in hydro-electric construction during the year which will result in an additional installation of about 378,000 horse-power being completed by mid-summer of 1928, whilst other developments upon which construction has begun or is about to begin will, it is anticipated, increase the installation by a further 2,000,000 horse-power by the end of 1930.

Census of the Central Electric Station Industry

The development of the central electric station industry in Canada has been based almost solely upon the utilization of hydraulic power, the converse proposition that hydraulic development has been largely due to the progress of the central electric stations also holding good.

The close interconnection of these two outstanding factors in the development of Canada's natural resources and in the high standard of living of her citizens is at once made evident when it is stated that 81.7 per cent of the total hydraulic installation is in central electric stations while for several years past the electrical output of these hydraulically driven central stations has been in excess of 98 per cent of the total electricity distributed in Canada for public use.

The foregoing facts indicate the importance to this service of the frequent periodic revision of all basic data relating to the central electric station industry and this revision is accomplished through the medium of an annual census

inaugurated by the Dominion Water Power and Reclamation Service and conducted in co-operation with the Dominion Bureau of Statistics of the Department of Trade and Commerce.

The general statistics of this census are made available through annual reports issued by the Dominion Bureau of Statistics while at longer intervals a Directory of Central Electric Stations presenting a comprehensive review of the scope and character of all organizations, commercial or municipal, distributing electricity for sale, is published. The various aspects of personnel; capital invested; generating, transmitting and distributing equipment used; power generated, purchased and sold; blocks of power available for sale, rates and transportation facilities are presented in a form that renders the directory a valuable reference to the extensive financial and technical interests concerned with the industry.

The general statistical review of the tenth annual census, that for the calendar year 1926, has just appeared in preliminary form and will be followed shortly by the final report, while the third issue of the directory descriptive of conditions obtaining May 1, 1928, will issue shortly.

Dominion Hydrometric Survey

The Dominion Hydrometric Survey embraces stream measurement work throughout Canada. The records are brought together in one central agency, which attends to the compilation and dissemination of stream flow data and the survey operates efficiently both as regards office administration and field operations.

In the Prairie Provinces the work is the direct responsibility of the Dominion Government and in the other provinces the survey is carried on by the Dominion Government under co-operative agreements with the provinces concerned. The Dominion is divided into major drainage divisions, which together with the district office or offices in charge, are as follows: Pacific drainage, Vancouver; Arctic and Western Hudson Bay drainage, Calgary and Winnipeg; St. Lawrence and Southern Hudson Bay drainage, Ottawa and Montreal; Atlantic drainage, Halifax.

The uses to which the records are put are primarily in connection with water-power development and irrigation projects, and the rapid strides which have taken place in the hydro-electric field are due in no small part to the detailed and extensive records of the regimen of the numerous lakes and rivers of the country which have been made available, by the Dominion Hydrometric Survey, assisted by the voluntary co-operation of the provinces, of private corporations and of numerous individuals.

Run-Off Conditions in Canada.—As set forth in detail in the annual reports of the District Chief Engineers, the average run-off for the year has been generally above normal throughout the Dominion.

In the Pacific drainage typical stations showed a range in run-off for the year from 104 per cent of the long term mean in Capilano creek in the coast region to 148 per cent of the long term mean in the Kootenay river at Wardner.

In the Arctic and Western Hudson Bay drainage typical stations showed a range in run-off for the year from 106 per cent of the long term mean on the Peace river in northern Alberta to 353 per cent of the long term mean in Moosejaw creek in Saskatchewan. In southeastern Manitoba and in western Ontario, especially in the Winnipeg River watershed, maximum discharges for the period of record were experienced.

In the St. Lawrence and Southern Hudson Bay drainage typical stations showed a range in run-off for the year from 81 per cent of the long term mean in the north Maganatawan river in the North Bay district to 168 per cent of the long term mean in the Missinaibi river in northern Ontario.

In the Atlantic drainage typical stations showed a range in run-off for the year from 103 per cent of the long term mean in the Medway river in Nova Scotia, to 127 per cent of the long term mean in the Miramichi river in New Brunswick.

Power and Storage Investigations

Field studies in connection with power and storage investigations were carried on only where special circumstances warranted or upon the request of organizations receiving co-operative assistance from the service. Office studies were actively continued in the keeping up to date of the records of undeveloped and developed water-power resources throughout the Dominion.

In British Columbia an investigation and report was made for the Dominion Lands Branch of the department on an application for water-power privileges on the Indian river. Co-operation was maintained with the city of Vancouver in the matter of special studies relating to the investigation of nearby hydro-electric possibilities, also with the Greater Vancouver Water District in its investigations for a satisfactory water supply. The special studies of recent years in the headwaters of the Bridge river connected with hydro-electric development were also continued.

In Alberta an investigation and report were made in connection with an application by the Calgary Power Company for power privileges at the Ghost and Radnor sites on the Bow river. Inspections were made of a number of extensions made to the transmission system of the Calgary Power Company in the southern part of the province. An office study of the effect upon irrigation projects of storage for power purposes in the watershed of the Bow river was completed and a report made. Responsibility for the operations of the Lake Minnewanka storage during the filling season was again assumed by the department with satisfactory results.

In Manitoba inspections were made of the work carried on at Great falls on the Winnipeg river in the extension of the power station and appurtenant works of the Manitoba Power Company also of the work done by the city of Winnipeg on the same river in enlarging the channel at Eight Foot falls to improve tail water conditions at the Point du Bois station.

In Ontario field work was continued in connection with the Reference respecting Rainy and the Upper Boundary lakes now before the International Joint Commission. Information necessary to delimit the contours above the shore line of Namakan, Kabetogama, Sand Point, Crane, Little Vermilion lakes and Loon river was secured, completing and amplifying the work previously done on these lakes by the International Boundary Survey. Assistance was again afforded the International Lake Superior Board of Control in recalibrating the discharge through the dam at Sault Ste. Marie, and on the Niagara river studies were continued in close co-operation with the investigation being made by the Special International Niagara Board appointed to report upon the preservation of the scenic beauty of Niagara falls.

In Quebec special efforts were made to secure from all possible sources full data with regard to the developed and undeveloped water-powers of the province. The exhaustive list of Quebec water-powers compiled during the previous year and supplied to the Quebec Streams Commission for publication was revised and brought up to date.

In New Brunswick an examination of storage possibilities on the Tobique river was made in connection with the studies by the New Brunswick Electric Power Commission of the power available from the Meductic Rapids site on the St. John river.

In Prince Edward Island surveys were made on the south branch of the Montague river, following which a small hydro-electric plant was constructed by the Montague Electric Company.

In Nova Scotia storage studies were made in connection with the hydro-electric development of the town of Middleton and a power and storage survey commenced on the Herbert river at the request of the Nova Scotia Power Commission. Studies were also made of problems connected with the St. Margaret Bay system of the commission.

IRRIGATION

The season of 1927 was exceptional as regards intensity of rain and snow-fall, particularly in the southern portions of the provinces of Alberta and Saskatchewan. As a natural consequence little water was required for irrigation. Due to these favourable conditions complaints which are usually numerous during the irrigation season materially decreased and, in fact, were almost negligible. The demand for the right to construct small dams to create storage for domestic and stock-watering purposes was reduced to a fraction of the customary number and emphasized the fact that ample precipitation had been received throughout the two provinces.

Field work in connection with the location of farmers' lateral ditches, although continued, was greatly reduced owing to the majority of farmers considering it unnecessary to supplement the already generous natural watering which their lands were receiving. Seepage and alkali studies and the classification of irrigable lands were continued throughout the season on the larger projects. Investigations were also carried on at the Brooks "Duty of Water" experiment station. New co-operative work was undertaken with the Seed Branch of the Department of Agriculture in connection with cereal, alfalfa and sweet clover seeds.

Sugar beet crops in areas tributary to the Raymond sugar factory again proved of great value to settlers on irrigated lands. In spite of most unfavourable harvesting conditions many heavy crops were dug and delivered to the factory at increased prices.

Considerable interest has been manifested by settlers in northern Alberta and Saskatchewan in the possibilities of utilizing the numerous bodies of surface water to raise fur bearing animals of various species. Many applications have been made to the provincial Governments at Winnipeg, Regina, and Edmonton for permission to engage in this profitable industry. Regulations have been framed with a view to leasing land and water areas to the provincial Governments who in turn sub-lease such areas to the applicants.

Water Administration

During the calendar year 1927, 51 applications were filed to use water under the Irrigation Act, a decrease of 26 from the previous year's total. Sixty-three licences were issued and there were at the end of the year 1,044 water licences in good standing, with 22 temporary permits, 223 authorizations and 202 schemes under investigation, excluding ice permits which are issued annually.

Inspection Work

The usual routine field work in connection with the administration of the Irrigation Act, consisting of the investigation of new applications which involve the making of surveys and the preparation of plans, and the inspection of operating projects was continued throughout the season in conjunction with canal and stream measurements and the study of losses in canals and reservoirs. The eleven field engineers engaged on this work inspected 298 established projects, investigated and surveyed 70 new projects and made 1,937 gaugings of stream and canal discharge. In addition one of the senior engineers made the usual annual inspection of all the large projects and irrigation districts.

General River Control

Many of the streams and lakes of Alberta, due to the abnormal precipitation, rose to extremely high stages, flooding low-lying lands, and in some cases causing considerable damage. Field investigations were, therefore, made in a number of cases where complaints were received. Investigations were made and reports prepared on the following: Sturgeon, Bow, Cascade and Highwood rivers and Wabamun lake.

The Canadian Pacific Railway Company's Irrigation Projects

Western Section.—The season being exceptionally favourable for crop growth and the rainfall for the growing season well over the average, only 1,273 acres were irrigated. The total cropped irrigable area was 203,000 acres producing crops valued at \$5,090,100, based on the company's unit values, representing a per acre return of \$25. One hundred and fifty thousand acres of this area were seeded to wheat and produced at the average rate of 30 bushels per acre. The live stock situation has shown little change from the previous season. The cropped area of the project, however, was increased by the breaking of some 15,400 acres of virgin land.

Eastern Section.—The area actually irrigated during the season was 7,921 acres, a considerable decrease as compared with the previous season. The total cropped irrigable area was 66,640 acres, which produced \$1,821,680, based on the company's unit values, representing a per acre return of \$27.30. The area in wheat was 31,967 acres producing 904,751 bushels, or at the rate of 28.3 bushels per acre. The season was most favourable for crop growth and very little irrigation water was used.

Lethbridge Section.—The area which received water during the season was 21,600 acres. The actual cropped area was 64,375 acres which produced values amounting to \$2,147,767, based on the company's unit values, or equal to a per acre return of \$33.36. The major crop was wheat which represented 47.5 per cent of the cropped area and produced an average yield of 32.3 bushels per acre. With the Magrath and Raymond irrigation districts now receiving water through the company's works, the irrigable area has been increased by 11,465 acres.

Taber Irrigation District

A change in content of this district has been authorized and 4,662 irrigable acres added to the system, bringing the total irrigable area to 21,600 acres. The area irrigated was only 576 acres, due to a very generous and well distributed rainfall. Unfortunately, weather conditions in the fall interfered with the threshing of grain and complete returns regarding yields are not available.

The sugar beet area was 1,630 acres, an increase of some 50 per cent over the previous season. The average yield was 8 tons per acre and the saccharine content averaged 17.8 per cent.

Canada Land and Irrigation Company

Important readjustments affecting the land areas and the financial situation of the company were sanctioned by the courts during the past year and additional funds were raised for further development work.

Owing to the wet season very little water was used, the total area actually irrigated being 700 acres. The average per acre return from the irrigated land, based on the company's unit values, was \$29.66, while the gross value of produce and livestock shipped out during the year will, it has been estimated, exceed \$500,000.

New West Irrigation District

Very little irrigation was practised or found necessary on this project during the past season. The total irrigable area is 4,501 acres of which only 151 acres were irrigated. The major crop was wheat, which represented some 58 per cent of the total irrigable area and yielded an average of 30.1 bushels per acre.

Lethbridge Northern Irrigation District

Although a much smaller area than usual was irrigated owing to favourable weather conditions, crop returns were quite satisfactory. The major crop was again wheat, an area of 60,161 acres yielding at the average rate of 33.7 bushels per acre. Weather conditions in the fall of the year were very unsatisfactory and serious delays were caused to threshing operations and the haulage of grain to elevators.

The Colonization Organization has again reported good progress and during the year 86 families were settled on the vacant lands. There are now 737 water users as compared with 646 in 1926.

During the season some 10,012 acres were irrigated. The total cropped area was 78,420 acres which produced crop values amounting to \$2,700,185, according to the district's unit values, or representing a per acre return of \$34.40.

United Irrigation District

In this district very little water was used for irrigation but a small stream was kept moving through the system during the entire season for domestic and stock watering use. Crops were below average due to the late seeding followed by cold wet weather which delayed ripening.

Magrath Irrigation District

Construction of the system was completed during the summer and water turned into the main canal for priming purposes on June 24. The total irrigable area is 6,970 acres, of which 1,235 acres were irrigated.

Raymond Irrigation District

No crop returns have been received from this district but it is situated in the heart of the beet-growing territory of southern Alberta and a large percentage of the irrigable land is devoted to this crop. The total irrigable area is 15,129 acres, of which 6,441 acres are served by the newly constructed works and the remainder are old agreement lands of the Alberta Railway and Irrigation Company, but are now operated by the district.

Mountain View Irrigation District

Authorization for the construction of the necessary works in connection with this district was issued on June 23, 1925. Plans for the major structures have been prepared and submitted to the district. These plans have not yet been filed by the district and no construction work has been undertaken during the past season.

Alkali Test Plots at Maple Creek, Saskatchewan

Experimental plots have been under observation for the past six years to endeavour to obtain some reliable data regarding the effect of irrigation on heavy soils with high alkali content. Results to date indicate that alfalfa and cultivated grasses continue to produce heavy crops, while the wheat yield was only fair, due to extraneous causes. The alkali movement does not appear to be upward and as the general soil water movement is downward it is possible that the alkali salts are moving in the same direction. The experiments are being continued for a further period.

Duty of Water Investigations

The investigations continued at the Brooks "Duty of Water" Experiment Station during 1927 complete the ten-year program started in 1918. Crops included in the water requirement experiments in 1927 were wheat, oats, barley, corn, beans, alfalfa, peas, and sugar beets. Water requirements of these crops were observed in relation to number and depth of irrigations, stored moisture, and crop rotation. In addition the sugar beet crop was studied in relation to time of irrigation and seasonal use of water. The investigation on the effect of irrigation on the quality of wheat conducted in co-operation with the University of Alberta was continued at Brooks during 1927, and in addition some new co-operative work was undertaken with the Seed Branch of the federal Department of Agriculture in connection with cereal, alfalfa, and sweet clover seeds.

The season of 1927 was exceptional in respect to rainfall. The total for the six-month period April to September amounted to nearly 16 inches and actually exceeded the average for this period by 7.4 inches. The distribution was as follows: April, 2.13; May, 4.41; June, 3.76; July, 2.61; August, 1.09; and September, 1.74 inches. Past records show that not since 1915 have the moisture requirements of crops been so completely supplied by natural precipitation. As a result crops needed very little irrigation. Oats and alfalfa showed most benefit. Average yields of dry land and best irrigated plots are tabulated below. Irrigations required to produce maximum yields complete the table.

IRRIGATION EXPERIMENTS, 1927—AVERAGE YIELDS WITH AND WITHOUT IRRIGATION.

Crop	Average yield per acre		Irrigation required for highest average yields
	Without irrigation	With irrigation	
			inches
Wheat (bushels).....	52.5	60.6	1.6
Oats (bushels).....	50.3	110.7	1.6
Barley (bushels).....	70.9	70.9	1.4
Beans (bushels).....	28.5	28.8	1.4
Alfalfa (tons).....	3.75	5.7	2.6
Sugar Beets—			
Beets (tons).....	15.2	16.5	1.4
Sugar (pounds).....	5,350	5,780	1.4

Yields were influenced more by fertility as affected by rotation than by the irrigations applied during 1927. It is to be remembered, however, that the high state of fertility obtained in the legume rotations depended directly upon irrigation during the preceding years of scanty rainfall.

The importance of legumes in the production of crops under irrigation is strikingly illustrated in the following table showing the average and maximum yields of wheat and sugar beets in the legume and non-legume rotations.

SUMMARY OF RESULTS FROM LEGUME AND NON-LEGUME ROTATIONS

Crop	Best legume rotation		Best non-legume rotation	
	Maximum	Average	Maximum	Average
Wheat (bushels).....	60.0	60.0	44.3	41.5
Sugar beets—				
Beets (tons).....	19.9	18.0	10.0	9.7
Sugar (pounds).....	6,900	6,280	3,650	3,370

In the sugar beet time-of-irrigation experiments highest tonnage of beets and per cent sugar were obtained from irrigations applied early in July. The average monthly use of water by beets on dry land and plots which received one and two four-inch irrigations was as follows: May, 2·2; June, 4·4; July, 6·2; August 3·3; September, 1·2; and October, 1·4; a total of 18·7 inches.

A complete report of results of the irrigation experiments at Brooks in 1927 is contained in the separate report of this service.

DRAINAGE SURVEYS AND INVESTIGATIONS

The administration of the Dominion Drainage Regulations was again largely confined during the year 1927-28 to the development of smaller schemes. A striking example of the success of small scheme drainage might be cited in one case in the vicinity of Hay Lake, Alta., where a crop of Garnet wheat, grade No. 2, that averaged forty-six bushels to the acre, was harvested from land which only three years before formed the bed of a small lake. The department maintained supervision over the Waterhen Lake drainage project in Saskatchewan and the Western drainage project of the Manitoba Dairy Farms, Limited, in Manitoba, and kept in touch with provincial drainage development in the provinces of Saskatchewan and Alberta.

Small Projects

Eighty-eight small schemes were inspected, twenty-one applications dealt with, eight schemes authorized, ten sales of Dominion land made and seven applications cancelled. Owing to an exceptionally late spring and wet fall there was very little opportunity to construct drainage schemes or maintain the existing ditches with the result that many of the schemes authorized have not yet been completed. It is expected, however, that during 1928-29 better progress will be made and a number of new schemes constructed.

Provincial Drainage Projects

No new drainage districts were formed or petitioned for during the year 1927-28, but certain steps were taken toward the formation of a drainage district to carry out the works planned by this department some years ago for the reclamation of lands underlying and adjoining Big lake near St. Albert, Alta. Some work was carried out in connection with the drainage districts now in operation, but owing to the abnormal amount of precipitation during the year this was confined to the repair of ditches. Some of the lower lands in the districts were too wet for the growth of crops and freshets caused some of the ditches to cave in with the result that certain lands were flooded during a greater part of the year. Financially, however, all of the districts are reported to be in a sound condition.

In Saskatchewan, Drainage District No. 27, in the vicinity of Lewvan, was completed during the year and work was commenced on the Grand Coulee Drainage District. The enlargement and extension of Ditch No. 2 in the Rice-ton Bechard Drainage District was also undertaken at an estimated cost of \$22,000.

Waterhen Lake Drainage Project

The late and wet season made it impossible to carry out any experimental work in connection with the test plots which have been maintained for a number of years on the project. Crops sown by the lessees of the Dominion land in the project also suffered due to the wet condition of the lake bed. Some sixty acres of wheat, however, sown by the lessees yielded a fair crop. Cultivated hay crops, such as timothy, bromus, red top, sweet clover, and western rye grass, grew luxuriantly with good returns.

Manitoba Dairy Farms Limited—Western Project

In connection with the Dominion land leased by the company in townships 4 and 5, range 9, E.P.M., under condition of drainage, a ditch 9 miles long, 6 feet in width at the base and 18 feet at the surface, and 6 feet deep, was constructed. The excavating was done by a 'walking' dredge which straddled the ditch. A motor road is being constructed on one side of the ditch, the excavated material being utilized for this purpose.

Manitoba Dairy Farms Limited—Eastern Project

A reconnaissance investigation was made of this company's proposed drainage scheme in townships 1-11, ranges 9-17, E.P.M., to determine its feasibility and durability. The data secured are being studied and a full report thereon will be submitted to the department at an early date.

NORTH WEST TERRITORIES AND YUKON

REPORT OF THE DIRECTOR, O. S. FINNIE

All matters, with the exception of mining, pertaining to the Department of the Interior, having to do with the Northwest Territories and the Yukon are under the control of this branch, and in addition there is the inspection work done by the mining and petroleum engineers in the Prairie Provinces, the Railway Belt of British Columbia, and the Northwest Territories.

NORTHWEST TERRITORIES

General.—There has been a continued steady development in all lines of endeavour in the Northwest Territories. The staple industry, the fur trade, has been generally good. There has been also a marked increase in prospecting, requiring surveys both by land and air. Investigations have been conducted not only in the interior but along the coasts and islands from the eastern to the western Arctic, including Hudson and James bays. There are many indications of marked improvement in native conditions.

Northwest Territories Council.—There was a session of the Northwest Territories Council which opened on Wednesday, the 28th December, 1927, in the office of the Commissioner, W. W. Cory, C.M.G., at Ottawa. All members of the council were present. In addition to a large amount of routine business, the council amended the Judicature Ordinance by increasing the powers of the public administrator to administer intestate estates not exceeding \$250 in value. Through this amendment the public administrator was empowered to administer some thirty-four estates of half-breeds entitled to \$240 each in lieu of script on the extinguishment of the Indian title. The Commissioner was authorized to accept the conventions made between the United Kingdom and France, Belgium, and Czechoslovakia relative to legal proceedings in civil and commercial matters. The composition of the council is as follows:—

Commissioner—W. W. Cory, C.M.G.

Deputy Commissioner—Roy Alexander Gibson.

Councillors—Charles Camsell, Oswald Sterling Finnie, John Wesley Greenway, Henry Howard Rowatt, Cortlandt Starnes.

Scientists and Explorers.—Under the provisions of the Scientists and Explorers' Ordinance sixty-one licences were issued during the year, permitting scientists to conduct investigations and explorations in the Northwest Territories.

Exploration and Patrol.—Several patrols were made by officers of this branch into the Northwest Territories for the purpose of collecting and assembling all possible information on the resources and nature of the country, as well as the health and well-being of the native population.

Mr. George P. Mackenzie again commanded the Annual Expedition to the Eastern Arctic on the ss. *Beothic*. Dr. F. H. Banting, of the University of Toronto, and Mr. A. Y. Jackson, R.C.A., also of Toronto, accompanied the expedition. Eight members of the Royal Canadian Mounted Police, including Inspector C. E. Wilcox, were taken north to various detachments and eight other members, who had been relieved, returned on the ship. Inspector Wilcox was left at the Pond Inlet detachment.

The Expedition left North Sydney, N.S., on July 16, 1927, the first port of call being Godhavn, Greenland, which was reached on July 23. Here the members of the expedition were entertained by the Governor and the Greenland Parliament, then in session.

After leaving Godhavn, Baffin bay was crossed without more than ordinary difficulty, but, as an unbroken ice field was encountered about twenty-five miles from Pond Inlet, it was decided not to attempt to reach this post until the return voyage. Dundas Harbour, Devon island, was reached July 27, Craig Harbour, Ellesmere island, on July 29, Etah, north Greenland, on July 30, Fram Havn, Ellesmere island, on July 31, and Bache Peninsula, the most northerly post, was reached the same day.

From here the ship was headed south and Craig Harbour was reached on August 2; Dundas Harbour, Devon island, on August 3; Beachy island, Lancaster sound, on August 4; Port Leopold, Somerset island, on August 8; Arctic Bay, Admiralty inlet, on August 12; Pond Inlet, Baffin island, on August 14; River Clyde on August 18; Pangnirtung on August 21; Lake Harbour on August 25; Wakeham Bay, Hudson Straits, on August 29; Port Burwell on August 30, and the expedition returned to North Sydney on September 5.

All the purposes of the expedition were fully accomplished. The ice conditions south of River Clyde were exceptionally favourable. North of that port conditions were about normal for these high latitudes, but the voyage was a particularly trying one on the navigating officers because of the almost continual dense fog prevailing, no previous expedition having encountered anything like it.

Dr. L. J. Weeks and Mr. M. D. Haycock, of the Geological Survey, Department of Mines, who had spent the year in the interests of their department working in Pangnirtung district, Cumberland sound, returned on the ship.

Dr. L. D. Livingstone, the medical officer, also came out with the 1927 expedition, having spent the previous year on Baffin island. During this period he checked an epidemic of chicken-pox which had broken out among the natives. On February 14, 1927, a patrol was commenced via Sinayah, Frobisher bay, Hudson strait and Lake Harbour to Amadjuak. The land route was then taken by Amadjuak lake and thence followed a large river flowing north running into Nettilling fiord. Five hundred natives were visited and very little sickness found. The trip lasted fifty-two days.

On April 25, another trip was made with a native, Ookoojoak, via Kingnait fiord to Pond Inlet, visiting and treating sick natives at Padle and other camps on the way. Pond Inlet was reached on June 5, after covering 1,028 miles in forty-two days, although, owing to bad going, eight dogs were lost. The trip was continued on June 25 to Milne Inlet and Navy Board Inlet where two families were visited. Bylot island was visited and Pond Inlet was again reached on July 3, where Dr. Livingstone was picked up by the ss. *Beothic* and returned to headquarters.

Major L. T. Burwash, who left Ottawa on July 2, 1927, returned in September of the same year from a reconnaissance survey of the economic conditions of the Eskimo and an examination of the country on the eastern coast of Hudson and James bays, between Rupert House and Richmond gulf. The Belcher and other islands lying off these coast lines were also visited and the conditions of the native population investigated.

Mr. J. A. McDougal, District Agent at Fort Smith, made an inspection of the district from Fort Smith to Cambridge Bay, investigating and reporting on all matters pertaining to the welfare of the Eskimo in the western Arctic.

Mr. W. H. B. Hoare, one of the Branch's investigators, left Ottawa in January, 1928, to make an inspection of the wild life in the Thelon game

sanctuary, an area referred to under "Parks and Preserves" in a later portion of this report. He took with him six Husky dogs brought down from the eastern Arctic for patrol work on the Arctic prairies. This work will continue until the fall of 1929.

Messrs. A. E. and R. T. Porsild, brothers, made an investigation of the area between the Mackenzie and Anderson rivers, comprising some 15,000 square miles, and reported that the grazing grounds in that district compare favourably with those found in Alaska and would support 150,000 reindeer.

They are to continue their work in 1928 and will make an inspection of the area to the north and east of Great Bear lake. They will return to Ottawa in the fall of 1928 and submit a final report on the advisability of introducing reindeer into the northern area of the Mackenzie District.

Of the patrols carried out by the Royal Canadian Mounted Police during the last year, among the most noteworthy were Staff-Sergeant Joyce's patrol from Bache Peninsula, Ellesmere island, to King Christian island, when several herds of musk-ox and caribou were observed; and Corporal Walters' patrol from Fort Smith northeast to the Taltson river which provided material for the addition of valuable information to the maps of that district.

Eskimo Affairs.—Steps were taken by Order in Council to transfer the control of Eskimo affairs from the Department of Indian Affairs to the Commissioner of the Northwest Territories, Department of the Interior. By mutual consent of the departments concerned this transfer did not become effective until March 31, 1928.

Lands.—Seven applications for land were received and six patents were issued covering five acres.

Hospitals.—The sum of \$10,778.58 was paid during the year to the hospitals at Fort Smith, Resolution, Hay River, Simpson and Aklavik for medicines and for the maintenance and treatment of patients on the basis of 50 cents per diem for all patients treated and \$1.50 per diem additional for indigent whites and half-breeds. The details are as follows:—

Eskimo, Indians and half-breeds—	
Total number of days treated, 14,189, at 50c per diem.....	\$ 7,094 50
Pay patients—	
Total number of days treated, 1,010, at 50c per diem.....	505 00
Indigent whites and half-breeds—	
Total number of days treated, 1,541, at 50c. plus \$1.50	
per diem	3,082 00
Mental patients, Ponoka, Alta.....	95 00
Medical supplies, etc.....	2 08
Total	\$10,778 58

Health.—The general health of the population (white, Eskimos and Indians) has been good on the whole and there were no serious epidemics during the year.

Education.—Schools were conducted by different missions at Fort Smith, Resolution, Hay River, Providence, Simpson, Norman, McPherson and Aklavik. The sum of \$1,800 was expended for their assistance. During the year the Church of England school at Hay River received a grant of \$655 for the maintenance of destitute children and the Roman Catholic school at Resolution received \$1,005 for the same purpose.

Liquor Permits.—The annual return made before Parliament, in accordance with section 88, chapter 62, R.S.C. 1906, shows that 266 permits to import liquor for medicinal purposes covering 534 gallons were issued during the year.

PARKS AND PRESERVES

Protection of Buffalo.—During the past year the warden service was increased from ten to twelve men in order to continue efficiently the patrol service of the Wood Buffalo park which has been extended in area and now supports a greatly increased number of animals. Latest reports indicate that the wood buffalo in the southern range are intermixing with the plains buffalo shipped from the Wainwright park and the different herds are in excellent condition, each herd containing several calves. The Treaty Indians who are authorized to hunt and trap other animals in the park, subject to the provisions of the park regulations, co-operate with the game wardens and render considerable assistance in connection with the protection of the buffalo.

Permits to take buffalo for scientific purposes were issued to Dr. R. M. Anderson, of the National Museum of Canada, and Dr. Seymour Hadwen, of the University of Saskatchewan.

Transfer of Plains Buffalo.—A total of 1,934 buffalo were received at the Wood Buffalo park from Wainwright in 1927, which brings the total number of animals received from Wainwright during the past three years to 5,568.

Wood Buffalo Park.—A telephone line was constructed between Fort Smith and the base camp in the Wood Buffalo park, a distance of forty-six miles. This is a valuable improvement and of great assistance to the superintendent in that it enables him to keep in touch with the warden service at all times. A fire tower was also constructed at the buffalo landing and fourteen miles of road graded. Only two minor offences were reported on the part of the Indians and half-breeds who were permitted to hunt and trap in the park. One hundred and thirty-two such permits were issued during the year and the value of the fur taken by the permittees was approximately \$40,000.

Musk-Ox.—During the past year the Thelon game sanctuary comprising some 15,000 square miles, which embraces a portion of the natural habitat of the musk-ox, was set aside as a preserve for the musk-ox and other forms of wild life. A few years ago our investigators reported the presence of two small herds of musk-ox in the district adjacent to the junction of the Thelon and Hanbury rivers, which location is almost in the centre of the sanctuary. It is expected that the musk-ox will thrive and multiply in this natural habitat where they will be accorded complete protection under the provisions of the Northwest Game Act.

Caribou.—Efforts are being continued to educate the natives to the necessity of conserving this animal and to the inevitable results should wanton slaughter be renewed. The regulation prohibiting the export of caribou skins resulted in a marked decrease in the number of skins traded during the licence year for which records are now presented. The figures are:

1925-26.. . . .	2,332
1926-27.. . . .	292

A decrease of..... 2,040 skins

Beaver.—This animal has been trapped extensively of late years and, in accordance with the recommendations of our game officers, a close season has been declared on beaver in the Mackenzie District for a period of three years from October 1, 1928.

Destruction of Predatory Animals.—The amount paid in wolf bounties during the last year was \$29,220, a total of 974 wolves being secured. The bounty is paid on condition that the pelts be surrendered to the department and the sum of \$23,364.25 was realized from the sale of wolf pelts, the net cost to the Department being less than \$10 per wolf killed, whereas, prior to 1924, bounty was paid at the rate of \$20 for each wolf killed and the pelt was not surrendered. The present system of bounty payments is working very satisfactorily.

ADMINISTRATION OF THE NORTHWEST GAME ACT

Revenue.—The revenue collected was as follows:—

Hunting licences.....	\$15,332 00
Trading licences.....	4,005 00
Bird licences.....	25 00
Sale of wolf pelts.....	23,364 25
Fines for violation of the Northwest Game Act.....	225 00
Sale of confiscated pelts.....	280 71
Trading post permit fees.....	160 00
Total.....	\$43,481 96

This is an increase of \$9,286.46 over the amount received during the previous year.

Licences.—Returns of licences under the Northwest Game Act for the year 1926-27 were received during the fiscal year 1927-28, as follows:—

Hunting.—Resident, 312; non-resident, British, 122; non-resident, alien, 45.

Trading.—Resident, 162; non-resident, British, 8; non-resident, alien, 8.

Bird Licences.—5.

The revenue received in payment for these licences was \$19,452, a reduction from last year of \$2,189.

Convictions.—There were ten convictions for violation of the Northwest Game Act as compared with twenty-one last year.

Permits.—Thirty-two permits were issued without charge to scientists and others to take specimens of game animals for scientific and propagation purposes.

Twenty-eight Migratory Bird Permits were counter-signed to be operative in the Northwest Territories.

AMENDMENTS TO THE NORTHWEST GAME REGULATIONS

Amendments have been made to the Northwest Game Regulations during the fiscal year in relation to the following matters:—

(1) The creation of the Thelon Game Sanctuary.

(2) The authorization of a close season on beaver in the Mackenzie District for a period of three years commencing the 1st October, 1928.

Statement of Game and Fur-Bearing Animals Taken and of Pelts Traded Under the Northwest Game Act, 1926-27

	Taken	Traded
<i>Fur-bearers—</i>		
Otter.....	63	210
Beaver.....	1,243	8,815
Marten.....	1,393	10,591
Fisher.....	17	179
Mink.....	1,045	4,943
Muskrat.....	15,259	130,273
Fox white.....	5,294	35,590
" blue.....	138	257
" red.....	920	3,752
" silver.....	65	254
" cross.....	340	1,397
" not specified.....	18	11
Wolf.....	187	318
Wolverine.....	87	216
Coyote.....	120	214
Lynx.....	1,182	3,220
Skunk.....	104	492
Ermine.....	836	4,165
Bear white.....	48	114
" black.....	59	254
" grizzly.....	1	7
" not specified.....	..	9
<i>Big Game—</i>		
Moose.....	98	48
Caribou.....	416	292
Mountain Sheep.....	2	12
<i>Protected Birds—</i>		
Ptarmigan.....	622	
Grouse.....	468	
Prairie Chicken.....	39	
Wild Goose.....	93	
Duck.....	810	

The total value of the furs traded is estimated at approximately \$2,928,250, an increase of \$1,148,900 over the estimated value for the previous year.

YUKON

Lands.—Nine applications for land were received and eighteen patents issued covering seven hundred and twenty-five acres.

Timber.—The details of the timber business for the fiscal year were as follows:—

Permits to cut wood and timber.....	62
Timber cut under permits.....	155,678 feet board measure
Wood cut under permits.....	7,646 cords
Wood cut on timber berths on which dues were paid.....	11 cords
Wood cut without authority of permit on which seizure dues were paid.....	1,482 cords

Coal.—The Five Fingers Coal Company operated their mine at Tantalus, Butte, during the year and shipped a considerable tonnage to Dawson.

Agriculture.—The season of 1927 was very favourable and the well matured crops were of an excellent quality.

Hospitals and Public Health.—The hospitals at Whitehorse, Dawson and Mayo have given splendid service. The number of old persons, both men and women, who have to be given assistance, is still a problem and their maintenance is a heavy drag on the finances of the Territory.

Education.—The school situation remains somewhat the same as the previous year. Public and High Schools were maintained at Dawson, Whitehorse, Mayo, Keno and Carcross. There are no assisted schools in the Territory at the present time.

Game.—Big game is reported as being plentiful. Wolves and coyotes were reported to be on the increase. Several parties of big game hunters were again in the Territory during the past year and all express themselves as being well satisfied with the results of their hunts.

Law and Order.—The Royal Canadian Mounted Police have made frequent patrols to outlying districts as in the past and law and order has been well maintained throughout the Territory.

Yukon Council.—The Yukon Council assembled on May 9, and prorogued on June 7. Amendments were made to the existing ordinances, and ordinances were passed respecting aeroplane transportation in Yukon and also empowering the Gold Commissioner to enter into negotiations with the Federal Government with a view of putting into effect the Act respecting Old Age Pensions.

During the absence through illness of Mr. Percy Bearisto Reid, the Gold Commissioner, and later owing to the vacancy caused by his death, Mr. George Allen Jeckell, Comptroller of the Territory, was appointed Acting Gold Commissioner for the remainder of the fiscal year.

MINING, PETROLEUM, AND NATURAL GAS SUPERVISION

COAL MINING IN ALBERTA

Good conditions have prevailed at the majority of the coal mines in this province resulting in a larger output than during the preceding year.

One feature in the domestic field has been the acceptance of Alberta coals on the Pacific Coast cities where the coals have won favour owing to their freedom from soot. Future trade for Alberta coals in British Columbia and the adjacent State of Washington would appear to look brighter, particularly as the suitability of these coals for domestic consumption is being more widely recognized by the consumers in these areas.

As far as possible inspections have been carried out systematically for the purpose of checking up the quantities of coal reported as mined from the various areas, and where required underground and surface surveys have been made to determine the correctness of the plans of the underground workings supplied by the operators.

The staff of the Calgary office have been called upon to assist the Department of Justice in actions against operators for non-compliance with the Coal Mining Regulations and infractions of the Railway Act in relation to barriers required to be left to protect railways.

Steam Coal Mines

Crowsnest Area.—The disastrous explosion which closed down the mine of the McGillivray Creek Coal and Coke Company on November 23, 1926, was investigated by the Hon. Chief Justice Horace Harvey of the Supreme Court of Alberta. Since this explosion a regulation has been passed requiring that rock dusting be carried out at gaseous mines so as to minimize the result of coal mine explosions. This mine has been reopened and again brought into production.

Brazeau-Mountain Park Area.—Mines in this area have worked fairly regularly throughout the year.

Domestic Coal Mines

Lethbridge-Taber Field.—The mines in this area have been kept busy during the year with the exception of some of the smaller mines which have only worked spasmodically. A new shaft has been sunk by the C. S. Donaldson Coal Company in section 30, township 10, range 21, west of the 4th meridian, on the Kipp-Retlaw extension of the Canadian Pacific Railway, and it is proposed to install a plant at this point to develop the Lethbridge seam which was found to underlie this area.

Operations at the Leland mine, Taber, formerly the Canada West Coal Company, have been continued during the year with an increased production.

Drumheller-Carbon-Willow Creek Area.—Prospecting with the diamond drill has shown that workable coal seams exist in the vicinity of Munson but under much deeper cover than in the valley of the Red Deer river. It is probable that this area will receive further attention from operators at an early date.

In the Carbon field, the major output is obtained from the Stopp mine of the Peerless Carbon Coal Company and the Oliphant mine. The mine formerly operated by the Carbon Coal Company has been reorganized and is now operated by the Fox Coal Company. The extension of the power line from the Union Power Company's plant at Drumheller to the Carbon district has supplied these smaller operators with power at a lower cost and will thereby enable them to operate more successfully than in the past.

The construction of the branch railway from Rosedale southerly, along the Red Deer river, to the Canadian Pacific Railway at Rosemary, will provide transportation for development of the Willow Creek area, a southeasterly extension of the Drumheller coal field. It is hoped that this railway will be open for traffic during the fall of 1928. Various companies, holding leases under the Dominion Coal Mining Regulations, have been carrying out prospecting by means of core drilling and prospect tunnels from the outcrop. Spur tracks and mining plants are being installed at sites selected by the Murray Collieries Limited, Atlas Coal Company, and Albion Coal Company. It is also proposed to proceed with development, at an early date, at the Murray, Murphy, and Sharpe lease and the Willow Creek Coal Company's property. This branch line will also give an additional outlet for the coal mines in the vicinity of Drumheller and Wayne.

Three Hills-Ardley Field.—Prospecting has been carried out by means of core drilling in the vicinity of Three Hills, and it was found that the seam worked by the Pallisade Coal Company extends easterly beyond the town. No further development work has taken place in this area. The Carbondale Coal Company's mine at Ardley was reopened during the year.

Saunders Area.—The West Saunders Coal Company's mine was closed during the year. Additional mining equipment has been installed at the plants of the Bighorn and Saunders Creek collieries and Alexo Coal Company.

Coalspur-Lovett Area.—The mine formerly operated as the Oliphant-Munson Collieries was reopened as the Coalspur Collieries, Limited. New spur tracks and mining plant have been installed and the original entries cleaned up and the underground workings extended.

The Superba Coal Company, Limited, have opened a new mine in section 2, township 47, range 19, west of the 5th meridian on the southerly extension of the Lovett coal seams. The main line of the Alberta Coal Branch of the Canadian National Railways was extended to the site; mine sidings and complete mining plant installed. A considerable amount of surface prospecting has been carried out during the year in the vicinity of Bliss on the Canadian National

Railways in township 51, range 24, west of the 5th meridian, in order to locate the northerly extension of the Coalspur series of coal seams in that vicinity. It is proposed to do further prospecting by means of core drills owing to the thick mantle of glacial deposit overlying the strata in this locality.

Wabamun-Pembina Area.—The fire, which it was felt was satisfactorily sealed off at the Lakeside mine, Wabamun, unfortunately worked through the coal seam on to the main entry and necessitated the closing of the mine. New entries are now being driven with the object of developing the virgin areas and eventually passing around the old workings to recover the pillar coal which remained undrawn at the time of sealing up the mine.

SASKATCHEWAN MINING

Coal

The number of mines operating on Dominion lands during the year averaged sixty-seven, some mines being abandoned and others being opened. Ninety-four regular mine inspections were made and reported on, and thirty-four mines were surveyed. Apart from these inspections, many visits were made for the purpose of giving advice in regard to mining operations.

Employment in mines was, as usual, irregular during the spring and summer months. Good relations prevailed between operators and miners. There has been no fatal or serious accident in any mine operating on Dominion lands during the year. Two cases of illegal mining were reported, but both parties took out leases covering the areas concerned.

The table which follows is divided into three classes showing the output during the calendar year 1927 of coal from Dominion lands subject to royalty, coal subject to royalty taken from School lands, and coal produced not subject to royalty:—

Province	Output subject to royalty		Not subject to royalty	Total
	Dominion lands	School lands		
	tons	tons	tons	tons
Alberta.....	4,039,431	142,990	2,754,359	6,936,780
Saskatchewan.....	119,684	11,299	341,199	472,182

The table hereunder shows the number of mines operating in Alberta and Saskatchewan subject to royalty, and those not subject to royalty, also the total number of mines operated during the year 1927:—

Province	Number of operating coal mines subject to royalty		Not subject to royalty	Total
	Dominion lands	School lands		
Alberta.....	187	15	57	259
Saskatchewan.....	61	7	13	81

Sodium Sulphate

Three inspections were made of sodium sulphate deposits, taken up as mineral claims, and for the purpose of valuing improvements.

PETROLEUM AND NATURAL GAS

The impetus given to the prospecting for oil and gas in Western Canada by the production of naphtha laden gas from the Royalite Oil Company's No. 1 Well has led to steadily increasing developments.

In Turner valley the Royalite Oil Company have erected a derrick on their seventeenth location and have prepared for a large drilling program in addition to the increased activities of several of the other companies. The wells now drilled have furnished a great many valuable data for the further development of the field and the encountering of the naphtha laden gas in every well which has been drilled into the Royalite dolomite clearly shows that the original strike in Royalite No. 4 was not a 'pocket.'

In the other areas of Western Canada the most important development was the encountering of production of oil in the Ellis formation at the Devenish Well near Skiff in southern Alberta, which opens up great possibilities over a wide area and considerable further prospecting will be carried on in this locality during the coming season.

In addition to the production obtained during the year a very important feature is the large amount of detailed geological work which is being carried on, aided, in many cases, by the drilling of shallow test holes to determine the complex structure of the foot-hills or the masked structure of the plains which is generally covered with a mantle of glacial drift.

A summary of the operations in Western Canada follows and is concluded by a tabulated statement of the results obtained.

Alberta

Lesser Slave Lake Area

International Petroleums Ltd.—Drilled a well on section 14, township 74, range 4, west of the 5th meridian to a depth of 2,845 feet encountering some showings of gas and oil but not in commercial quantities. The well was, therefore, abandoned and preparations are being made to drill a second hole on section 30, township 75, range 6, west of the 5th meridian.

Athabasca River Area

Drilling was carried on by the International Bitumen Company, Limited, on section 32, township 96, range 10, west of the 4th meridian in the bituminous sand region.

Considerable work was carried on by the Bituminous Sand Extraction Company leading to the recovery of the bitumen from the tar sands, and one well was drilled on section 24, township 88, range 8, west of the 4th meridian, to a depth of 350 feet.

Viking Area

Two new wells drilled by the Northwestern Utilities Limited in the Viking field during the summer encountered a gas flow of nearly 14,000,000 cubic feet which augmented the reserve supply of gas for the city of Edmonton. No. 13 was drilled on legal subdivision 13, of section 4, in township 49, range 12, west of the 4th meridian and No. 14 on legal subdivision 4, of section 4, in township 49, range 12, west of the 4th meridian.

Irma—Fabyan Area

No drilling was carried on during the year.

Gas was supplied to Wainwright from the Maple Leaf No. 1 Well, located on legal subdivision 1, of section 24, in township 45, range 8, west of the 4th meridian.

Wainwright Area

The National Exploration Company's Well.—L.S. 1, section 30, township 45, range 6, west of the 4th meridian. This well encountered a flow of gas amounting to 14,000,000 cubic feet at a depth of 2,237 feet. Drilling was carried somewhat further but the well was not completed.

British Wainwright Oil Company.—L. S. 4, section 22, township 45, range 6, west of the 4th meridian. This well was drilled to 2,238 feet and 8¼-inch casing set but was not completed.

Edmonton-Wainwright Oils Limited No. 1.—L. S. 4, section 29, township 45, range 6, west of the 4th meridian.

British Petroleums Limited No. 3B.—L. S. 4, section 29, township 45, range 6, west of the 4th meridian.

Production of oil was obtained from these wells during the year and treated in a refining plant erected near the wells by the Absher Syndicate.

Mid Canada Oil and Gas Company.—Section 35, township 45, range 6, west of the 4th meridian. This company erected a derrick and 'spudded in' on the above location but operations were suspended before the well was carried to depth.

Western Consolidated No. 2.—Section 30, township 45, range 6, west of the 4th meridian. The well was abandoned and plugged.

Interior Oil Co. Limited No. 1.—Section 36, township 44, range 7, west of the 4th meridian. Was drilled to 2,000 feet when operations were suspended. It is expected that the well will, in the spring, be carried to the horizons in which oil was found in the British Petroleums and Edmonton Wainwright wells this season.

Ribstone Area

Ribstone Oils Limited No. 1.—L. S. 1, section 1, township 46, range 1, west of the 4th meridian. This well has been carried to a depth of 1,956 feet where a heavy flow of water was encountered. The crew are endeavouring to shut off this water before drilling further.

Imperial Oil Co., Ribstone No. 1.—Section 5, township 45, range 1, west of the 4th meridian. The well was abandoned at a depth of 3,490 feet and plugged back so as to produce the gas encountered at a depth of 1,350 feet. The gas, at the present time, is shut in for lack of market.

Advance Oil Company Ltd. No. 3.—L.S. 1, section 16, township 45, range 1, west of the 4th meridian. Drilling was carried to a depth of 308 feet. Operations have been suspended for some time.

London Ribstone Petroleums No. 1.—L.S. 14, section 10, township 43, range 3, west of the 4th meridian. This well was carried to a depth of 1,500 feet when drilling was suspended in the fall.

Suffield Area

Ontario-Alberta Oil Development Co., Ltd.—Section 33, township 16, range 8, west of the 4th meridian. A derrick is being erected on the above location.

Medicine Hat Field

The Ogilvie Milling Company.—L.S. 9, section 30, township 12, range 5, west of the 4th meridian. Drilled a well to the main producing sand, encountering a good flow of gas; otherwise no drilling was done in the field during the season. Some repair work was done.

The city of Medicine Hat has planned an extensive campaign of repair work for its wells this season.

Redcliff Field

The Roth and Faurot Well.—L.S. 9, section 8, township 13, range 6, west of the 4th meridian. Was carried to a depth of 3,145 feet where drilling ceased and the well was plugged back to the gas sand at 1,252 feet.

The Redcliff Pressed Brick Company.—Section 9, township 13, range 6, west of the 4th meridian. Drilled a well to the gas sand at 1,166 to 1,190 feet securing an open flow of 2,500,000 cubic feet per day.

Cypress Hills Area

Eagle Butte Oil Company, Limited.—L.S. 3, section 31, township 7, range 4, west of the 4th meridian. Commenced drilling on the above location late in the fall. Operations were suspended for the winter at a depth of 1,000 feet but have been resumed recently.

Skiff Field

An important development in the Prairie area was the discovery of oil in a well drilled by the Devenish Petroleum Limited on L.S. 5, section 27, township 5, range 14, west of the 4th meridian, at a depth of 3,182 feet. The oil has a specific gravity of 18.4° Be. and appeared to be in good quantity although, on account of difficulty experienced in shutting off lower water, no large production has been obtained.

The Devenish Petroleum and Imperial Oils Limited are co-operating to drill other test wells in the vicinity, the first one to be on L.S. 11, section 11, township 5, range 14, west of the 4th meridian.

Barnwell Field

The Canadian Western Natural Gas, Light, Heat and Power Company have carried on extensive structure drilling in this area during the winter.

Chin Coulee Field

Lethalta Oils Limited—L.S. 5, section 33, township 8, range 18, west of the 4th meridian. A derrick is being erected in preparation for drilling a well on the above location.

Bow Island Field

The Imperial Oil Company's test well on section 8, township 11, range 11, west of the 4th meridian, was abandoned at a depth of 3,950 feet.

Warner Area

The Gas Production & Transportation Ltd—Are drilling on L.S. 14, section 21, township 4, range 18, west of the 4th meridian, having reached a depth of 3,350 feet at the end of the year.

Pincher Creek Area

Alberta Gas & Fuel Co. Limited.—L. S. 3, section 34, township 2, range 29, west of the 4th meridian. This company is drilling on the above location, having reached a depth of about 2,000 feet at the end of March.

Mount Royal Oil Co. Ltd. No. 1.—L. S. 3, section 7, township 6, range 1, west of the 5th meridian. Operations were suspended for the winter at a depth of 1,000 feet. Several good showings of gas were encountered.

Gleichen Area

Oil Producers Corporation of Canada, Ltd.—L. S. 4, section 24, township 22, range 23, west of the 4th meridian. This company has erected a derrick on the above location near the town of Gleichen but has not, as yet, commenced drilling.

Rice Creek Area

Imperial Oil Co. Ltd. Rice Creek.—L. S. 13, section 4, township 14, range 2, west of the 5th meridian. This well was abandoned at a depth of 5,747 feet.

Highwood Area

Imperial Oil Co. Ltd. Highwood No. 1.—L. S. 3, section 36, township 18, range 3, west of the 5th meridian. Operations were suspended at a depth of 3,624 feet. It is expected that drilling will be continued with a diamond drill.

Aldersyde Area

Ranchmen's Gas and Oil Co. No. 1.—L. S. 16, section 13, township 20, range 29, west of the 4th meridian. This company is drilling at a depth of about 2,500 feet.

De Winton Area

Anglesey Lakeview No. 1.—L. S. 1, section 22, township 21, range 1, west of the 5th meridian. Operations have been carried to a depth of over 2,700 feet with drilling in progress.

Moose Mountain District

Imperial Oil Co. Ltd. Bow River No. 1.—L. S. 15, section 12, township 25, range 5, west of the 5th meridian. This well was abandoned at a depth of 5,585 feet.

Signal Hill Oil Company No. 2.—L. S. 9, section 34, township 23, range 5, west of the 5th meridian. Drilling has been carried to a depth of 1,950 feet and is in progress.

Morley Reserve

Gold Coin Oils.—Operations were suspended at a depth of 3,928 feet.

Wabash Oils Ltd. No. 1.—This company is drilling at a depth of 1,100 feet.

Turner Valley

Advance Oil Co. Ltd. No. 5.—L. S. 16, section 19, township 19, range 2, west of the 5th meridian. Drilling was started on March 8.

Big Chief Oil Co. Ltd. No. 1.—L. S. 4, section 5, township 20, range 3, west of the 5th meridian. Drilling suspended at 4,370 feet.

British Dominion Oil & Development Co. No. 1.—L. S. 4, section 5, township 20, range 2, west of the 5th meridian. This well was drilled to a depth of 6,600 feet being the deepest well yet drilled in Canada. A string of 6½-inch casing was carried to a depth of 6,441 feet. The well is to be abandoned.

Calmont Oils Limited No. 1.—L. S. 2, section 1, township 20, range 3, west of the 5th meridian. Drilling is being carried on at a depth of 5,200 feet.

Canada Southern No. 1.—L. S. 9, section 1, township 20, range 3, west of the 5th meridian. Some oil was produced during the year. No drilling was carried on.

Cooper-Nanton No. 1.—L. S. 2, section 7, township 20, range 2, west of the 5th meridian. Drilling was suspended at a depth of 4,840 feet.

Dalhousie Oil Co. Limited No. 1.—L. S. 4, section 18, township 20, range 2, west of the 5th meridian. This well was 'spudded in' by the Southern Alberta Oils Limited in 1913 and produced a light oil in good quantity from a depth of 3,500 feet for some years. After it was taken over by the Dalhousie Oil Company, Limited, in 1925, it was carried to a depth of 4,565 feet where the limestone production was encountered and it commenced producing gas at the rate of approximately 19,000,000 cubic feet per day with a large production of naphtha.

Dalhousie Oil Co. Ltd. No. 5.—L. S. 16, section 30, township 19, range 2, west of the 5th meridian. Encountered an oil sand at a depth of 4,810 feet and has been carried to a depth of 4,900 feet. The well is flowing by heads at the rate of 60 to 70 barrels per day. The oil has a specific gravity of 50° Be.

Dalhousie Oil Co. Limited No. 6.—L. S. 10, section 13, township 20, range 3, west of the 5th meridian. Drilling has been carried to a depth of 4,850 feet.

Foothills Oil & Gas Co. Ltd. No. 1.—L. S. 4, section 26, township 20, range 3, west of the 5th meridian. A depth of 3,498 feet was attained when the rotary drill pipe was broken off, causing a long fishing operation which is now nearly completed.

Foothills Oil & Gas Co. Ltd. No. 2.—L. S. 8, section 1, township 20, range 3, west of the 5th meridian. A depth of 2,300 feet had been reached at the end of March. This well was formerly known as Dolomite No. 1.

Great West No. 1.—L. S. 2, section 7, township 20, range 2, west of the 5th meridian. This well reached a depth of 5,400 feet when operations were suspended.

Home Oil Co. Ltd. No. 1.—L. S. 10, section 20, township 19, range 2, west of the 5th meridian. Oil was encountered at a depth of 4,560 feet with a considerable flow of gas. The oil has a specific gravity of 53° Be. and is produced by flowing at the rate of 40 to 50 barrels per day.

Home Oil Co. Ltd. No. 2.—L. S. 14, section 20, township 19, range 2, west of the 5th meridian. Drilling has reached a depth of approximately 3,800 feet and is in progress.

Home Oil Co. Ltd. No. 3.—L. S. 10, section 20, township 19, range 2, west of the 5th meridian. Drilling was commenced on the 17th of February but, owing to the rig having burned down, a depth of 200 feet only was attained. The derrick has been rebuilt and drilling is now in progress.

Highland Oil Co. Ltd.—L. S. 5, section 5, township 20, range 2, west of the 5th meridian. This well was abandoned at a depth of 3,020 feet.

Illinois-Alberta Oil Co. Ltd. No. 1.—L.S. 14, section 12, township 20, range 3, west of the 5th meridian. This well continues to produce approximately 100 barrels per day of naphtha with accompanying gas.

Illinois-Alberta Oil Co. Ltd., No. 2.—L.S. 14, section 12, township 20, range 3, west of the 5th meridian. The well was 'spudded' on the 27th of August last with a diamond drill and had reached a depth of about 1,800 feet at the end of March.

Mill City Oil Co. (Old Record).—L.S. 13, section 4, township 19, range 2, west of the 5th meridian. No operations were carried on during the year.

McLeod Oil Co. Ltd., No. 1.—L.S. 16, section 1, township 20, range 3, west of the 5th meridian. This well was deepened to 3,930 feet encountering a production of about 9,000,000 cubic feet of gas and about 100 barrels per day of naphtha in the limestone.

McLeod Oil Co. Ltd., No. 2.—L.S. 16, section 1, township 20, range 3, west of the 5th meridian. Continued to produce naphtha and gas during the year, no permanent increase or decrease being noted.

McLeod Oil Co. Ltd., No. 3.—L.S. 16, section 1, township 20, range 3, west of the 5th meridian. This well was 'spudded' on the 25th of February, 1927, and carried to a depth of 3,200 feet, encountering a production of oil amounting to about 30 barrels per day. Recently the company resumed drilling operations to carry the well to the limestone.

McLeod Oil Co. Ltd., No. 4.—L.S. 16, section 1, township 20, range 3, west of the 5th meridian. The company's fourth well was commenced on the 13th of March.

New McDougall-Segur Oil Co. Ltd., No. 1.—L.S. 14, section 12, township 20, range 3, west of the 5th meridian. This well continues to produce from the horizons in the Cretaceous, at a depth of 2,490 feet.

New McDougall-Segur Oil Co. Ltd., No. 2.—L.S. 14, section 12, township 20, range 3, west of the 5th meridian. Oil was encountered at a depth of 2,620 feet and the well is being pumped.

New McDougall-Segur Oil Co. Ltd., No. 3.—L.S. 14, section 12, township 20, range 3, west of the 5th meridian. Drilling was commenced on the 26th of January, 1928, a depth of 1,850 feet being reached at the end of March.

New Valley Oil Co., No. 1.—L.S. 4, section 6, township 21, range 2, west of the 5th meridian. Drilling was carried on to a depth of 2,080 feet, when suspended in the fall.

New Black Diamond Oil Co., No. 1.—L.S. 1, section 3, township 20, range 3, west of the 5th meridian. No drilling was carried on during the year.

Okalta Oils Ltd., No. 1.—L.S. 1, section 1, township 20, range 3, west of the 5th meridian. Drilling was carried to a depth of 4,640 feet when it was decided to complete the well with a diamond drill and operations were suspended pending the arrival of this equipment.

Okalta Oils Ltd., No. 2 (Old Indiana Alberta, No. 2).—L.S. 8, section 1, township 20, range 3, west of the 5th meridian. A small amount of production was obtained from the well during the year. When the No. 1 Well was suspended the crew were placed at this well in preparation for deepening it.

Regent Oil Co. Ltd., No. 1.—L.S. 16, section 1, township 20, range 3, west of the 5th meridian. A depth of 2,475 feet had been attained at the end of March.

Royalite Oil Co. Ltd., No. 1.—L.S. 14, section 6, township 20, range 2, west of the 5th meridian. Some production of gas was taken from the well during the year although the absorption plant is not now being operated.

Royalite Oil Co. Ltd., No. 2.—L.S. 11, section 6, township 20, range 2, west of the 5th meridian. This well also produced some gas during the year.

Royalite Oil Co. Ltd., No. 3.—L.S. 15, section 6, township 20, range 2, west of the 5th meridian. Some production of gas was taken from this well during the year.

Royalite Oil Co. Ltd., No. 4.—L.S. 12, section 7, township 20, range 2, west of the 5th meridian. This well continued to produce gas and naphtha, the latter increasing in quantity. In December last it produced at the rate of 650 barrels per day.

Royalite Oil Co. Ltd., No. 6.—L.S. 16, section 31, township 19, range 2, west of the 5th meridian. This well was carried, by the hydraulic rotary system, to a depth of 4,280 feet when a diamond drill was installed and it is expected to complete the well with this equipment.

Royalite Oil Co. Ltd., No. 7.—L.S. 3, section 13, township 20, range 3, west of the 5th meridian. The productive horizon in the limestone was encountered at a depth of 4,208 feet, and at last reports the well was producing about 9,000,000 cubic feet of gas and about 140 barrels of naphtha per day.

Royalite Oil Co. Ltd., No. 8.—L.S. 15, section 12, township 20, range 3, west of the 5th meridian. This well has been carried to a depth of 3,676 feet where the 6½-inch casing was set in the limestone. A heavy flow of gas was encountered.

Royalite Oil Co. Ltd., No. 9.—Section 13, township 20, range 3, west of the 5th meridian. This well has been drilled to a depth of 3,700 feet with drilling in progress.

Royalite Oil Co. Ltd., No. 10.—L.S. 10, section 12, township 20, range 3, west of the 5th meridian. Drilling was suspended at a depth of 2,332 feet in the producing sand of the Cretaceous formation and a production of 30 to 35 barrels of oil is being obtained.

Royalite Oil Co. Ltd. No. 11.—L.S. 10, section 12, township 20, range 3, west of the 5th meridian. Drilling has been carried to a depth of 1,700 feet and is in progress.

Royalite Oil Co. Ltd. No. 15.—L.S. 1, section 12, township 20, range 3, west of the 5th meridian. This well is rigged up ready to 'spud in'.

Royalite Oil Co. Ltd. No. 16.—L.S. 2, section 12, township 20, range 3, west of the 5th meridian. This well was 'spudded in' on March 30.

Stockmens Oils Ltd. No. 1.—L.S. 1, section 27, township 20, range 3, west of the 5th meridian. Further drilling was abandoned at a depth of 5,320 feet and the well plugged back to the gas horizon at 1,760 feet.

Stockmens Oils Ltd. No. 2.—L.S. 7, section 27, township 20, range 3, west of the 5th meridian. Rigging up preparatory to 'spudding in'.

Seneca Oils Ltd. No. 1.—L.S. 1, section 34, township 20, range 3, west of the 5th meridian. Drilling is being carried on at a depth of 3,700 feet.

Spooner Oils Ltd. No. 1.—Section 13, township 20, range 3, west of the 5th meridian. Drilling is proceeding at a depth of 4,950 feet. The limestone was encountered at a depth of 4,600 feet and the well is producing about 2,000,000 cubic feet of gas with considerable naphtha.

Sentinel Oil Co. Ltd. No. 1.—L.S. 14, section 8, township 20, range 2, west of the 5th meridian. Drilling was suspended at a depth of about 3,700 feet. An exceptionally long string of 12½-inch casing was landed in this well, the depth being 3,434 feet.

Vulcan Oils Ltd. No. 2.—L.S. 11, section 13, township 20, range 3, west of the 5th meridian. Drilling was in progress at a depth of 4,850 feet.

In the Peace River, Fort Vermilion and Pouce Coupé areas no operations were carried on during the fiscal year.

Saskatchewan

Kenaston District

Big Six Oil Co. Limited No. 1.—L.S. 16, section 18, township 29, range 2, west of the 3rd meridian. This well was carried to a depth of 85 feet when operations were suspended in the fall.

Readlyn District

Ribstone Wainwright Oils Ltd. No. 1.—L.S. 11, section 7, township 8, range 27, west of the 2nd meridian. Drilled to a depth of 365 feet when operations were suspended.

Riverhurst District

Riverhurst Oil & Gas Co. Ltd. No. 1.—Section 33, township 22, range 7, west of the 3rd meridian. This well was carried to a depth of 518 feet before suspending operations for the winter.

Rosetown District

Rosetown Lease Holdings & Development Co. No. 1.—L.S. 13, section 4, township 31, range 17, west of the 3rd meridian. Drilling operations were commenced in the fall and suspended at a depth of 225 feet.

Simpson District

Simpson Oil Company, Ltd. No. 1.—L.S. 2, section 9, township 29, range 25, west of the 2nd meridian. Drilling was carried to a depth of 1,371 feet before suspending for the winter.

Vera District

Unity Valley Oil Co. Ltd. No. 1.—Section 22, township 41, range 24, west of the 3rd meridian. Operations reached a depth of 2,925 feet when suspended.

Unity Valley Oil Co. Ltd. No. 2.—L.S. 12, section 14, township 41, range 24, west of the 3rd meridian. Derrick erected for No. 2 well on the above location.

Manitoba

Ochre River District

J. W. Holmes No. 1.—L.S. 10, section 30, township 22, range 17, west of the Principal meridian. Carried a well to a depth of 1,487 feet.

Mack Oil Co. Limited.—L.S. 12, section 30, township 22, range 17, west of the Principal meridian. This well is being drilled at a depth of 530 feet.

Grandview District

Irro Gas & Oil Co. No. 2.—L.S. 11, section 18, township 26, range 23, west of the Principal meridian. Operations were suspended at a depth of 136 feet.

Rapid City District

Prairie Petroleum Limited.—Section 3, township 13, range 20, west of the Principal meridian. Drilling was suspended at a depth of 704 feet.

Northwest Territories

No petroleum and natural gas operations were carried out in the Northwest Territories during the fiscal year.

SURVEYS BUREAU

REPORT OF THE DIRECTOR GENERAL OF SURVEYS, J. D. CRAIG

The Surveys Bureau was formed in 1922 by the amalgamation, under the Director General of Surveys, of three branches of the department engaged in surveying work: the Geodetic Survey, the Topographical Survey, and the International Boundary Commission, Canadian Section.

The Geodetic Survey which has been in operation since 1905 has for its main function the determination, with extreme accuracy, of the geographic positions and the elevations above sea-level of selected points throughout the country. These points are marked by permanent monuments which serve as control for all other surveys in the areas adjacent to them, whether federal, provincial, municipal or private. Twenty-four parties were in the field.

The Topographical Survey is the oldest surveying organization in the department, having been in existence under different names since 1870 when legal surveys of Dominion lands were first started in the West. Legal land surveys still form part of its duties but of late years attention is being given chiefly to topographical mapping, the information for which is obtained from surveys specially organized for mapping purposes, from aerial photographs taken in co-operation with the Royal Canadian Air Force, and from the extensive legal survey records of the branch. This branch also maintains a laboratory for the testing, adjustment and certification of various scientific instruments. Twenty parties were in the field, and in addition six officials acted as navigators for planes of the Royal Canadian Air Force.

The International Boundary Commission, Canadian Section, working in conjunction with the United States Section, inspects the 5,500 miles of boundary line between Canada and the United States, and maintains it in a state of effective demarcation.

During the season the Director General of Surveys, who is also Canadian International Boundary Commissioner, accompanied by the United States Commissioner, made a trip of inspection which included Dixon entrance and cape Muzon at the southern end of the Alaska section of the boundary, point Roberts on the gulf of Georgia, and the Northwest Angle inlet of the lake of the Woods.

The Director General also discussed with provincial officials such matters as town planning and the restoration of survey monuments, and later visited a survey party engaged in mapping in Saskatchewan.

The town planning activities of the department heretofore carried on under the National Parks of Canada Branch, were taken over during the year and now form the Town Planning Division of the Surveys Bureau. At present the main activities of the division include the preparation of lecture notes and slides featuring town planning matters; a continually increasing correspondence dealing with requests for advice and literature on town planning; and publicity service for such publications as the *Journal of the Town Planning Institute*. The increasing interest that is being taken in this new development indicates its growing importance in Canada and throughout the civilized world.

A brief summary of the work of each of the three major divisions of the Surveys Bureau for the fiscal year follows. Detailed reports covering the activities of the Geodetic Survey and the Topographical Survey are issued as separate publications.

GEODETIC SURVEY

In the fiscal year 1927-28 the Geodetic Survey of Canada furnished accurately determined geographical positions and precise elevations for the basic control of all Canadian mapping operations and the use of the engineering profession.

The establishment of such control points involved the extension of geodetic primary and secondary triangulation nets in various provinces, base line measurements, precise and secondary levelling and the observing of latitudes, longitudes and azimuths at Laplacean stations. In the office, triangulation and level adjustments have been continued. Mathematical investigations have also been carried on to solve special problems arising from geodetic operations in Canada.

Triangulation and Precise Traverse.—Work was completed on a net running southwest from Halifax to Liverpool, N.S., thence north to Caledonia, to which hydrographic stations, topographic stations and lighthouses were connected. A net to connect the St. Lawrence River net with the Chaleur Bay net was laid down. Work was continued to give geodetic control in the Rouyn mining area, and also in the Gatineau valley. Work on nets in northern Ontario was undertaken to serve the mineralized areas from Kirkland lake north to lake Abitibi and east to the Kamiskotia district.

The net extending from the Canada-United States boundary northward through Calgary reached a point fifty miles south of Edmonton. Triangulation extending the control carried inland from Prince Rupert reached a point 250 miles from the coast. Secondary triangulation was extended across Vancouver island from the primary triangulation stations north of Victoria to tie in a Geological Survey net covering a large part of the island. Thus co-ordinated with the Geodetic Survey net the extensive and accurate data supplied by the Geological Survey of Canada, become of prime geographic value.

Precise Levelling.—Levelling operations were carried on in Quebec, Ontario, Manitoba, Saskatchewan, and British Columbia. A line of secondary levels was completed between Tring Junction and Sherbrooke, Quebec. Precise levelling was completed between Ste. Therese and Mont Laurier and a line of secondary levels was continued from Mont Laurier to Maniwaki, Quebec, where closure was made with the precise level line from Ottawa. Levelling in Montreal was completed under the usual co-operative arrangement. Precise level control including 651 bench-mark monuments now extends from Montreal West to the foot of the island, and northward to Riviere des Prairies. Twenty-two fundamental bench-mark monuments were established in Ontario. Important levelling control was furnished in the Prairie Provinces, including fundamental bench marks at Canora, Dauphin and Swan River, Manitoba; and at Yorkton, Saskatchewan. A number of short lines were completed in British Columbia and fundamental bench marks were constructed at Armstrong and Kamloops.

Mathematical Research and Adjustments.—The method of converting latitudes and departures to true latitudes and longitudes, as applied to precise traverses of the Geodetic Survey, has received consideration and a publication entitled "The Conversion of Latitudes and Departures of a Traverse to Geodetic Differences of Latitude and Longitude" is in press. A treatise entitled *Geodesy* has been distributed.

The precise level net of Canada has been adjusted by the method of differential adjustment recently developed. The work of triangulation adjustment has been increased with the closures this season of large loops. The 1,800 miles of triangulation in Eastern Canada is being adjusted by a process of division into five large nets. The British Columbia Coast net is under adjustment for the determination of corrected positions and the work entailed is nearing completion. Other adjustments in hand are those for the New Ontario net, the Western Ontario net, and the British Columbia precise traverse.

Base Line Measurements.—Base lines were measured at Smithers, British Columbia, Edmonton and Calgary, Alberta, and at Windigo, Quebec, to establish control for the scale of length of triangulation in these localities.

Geodetic Astronomy and Isostasy.—Laplace observations were made at Haysport, Martin, Lorne, Skeena Crossing, and East Base, British Columbia, to control the azimuth of the precise traverse between Prince Rupert and Smithers. Another Laplace observation was made at Windigo in the Quebec triangulation net for azimuth control. Twelve of the established geodetic triangulation stations in Ontario were occupied for latitude and longitude for the determination of the deviation of the vertical. A comparison of the values so obtained with those given by the adjusted triangulation is of use in the study of isostasy.

Standards.—The standardization of the invar tapes used in base line measurement and of the levelling rods of the precise levelling division of the survey shows the continued need of a periodic comparison in order to attain the degree of accuracy required. Three base lines were measured in Western Canada, and to obviate returning to Ottawa with the tapes for standardization, prior to the measurement of the second and third bases, three of the microscopes used in standardization were taken to the field where the three base line tapes used were carefully intercompared.

TOPOGRAPHICAL SURVEY

The usual activities of the Topographical Survey were proceeded with as in past years. Field work was carried on in eight provinces and in the Northwest Territories. Twenty field parties were employed, and in addition six Dominion land surveyors acted as navigational officers for the planes of the Royal Canadian Air Force in taking pictures for aerial surveying operations.

The year was marked by an increase of between five and six per cent in the number of maps, plans, and publications distributed to the public. This increase has been going on steadily for a number of years and reflects the increasing interest on the part of the public in the service rendered by this organization in this regard.

A great portion of this interest is undoubtedly due to the rapid advancement in Canada of aerial photography as an aid in surveying and mapping, whereby the gathering of the necessary information is greatly expedited and much simplified. The service of the aerial photograph does not end with the production of the map sheets. A distinct advantage of the aerial photograph is that it is a permanent record, available for study for any required purpose at any future time. In this connection the Topographical Survey has been constituted by Order in Council a central agency for the recording and indexing of all aerial photographs taken by the Dominion Government services, thus preserving them for use in other directions when their original purpose in connection with mapping has been served.

Topographical and Photo-topographical Surveys.—A total area of 7,353 square miles of new topographical mapping was completed, a second revision was made of an area of 2,550 square miles, and in addition some 10,000 square miles were covered by exploratory survey.

By provinces the area of new mapping is distributed as follows: Nova Scotia, 184 square miles; New Brunswick, 291 square miles; Quebec, 460 square miles; Saskatchewan, 4,218 square miles; Alberta, 1,230 square miles; British Columbia, 970 square miles; total, 7,353 square miles.

Of this total 805 square miles is for publication at a scale of 1 mile to 1 inch; 2,330 at a scale of 2 miles to 1 inch; and 4,218 at a scale of 3 miles to 1 inch. The 2,550 square miles of second revision referred to above are for publication at a scale of 4 miles to 1 inch.

The 10,000 square miles covered by exploratory surveys are for publication on the scale of 4 miles to 1 inch. This exploratory work was carried on in northeastern British Columbia and the resulting maps will be exploratory editions only.

Different methods of mapping were used to conform with the requirements of the scale and with the topography of the district being mapped. For the one-mile scale ordinary plane-table methods, in some cases supplemented with vertical aerial photographs, were used. For the two-mile scale plane-table methods with vertical aerial photographs and, in the rough topography of British Columbia photo-topographical methods supplemented with range-finder and plane-table, were used. For the three-mile and four-mile scales the special method of sectional sheet revision applicable to Manitoba, Saskatchewan, and parts of Alberta was employed.

Considerable progress has been made in the application of vertical photographs to topographical mapping.

Control Surveys.—Surveys as a basis for topographical mapping were carried on in the Moncton area in New Brunswick and in the Ste. Anne de Beupre area and the district north of Ottawa in Quebec. The Ontario Department of Lands and Forests conducted surveys in the Muskoka area in co-operation with this organization. In accordance with the general practice, permanent monuments as reference points to which other surveys may be tied were established in suitable locations at points about three miles apart. The geographical co-ordinates of these monuments are computed and this information is available to the provincial authorities.

The astronomical positions of a number of points south and east of Kenora were determined for the purpose of co-ordinating existing land surveys. Similar observations were taken west of Island lake to serve as control for aerial mapping. Ground investigation was carried on in the Wood Buffalo Park area, near Fort Smith, Northwest Territories.

Aerial Surveys.—During the year a total area of 45,850 square miles was photographed in co-operation with the Royal Canadian Air Force for mapping purposes. Of this area about 63 per cent, or 28,650 square miles, were covered by oblique, and 37 per cent, or 17,200 square miles, by vertical axis photography.

During the year 62,000 aerial photographs were placed in the index and, in addition there were received 63,000 prints for constructing mosaics, for the use of surveyors in the field and for distribution on request to provincial officials, city engineers, mining and lumbering corporations, municipalities, and the general public. Of the former, 9,360 were received from a private company, being vertical photographs in the province of Quebec done under contract, and 7,756 were old photographs taken by the royal Canadian Air Force from 1920 to 1922, copies of which had never been furnished to this office.

From the photographs (obtained for mapping purposes) mosaics of ten different localities have been constructed.

From vertical photographs, one sheet on the two-mile scale, and from oblique photographs eight sheets on the four-mile scale, all of the National Topographic Series, are under preparation.

Vertical photographs have also been taken covering four sheets of the National Topographic Series on the two-mile scale, and areas of 8,000 square miles in the Wood Buffalo park near Fort Smith, N.W.T., and 2,650 square miles in the Prince Albert national park in Saskatchewan, but the mapping of these is postponed until further surveys over these areas have been carried on. Three other sheets on the four-mile scale, prepared from oblique photographs, are practically completed, but these also are being held for further photographic surveys.

The following sheets of the National Topographic Series were completed during the year from photographs obtained during the previous year:—

1. On the two-mile scale from vertical photographs, the Rouyn Lake and Rouyn-Larder Lake sheets;
2. On the four-mile scale, from oblique photographs, the Grand Rapids, Cormorant Lake, The Pas, Wekusko Lake, Trout Lake, and Sioux Lookout sheets. The Armstrong and Lake St. Joseph sheets were partly compiled and should soon be completed.

Special mapping was carried on for the Dominion Forest Service, in which timber type maps were prepared of an area of about 35,000 square miles in the vicinity of lake Winnipeg. This work involved the preparation of eighteen special maps. Copies of these were supplied to the Dominion Forest Service on the scales of one-half mile, two miles, and four miles to the inch. Special mapping was also done for the International Paper Company in the area south of Sioux Lookout, Ont., for the Mining Corporation of Canada, showing a transmission line route from Nelson river to Flinflon mine in northern Manitoba; and for the Ontario Department of Lands and Forests.

Land Surveys.—One townsite was laid out at Cloan, Sask. A resurvey of the mission property at Morley, Alta., was made to effect the registration of title. The Government reserve at Port Nelson was laid out and the survey of a considerable number of summer resort lots at Atikameg and Cormorant lakes in northern Manitoba was made. Settlement lots were also surveyed at Cunningham Landing on Slave river, N.W.T.

Land in township 45, range 4, west 2nd meridian, urgently required for settlement in the vicinity of Hudson Bay Junction, was subdivided; miscellaneous subdivision to provide for squatters on unsurveyed land was made in seven other localities. Two timber berths and several Indian reserves were laid out in British Columbia, and small miscellaneous surveys and investigations were made in 140 other places.

Land Classification Surveys.—Land classification surveys comprise a thorough field investigation of our land resources, and provide a record of the acreage of the different grades of available land within investigated districts. This information is of value to intending settlers and is a guide to those in charge of directing settlement to suitable lands. It is also of value in connection with the study of forestry problems and may be made the basis for the selection of areas to be included within forest reserves.

During the year an aggregate of 434,080 acres was examined at the request of the Forest Service of this department, comprising 147,360 acres within part of the proposed Kehiwin forest reserve, Alberta; while in the total of 286,720 acres covered in the province of Saskatchewan, 192,320 acres are included within various reserves and 94,400 acres are adjacent to reserves.

Mapping and Mechanical Work.—Drafting, photographing and lithographic work was proceeded with. A considerable number of photographic copies of maps or of parts of maps were made to required scale either for our own com-

piling office or at the request of other branches of this or other departments. In the list of important maps, plans, etc., there are some sixty different items, the total number of copies being in the neighbourhood of 90,000.

Physical Testing Laboratory.—As the laboratory becomes more widely known the requests for assistance received from other organizations continue to increase. More than sixty per cent of the tests made in the year under review were for other services. Owing to the increase in the routine testing operations difficulty was experienced in carrying out the investigations and allied work in connection with the maintenance of standards and the development of technique.

A great increase is recorded in the number of thermometers submitted for testing. No fewer than 4,345 thermometers, covering a range from 50° F. below zero to 500° F. above zero, were received for test during the year. The use of the facilities for standardizing thermometers in terms of the International Standard Temperature Scale is thus becoming more and more general.

Another branch of the laboratory where assistance was much in demand is the instrument shop. The shop undertakes the repair of scientific instruments on behalf of Government organizations, and it might be noted that in the majority of instances this work would otherwise have to be sent out of the Dominion.

During the year the laboratory completed the study of the Dominion Standard Yard and other length standards of national interest. A bulletin describing this work is now being prepared for publication.

Magnetic Declination Surveys.—The needle of the magnetic compass does not point north but more or less to the east or west at different places; so that the leading countries of the world measure its deviation from the true direction which is called the "declination," and show this on magnetic maps for compass users.

Such information is particularly valuable in such a large new country as Canada, so since 1880 the Topographical Survey has been making these measurements in conjunction with its other regular work. They are thus made economically when the surveyors are already on the ground with the instruments required.

During 1927 this work was continued and some 1,300 such measurements were made, bringing the total number to date up to more than 23,000. Before publication these results are compiled with magnetic data secured by other branches. A new declination map was published for Canada for the use of surveyors, airmen, navigators, explorers, miners, prospectors, timber cruisers, settlers, and hunters.

The Dominion Observatory also takes magnetic observations for purely scientific purposes, and co-operation between this service and the observatory is close in order to utilize to the full the results of all work done.

An arrangement was made whereby the Survey Office of the Ontario Department of Lands and Forests co-operates in such measurements with the Topographical Survey. During 1927 their field officers made more than 300 such measurements.

The Topographical Survey co-operates also with the Canadian Hydrographic Service of the Department of Marine and Fisheries and supplies the compass information for their charts.

Registration, Records, and Distribution Office.—During the twelve months there were distributed 33,651 maps, 3,271 publications, and 23,155 official plans of townships, townsites, etc.

Survey returns received for examination from surveyors in the field, railway companies, and provincial governments, and entered in the various registers.

plotted on the various index maps, etc., comprised 305 books of field notes, 411 plans, and 2,963 miscellaneous returns. During the year 296 new books and 612 new plans were placed on record, the total number on record now being 19,969 books of field notes and 35,672 plans.

INTERNATIONAL BOUNDARY COMMISSION—CANADIAN SECTION

A conference of the commissioners was held in Ottawa in May, 1927, when a division of the field work to be done during the coming season was agreed upon and certain matters of detail were discussed and the necessary decisions made.

A final draft of first joint annual report required under the treaty of 1925 was adopted. Later two signed copies of this report were submitted by the commissioners to their respective governments. These reports show in detail the work of maintaining the boundary in a state of effective demarcation, done between the ratification of the treaty and December 31, 1926.

As a result of the above conference the United States Section of the Commission undertook the work of reclearing the boundary vista, repairing any monuments found to have deteriorated and running a line of levels on the Quebec-Vermont section of the International Boundary. The United States Section also undertook to locate the exact position of the boundary on the new Peace Bridge between Fort Erie and Buffalo and to mark it with bronze plates of an appropriate approved design, and to locate the position of the boundary on the other bridges across the Niagara river with a view to having them marked also with bronze plates in the near future.

The Canadian Section of the Commission undertook the work of reclearing the boundary vista, repairing deteriorated monuments, and running levels along the north line of the New Brunswick-Maine section of the International Boundary. This work required the services of a field party averaging ten men from May 22 to November 15. During the season 64 miles of vista were cut, 57 monuments were repaired and the elevations of 265 monuments were determined by this party.

In August the Canadian and United States Commissioners made a personal inspection of a number of points on the International Boundary while on a trip, during which each inspected in his own country certain work being carried on under his direction in the respective capacities of Director General of Surveys and Director of the United States Coast and Geodetic Survey. The first section visited was Dixon entrance and Portland canal. Through the courtesy of the United States Coast and Geodetic Survey the hydrographic survey ship *Explorer* was made available for the use of the commissioners on this portion of their inspection trip. After inspecting the boundary in the vicinity of Stewart, British Columbia, the commissioners went south to Vancouver and examined the site of certain proposed boundary range marks at point Roberts. After a lapse of a week the commissioners met again at Winnipeg, and proceeding to Kenora, inspected the boundary in the vicinity of the Northwest Angle inlet of lake of the Woods.

In September at the request of the Commissioner of Customs, a determination was made of the position of the boundary with respect to a wharf on a Canadian island known as 101G in that channel of the St. Lawrence river known as the Rift. The Department of Customs had been uncertain whether or not this wharf extended across the International Boundary and consequently had been unable to determine whether or not regulations applying to foreign vessels calling at Canadian wharves should properly be enforced. As a result of surveys made by one of the commissioner's staff, it was definitely established that the wharf in question lies entirely within Canadian waters.

A joint inspection of the work on the Niagara river was made early in August by an engineer from each section of the Commission. A similar joint inspection was made of the work on the Quebec-Vermont and New Brunswick-Maine lines between November 1 and 11.

A memorandum was prepared for the Canadian Legation at Washington giving full information regarding the so-called "neutral strip" on the various sections of the International Boundary.

Survey data of the area in British Columbia adjacent to the 49th parallel boundary were supplied by the Commission to the Department of Lands of British Columbia, for use in their surveys in those districts. Similar data and maps of the area in the vicinity of lake Namakan on the Ontario-Minnesota boundary were supplied to the Dominion Water Power and Reclamation Service of the Department of the Interior for the same purpose.

The office work of the staff during the year has been largely devoted to adjusting surveys, computing geographic positions, proof-reading boundary maps, making triangulation sketches, and doing other related work in preparation of three joint reports, which have yet to be submitted to the Governments of Canada and the United States by the commissioners. One such report is now in the printers' hands and it is hoped to have one of the three above referred to ready by the end of the fiscal year.

A large number of maps, photographs, reports and items of specific information regarding the boundary were supplied upon request to various government departments and to the general public.

OFFICE OF THE SECRETARY

IMMIGRATION AND COLONIZATION

FISCAL YEAR ENDING MARCH 31, 1911

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to lay before Your Excellency the report of the transactions of the Department of Immigration and Colonization for the fiscal year ended March 31, 1928.

Respectfully submitted,

ROBERT FORKE,
Minister of Immigration and Colonization.

REPORT
OF THE
DEPARTMENT OF IMMIGRATION AND COLONIZATION

1927-28

DEPUTY MINISTER, W. J. EGAN

In presenting the Eleventh Annual Report of the department, attention is directed to the reports of the various officials of the department describing the work done not only in Canada, but also in the United States, the British Isles, and on the Continent of Europe.

The statistical tables published, some of which are new, are designed not only to give general information, but to supply an answer to most of the inquiries that are addressed to the department from time to time.

The report of the Commissioner of Colonization contains a very useful summary of the Empire Settlement Schemes in effect during the year and shows the progress made in federal-provincial co-operation. This report also gives a summary of the work accomplished in the United States.

The Director of European Emigration for Canada in London describes in his report the work carried on in the British Isles and on the Continent and gives much useful information for those interested in the nature of the efforts made to attract immigrants. Embodied in that report are extracts from the reports of the various agents in the British Isles. These extracts are published to show the methods of work and the difficulties that have to be met.

The report of the Director of Publicity contains a general summary of the work of the department in securing publicity and in distributing information.

Attention is called to the very full report presented by the Supervisor of the Women's Branch touching as it does upon the activities of the department in women's work both within and outside of Canada. A feature of this report that should not be overlooked is the evidence of the very hearty and helpful co-operation that exists between the department and various voluntary and other organizations interested in this feature of immigration.

Other reports refer to Chinese immigration, Juvenile immigration and to the work of the three Division Commissioners. The report of the work of the Land Settlement Branch will be found in the general report issued by the Soldier Settlement Board and is, therefore, not reproduced in this report.

During the year under review the first steps were taken to establish overseas a Canadian medical examination of oversea immigrants both from the British Isles and the Continent of Europe. Medical officers attached to the Department of Health were appointed for this service. The work on the Continent is done at seven centres as follows: Paris, Antwerp, Rotterdam, Hamburg and Bremen, Danzig, and Riga, these being with the exception of Paris, the principal ports of embarkation. Medical inspection at these ports takes place immediately prior to sailing. There is no provision for Canadian medical examination of immigrants in the interior of the States from which they come. It is

customary for Continental immigrants to arrive at the ports of sailing several days before the date of sailing and it is during this period that their examination takes place.

In the British Isles the arrangement is much easier for the migrant. Canadian doctors are always available at the ports of embarkation while other doctors travel on a regular itinerary visiting weekly, fortnightly or monthly, hundreds of inland points. The examination may take place at any time within four months of the date of sailing and when the examination is completed the migrant is handed a medical card valid for four months. Towards the close of the fiscal year it became evident that the facilities for medical examination in the British Isles might be extended by the use of British Roster Doctors and this matter is now under consideration. All medical examination whether in the British Isles or on the Continent of Europe is without charge to the migrant.

In February, 1928, the general subject of Immigration, including the Immigration Act and Regulations and the work of the department was referred to the Select Standing Committee on Agriculture and Colonization. A number of meetings of this committee were held and a great deal of evidence taken before the close of the year, but the inquiry was continued into next fiscal year and its findings and recommendations will no doubt find ample reference in the report for next year.

A movement not included in the immigration figures is that of returned Canadians. Since April, 1924, a record has been kept of the number of Canadian citizens returning to Canada after an absence in the United States, who left Canada with the intention of making their permanent home in the United States and subsequently returned to Canada declaring their intention of again taking up permanent residence here. Persons who left Canada on visits or for other temporary purpose, have not been included in this summary. Returning Canadian citizens are divided into three classes: (a) those born in Canada, (b) those British born who acquired Canadian domicile, and (c) those who secured naturalization in Canada. The figures since April 1, 1924, are as follows:—

	Canadian born citizens	British subjects who had acquired Canadian domicile	Naturalized Canadian citizens	Totals
1924-25—				
April.....	3,608	289	190	4,087

REPORT OF THE CHIEF CONTROLLER OF CHINESE IMMIGRATION, A. L. JOLLIFFE

The head tax of \$50 imposed upon Chinese in 1885, which was increased to \$100 on January 1, 1901, and to \$500 on January 1, 1904, was abolished under the provisions of the Chinese Immigration Act, 1923, which confines the entry to Canada of persons of Chinese origin, or descent, to members of the following classes:—

- (a) Members of the diplomatic corps, or other government representatives, their suites and their servants, and consuls and consular agents;
- (b) Children born in Canada of parents of Chinese race or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
- (c) (1) Merchants as defined by such regulations as the minister may prescribe; (2) Students coming to Canada for the purpose of attendance, and while in actual attendance, at any Canadian university or college authorized by statute or charter to confer degrees.

During the fiscal year 1927-28 three Chinese immigrants were admitted to Canada; of these two were Chinese women who originally arrived in Canada during 1923 and who were admitted by virtue of a decision of the courts upon payment of the head tax in vogue at that time, and the other a merchant. Two students coming to attend Canadian universities, who will return to China when their studies have been completed, were admitted as non-immigrants. Eleven Chinese were deported during this period under various provisions of the Act.

Permits were issued under section 9 authorizing the temporary admission, for periods up to one year, of 75 Chinese, consisting mainly of actors and actresses under contract to appear in the different Chinese theatres, amahs, and servants of tourists, missionaries, students and teachers. Of this number 28 have left Canada within the year. In the case of actors, amahs, servants and teachers, cash or guarantee bonds are required by the department, guaranteeing that they will engage in no other wage earning occupation and that they will leave Canada within the period of their permit.

The registration carried on during 1923-24 shows a Chinese population in Canada of approximately 55,706. Of this number 48,305 were males, 1,302 females and 6,099 children under 18 years of age, distributed as follows:—

British Columbia.....	31,116
Alberta.....	4,657
Saskatchewan.....	3,961
Manitoba.....	2,146
Ontario.....	9,377
Quebec.....	3,753
New Brunswick.....	270
Nova Scotia.....	404
Prince Edward Island.....	19
Not specified.....	3
	55,706

Five thousand and eighty-seven Chinese registered out during the present year, as provided for in sections 23 and 25 in the case of Chinese leaving Canada with the declared intention of returning. This registration, for which a \$2 fee is charged, entitles the registrant to re-entry within two years. The number of Chinese leaving Canada without registering out and the number allowing their registrations to lapse thereby forfeiting the right of readmission would appear to be increasing.

For the purpose of comparison the following table relating to Chinese immigration is given:—

	Exemptions	Paying Tax	Percentage of total arrivals admitted exempt	Registered for leave	Total Revenue
					\$

REPORT OF COMMISSIONER OF COLONIZATION, W. R. LITTLE

This report gives a summary of

- (a) Empire Settlement work; and
- (b) Immigration from the United States.

EMPIRE SETTLEMENT

Assisted Passage Agreement.—The present Assisted Passage Agreement was made on January 3, 1927, between His Majesty's Secretary of State for Dominion Affairs and the Government of the Dominion of Canada. For the purpose of assisted passage under this agreement, migrants are divided into two classes, viz.,

1. Adults or persons over 17 years of age; and
2. Children or persons under 17 years of age.

Assistance is given only to migrants who are coming to Canada to earn their livelihood on the land or to engage in household work.

Adults.—The following is the appendix to the Assisted Passage Agreement and shows the amounts payable by the immigrant, the shipping companies, the Dominion Government and the Secretary of State in the cases of adults:—

APPENDIX

STATEMENT of Payments Based on Existing Specimen Rates (Subject to Modification in the Event of Alterations or Rates)

Children.—For children eligible under the agreement, the assistance takes the form of a free grant of the total cost of transportation from the port of embarkation in the United Kingdom to the rail destination in Canada in the case of those proceeding.

- As members of families with parents or other approved guardians or proceeding to join their parents or other approved guardians or relations;
- To a home approved by the Dominion Government; or
- Under a scheme approved by the Oversea Settlement Department and the Department of Immigration.

For children migrating under the auspices of voluntary societies passage assistance is given at the rate of \$80 per child to those destined to points east of Manitoba and \$100 per child to those destined to points west of Ontario. These amounts are paid to the voluntary society on account of transportation. Of these amounts the voluntary society pays £11.10.0 per child for ocean transportation and the balance is applied to railway fare in Canada and administrative expenses.

Loans.—Where considered necessary and advisable, loans are made to migrants accepted under the 3,000 Family Scheme and to household workers. A household worker receives a loan up to the amount of the difference between the minimum ocean rate and the migrant's contribution to ultimate destination as shown in the index printed in this report provided that the loan does not exceed £6 per migrant. These loans are free of interest and are repayable by instalments as determined by the Department of Immigration.

3,000 Family Scheme.—The total number of families brought to Canada during the past three years under this Scheme was 2,669, comprising 14,946 persons. Of this number 5,180, including heads of families, were placed in farm and household work. Up to the end of the fiscal year there have been 314 withdrawals and cancellations.

New Brunswick Land Settlement Agreement.—An agreement was made on August 4, 1927, between His Majesty's Secretary of State for Dominion Affairs, the Government of the Dominion of Canada and the Government of the Province of New Brunswick for the settlement within a period of not more than six years of 500 families on improved farms in the province of New Brunswick. Under this Scheme, the Provincial Government provides the farm and the British Government advances \$1,500 for stock and equipment. Repayment is made on a 25-year amortization basis with interest at 5 per centum per annum. The Dominion Government recruits and selects the families and co-operates with the Provincial Government in making adequate arrangements for reception and settlement. Families under this Scheme also participate in the Assisted Passage Agreement. Any loss of interest incurred on the price of a farm during the first two years as a result of the failure of a settler is shared as follows:—

Dominion Government..	25 per cent
Provincial “	25 “
British “	50 “

Losses on stock and equipment are shared as follows:—

British Government..	50 per cent
Dominion “	50 “

Arrangements have been made to recruit 100 families for settlement on improved farms in the Province of New Brunswick during 1928. Prior to the end of the fiscal year three families had arrived and 71 had been approved for sailing.

Nova Scotia Land Settlement Scheme.—On December 5, 1927, an agreement was made for the settlement within a period of not more than six years of 500 families on improved farms in the Province of Nova Scotia. This Scheme is similar to the New Brunswick Land Settlement Scheme but has not yet come into operation.

Manitoba.—The Department of Immigration negotiated with the British Government a Scheme for the settlement of 200 British families on improved farms in the Province of Manitoba. This Scheme is similar to the New Brunswick and Nova Scotia Schemes but has not yet been finally approved by the Provincial Government of Manitoba.

PROVINCIAL RECEPTION AND DISTRIBUTING FARMS

For many years juvenile migrants have been brought to Canada under the auspices of voluntary immigration societies.

Tripartite agreements, however, have now been made with several Provincial Governments for the operation of provincial reception and distributing farms. Boys between 14 and 17 years of age brought to Canada under these Schemes are received at provincial headquarters farms and then placed in selected farm homes. The wages commence at \$10 per month plus board and lodging, washing and mending. The farmer undertakes to pay the boy a certain sum each month and to remit the balance to the Provincial Government to be placed to the boy's credit. The Provincial Government selects the home, furnishes aftercare, advice, protection and what supervision is necessary for a boy's welfare for a period of three years after his arrival in Canada.

Voluntary societies may operate through provincial centres by supplying the colonization officials of Provincial Governments with the names and addresses of suitable homes for the placement of boys, and by the oversea representatives of voluntary societies submitting the names and addresses of suitable boys to the oversea agents of the Provincial or Dominion Governments.

The Provincial Government supplies the farm and the following cash contributions are made on account of the operation of the farm:—

Provincial Government.....	\$10 per boy
Dominion Government.....	\$10 “
British Government.....	\$20 “
<hr/>	
Total.....	\$40 “

The British Government and the Dominion Government share equally in the cost of transportation.

Ontario.—The Ontario Government have established a farm at Vimy Ridge, near Guelph, as a reception and distributing centre. These boys are placed in employment with farmers who have been selected by the Ontario Government. During the fiscal year 399 boys were received at and distributed from this centre.

Manitoba.—The Provincial Government of Manitoba have designated the Manitoba Agricultural College as a reception and distributing centre; 101 boys were brought forward and placed through the Manitoba Agricultural College.

New Brunswick.—The Cossar Farm at Lower Gagetown has been designated as a provincial headquarters farm for the reception and distribution of British boys.

Nova Scotia.—The department has been negotiating with the Provincial Government of Nova Scotia with a view to establishing a reception and distributing centre in that province.

Similar proposals were made to the other western provinces who, so far, have decided not to participate in this Scheme.

British Immigration and Colonization Association.—This association has established a farm on the island of Montreal as a reception and distributing centre for boys destined to eastern Ontario and the Eastern Townships.

BOYS' LAND SETTLEMENT SCHEME

This Scheme is a further development of the provincial training centres for British boys. An agreement was made on the 1st of July, 1927, between the British and Canadian Governments which involves an expenditure of \$5,000,000 between 1928 and 1937 for the settlement of British boys on farms in Canada. The agreement is applicable to settlers from the United Kingdom,—

- (a) who (i) have proceeded to Canada since the date of the Empire Settlement Act, i.e. May 31, 1922, provided that preference shall be given to settlers who have been trained at the provincial headquarters farms; (ii) have attained their 14th but not their 20th birthday at the time of their arrival in Canada; (iii) have not come to Canada with their parents or to join their parents in Canada;
- (b) who have reached their 21st but not their 25th birthday at the date of application for assistance;
- (c) who are in possession of savings amounting to approximately \$500;
- (d) who have acquired the necessary experience of farm work in Canada by working as agricultural labourers for wages or in such other manner as the Dominion Government may consider sufficient provided that the Dominion Government shall be satisfied that the applicants are industrious, economical and capable of managing a farm;
- (e) in respect of whom a Provincial Government makes a cash contribution of not exceeding \$250 per settler.

The agreement provides that the total advance in each case shall not exceed \$2,500. Of this amount \$1,250 is to be advanced by the British Government, \$1,000 by the Dominion Government, and \$250 by the Provincial Government. Several Provincial Governments have already agreed to participate in the above Scheme and agreements are now being negotiated between the department and several Provincial Governments.

The Land Settlement Schemes mentioned in this report involve an estimated expenditure of \$24,000,000, excluding settlement or administrative expenses and cost of transportation.

NOMINATIONS

In the annual reports for the years 1925-26 and 1926-27, respectively, an explanation was made regarding direct, descriptive and bulk nomination. The first reduced passage agreement became effective on January 1, 1926. Prior to that date loans were made to migrants for transportation and nominations were endorsed throughout the country by managers of chartered banks, who rendered splendid co-operation. One of the main objects of the reduced rate was to reduce loans to a minimum and thereby reduce the cost of collection. When loans had, therefore, in a large measure, been discontinued, it was not necessary to have the nomination forms endorsed by bank managers. The district land superintendents of the department were then instructed to investigate and report on nomination cases arising in Canada. Every effort was made to develop the direct nomination system with its offer of satisfactory placement and annual employment in preference to bulk nomination which, during the past year, disclosed a comparatively small percentage of satisfactory settlement. Any British subject resident in Canada may nominate any experienced or inexperienced farm or household worker.

Bulk Nomination.—The department assumed responsibility for the placement of all experienced farm workers and household workers, who could be recruited through departmental sources in Great Britain, and instead of fixing quotas for farm workers as in the previous year, invited the Colonization Departments of the two Canadian railways, the Hudson's Bay Company and other organizations, to place in the hands of the district superintendents of the Land Settlement Branch of the department estimates of the number of experienced or inexperienced farm workers they could satisfactorily place in each district. By this system it was possible to eliminate delay and group movement could be increased or reduced from month to month as the circumstances required. Co-operation in recruiting was welcomed from every source, but the responsibility for final selection of those who received assisted passage rested with oversea officials of the department.

Aftercare.—Under the Assisted Passage Agreement, the department has undertaken to give aftercare for a period of five years. Against aftercare service the British Government makes a cash equation, which was one of the main factors in establishing the reduced rate. Every organization furnishes the department with a statement showing the name and address of the farmer who employs the migrant. This information is necessary so that the service of aftercare can be rendered.

The department has a subsidiary agreement only with the British Settlement Society of Canada which undertakes recruiting, placement and aftercare.

UNITED STATES

The office at Portland was closed on October 31, 1927, and the immigration work in the Portland area was assigned to the agent at Manchester, N.H. There are now sixteen Information Bureaux in the United States.

SUMMARY of the Results of Immigration Work at each Canadian Information Bureau in the United States for the fiscal year ended March 31, 1928.

Agency	Number of inquiries	Settlers reported by		Number carloads	Value of carloads and effects	Good prospects outstanding

Increase.....	8,993	-1,696	3,982	27	969,295	

The above table has been prepared on the basis of the volume of business transacted by each agent, e.g., a total of 2,785 persons from Fargo, the lowest being 156 as reported by the agent at Columbus, Ohio. The first column under the heading "Settlers reported by Agent" shows the heads of families and single persons other than heads of families. The second column includes the total reported by the agent. In the column showing "Settlers reported by Stat. Br." is also included those who were not reported by the agents in the various districts but who were examined upon application for entry at the boundary port. A considerable number of settlers from the United States enter Canada by automobile. The statement regarding the "Value of carloads and effects" is prepared from information given by the settler to the immigration agent.

Agricultural products were displayed at sixty-five exhibitions, where a total of 951 good prospects were established.

REPORT OF THE DIRECTOR OF EUROPEAN EMIGRATION, J. BRUCE WALKER

I beg to submit herewith the annual report of the Director of Emigration for Canada in Europe for the year ended March 31, 1928.

You will find attached hereto divisional reports dealing with various aspects of the work. These will speak for themselves, and I only desire to offer a word or two on the general conditions with respect to emigration to Canada from Europe.

The last three months of the fiscal year have shown a slight decrease in the volume of the movement, as compared with the same period in 1927. This decrease is due to several more or less correlated causes. There is something of a slump in marine transportation of every kind. We were later than usual

last fall in starting our advertising operations. The reduction in the number of farms available for families under the 3,000 scheme had a marked influence on the movement, and from one cause or another—chiefly hostile propaganda from certain sources—a good deal of prejudice had been worked up against the Canadian medical examination, particularly in the British Isles. These influences have combined to reduce the flow, but I am satisfied that while these influences may have reduced the flow, they have not reduced the quality of the migrant, and, after all, mere numbers is not everything.

It was natural that with the introduction of a new scheme such as the Canadian medical examination, there should have been difficulties, incongruities and delays. These were not, however, due either to the scheme or to the conception of it, but rather to the natural inexperience in the application of the regulations, and to some disinclination to submit to a medical examination that had been wrongly advertised as severe and restrictive. The immediate shipping interests and their ramifications throughout the country looked with suspicion upon the Canadian medical examination, and some interests sought the medium of the public press to criticize our action; all these influences, some more, some less, militated against the increase in numbers which we had reason at one time to expect should have marked our efforts in Europe this year.

The medical examination is becoming generally accepted, the difficulties and delays incidental to a new system are passing away, and the machine is beginning to work smoothly. A noticeable change in the sentiment of the shipping interests and their representatives has been due to the readiness with which the medical health authorities have sought to meet the criticism and complaints of interested parties.

I am confident that the year that is coming will show a constantly increasing stream of a most desirable class of persons making Canada their permanent objective. If it is found possible to get the year's emigration efforts started in the early fall instead of later results will come more readily, more satisfactorily and more economically.

The whole staff in Europe has worked cordially and enthusiastically, and I believe entirely in the interests of our Dominion. To the loyalty and efficiency of my immediate aides I pay a grateful tribute.

EMIGRATION WORK

The following is a summary covering the work of the emigration agents in the British Isles.

Lectures.—The lecture season this year was again concentrated into the month of October, after which the provincial agents gave their time to the after-work of interviewing prospects and following up the interviews secured at their lectures. A total of 347 lectures was delivered as per the schedule given below.

SUMMARY of Statistics for Lectures, 1927-28 Season

District	Total number lectures	Attendance at lectures	Families	Prospects single	Domestics
Bangor.....	40	13,404	41	79	5
Belfast.....	31	9,190	35	64	3
Birmingham.....	47	6,922	28	26	4
Bristol.....	29	3,087	16	8	1
Glasgow.....	35	4,548	34	44	5
Inverness.....	51	2,968	5	20	4
Liverpool.....	50	6,440	15	44	11
London.....	37	2,790	5	2	5
York.....	27	3,703	8	8	1
Totals.....	347	53,052	187	205	39

In addition to the above lectures, many were given at military centres in the United Kingdom, at the request of the War Office; also several lectures were given to the Ministry of Labour trainees, and at Women's Guilds.

The expenditure on lectures was £2,368 3s. 3d.

Lantern Slides.—We have had many demands for the loan of lantern slides. During the year the sets in use in the United Kingdom were shown about 640 times. From our stock in the London office we loaned sets of slides on no fewer than 214 occasions. The demand for these slides came from all parts of the British Isles.

Films.—There is an increasing demand for the use of films, and during the year the supply at the London office was frequently insufficient to meet the demand. The film "Twenty Minutes in Canada" has been in use for such a prolonged period that the request is usually for something new, which as yet we are unable to supply.

Exhibitions.—During the year we were represented at 103 Agricultural Shows. These shows were attended by a total of 890,630 visitors, and the Canadian Government stands were visited by 256,928 persons, and 190,052 pieces of literature were distributed. Below is a summary of statistics of Agricultural Shows attended this year:—

SUMMARY of Statistics for Agricultural Shows, 1927 Season

District	Total number of shows	Total attendance at shows	Total attendance at stands	Literature distributed	Prospects		
					Fams.	Sing.	Dom.
Bangor.....	16	72,559	23,800	19,375	68	130	5
Belfast.....	10	97,297	31,700	27,500	3	5
Birmingham.....	11	90,811	22,620	20,920	32	24
Bristol.....	13	179,625	58,334	24,697	23	60	1
Glasgow.....	15	132,800	29,179	17,760	73	26
Liverpool.....	18	179,711	42,120	40,650	62	84
London.....	4	32,870	22,000	19,000	8	12
York.....	16	104,957	27,175	20,150	29	16	1
Totals.....	103	890,630	256,928	190,052	298	357	7

These prospects figures include only names and addresses actually given to our officers attending the Shows. There is a natural indisposition on the part of farm workers and others to come forward at these Shows for fear of the effect such a visit may have on their present employers; some seek for information at the stands and many of them write in afterwards. We have found that many callers at our various exhibition stands state that they prefer not to give their names and addresses.

In addition to the Agricultural Shows, there was a large number of Empire Displays, Empire Fairs, Fetes, Shopping Weeks, etc., to which we were able to send exhibits. At these functions there was very little opportunity of obtaining the names and addresses of people, but undoubtedly such displays have a beneficial effect on the work of the Department.

The sum expended on exhibitions and exhibits was £2,171 17s.

Motor Exhibition Wagons.—During the season the two exhibition motor wagons were able to visit 412 towns and villages. The majority of these were off the beaten track and in districts remote from centres where Agricultural Shows were held. The wagons also visited 84 schools, at which the exhibits were displayed to the pupils who were paraded while the attendant on the wagon delivered a short talk on Canada. As a rule we find schoolmasters in

the British Isles are favourably disposed towards a visit from our officers, and on all visits the senior pupils are given copies of the Atlas, and a wall map is left with the teacher for school use.

Below is a schedule showing the work of the exhibition wagons during the fiscal year, from which it will be noted that the total mileage covered was 3,772. The wagons were opened for display at 35 markets, and 98,935 pieces of literature were distributed.

STATISTICS *re* Exhibition Wagons, Fiscal Year 1927-28

—	Towns and villages visited	Schools visited	Markets attended	Shows attended	Miles run	Prospects secured			Interviews held	Literature dist.
						F.	S.	D.		
Car No. 1.....	112	16	25	7	1,369	5	29	4	86	53,435
Car No. 2.....	300	68	10	1	2,403	18	45,500
	412	84	35	8	3,772	5	47	4	86	98,935

It has frequently been found desirable to utilize the exhibition motor wagons at small Shows. There were a number of requests for the wagons to participate in pageants, with which it was not possible for the department to comply, as the wagons were otherwise employed.

The total expenditure on account of the two motor wagons was as under:—

Car No. 1—£299 13s. 10d.

Car No. 2—£327 0s. 1½d.

Advertising.—The newspaper advertising for the department was placed in the hands of Messrs. G. Street & Co., Limited, and at the beginning of January advertisements were inserted in 457 newspapers and journals in Great Britain and Northern Ireland. From time to time as the necessity arose, the list was slightly augmented. Attention was concentrated on the various schemes for settling men and youths on the land and women in domestic service. In addition to the standard advertisements a very considerable number were inserted by the agents in the provinces for the purpose of advertising their lectures, meetings and interviews with prospects, etc.

The total sum expended in advertising during the fiscal year was £10,073 13s. 7d.

Canadian Official Press Bureau.—The Canadian Official Press Bureau continued to actively officiate throughout the year, and during the period under review secured widespread publication of propaganda matter in the columns of the British press. About sixty per cent of the items appeared, and the returns for this year show an average of 500 a month. The total number of articles and items sent out was 1,186, and the aggregate circulation of the journals in which these appeared was 368,274,165.

Literature.—Over half a million pamphlets were distributed throughout the British Isles during the year. Some literature printed in the French language was despatched to the continental offices for distribution there. The booklet, "Sixty Years of Canadian Progress," has fulfilled a need for something less expensive than the Year Book, containing, as it does, useful statistics, and the book is welcomed by lecturers, teachers and journalists.

Towards the close of the fiscal year considerable consignments were received, including new editions of "Farm Opportunities in Canada" and "The House-worker in Canada", also the newly published "On the Doorstep of Prosperity in Western Canada", which is likely to prove very popular.

The issue by the department of a calendar, 65,000 of which were sent to the British Isles for circulation, aroused great interest in the Dominion and increased the demand for literature, particularly in rural schools, following notices in educational journals. School teachers throughout the United Kingdom are unanimous in asserting that the Descriptive Atlas of Canada is the most interesting, attractive and useful handbook they have seen. After it has been used in class, children are allowed to take their copies home, and thus the interest of the parents in the Dominion is aroused.

The following literature has been received and distributed during the fiscal year:—

Pamphlets Received	—	Pamphlets Distributed	—
On hand 31-3-27.....	554,254	By Agents.....	311,640
From the Department.....	615,650	By London.....	107,562
From other sources.....	10,561	By Cars.....	98,935
Total.....	1,180,465	On hand 31-3-28.....	519,137
		Total.....	662,318
			1,180,455

Peonies.—During the months of June and July consignments of peonies aggregating 100,000 blossoms were received in this country. Almost without exception the blooms arrived in perfect condition and only partially expanded. Supplies were sent to each office in the United Kingdom for distribution in quarters where they were most likely to be of good advertising value to Canada. It is not too much to say that the appearance of these peonies created quite a sensation. Bunches were sent to Their Majesties, prominent statesmen, the cabinet and members of Parliament, but were chiefly displayed in the windows of booking agents. These flowers lasted well, and were certainly one of the best advertisements Canada has had for a long time, and I feel sure the exhibit went a long way in removing the impression that Canada is a land of snows.

Empire Settlement Warrants.—I attach a schedule showing the number of persons who have received assistance under the Empire Settlement Agreement, and in whose favour warrants have been issued.

(These figures include expenditures by the British Government.)

British Family Settlement Scheme.—We are engaged this year in completing the 3,000 British Family Scheme, under which the Governments of Great Britain and Canada are co-operating to settle families on farms in Canada.

Family applications to the number of 931 have been investigated during the past fiscal year and submitted for the consideration of the London office and the Oversea Settlement Committee. The net approvals, after deducting withdrawals and cancellations are 611 families.

During the fiscal year 876 families, comprising 4,368 souls sailed for Canada under this Scheme.

This spring we are forwarding families under the 500 British Family Scheme of the province of New Brunswick. Under this Family Settlement Agreement the province of New Brunswick provides the land for the settlement of the families. In other respects conditions are similar to the 3,000 British Family Settlement Scheme. It is proposed to forward one hundred families during 1928 for settlement in New Brunswick. 78 families have been accepted up to this date under the scheme. 14 families have sailed, comprising 68 souls.

Following are statements showing the action taken on family applications under the 3,000 Family Settlement Scheme and the New Brunswick Family Scheme.

British Columbia.....	608	165
	8,052	3,738

Juvenile Emigration.—The following statement shows the number of children who have migrated under the auspices of the Juvenile Emigration Societies, under the Empire Settlement Act during the fiscal year:—

Church of England Council of Empire Settlement.....	129
Church Army.....	164
Salvation Army.....	96
Catholic Emigration Society.....	264
Orphan Homes of Scotland.....	48
Dr. Cossar.....	70
Fegan's Home.....	40
Church of England Waifs and Strays Society.....	117
British Immigration and Colonization Association.....	818
Dr. Barnardo's Homes.....	103
National Children's Home and Orphanage.....	34
Middlemore Homes.....	12
Mr. Oliver Hind.....	7
	<u>1,902</u>

These figures show an increase of 319 children on the number that proceeded in the fiscal year 1926-27.

Correspondence.—The number of letters received and despatched during the past fiscal year is as follows:—

Letters received—460,462;

Letters despatched—513,876,

showing an increase as compared with the previous fiscal year of 43,879 and 27,942.

Parcels.—The number of parcels despatched from the London office during the fiscal year 1927-28 was 36,872, as compared with 29,432 during the last fiscal year.

Callers.—

The following extracts from the individual reports of our various Agencies will no doubt be of interest:—

LIVERPOOL AGENCY

In submitting the annual report for the Liverpool office and district, for the year ended March 31, 1928, I have to record a year of strenuous activity on the part of all interested in migration, and if it was possible to record at the same

time a result in proportion to the efforts put forth then the movement Canada-wards would be much larger than it is at the present time, but on all sides one hears of a general indifference with regard to migration and as a consequence a smaller movement. While it may be difficult to assign any one reason for this condition of affairs, there is general agreement that the continued payment of unemployment benefits is one of the chief causes. The availability of unemployment insurance undoubtedly creates a feeling of security in the minds of those who would otherwise give greater thought to their future and look overseas for the opportunity and prospects denied them and their dependents here. As far as experienced agriculturists are concerned, there are few, if any, farming districts in which there is a surplus of this class of help, and farming employment as a rule is good and at fairly high wages. Another contributory cause is the fact that a certain section of the British press has given space to adverse publicity regarding our Dominion, and this creates a feeling of uncertainty in the minds of would-be migrants who do not always hear of the successful settler. It has been the constant work of the staff to use all the various channels of our activities to counteract these adverse influences. Early in the season our attendance at seventeen agricultural shows gave the opportunity of personal contact with inquirers many of whom came from agricultural districts, and who were not only interested to view our display of Canadian products, but sought information and while showing interest some inquirers indicated in the course of conversation satisfaction with their present circumstances and employment, and did not show any particular desire to look beyond immediate prospects and what their future might be by taking advantage of the greater opportunities and broader outlook awaiting in our Dominion. It is with such inquirers that we make good use of the very satisfactory letters we continue to receive from those who have migrated from this district, and with whom I make it my aim, as far as possible, to keep in personal touch.

BIRMINGHAM AGENCY

The number of callers at the office is also lower than in the previous twelve months and the number of letters received slightly fewer. There may be many explanations for this but certainly one that applies to this particular district is that industrial life is showing more activity in the Midlands of England than at any time since the war. Furthermore, the depression in agriculture has sent men to seek work in the towns, and when they have well-paid employment they do not look our way. I do not think that the criticisms of Canada which have cropped up occasionally have had a widespread effect so far as this area is concerned, though no doubt some persons are deterred by this kind of thing.

Two features, however, of our work show a pleasing record. The number of people with capital now going forward is distinctly on the increase, and the number of domestic servants of a really good type is markedly in advance of that shown last year.

As regards the outlook for the future, it is very difficult to attempt to prophesy. It is certain that people discuss Canada more than at any time for years past, but it is equally certain that when industrial life is active and there is growing opportunity of getting work here people of the working-class type will prefer to remain in familiar surroundings. This district is becoming more and more industrialized, and Birmingham, Coventry, Walsall, and Wolverhampton are drawing man-power from the surrounding districts. It seems that this will soon be just one huge city.

BRISTOL AGENCY

During the months of October and November twenty-nine lectures were given by this agency. They were all well attended and literature distributed

at each; also information and interviews were given before and after. At some quite a number of names and addresses were obtained, but, as usual, both married and single men hesitate to make themselves conspicuous and give their names for fear of it getting to the knowledge of the farmers or others for whom they are working. However, many of these we get correspondence from afterwards. As to the amount of good done either at lectures or shows it is difficult to estimate, but I believe both are well worth what they cost, and it is often a long wait for results. Two instances have come to my knowledge this winter, which I think are well worth mentioning. In the first case I was asked to meet three farmers in the county of Cornwall whom I did not know. The interview disclosed that each of them had met me some time ago at shows and lectures. They intend going to Canada this summer to look out farms for themselves, and they have considerable capital. In the other instance, just at the close of the war I lectured at Kingston in Somerset, and lately a Mr. J—— called on me and reminded me of my lecture given in the school house and said that his eldest son was so impressed by the lecture, although he was only then at school, that after leaving he went to Nova Scotia and worked with farmers in that province for three years. During that time he decided there was a great opening in that province for the manufacture of pure jams and marmalade. He returned to England, took a year's course at a university in scientific methods of jam-making, and now has an up-to-date jam factory in Nova Scotia with a capacity of two tons of finished product per day. He is also putting in a hydraulic cider press.

YORK AGENCY

The past year has been one which shows that the interest in Canada is maintained in this district and in certain phases of the work has shown marked improvement.

One of the noticeable features has been the increased number of women going forward to engage in household work, an increase of 38 per cent over 1927 being recorded. The increase is largely to be found in the numbers proceeding under the Empire Settlement Act at the reduced rates.

A further increasing and important branch is that concerning boys for farm placement between the ages of 14 and 17. In this connection a very strong Committee in Newcastle has taken up the question and has provided a well equipped training hostel, as well as making arrangements for some practical work in handling horses and simpler implements with large horse transport concerns and farmers in the Newcastle District. This is a line of endeavour calling for every possible encouragement.

A very large increase in the number of applicants for training on farms in England under the Ministry of Labour Scheme prior to proceeding to Canada has been shown over the previous year. It is further of special note that the general type of applicant being put forward is much better than was the case previously. This appears to be a work which should be materially increased and should prove greatly to the advantage, not only of Canada and those employers who engage these men on arrival, but especially to the applicant himself. Several very encouraging letters have been received from men who sailed in 1927, after having taken a short course of training under this Scheme.

BANGOR—WALES AGENCY

It is with pleasure that I report, that there has been considerable increase in Emigration from Wales as compared with former years, and I am of opinion that during this year more emigrants went out to Canada than during any year in the history of the Principality. When it is considered that the population of Wales is only slightly over 2,000,000, the emigration on a percentage basis, would be higher than from England, Scotland or Ireland.

This I attribute chiefly to the success of those who went out under the 3,000 Family Settlement Scheme, the total number of families accepted under the Scheme being 120. From reports it would appear that only about 6 per cent failed, and the encouraging letters received from those who have been successful, together with the splendid publicity given by the press to these, brought forward over 200 applications under the Scheme for 1928. If it had been possible to place a further number of families this year, I have no hesitation in stating, that I could easily have selected 180 good families.

During the year I only heard one complaint in respect to families who had gone out. It would therefore appear, that even the small percentage, who did not make good, were able to find some other work in Canada.

The present spring, I regret to report, has shown a marked decrease in the applications received from experienced farm workers. This may be attributed to the following causes:—

(1) Each year shows a decrease in the number of men employed in Agricultural Work in Wales, owing to so much land being under pasture. It is quite evident that fewer men are being employed on the land from year to year. Those unable to find employment on the land have either drifted to other work or emigrated, and the few boys who are started at Agricultural Work, makes it clear that we must anticipate for the future a marked decrease in the number of experienced farm workers.

(2) Those who formerly worked on the land have sought other work, under which they can receive benefit when out of employment through the dole, and this has a tendency to keep men in this country.

(3) The industrial depression has thrown out of employment thousands of men desirous to work, and who would be prepared to take up farm work, were it not that the capital they had, has been exhausted. There are thousands of young men who are not even able to find the £5 or £6 necessary before they can pay their way even under the reduced rate.

(4) In the country districts it has been found that some experienced farm workers are not hurrying to be medically examined, because they are not able to get away from their work on the land during the day, and they are reluctant to ask their employers for time off. A great number of farm workers live a good distance from the Centre where they are to be medically examined, and it means that they have first to get "leave off" their work to go to the nearest town to be photographed and another "leave" to be medically examined and interviewed.

This department was represented at fifteen one-day shows, and at the Royal Welsh Agricultural Show which was held at Swansea for four days. I also assisted at the Royal Show at Newport.

A very large number of inquiries were made, especially at the Royal Welsh Agricultural Show at Swansea. It is very difficult to find out the number of emigrants, who have been first of all stimulated with the idea of emigrating to Canada through these shows. The literature distributed travels far, and it has been found in numerous cases, that the applicants sought their first advice at our Stands, yet not applying definitely until two or three years after the show.

During the month of November and the first two weeks in December (1927) thirty lectures were delivered, and I had arranged them in some of the large centres, so as to give an opportunity in every county for those interested to attend. The lectures were well attended, in many places, the doors had to be closed before the lecture commenced and hundreds failed to gain admission.

GLASGOW AGENCY

The 3,000 Family Scheme is now attracting the attention of even a better class of agricultural worker than it has in the past. The scheme is becoming better known. In many cases a farm worker has gone out to Canada under the scheme, and, according to his reports sent back, has made much better progress than his old country employer at home during the same period. This statement has been made to me by farmers in this country, and has been responsible for several real good farmers selling up here and going out under the scheme this year. There is no doubt but that the standard, or quality, of the families going out this year is higher than in previous years.

Experienced single men are becoming very scarce and hard to get. The agricultural areas of Scotland have been very thoroughly combed. In many cases the good single man in this country can secure as high wages here as in Canada. Of the inexperienced men there is no scarcity but the majority of these would never make farmers.

The Boy Scheme is, I believe, one that will stand more development, and offers the most helpful migration in years to come. Scores of boys leaving the schools have no hope of employment. The Boy Scheme, if handled direct by the Government, and developed, should call forth ready response. I believe, in the Scottish area.

The Women's Department continues to flourish. There never seems to be any scarcity of domestics in Scotland. It always seems to me that the women in this country are more ambitious than the men.

INVERNESS AGENCY

Callers at the office, 2,697.

Callers show an increase of 524 over last year. On account of the scattered area and the inadequate transportation facilities, the majority of interviews still continue to be held outside of Inverness. It is impossible for even single applicants from any distance to come to the office.

Publicity and Propaganda.—Publicity and propaganda work were carried out through the following channels:—

(1) Standard advertisements inserted in local newspapers through London office.

(2) Publication in local newspapers (at the request of the agent) of letters received by the agent from families, single men and domestic workers who went out under the Empire Settlement Scheme during 1927-28.

(3) Publication and circularization of copy letters (in leaflet form) received by agents from families, single men and domestic workers who went to Canada under the Empire Settlement Scheme during 1927-28. (A sample letter is attached.)

(4) Circularization, by leaflets and literature of married and single agricultural workers in the principal agricultural districts in the area, names and addresses being obtained from the voters' rolls.

(5) Lectures.

(6) Advertised interviews.

(7) Distribution of posters to outlying districts.

(8) Distribution of calendars, atlases and wall maps to schools, clubs, shops and private individuals in country districts.

(9) Distribution of peonies.

(10) Co-operation with shipping agents.

Adverse Propaganda.—The anti-emigration feeling amongst employers in this Area is very strong, due to the best of the agricultural population leaving. A Land Settlement official who was attached to this office for some three months this year, remarked on the evident unpopularity of the emigration schemes.

It is difficult to ascertain all the reasons for the antagonistic attitude amongst employers and the general public to emigration schemes, but several of the obvious causes have been dealt with under the heading "Empire Settlement Act".

It is considered that too many organizations are dealing with publicity work and interviews.

Under the present system, applicants require, in many cases, to attend twice for interview, once with the transportation company representative and again with the government agent, with, of course, the medical examination following. In addition, they receive correspondence from the transportation company's representative, then from the shipping agent and, finally, from the Government office. The applicants get confused and they feel they are being sought after too eagerly. The uneducated mind cannot realize that all this propaganda work and expense may be worth while to the British and Canadian Governments. They judge only the obvious, with the result that all over the country there is a growing suspicion against Canada and her schemes.

The fact that shipping agents are receiving commission on bookings is also a cause of suspicion. The public does not distinguish between a shipping agent and a Government agent, and there is the general idea that everyone connected with emigration is interested from a financial point of view, in the number of applicants who proceed. One satisfied settler wrote:—

DEAR MISS MACDONALD,—I now take the liberty of writing you these few lines to let you know how we are getting on in Alberta. It certainly is a splendid country. My husband and I like it very well. We would never dream of going back to live in Scotland again. We would not mind it for a holiday. It's getting on for three years since we came out here.

Our destination was supposed to be Edmonton, but we were taken off at Hardisty and put on a farm five miles from town. My husband worked for a farmer there. Then we were moved up here on the 3rd of April last year, and doing very well. There were just thirty acres of land broken, but we broke twenty-nine acres last year and twenty this year, so we are getting quite a nice farm. I am milking seven cows, feeding six calves, and I am feeding twenty pigs, so I have my work cut out for me.

We have lovely heavy crops this year, and I have a splendid garden of all kinds of vegetables. I am very busy just now packing Saskatoon berries for winter.

I have a sister-in-law that would like very much to come out next month, so I would be very much obliged to you if you would communicate with her and see how much her fare would cost.

There is a place near us that is waiting for her, so if she hasn't enough money could you, through any of your organizations, advance her a little? We could pay it back in the fall, or she could do it herself. Her address is Miss..., Newtonmore, Invernessshire.

Mrs. JOHN DUNBAR.

DUBLIN AGENCY

Conditions in the Irish Free State are similar to those obtaining in the previous year, consequently there was little change in the nature of our work. Active propaganda being inadvisable, the office continued to be an Information Bureau. In the main we confined our efforts to giving reliable information and advice to voluntary enquirers, interviewing prospective emigrants, and furnishing with Directional Certificates suitable agriculturists. On the whole we secured a fair amount of publicity by the judicious distribution of the literature specially compiled for use in the Irish Free State. When interviewing and writing to prospective emigrants we suggest that their friends may secure literature and information concerning the Dominion by applying to the office; when a school-teacher applies for a Wall Map of the Dominion we also send a few copies of the Atlas.

When interviewing applicants about the country we ask for character reference purposes, the name of his or her clergyman, and make a point of calling upon him, thus effecting the acquaintance of the local parish priest or curate. We keep in close personal touch with the bulk of shipping agents, of whom there are about 400, calling on them on every possible occasion, discussing Canada, keeping alive their interest and eliciting their co-operation in encouraging desirable settlers to locate in the Dominion. The constant supply of press notices, bulletins, periodicals, etc., being received are passed on to the press, agricultural colleges, libraries, etc. Some of the most influential of the Irish daily newspapers are decidedly friendly in their attitude to Canadian affairs and in almost every edition publish articles and paragraphs of Canadian interest. One journal in particular is most outspoken in its advocacy of emigration to Canada. Recently in an editorial this paper pointed out that most Irish emigrants go to the overcrowded urban life of the United States there to take up low-grade, unskilled occupations, and it declared that "it would be better for themselves and for Ireland if these emigrants carried their sturdy energies to the farms of Canada where they might win their own farms and found happy and healthy families."

BELFAST AGENCY

A very great interest has been manifested in our Dominion during the fiscal year just closed. This interest is clearly shown by the very increased number of inquiries received from those residing in Northern Ireland and by the splendid attendance at the various lectures given in this district. The Government exhibits at the various agricultural and horticultural shows where the department was represented were also well patronized.

There has been an exceptionally fine type of men, women and children leaving these shores within the last twelve months who hope to make their homes in our Dominion, and it is gratifying to note that the majority of these are experienced agricultural families, farm workers and household workers.

CONTINENTAL EUROPE

Inspectional offices on the Continent are established at Paris, Antwerp, Rotterdam, Hamburg, Danzig and Riga. The Canadian officers in charge at these places are men trained in inspectional work and having a knowledge of two or more languages. The inspection though not final, has to do with the ability of immigrants to comply with the immigration regulations applicable in each case and the general fitness of immigrants for work in Canada. Those who pass primary inspection are given an examination visé which is placed on the passport.

The number of visés granted during the fiscal year is as follows:—

Antwerp.....	12,694
Paris.....	10,342
Rotterdam.....	3,059
Hamburg.....	8,590
Danzig.....	18,110
Riga.....	2,219

The number of visés does not always show the number of persons concerned because a whole family may be included in one passport.

Upwards of 300 agricultural families, having a capital of \$1,000 or more secured visé for Canada during the year, the total declared capital in possession of these families being \$878,351.

STATEMENT of Primary Civil Inspection showing passports viséd, rejections, appeals, and causes of rejections, etc.

Office	Ad- mis- sions	Re- jec- tions	Appeals			Causes of Rejection								Letters in	Letters out	Inter- views
			Sust.	Dismi.	Pend.	PC.	PC.	PC.	Sec. 3		SS.					
						182	183	185	b.	c.	j.	t.				
Antwerp.....	12,694	949	83	137	82	4	311	82	88	71	53	70	10,179	17,760	6,519	
Paris.....	10,444	777	25	131	95	28	491	321	55	60	52	28	5,460	6,205	6,065	
Rotterdam.....	3,059	204	26	70	24	52	46	14	40	1	2	4,500	4,689	3,982	
Hamburg.....	8,590	514	112	138	98	115	38	24	203	15	11	4,264	5,435	2,547	
Dansig.....	18,110	462	138	219	123	179	21	52	117	13	3	8,909	6,099	2,611	
Riga.....	2,210	191	55	36	38	1	115	12	7	20	11	12	3,194	3,567	553	
Total.....	55,116	2,797	439	736	460	33	1,293	520	240	522	145	126	31,506	43,755	22,377	

NOTE.—Some aliens were rejected on account of more than one statutory cause, consequently the number of rejections will not correspond with the causes of rejections, e.g. one alien may have been rejected upon two grounds, e.g., P.C. 182 and P.C. 183.

REPORT OF THE DIRECTOR OF PUBLICITY, ROBERT J. C. STEAD

Publicity activities designed to secure for Canada a movement of desirable settlers were conducted on a considerable scale during the fiscal year under review. These activities were centralized mainly in the British Isles and the United States. Publicity in the United States is handled directly from the Publicity Branch of the Department of Immigration and Colonization, but publicity operations in Great Britain are under the supervision of the Director of European Emigration in London, acting, of course, in close co-operation with headquarters at Ottawa.

ADVERTISING

Among the mediums used to make known the opportunities for agricultural settlement in Canada are the agricultural papers and other publications having an extensive rural circulation among the classes whom it is sought to interest. In the British Isles the advertising, in addition to being directed toward prospective farmers and farm labourers, includes domestic servants in its appeal. In the United States it is limited strictly to those who wish to seek their fortune on the land.

Advertising in the British Isles is begun in the late autumn and continued through the winter months until April. This is the season in which most prospective settlers are giving consideration to the possibility of moving to Canada. The purpose of the advertising is not only to present information concerning Canadian opportunities, but to draw inquiries from those interested so that the information may be supplemented by personal contact with a representative of the department. Advertising in the British Isles is placed through an advertising agency in London.

Advertising in the United States is placed with the leading national farm papers, with state farm papers in localities where best results can be expected, and, to a limited degree, in papers published in the languages of the countries of Northern Europe, mainly Scandinavian. It is handled through an advertising agency located in Canada and selected for the purpose upon evidence of its ability to handle the advertising of the department in the United States to advantage.

The advertising of the department in the United States is designed primarily to bring the prospective settler into contact with the representative of the department. It is no part of the theory of the Publicity Branch that settlers in any great number can be moved from one country to another exclusively by advertising. The function of advertising is to give information about and create interest in settlement opportunities in Canada. When this interest leads the prospective settler to write a letter of inquiry or fill out a coupon and send it to the nearest Canadian Government agency the advertising has done its job. The value of the department's advertising can therefore be reckoned in general terms, although, of course, not exactly, in the number of inquiries produced in any territory or through any medium. These results are carefully checked and changes are continually being made in our advertising list, papers being dropped which are found to be too expensive in proportion to returns and others added which give promise of satisfactory results.

In addition to 26,137 inquiries received direct by our agencies in the United States, 2,002 inquiries from United States points were received direct at Ottawa during the fiscal year 1927-28. These latter inquiries, after being answered, were sent to the agencies in the United States covering the territory in which they originated. The total inquiries received from the United States were 28,139 during 1927-28 compared with 17,888 the previous year—an increase of 10,251, or approximately 57 per cent.

Aside from inquiries originating in the United States and the British Isles, a number from other countries reach the Publicity office each year. In the year 1926-27 these totalled 212 and in 1927-28, 284.

Inquiries arising from advertising in the British Isles go direct to the offices of the department in that country, and are not tabulated in this report.

BOOKLETS AND PUBLICATIONS

The production of booklets and other publications designed to make Canada better known in the lands from which immigration is invited, and to give the prospective settler dependable information concerning the opportunities and conditions he will find in this country, is an important phase of our publicity work and occupies a large proportion of the time of the branch. It is not possible in an annual report to state exactly what booklets are compiled and produced in any fiscal year, as the work goes on continually and booklets compiled in one year may be printed and distributed in the next. However, the summary hereunder will give a general outline of the activities of the branch in that connection during the period under review.

A booklet to which very wide distribution is given is called "Canada West". As its name suggests, it deals with the western provinces of Canada—Manitoba, Saskatchewan, Alberta, and British Columbia. It contains maps of each province and text and illustrations giving information particularly along the line of agricultural opportunities. This booklet is printed in three editions: one designed for distribution in Great Britain, one for the United States, and one printed in French, used mainly for repatriation purposes in French-speaking communities in the New England States. New British and United States editions were compiled, but the printing was not completed during the year. A sufficient number of the French edition were on hand so that no reprinting was required. The "Eastern Canada" booklet deals with the eastern provinces in much the same way as "Canada West" does with those lying west of the Great Lakes. It, too, is issued in three editions—British, United States, and French. Orders for British and United States editions were placed during the year but were not completed. The French edition on hand was sufficient to supply the year's requirements.

The "Descriptive Atlas of Canada" is a publication widely used for educational work in Great Britain and the United States. It is prepared in the style of a school geography and has drawn many favourable references from educationists and from the press. Perhaps one such quotation—from the *New York Sun*—may be permitted:—

"The Canadian Government Information Bureau in Ottawa has issued, for free distribution to teachers and others interested in the study of our northern neighbour, an eighty-page 'Descriptive Atlas of Canada'. In the excellence of its maps it might well be a model for some of our States that yearn to spread their attractions before the public."

A British edition of the Descriptive Atlas consisting of 103,500 copies was compiled and printed during the year. A United States edition of the same size was also compiled and placed in the printer's hands, but delivery was not made until April, 1928. The Atlas is also produced in French but no reprinting in this language was required.

A calendar featuring the possibilities of boy settlement in Canada was also produced for distribution in the British Isles. The quantity printed was 64,800.

The booklet "Farm Opportunities in Canada" features the opportunities for farm settlement in all of the provinces. It is compact and informative, and is produced in several editions, for which there is a continuous demand. During the fiscal year 201,050 were produced for distribution in Great Britain and Northern Ireland, 10,000 for the Irish Free State, and 212,655 for use in the United States.

The "Houseworker in Canada" booklet is designed to give information to women and girls in the British Isles desiring household employment in the Dominion. An edition of 50,620 copies was printed for that purpose.

"Canada—Where to Go for Advice" is a compilation of names and addresses of Dominion and provincial Government representatives in all parts of Canada to whom the new settler can turn for authoritative advice. An edition of 20,200 copies was printed.

The "Map Folder of the World" is a folder with a map of the world on one side showing the commanding position Canada occupies geographically and on the reverse are illustrations and text giving general information concerning this country. Two editions were compiled and printed during the year: 108,300 copies for use in the British Isles and 90,450 copies for use in the United States.

"On the Doorstep of Prosperity in Western Canada" is a special booklet depicting the successes of actual British settlers in Western Canada. Of this booklet 104,000 copies were printed for distribution in Great Britain.

"Canada and Immigration" is a booklet outlining the policy and practices of the Department of Immigration and Colonization. It has been found very useful in giving an outline of the Canadian immigration activities to students, journalists and others particularly interested in the subject. Three thousand copies were printed.

A highly favourable review of the outlook in Canada originally published in a United States paper was reprinted under the title "A Workshop of the World", and 25,000 copies were distributed in the United States.

The department co-operated with the Department of Trade and Commerce by bearing the cost of producing 60,000 copies of a booklet entitled "Sixty Years of Canadian Progress", compiled in connection with the Sixtieth Anniversary of Confederation.

The vest-pocket booklet, which contains in compact form questions and answers concerning Canada, and also a small but up-to-date map of the Dominion, was issued in two editions; for distribution in the British Isles, 97,975 copies, and for distribution in the United States, 99,440 copies.

The department also issued through its Publicity Branch a weekly news bulletin entitled "Canada Week by Week", which is devoted to development information relating mainly to agricultural activities. It has a considerable mailing-list reaching newspapers and other news-distributing agencies. During the year issues were published representing a total of 71,225 copies.

NEWS AND FEATURE ARTICLES

The Publicity Branch of the department conducts a news, feature articles, and photographic service on which heavy demands are made by newspapers, magazines and other publicity organizations. This phase of the work is conducted under the name of the Canadian Government Information Bureau. Material is supplied to an associated organization in the British Isles from which it is fed out to the British press, and for which a circulation of 303,000,000 was established by clippings on file. The press of the United States was also reached through an associated organization in that country to a circulation of over 112,740,000, and direct from the office at Ottawa to a circulation of over 89,000,000. Undoubtedly there was also a large circulation for which no clippings came to the attention of the Publicity Branch. Provision is made for translating and distributing Canadian publicity matter in the Norwegian, Swedish and German languages, and a large amount of information dealing particularly with Canadian agricultural development has been published in papers of these languages, mainly in the United States. Photographs to the number of upwards of 2,750 were obtained and circulated.

GENERAL

The publicity work of the department has many ramifications, some of which may not appear at first glance to have any direct connection with immigration. But the principle is accepted that whatever makes Canada better known in other countries, particularly in the British Isles and the United States, has a direct effect in stimulating migration to this country. For that reason the branch gladly co-operates in movements and undertakings which are likely to afford a good peg for Canadian publicity abroad.

A case in point is the World's Poultry Congress held in Ottawa in the summer of 1927. The Director of Publicity was honoured by being asked to take the chairmanship of the Special Publicity Committee organized to promote the World's Poultry Congress, and a great deal of work was done along that line. The congress was unanimously pronounced a great success and publicity for Canada was as a result carried into many lands. This department, in co-operation with the Department of Agriculture and the Canadian railways, was able to arrange for a trip by special train from Ottawa to Halifax, from Halifax to Vancouver, by steamer to Victoria, and returning to Toronto, of a party of selected delegates representing seventeen different countries. These delegates included a number of newspapermen from the United States, Great Britain, and elsewhere, and a vast amount of publicity appeared in the publications with which they are connected which is not included in the publicity statement in the previous section of this report. The practice is also followed of encouraging individual journalists, more particularly those connected with the agricultural press, to visit Canada and write up their impressions for themselves. Invariably it has been found that these impressions are of an optimistic nature and are given wide circulation.

REPORT OF SUPERVISOR OF WOMEN'S BRANCH, MISS M. V. BURNHAM

The Women's Branch of the department was formed in 1919, in order that special care might be given to unaccompanied women coming to Canada from the British Isles.

The report for this Branch for the fiscal year ended March 31, 1928, continues to show an increase in the work both in the British Isles and in Canada.

The headquarters of the branch are in Ottawa, where there is a supervisor and staff. Canadian woman officers are employed at the agencies in Great Britain. Woman officers and conductresses for the trains are stationed at the ports of arrival in Canada, and woman officers are employed at Montreal, Toronto and Winnipeg, to give supervision and assistance to women who settle in these districts.

IN GREAT BRITAIN

In Great Britain, there are eight Canadian woman officers who interview intending women settlers and to give them whatever information and advice may be necessary. During the past nine years many women have been prevented from coming out to unsatisfactory settlement conditions.

Under the Empire Settlement Scheme (see Commissioner of Colonization report) British houseworkers are given the reduced passage rate. During the past fiscal year, 4,220 passage warrants were issued. There is an increasing shortage of experienced domestics in the British Isles available for migration and many young women with very limited household experience are accepted, provided they are of good character, adaptable and willing to learn.

The following extract from the Empire Settlement Passage Agreement indicates the obligations assumed by the department for houseworkers:—

"Take the necessary steps for the recruitment and selection of migrants and recommending the assistance to be granted under this agreement.

"Make adequate arrangements for household workers to be personally conducted on outgoing vessels to be met by Women Officers of the Dominion Government and to be under governmental care and supervision until suitable situations are found for them and for as long afterwards as aftercare may be necessary.

"Guarantee work for the household workers at standard wages."

STEAMSHIP CONDUCTRESSES

The Canadian and British steamship lines co-operate with the department in looking after unaccompanied women and in giving general supervision on the journey between Great Britain and Canada. These companies employ conductresses on their vessels, to look after the welfare of girls and women travelling unaccompanied.

IN CANADA

A woman officer meets every ship that lands at Quebec, Halifax and St. John. She confers with the steamship conductress and ascertains from her the names of those requiring assistance. The steamship conductress assists the woman officer during the time that the passengers are passing through inspection.

The Canadian woman officer makes arrangements with the railroad companies for special cars for unaccompanied women, and assigns to the train conductresses their work. The following table has been compiled from the list of unaccompanied women and gives some idea of the work done.

—	Ships met	Conducted Parties	Special cars arranged for	Unaccompanied women and Children		Children travelling alone
				British	Foreign	
Quebec.....	166	229	199	10,292	6,182	357
St. John.....	32	39	19	1,151	1,331	19
Halifax.....	186	106	53	821	6,090	56
	384	374	271	12,264	13,603	432

IMMIGRATION CONDUCTRESSES

The train conductresses have their headquarters at the ports and are under the immediate direction of the woman officer at the port. Their duties are to help women and children at the port, to co-operate with the train officials in loading the trains, and to travel with the train in care of the unaccompanied women and children as far as it is deemed necessary. They are required to keep a watchful eye over the girls, to help the tired mothers, to give first aid to the sick and to look after the general welfare of travellers. Many of the conductresses are trained nurses. In addition to the unaccompanied women there are often women and children who need the help of the conductress although the husband may be travelling with them. Owing to the distances in Canada the train journey is a long one, and newly arrived settlers, through sheer fatigue, sometimes become discouraged. At this point the conductress, by tactful advice, can be of great help.

Since the spring of 1926 each conductress has been equipped with a large tea kettle for use on the stoves on the colonist cars in order that there may be boiling water always ready to make tea en route and for the babies' bottles. Enthusiastic reports are still being received about the tea kettles.

The following extracts from conductresses' reports give an idea of the work being done:—

"This woman destined to her husband was really pathetic. She carried an infant and a baby and the other five were all ages under eleven years. They were good, obedient and helpful children, but Mrs. ——— had been ill and was nervous and trembling constantly. The Red Cross nurse at the port gave her to me as a special charge and I am thankful to say she arrived at her destination in better health and heart than when she landed. A wire was sent to her husband. She was so grateful for all that was done."

"This woman complained of feeling very miserable, bones aching and headache. I gave her ——— and the doctor saw her at Parent, Cochrane and Sioux Lookout. He said to continue what I was doing. She had a temperature around 102 degrees most of the time, but just before arrival at Winnipeg it came down to 99 degrees."

"Small boy, aged 4½ years, a Finlander, fell against the sharp corner of an extended seat and cut his forehead. The wound was about one inch long and deep with jagged edges, and bleeding profusely. A dressing of iodine was applied, and later the edges of the wound were brought together and strapped; the cut was quite clean."

The following is from a grateful houseworker to the conductress:—

"My dear friend: I am getting on fine now but I always claim you did most as your strength and kindness served to give me courage and spirit to fight my pain on the train. You were a mother to me and I will never forget you"

Another letter read as follows:—

" I must admit it is a great change to what I have been used to and I felt it awful lonely at first. You see I come from the city of Glasgow, Scotland, so you cannot blame me, but I am quite used to it now, only sometimes I feel a bit lonely; of course that is natural. . . . Well you did look after all the girls well and I may tell you that they all thought the world of you"

The foreign unaccompanied girls have given a good deal of trouble during the past year. As stated in a previous report many have endeavoured to leave

the trains en route and the conductress is forced to be on the alert at every station in order that the so-called friends and relatives may not persuade the girls to leave the train instead of proceeding to their original destinations.

Extract from report illustrating assistance given to foreign girls:—

"This girl was ill, I think from fright over the fact that she had to leave her friends and could not speak English. I got her to eat and sleep and when she found she was safe, was quite all right."

STATEMENT of Houseworkers, by Origins, arriving at Ocean Ports, for the Fiscal Year ended March 31, 1928

FOREIGN DOMESTICS

The foreign women listed in table above were destined either to husbands, relatives, or to be placed in domestic work. These women were given special care on the trains by the conductresses.

This branch has secured reports on 3,266 foreign domestics and 67 per cent satisfactory replies were received.

Under the railroad agreement, 2,532 foreign domestics arrived during the calendar year of 1927. In the east they came to fill definite situations with employers whose applications had been approved. In the west those seeking employment were required to report to our Division Commissioner in Winnipeg and to be placed under his supervision.

CANADIAN RED CROSS SOCIETY

The statistics hereunder are supplied the Canadian Red Cross Society, and give an excellent idea of the work done by this society in the Red Cross Nurseries at the ocean ports of Quebec, Halifax and St. John.

Nursery	Ships	Infants and Children	Women	Treatments	Follow-up Cards
Halifax	201	4,870	8,277	262	863
Quebec	165	11,310	6,567	175	3,482
St. John	30	2,128	1,548	99	245
Total	396	18,308	16,392	536	4,570

The nurseries are in charge of a trained nurse, and expert assistance is given to the women who bring their babies and small children to rest, pending the departure of the trains. The women are then able to get their baggage checked, secure food for the journey and attend to other important matters.

The nurse advises the train conductress of any case needing special care en route.

The nurseries are most hospitable centres, and tea, milk and biscuits are given to the weary travellers. The equipment and space are provided by the Department of Immigration but, as stated in previous reports, the credit of the work is due entirely to the Red Cross Society and words of appreciation are heard on all sides from newly arrived settlers. British and foreign both receive care and attention in the nurseries.

UNITED SERVICES FUND

The supervisor is the representative in Canada to administer this fund for the assistance of ex-service women now living in Canada who were members of the Women's Army Auxiliary Corps, Women's Royal Air Force, Women's Royal Navy Service and Queen Mary's Army Auxiliary Corps. During the past year assistance has been given in nine cases.

The Ex-Service Women's Clubs in Montreal and Toronto are well attended and are doing good work to cheer and assist members who are in ill-health or who otherwise have fallen into difficulties.

The supervisor, in November 1927, called at the office of the United Services Fund in London, England, and expressed her appreciation to the committee who kept her supplied with funds to give assistance when required. The supervisor was fortunate enough to be in London for the annual dinner of the Women's Army Auxiliary Corps, which was presided over by the Adjutant-General of the War Office. About six hundred members of this corps came from all over the British Isles to attend this dinner.

TRAVELLERS' AID

The Travellers' Aid workers are to be found at all the important stations in Canada to assist the travelling public. Numerous wires are sent them by our conductresses asking for special assistance in individual cases. This is one more important link in this country which makes it possible to give adequate after-care.

EMPIRE SETTLEMENT SCHEME

The Empire Settlement Agreement came into force in the spring of 1923. The first houseworkers were given passage loans to cover the fare from port of embarkation in the British Isles to the rail destination in Canada. On January 1, 1926, a new agreement was entered into and the special rate came into effect, particulars of which will be found in the report of the Commissioner of Colonization. Since that date the houseworker has not been required to refund any large loan.

The following table gives the number of houseworkers assisted under this agreement during the past fiscal year:—

Provinces	Accommodated at Hostels	Coming through Nominations	Total
Nova Scotia.....	20	22	42
New Brunswick.....	7	11	18
Prince Edward Island.....		2	2
Quebec.....	477	113	590
Ontario.....	1,262	519	1,781
Manitoba.....	115	84	199
Saskatchewan.....	184	177	361
Alberta.....	210	116	326
British Columbia.....	81	123	204
	2,356	1,167	3,523

In addition to the above, the Ontario Government brought out under the agreement 312 and the Salvation Army 341 houseworkers.

All these women have been met on arrival by women officers and arrangements have been made for their safe journey to destinations. At the various hostels they have been given a warm welcome and twenty-four to forty-eight hours' free accommodation.

NOMINATIONS

With reference to the 1,167 nominations, above listed, the houseworkers who came out to fill these situations did not pass through the hostels but the home conditions were all carefully looked into by the department before the nominations were approved. Under the terms of the Empire Settlement Agreement all houseworkers receiving passage assistance are under the general supervision of the department and receive aftercare. Every year this number increases and the aftercare assumed by the department has become a heavy item.

To illustrate the work involved in aftercare the reports from our women officers in Montreal and Toronto are of interest. Two women officers are employed in Montreal and two in Toronto with a third for emergency work when required.

CANADIAN WOMEN'S HOSTELS

The Canadian Women's Hostels have been established in provinces to which houseworkers seeking domestic employment are destined. These hostels are all non-denominational and are supported by grants from the Dominion and provincial Governments. In addition, the Dominion Government gives twenty-four to forty-eight hours' free accommodation to houseworkers on arrival in order that they may get rested before starting to work. The hostels are situated in the following centres: Halifax, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver. They are all managed by local committees and monthly reports covering the work done are sent to the supervisor at Ottawa. The work in each hostel varies according to local conditions.

In Montreal the conductresses take parties of girls to the hostel when they have to wait for train connections, and according to reports 722 of these tran-

sients have been accommodated. They arrived there at all hours of the day and night. In Montreal, the hostel has an Employment Bureau and placed 864 girls during the year.

On account of the number of houseworkers who go to Toronto the hostel there is a very busy centre. The superintendent gives a talk to each group of girls before they go to the Employment Service to be placed in situations. In this talk the superintendent explains what work is available, rates of wages, local conditions, rules of the hostel, etc. The girls are also told what they should specially guard against and how they should look after their health. The talks occupy about twenty minutes and it is found that they are given just at the right time, because it is at this point that the girl feels rather at a loss, owing to the fact that she has received so much advice from strangers on the way out on the boat. Talks given to the girls individually were found to be not nearly as effectual as the short addresses to groups.

During the past year 1,319 houseworkers registered at the Toronto Hostel as newly arrivals and reported to the Employment Service for placement.

In Winnipeg, which is another divisional point, the hostel looks after a certain number of girls who are on their way farther West, during the time they are awaiting train connections.

The Regina Hostel continues to do good work, and the girls are always given a warm welcome on arrival.

At Calgary, the superintendent receives Empire Settlement families, in addition to houseworkers; a certain number of foreign domestics have also been accommodated at this hostel. The figures are as follows:—

British houseworkers.. . . .	203
Empire Settlement families.. . . .	82
Children of Empire Settlement families	296
Foreign domestics.. . . .	72

The department has made arrangements with the following organizations to receive houseworkers and grants an allowance of twenty-four to forty-eight hours' free accommodation:—

Sisters of Service Hostel, Halifax.
 Rosary Hall Hostel, St. John.
 Y.W.C.A., St. John.
 Catholic Women's League Hostel, Montreal.
 Y.W.C.A., Ottawa.
 King's Daughters Guild, Ottawa.
 Rosary Hall Hostel, Ottawa.
 Catholic Women's League Hostel, Toronto.
 Y.W.C.A., London.
 Y.W.C.A., Hamilton.
 Catholic Women's League Hostel, Winnipeg.
 Y.W.C.A., Edmonton.
 Rosary Hall, Edmonton.
 Y.W.C.A., Vancouver.
 Queen Mary's Coronation Hostel, Vancouver.
 Y.W.C.A., Victoria.
 Joyce Hostel, Kelowna, B.C.

A total number of 2,668 girls have received accommodation on arrival at the Canadian women's hostels and institutions above mentioned.

The department during the past year has given the per diem allowance to the Salvation Army hostels, where houseworkers are accommodated on the same basis as other organizations listed above. Twenty-four hours' free accommo-

dation to houseworkers is given in hostels east of Winnipeg, this being extended to forty-eight hours if the girl arrives on a Saturday; Winnipeg and west, forty-eight hours' free accommodation is considered necessary to enable the girls to get rested and to get placed in situations.

EMPLOYMENT SERVICE

The Employment Service in Canada has always co-operated very fully with the Women's Branch and has furnished statistics and reports as required. Domestic arrivals at the hostels to be placed in situations are found work in the following provinces by the Employment Service: Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. In a few centres the placement is done by one of the department's representatives instead of the Employment Service.

The confidential references of houseworkers are all sent direct from Ottawa to the various Employment Bureaux, and when the girl registers the bureau already has her record and is able to place intelligently.

CO-OPERATION WITH THE DEPARTMENT OF HEALTH

As in previous years, this branch forwards to Dr. MacMurchy, Chief of the Division of Child Welfare, Department of Health, the names of all women who come to this country to be married. Last year 490 young women coming out as new settlers, far from friends and relatives, were put in touch with Dr. MacMurchy, and the many letters of appreciation which she receives show the necessity and value of this piece of work.

THE SOCIETY FOR THE OVERSEA SETTLEMENT OF BRITISH WOMEN

The Society for the Oversea Settlement of British Women, which is the Women's Branch of the Oversea Settlement Department, is in close touch with the Women's Branch of the Department of Immigration.

During the fiscal year 1927-28 the Women's Branch investigated settlement arrangements in connection with 207 applications made to the society for passage assistance. These investigations were carried on in some cases by the agents of the department throughout Canada, and in outlying districts by correspondence. In all cases where loans were granted the loan forms were completed under the direction of our officers. Two hundred and four women and 527 children are included in these 207 applications. Of this number, 77 women and 197 children (in all 274 persons) arrived in Canada in 1927-28, in most cases to join the husband and father, and a total of £2,725 was spent by the S.O.S.B.W. for their passage. In addition, grants were secured from various societies and funds in Great Britain to augment the amounts loaned. The sum of £2,725 is expected to be repaid by the families, in monthly instalments.

The S.O.S.B.W. arranged seven parties during the past year which were specially conducted. On arrival, the Women's Branch gave the necessary care and reported back to the S.O.S.B.W. on the various individuals helped.

In November, 1927, the supervisor while in London conferred with the S.O.S.B.W. on matters affecting the immigration of British women to Canada. The general consensus of opinion was that there is a great shortage of experienced domestics in the British Isles, and that to meet the demand in the Dominion it would be necessary to draw from the inexperienced class, which includes girls who are in other employment, such as clerical, industrial, etc. At the present time these girls are not generally accepted unless nominated for definite situations. There is keen competition in recruiting for domestics in the British Isles: Australia and New Zealand are both in the field. Australia offers a free

passage, and New Zealand a free passage plus £2 pocket money. In addition, a training hostel has been established under the direction of the British and Australian Governments to train inexperienced girls.

A free training scheme for nursery nurses under the auspices of the Sick Children's Hospital, in Toronto, was discussed; twenty-four girls are required each year and are given one-year's free training; at the end of that time they will be placed as experienced nursery nurses at a minimum wage of \$38 a month. The S.O.S.B.W. were asked to make the selection and considered that they would be able to find suitable applicants.

The supervisor wishes to record her appreciation of the cordial reception given her and the official luncheon in her honour as head of the Women's Branch given by the Council and Executive Committee of the S.O.S.B.W.

CANADIAN COUNCIL OF IMMIGRATION OF WOMEN

In February, 1928, the Canadian Council of Immigration of Women held a conference in Ottawa at the department. The following organizations are members of this council:—

- Canadian Council of Agriculture.
- Canadian Council on Child Welfare.
- Canadian National Committee on Mental Hygiene.
- Canadian Red Cross Society.
- Canadian Legion of the British Empire Service League.
- Federated Women's Institutes of Canada.
- Catholic Women's League of Canada.
- Imperial Order Daughters of the Empire.
- National Council of Women.
- Social Service Council of Canada.
- Trades and Labour Congress of Canada.
- Women's Auxiliary to the Missionary Society of the Church of England.
- Women's Christian Temperance Union.
- Women's Missionary Society of the United Church of Canada.
- Women's Missionary Society of the Presbyterian Church in Canada.
- Young Women's Christian Association.

The provinces were all invited to send delegates, but the only provinces officially represented at this meeting were Nova Scotia, Ontario, Manitoba and Alberta.

Reports were given by all the organizations present of the work done by them. At the conclusion of the proceedings, certain recommendations were formulated for submission to the organizations having membership in the council for their discussion and approval. A complete report of the proceedings has already been published.

APPRECIATION OF THE WORK DONE BY THE WELFARE AGENCIES

It is impossible in this report to record all that is done by the various organizations in Canada interested in immigration. Social service work is well organized in the Dominion and the department receives the co-operation of the Social Service Departments of hospitals, municipalities and welfare organizations in assisting and giving supervision to girls who are in difficulties.

During the past year, the supervisor visited the Immigration Offices, Canadian Women's Hostels, Employment Bureaux and Welfare Agencies interested in immigration in the following centres: Quebec, Montreal, Toronto, Winnipeg, Regina, Saskatoon, Edmonton and Calgary. In November, 1927,

the supervisor called at the following offices in the British Isles: London, Liverpool, Glasgow and Belfast. She also attended meetings, gave addresses, and, as already mentioned, was in conference with the S.O.S.B.W. in connection with matters which affected the immigration of British women.

REPORT ON JUVENILE IMMIGRATION

G. BOGUE SMART, SUPERVISOR

The British juvenile immigration movement from Great Britain to Canada has a history of sixty years, and it is entitled to recognition as the oldest established branch of Canadian immigration. During the six decades over 87,699 children of Anglo-Saxon origin have been brought to Canada under the auspices of organized societies and accredited agencies.

From its inception and until the year 1923 the movement was assisted and maintained as a philanthropic undertaking, and apart from a small per capita bonus of \$2 received from the Canadian Government no aid was received from any source in Canada.

Recent years have witnessed a remarkable change in public opinion in Canada regarding the importance of a steady flow of people from the United Kingdom. This is true particularly with reference to the migration of boys and girls for farm apprenticeship and assistance in household work and the advantages this country offers to young people are now more generally recognized in the motherland than heretofore. This growing consciousness of the immense value of juvenile migration to our vast Dominion and also to Great Britain from a national point of view is but the forerunner of a greater development.

The following organizations (which do not however include purely Provincial Government Schemes), are actively engaged in the work with the approbation of the British Government and the Government of Canada.

Organization *in Canada* Headquarters

Dr. Barnardo's Homes (Boys and Girls).....	538 Jarvis street, Toronto, Ont.
The British Immigration and Colonization Association (Boys)	87 Osborne street, Montreal, P.Q.

Mr. W. Quarrier (Boys and Girls).....	Brockville, Ont.
The Salvation Army (Boys and Girls).....	1225 University street, Montreal, P.Q.
The United Church of Canada (Boys).....	Norval, Ont.

Until the year 1924 the term child was generally used by this branch to mean children under the age of fourteen years, while children between the age of 14 and 18 years were designated as juveniles. Under the British Empire Settlement Act, the word children is now applied to all immigrants up to the age of 17 years, who migrate to Canada under the auspices of recognized child emigration organizations.

The organizations engaged in this branch of emigration in Great Britain have benefited in the promotion and extension of their work by the financial assistance provided under the terms of the Oversea Settlement Agreement which offers free transportation for boys and girls from 14 to 17 years, who migrate to Canada under the auspices of approved societies and who respectively come to the Dominion to work on the land as farm workers and apprentices and in domestic service.

The arrivals during the past fiscal year were 1,866 boys and 204 girls respectively—an increase in point of numbers over the preceding year.

On their arrival the children are immediately conducted to the headquarters of the society and in due course sent to homes and situations selected for them.

For many years the demand for juveniles of this type has been so great that in placing these young people it has become merely a matter of selecting the most advantageous home for the boy or girl. The steady demand which came from every province of the Dominion was greatly in excess of the number of boys and girls available.

The number of children and juveniles migrated to Canada by the principal organizations in Great Britain during the past twenty-six years, and the number of applications annually received at the Receiving and Distributing centres in the same period were as follows:—

Fiscal Year	Children emigrated	Fiscal Year	Children emigrated
1900-1.....	977	1914-15.....	1,799
1901-2.....	1,540	1915-16.....	821
1902-3.....	1,979	1916-17.....	251
1903-4.....	2,213	1917-18.....	
1904-5.....	2,808	1918-19.....	
1905-6.....	3,264	1919-20.....	155
1906-7.....	1,455	1920-21.....	1,426
1907-8.....	2,375	1921-22.....	1,211
1908-9.....	2,424	1922-23.....	1,184
1909-10.....	2,422	1923-24.....	2,080
1910-11.....	2,524	1924-25.....	2,000
1911-12.....	2,689	1925-26.....	1,862
1912-13.....	2,642	1926-27.....	1,741
1913-14.....	2,318	1927-28.....	2,070

RECEIVING AND DISTRIBUTING HOMES

There are twenty homes or hostels for the reception and care of the children. These centres are a necessary feature of the work and fulfil the requirements of both the British and the Federal Governments, whose desire is to safeguard the welfare of the children, by providing a home to which they may return in case of illness, changing situations, or for any other reason.

The work calls for a continuous supervision over the children, first by systematic visitation; second, by regular correspondence. Each child is dealt with individually, and made to feel that a personal interest is taken in his welfare.

During the past year, hostels were established by the Church of England, Council of Empire Settlement at Indian Head and Melfort, Sask., and Edmonton, Alta., for the reception and distribution of boys in Western Canada. This organization has migrated and placed with western farmers one hundred and thirty-nine boys.

The United Church of Canada has established a reception and training farm for boys at Norval, Ont., from which they will be distributed amongst the farmers of the province of Ontario.

The Church Army has in operation at Hempstead, Essex, England, a training farm for boys preparatory to their migration to the Dominion. In 1927, one hundred and sixty-four lads passed through this farm of whom seventy-two migrated to Canada and other parts of the Empire.

For many years, the Salvation Army has maintained at their Colony Farm at Hadleigh (Essex), a school for training boys in the rudiments of farm work with a view to their migration to oversea dominions.

Another well equipped, and the first to be established, is the late Mr. J. W. C. Fegan's training farm at Goudhurst, Kent, England. This farm covers about three hundred acres of fine land in one of the most productive districts in Kent. Canadian farming implements and other distinctly Canadian equipment, have been adopted for the benefit of boys who migrate to this Dominion. The boys remain on Mr. Fegan's farm for definite periods before proceeding to Canada, and are taught to handle horses, milk, work a binder and plough. On my last occasion of meeting Mr. Fegan, in speaking of this pre-migration training he said: "With the healthy, open air labour they have here, and the wholesome food, the boys develop rapidly. The elementary training given them in farm work is of great advantage when they go to Canada, and they are well fitted for strenuous work upon their arrival in the Dominion."

It is my privilege to record a satisfactory year's work, the volume of which exceeded the activities of the preceding year. As in previous years, the department continued an annual or more frequent individual inspection of the children. The inspectional staff of this branch includes four men and two women, the latter for girls.

Our inspectors have been engaged the year round travelling in the townships, paying personal and unexpected visits amongst the children. Each child is privately interviewed and a careful survey made of his home surroundings, personal appearance, and general progress. When complaints are received, the child and its employer are brought together with a view of adjusting any minor differences that have been found to exist between them. In the event of a situation being found unsatisfactory to the progress and well-being of the child, full particulars are reported to the superintendent of the home, with a recommendation for such action as circumstances may warrant.

The inspectional work of this branch during the past year, clearly indicates that the boys and girls selected for migration were, with comparatively few exceptions, in point of health and physique, suitable for Canadian farm life and work and domestic service.

GENERAL STATISTICS 1927-28

Inspections.....	5,807
Visits in addition to above.....	1,329
Inspections and visits.....	7,136

As a result of these inspections and visits combined with information from other sources, 2,323 cases were completed during the year and removed from the inspection list.

Four hundred and twenty children under 14 years of age were inspected.

Fiscal Year	1925-26	1926-27	1927-28

THE BOYS' LAND SETTLEMENT SCHEME

FARMING CAREERS FOR BOYS IN CANADA

An agreement for the settlement of British boys on the land in Canada has been concluded between the British and Canadian Governments under the Empire Settlement Act, 1922. Under this scheme the British and Canadian Governments propose jointly to expend a total sum of £1,000,000 over a period of ten years in the form of recoverable advances to assist suitable British youths to take up farming in Canada on their own account. An official statement says:—

It is the desire of the two Governments that British boys who are assisted to proceed to Canada between the ages of fourteen and twenty to work on farms should be able to look forward to a definite career on the land. It will apply to boys who have received assisted passages, have passed through the provincial training centres in Canada and who were between fourteen and twenty years of age on arrival in the Dominion. On reaching twenty-one years of age the boys—provided that they have acquired the necessary training and experience by working for wages on a farm in Canada, and have saved approximately \$500, will be eligible for a loan not exceeding \$2,500 for the purchase of a farm and for stock and equipment. No advances will be made to youths under twenty-one or over twenty-five years of age.

This scheme gives effect, so far as Canada is concerned, to one of the recommendations of the Imperial Conference, 1926, which drew attention to the importance of providing some inducement to settlers to remain on the land overseas, in order to counteract the drift to the cities, and recommended that facilities should be provided to enable suitable settlers to acquire farms of their own—provided that they had gained the necessary local experience and were in a position to make a deposit in respect of the purchase price of the land.

CONDENSED Statistical History of the Juvenile Immigration Movement since the year 1868

Society or Agency	Year	Children sent to Canada
Miss Macpherson and Mrs. Birt, London, Liverpool (Canadian headquarters, Marchmont Home, Belleville, Ont.).....	1868 to 1926	14,578

As an indication of the place juvenile migration occupies in the minds of prominent Britishers, the following extract is quoted from an article by Viscount Allenby in *United Empire* of November, 1927:—

"Lads and lasses of Great Britain, seize the opportunity, go out into the Empire. Don't wait for railways—go on ahead of them; go out into the Blue and bear the brunt; fare like pioneers and heroes of old. Conquer the open spaces and the forests—and when you have conquered the forests remember one thing, don't start cutting them down. Go out, I say and wring from reluctant nature the wealth which she yields only to the adventurous. Then and not till then will you have done your duty, you young people of our country, to the Empire to which you have the privilege and honour to belong. We have not yet reached the zenith of our glory. Standing shoulder to shoulder, the Empire could face the world, whether in peace or in arms—and the wars of peace are even more difficult than the wars of weapons. There is a future before us, such as the world has never imagined, and with God's blessing we should raise this mighty Empire to a height which would defy all competition and in no proud, in no domineering spirit, but in a spirit of altruism, though in helping others we must remember ourselves."

REPORT OF THE DIVISION COMMISSIONER OF IMMIGRATION, EASTERN DIVISION, J. S. FRASER

The Eastern Division extends from the Atlantic coast as far west as Sault Ste. Marie. Inspection is carried on at 103 ports. During the past fiscal year 193,997 persons were examined at ocean ports and approximately 23,054,466 at the boundary ports. Of these persons seeking entry 140,368 were landed as immigrants and 14,934 were rejected and deported. The two following tabulated statements show the disposition of those applying for admission to Canada at the various ports.

Ports	Admissions	Rejections	Non-Immigrants admitted	Sustained	Dismissed	By permit or otherwise	Pending	Investigations	Prosecutions	Total cash deposits

There has been a large increase in the number of persons crossing the International Boundary. This may be accounted for largely by the excellent system of permanent highways completed within the past few years, and the resultant increase in tourist traffic. This movement which has been increasing from year to year will continue to increase and will necessitate the opening of new ports from time to time and the appointment of additional officers. During the summer the Peace Bridge at Fort Erie was opened and from the opening in June until the end of the year roughly about four million people entered over the bridge. Notwithstanding this large movement only a few miles from the bridges at Niagara Falls the traffic at that port was as heavy as the previous year.

GENERAL

The staff numbers 416. Of these 32 are at head office and there are 302 full-time officers and 81 part-time inspectors stationed at the ports of entry. There are 103 such ports, three having been closed during the year. Three of these ports are located in the United States.

Efforts are being made to improve the inspection work at the various ports and also where necessary to secure better inspection facilities. We have been gradually changing at several of the ports our present method of inspection of passengers entering in sleepers, this with a view to having a personal examination in each case. This has been found more satisfactory both from the point of view of the passenger and the department. A movement has also been inaugurated with a view to centralizing the work as much as possible. In the Niagara peninsula five ports have been amalgamated and placed under the jurisdiction of the inspector in charge at Bridgeburg. As a result we have been able to improve the work in these five ports and similar action is contemplated at other central points.

During this year new offices have been erected at the Peace Bridge at Fort Erie, the accommodation being supplied by the Bridge Company as required under the regulations. The Ferry Company at Windsor have remodelled their headquarters along lines suggested whereby the work can be carried on with a smaller staff than under the old system and with more dispatch. New Immigration buildings were erected at the port of Halifax and are a decided improvement over the old quarters affording better landing and inspection accommodation.

REPORT OF THE DIVISION COMMISSIONER OF IMMIGRATION, WESTERN DIVISION, THOMAS GELLEY

The Western Division of the Department of Immigration and Colonization comprises the territory situated between Port Arthur, Ont., and the port of Kingsgate, B.C., taking in part of Ontario, the provinces of Manitoba, Saskatchewan and Alberta, and a portion of British Columbia, and in addition to the work involved in administering the inland territory, there are forty-three ports of entry on the International Boundary where inspectional work is carried on.

BOUNDARY INSPECTION

During the fiscal year just ended there were 765,664 persons inspected at the various ports on the international boundary in the Western Division. Of these 9,099 were coming forward as settlers, 8,445 being given admission as landed immigrants, 654 being rejected for various reasons, 12,831 were returning Canadians, and the balance, 743,734, were of the tourist or non-immigrant class. Those who came forward as settlers and were legally landed had in their possession cash to the amount of \$2,790,738, and effects valued at \$1,846,566.

The following comparative figures will give an idea of the work performed on the boundary in this division as compared to that of last year:—

	Ad- mitted	Reject- ed	Non-Immi- grants	Settlers' cash	Settlers' effects
1927-28.....	8,445	654	743,680	\$ 2,790,738	\$ 1,846,566
1926-27.....	8,900	757	680,738	2,519,111	1,125,413
	-455	-103	+62,942	\$ +271,627	\$ +721,153

While from the foregoing it will be noted that the admission of immigrants during the year has decreased, on the other hand, there is also a decrease in the number of persons rejected. In addition the cash and effects in possession of settlers show a considerable increase over that of last year. This may be taken as an indication that the settler coming from the United States is of a better type and that more are coming with the definite idea of becoming established in Canada.

Tourist traffic this year showed a correspondingly large increase over former years and is a definite indication of the interest which is being exhibited in the Canadian West by our neighbours to the south.

Another encouraging phase of this year's work is evidenced by the return to Canada of a large number of Canadians who proceeded to the United States in former years.

During the year the inspectional staff in the division has been fully employed in carrying on the various phases of inspectional work required on the boundary. Twenty-eight prosecutions were undertaken—convictions being secured in twenty-seven instances, and fines assessed to the amount of \$351. Cash bonds in the sum of \$29,513 were collected, \$27,148 of this being refunded, the balance still being on hand awaiting final disposition.

The following statistical table shows the volume of work carried on at each port during the fiscal year.

Port	Admissions	Rejections	Appeals sustained	Appeals dismissed	Appeals pending	Non-immigrants	Returning Canadians	Value of Settlers' effects	Amount of cash
Bannerman	32					3,464	1	\$ 3,626	\$ 3,685

Twin Lakes	1					1,454			
Waskada	9					400		1,868	35
West Poplar River	43					3,043	902	13,515	3,975
Wild Horse						266	149		
Willow Creek	24					1,740	43	4,917	9,788
Winnipeg	116	2						19,295	39,939
	8,445	654	17	29	8	743,680	12,831	1,846,566	2,790,438

In addition to the foregoing, the inspection of passenger and freight boats at Port Arthur and Fort William was carried on as usual.

IMMIGRANTS FROM OVERSEAS

The movement of families from the British Isles under the 3,000 Family Scheme continued during the past year to be very satisfactory and productive of a splendid type of settler. Many single British farm help and domestics took advantage of the cheap rate and were forwarded to placements throughout the West. Nationals of all countries were accorded every assistance by officers of this division on arrival at Winnipeg; all trains were met and such help and advice as was required was furnished.

Under the operation of the Railways Agreement, the volume of immigration from Central European countries was much larger than in former years.

The opening of Hall No. 3 at the Canadian National Railway relieved the work in Halls No. 1 and No. 2 and accommodated immigrants coming forward over Canadian National Railway lines making them available for quick distribution to points in the West.

Officers detailed for duty in meeting trains co-operated with the officials of the Railway Colonization Departments and the Land Settlement Branch in reticketing and directing new arrivals who were being sent on to final destination and placement, and valuable aid was rendered immigrants and their families in changing trains and in locating relatives.

IMMIGRATION HALLS

During the past twelve months Immigration Hall No. 1 at Winnipeg has accommodated and sheltered 8,494 immigrants, with an average stay of five days, as compared to last year, when 9,232 immigrants were accommodated with an average stay of three days. The total number of meals supplied during the year amounted to 89,606, these figures including 50,298 provided to deports and 3,194 supplied to matrons and assistants. The increase in the number of meals supplied and in the longer stay in the building, is accounted for by the fact that the peak of immigration was reached during a period of bad weather last spring, which required large numbers of these people being held over for a few days until the employment to which they were being forwarded was available for them.

Immigration Hall No. 2 at Winnipeg, which is set aside for the accommodation of immigrants from Southwestern and Central Europe, has housed during the past year 5,718 individuals as compared with 6,710 last year. This shows a slight decrease which is accounted for by reason of the fact that Hall No. 3 had been opened and was available to take care of this type of immigrant who came forward over Canadian National Railway lines.

Immigration Hall No. 3, which was provided by the Canadian National Railway, accommodated during the fiscal year just ended 10,973 new arrivals. The majority of these were Continentals who came forward under the Railways Agreement, but there were also a number of individuals and families from Great Britain and from the northern parts of Europe who were afforded over-night accommodation until such time as they could be sent forward for placement.

In addition to the Winnipeg immigration halls, halls were maintained at the following points and settlers were given temporary accommodation:—

	1927-28	1926-27
Athabasca.....	55	68
Edmonton.....	4,739	6,830
Edson.....	23	21
Grande Prairie.....	338	168
North Battleford.....	591	516
Peace River.....	223	8
Prince Albert.....	745	750
Spirit River.....	12	114
West Poplar River.....	36	50
	6,762	8,525

While the foregoing shows a slight decrease in the numbers afforded accommodation as compared with the previous year, this is accounted for by the fact that the various organizations interested in the placement of newly arrived individuals and families, have given better attention to the settlement arrangements, with the result that almost immediately on arrival at destination these were enabled to either proceed to work or to settle on land which had previously been selected for them. At the same time, the accommodation which is afforded by these halls is often indispensable and the service they render to new arrivals in outlying districts is of a very satisfactory nature.

LABOUR PLACEMENT

During the past year the department's Labour Bureau in this office has been worked to capacity and has registered and assisted in placing and arranging rates for 17,261 new arrivals destined to farm employment throughout the prairie provinces. This is an increase of 3,862 over last year, when 13,399 were handled through this office.

The work devolving on the Labour Bureau consists of registering new arrivals, arranging balance of ocean rate, replacing individuals who return seeking more satisfactory placement. In addition, information is given to prospective settlers in regard to farm opportunities awaiting them in the West. A contact is maintained with farmers throughout the West who require farm help, in order that placements may be available for those who seek work through the Labour Bureau.

While large numbers of those placed are new arrivals who have been directed to this office, on the other hand quite a number of placements are in the nature of after-care, being individuals who have come forward and been placed by the Railway Colonization Departments, the Land Settlement Branch and other organizations, and who have returned, either having proven themselves unsatisfactory or not being satisfied with the placement originally arranged. These are redirected to a farmer where it is considered they will have an opportunity of making good in accordance with their capabilities and in many instances, where they are without funds, arrangements are made so that they are enabled to reach their destination. The following table will give an idea of the replacements which have been arranged through this office during the past year:—

British.....	729	Czecho-Slovak.....	60
Scandinavian.....	238	German.....	53
Polish.....	140	U.S.A.....	36
Ukrainian.....	129	Russian.....	23
Hungarian.....	124	Swiss.....	13
Dutch.....	114	Others.....	30
			<hr/> 1,691

In addition to the foregoing, this office has charge of the distribution and placement of continental domestics destined to the Prairie Provinces. The office register shows 941 as having passed through our hands during the past fiscal year, and of these 461 were placed in employment developed and arranged by this office. The following table gives the figures of these domestics placed by this office:—

Austrian.....	11	Czecho-Slovak.....	44
Denish.....	5	Estonian.....	4
Finnish.....	13	German.....	44
Hungarian.....	3	Dutch.....	1
Lithuanian.....	5	Latvian.....	3

INVESTIGATIONAL WORK AND BOARDS OF INQUIRY

The investigational work with one exception throughout this division has during the past fiscal year, showed a decided increase. Chinese investigations have decreased by 54, but there is an increase in other immigration investigations as well as Boards of Inquiry.

Investigations	Chinese	Immigration	Total
1927-1928.....	130	3,880	4,010
1926-1927.....	184	2,700	2,884

BRITISH IMMIGRANT CHILDREN

During the fiscal year 520 British immigrant children were inspected as compared with 428 last year, being distributed throughout the provinces as follows:—

Manitoba.....	289
Saskatchewan.....	164
Alberta.....	67

GRAIN WAREHOUSE

As in former years, samples of grains and grasses were prepared by the Grain Warehouse staff and forwarded to our agents in England and the United States for exhibition purposes, and numbers of school boxes were forwarded to various points in the United States.

458 Cases were made and used in forwarding samples of grains and grasses to the various agents.

105 Boxes containing threshed grain.

322 Crates containing vegetables.

235 Cases containing cereals, cheese, honey, etc.

201 Small cases containing school exhibits of grain and grasses—forwarded to schools in the United States.

WINNIPEG OFFICE

The volume of work in the Winnipeg office has shown a material increase during the year.

Mail	Incoming	Outgoing
1927-28.....	80,538	77,988
1926-27.....	62,692	67,052
Increase.....	17,846	10,936

Enquiries at the counter in regard to assisted passages, naturalization, passports, proposed immigration and other phases of the work have also been greatly on the increase.

While there are numerous other activities and phases of the work performed by the staff in the Western Division which cannot be covered in this report, I have endeavoured to give a more or less complete review of the year's activities and the results which have accrued.

In closing, I should like to draw attention to the fine spirit of co-operation which has been in evidence during the past fiscal year in so far as the various organizations interested in colonization are concerned, the Labour Bureaus and the Land Settlement Branch, which have in no small way tended to overcome the many difficulties which must be experienced in the successful settlement of potential Canadians in Western Canada.

REPORT OF THE DIVISION COMMISSIONER OF IMMIGRATION, PACIFIC DIVISION, A. E. SKINNER

During the fiscal year 1927-28 there was an increase in the number of persons admitted to Canada at ports of entry in the Pacific District, as compared with the preceding twelve months. The total number of immigrants landed was 4,501 as compared with 4,024 for the previous year.

Other causes.....	7	28
	40	196

DRUG ADDICTS

There have been 51 aliens deported from ports in this division under the provisions of the Opium and Narcotic Drug Act, 39 of these convictions being made in British Columbia and 12 originating in the Eastern and Western Divisions.

INVESTIGATIONS

At places other than ports of entry, 149 investigations of various kinds were conducted and 247 Boards of Inquiry held by investigating officers.

Regular visits have been paid to provincial jails, penitentiaries, mental hospitals, sanatoria and other public institutions by investigating officers and the cases of all aliens in such institutions have been carefully investigated with a view to establishing their status in Canada.

During the year 47 British immigrant children residing in this province were inspected and the living conditions found to be very satisfactory. This is the smallest inspection report for a number of years owing to the fact that there were very few juvenile immigrant children brought to Canada and sent to this province during the past year.

No new ports were opened but the office at Port Simpson was closed on February 29, 1928. Six new officers have been appointed in this district during the past year, four part-time immigration officers and two to fill the duties of full-time officers.

From April 1, 1927, to March 31, 1928, but three applications were made by Chinese to enter Canada under the provisions of paragraph "C" of section 5 of the Chinese Immigration Act. Two of the applications referred to were made by bona fide students who were coming to attend Canadian universities and their entry was authorized at the port of Vancouver. The third application was made during the latter part of March by an alleged merchant and a decision regarding his admissibility has not been reached. It will therefore be seen that the number of Chinese attempting to qualify for admission as immigrants remains negligible since the passing of the 1923 legislation.

There have been sixty Chinese temporarily admitted during the fiscal year under section 9 of the Chinese Immigration Act, forty of whom arrived at Vancouver and twenty at Victoria. This is a decrease of eight from the figures of last year.

Systematic searching of transpacific vessels has been undertaken and in addition during the last four months officers have kept a continuous watch on steamships during the time they have been in port. The fact that no stowaways have been discovered would indicate the measures taken have checked any attempts at illegal entry by this means.

There has been only one attempt at entry by impersonation. In the case referred to a Chinese arrived misrepresenting himself as a person who had registered out to visit China. The impersonation was readily detected and after a term of imprisonment was served as a result of a successful prosecution under the Provisions of section 32 of the Chinese Immigration Act, the impersonator was deported.

There were eight desertions of Chinese seamen during the period under review. These desertions were all during November, 1927, and since that time extra precautionary measures have been taken both by the transportation interests and by our officers to see there is no recurrence.

The travel through Canada of overland Chinese has been less than the previous year, 4,108 of this class being handled during 1926-27, and 3,183 during 1927-28. There has also been a decrease in the number of outward registrants under section 23 of the Chinese Immigration Act. The figures for last year were 5,573 and for the year just ended 4,731. During the year 335 Chinese who regis-

tered out have lost their right to return by not applying for readmission within the statutory period of two years and 213 left Canada without applying for outward registration, thereby forfeiting their right to return.

There has been a total of seven head taxes collected, five under the provisions of section 27 of the Chinese Immigration Act, three at Vancouver, and two at Victoria, and two to cover the admission of Chinese women whose cases had been outstanding through court action since 1923.

Following is a table covering Chinese immigration figures for the years 1926-27 and 1927-28:—

	1926-27		1927-28	
	Victoria	Vancouver	Victoria	Vancouver
Admitted to Canada under Paragraph (c) of Section 5		2		2
Applications based on Section 5 rejected			2	
Persons deported after rejection	1	17	2	
Admitted under Section 9	10	58	20	40
Chinese deported after proceedings Section 26		6	3	7
	(3 from other provinces)		(2 from other provinces)	
Awaiting decision on appeal after deportation ordered under Section 26	3	1		1
Prosecutions under Section 32, Sub-sec. 1		2		1
Chinese stowaways apprehended by search of incoming vessels		15

REPORT

OF THE

DEPUTY SUPERINTENDENT GENERAL OF
INDIAN AFFAIRS

FOR THE YEAR ENDED MARCH 31, 1928

REPORT

DEPUTY SUPERINTENDENT GENERAL OF
INDIAN AFFAIRS

FOR THE YEAR ENDING JANUARY 1, 1901

REPORT OF THE DEPUTY SUPERINTENDENT GENERAL

OTTAWA, November 1, 1928.

Hon. CHARLES STEWART,
Superintendent General of Indian Affairs,
Ottawa.

SIR,—I have the honour to submit the report of the Department of Indian Affairs for the year ending March 31, 1928.

INDIAN HEALTH SUPERVISION

All matters appertaining to the health of Indians are conducted by the Department of Indian Affairs. The department staff has recently been strengthened by the addition of a medical director, and the creation of a definite Medical Branch, which is expected to prove of great value in supervising and co-ordinating the various health activities.

The outstanding event of the past year was the epidemic of influenza which swept the basin of the MacKenzie river during the month of July. The disease, which was of a very severe type, broke out at Fort Smith, and spread to the Great Slave lake and down to Aklavik with great rapidity. This vast region is inhabited by scattered bands of Indians whose needs are ministered to by Indian agents and doctors at Fort Smith, Fort Resolution and Fort Simpson, and by missionaries and church establishments at these and other points. At Hay River there is a mission school and at Fort Smith, Fort Simpson and Aklavik are small mission hospitals. The doctor at Fort Smith was out of the country on leave of absence, but was at once replaced by a doctor from Edmonton. The doctor at Fort Resolution and the mission personnel at that point and at Hay River looked after the Indians about the Great Slave lake. The doctor at Fort Simpson followed the epidemic down the river to Aklavik. All the workers were handicapped by lack of drugs and supplies, owing to the fact that the year's supplies had been burned in a warehouse fire at Edmonton where they were collected for shipment by the first boat of the season. Emergency supplies were sent in. Accounts of the epidemic which have reached the department tell of whole settlements stricken at once, so that there were not enough well persons to care for the sick or bury the dead, of mission workers carrying on though suffering from the disease themselves, and in one or two cases, of isolated families or small settlements being completely wiped out. The reports of the workers are modest in the extreme as to the services they rendered, but an officer of the Department who was in the country at the time, pays a glowing tribute to their devotion and self sacrifice. The toll of death was heavy, and many widows and orphans are left.

It is difficult for those who have no intimate acquaintance with the primitive Indians of the remote parts of the north to realize their attitude toward a widespread outbreak of a dangerous disease such as influenza. They become discouraged and hopeless, and their fear and fatalism prevent their co-operation with those whose advice and help would assist their recovery.

TUBERCULOSIS

During the summers of 1926 and 1927 a committee of experts under the auspices of the Canadian Tuberculosis Association, carried out for the department a survey of tuberculosis among the Indians of British Columbia, and presented a very valuable report. Their findings agree with those of investigators in other parts of the country and with the observations of departmental

physicians. Tuberculosis is about five times more common among Indians than among the general population. Several factors contribute to its prevalence. In many tribes tuberculosis has been comparatively recently introduced, and the resistance possessed by the white race has not yet been acquired. The food supply which would produce in the individual the robust health to enable him to resist invasion by the disease and to cast it off after invasion is not available, nor have the Indians learned in many cases to make good use of the supplies to be had. Living conditions are far from ideal, and ignorance prevails as to the method of spread of contagion. With the exception of a few tribes, the Indians have not the background of education and experience which would enable them to take full advantage of the knowledge of public health available at the present day.

The problem is a very serious one, but the outlook is not hopeless. Bands of Ontario Indians, who were expected to disappear from this cause some fifty years ago, are now rapidly increasing. The Blackfoot tribes of Alberta, whose numbers were greatly reduced following their infection in the latter quarter of the last century, are now holding their own. The solution of the problem depends as much on the improvement of economic conditions as on medical attendance and public health instruction. The department is using every recognized method of combating the disease, and the situation has shown a definite improvement in recent years. With somewhat increased funds at its disposal, there is reason to hope for more rapid progress in the future.

DISEASES OF THE EYE

Trachoma is reported from time to time as existing among Indians. The committee which investigated tuberculosis in British Columbia also interested itself in eye conditions, and from this and other sources of information, it may be stated that this eye disease is very rare among Canadian Indians, if indeed, it exists at all. There is however, a condition which is prevalent in the mountains and foothills, and occasionally appears elsewhere, which is of importance. It consists of an acute inflammation of the eye, with a small ulcer on the eyeball, and often leads to impairment of vision. It occurs chiefly among undernourished children, and is probably to a large extent a deficiency disease. The department is devoting special attention to its treatment.

HOSPITAL SERVICES

In the more remote districts and at certain large reserves the department maintains hospitals for the use of Indians alone. During the past year new units have been opened at the Six Nations Reserve in Ontario, at the Peigan Reserve in southern Alberta, and at Ile-a-la-Crosse in northern Saskatchewan, where the hospital is a joint enterprise between the department and the Government of Saskatchewan.

The new hospital on the Six Nations Reserve at Ohsweken was opened on October 16, 1927, by Their Excellencies, the Governor General and the Viscountess Willingdon, who graciously gave permission that the institution should be known as the Lady Willingdon Hospital. This hospital has already proven its worth, and is used by the Indians to its fullest capacity. A new unit is under construction at the Blood Reserve in southern Alberta where a very successful work has been carried on for many years under great difficulties. The department requires a high standard of service from its hospitals and they are considered to be equal in quality to any other institutions of similar size.

In many places hospitals are maintained by church organizations, and the department co-operates by furnishing some equipment and supplies, and in some cases by providing grants of money for building and upkeep. In all parts of the country the services of local hospitals and sanatoria are available for Indians, and a very large use is made of these institutions. Indians are rapidly overcoming their old distrust of hospital treatment, and hospitals are more and

more welcoming them as patients. It is becoming increasingly apparent that Indians are as hopeful subjects for modern treatment as white people. Rates paid for hospital care vary in accordance with local conditions and with any other assistance which the department gives to institutions.

DOCTORS' SERVICES

In some remote places the department employs full time physicians, and in several instances these doctors furnish the only medical service available for the white population as well as Indians. Seven such positions are maintained, and in four other cases the position of Indian Agent is filled by a doctor. For the most part, however, the needs of the Indians are served by the employment of a physician, on part time or on call, who resides near the reserve. There are over two hundred and fifty doctors so employed. The services of specialists in surgery and eye, ear, nose and throat diseases are retained in large centres for the benefit of Indians in the surrounding country.

There are certain districts, where the Indians are of such primitive and nomadic habits and live over such an extended area that it is impossible to do more than send a doctor once a year to visit them when they are collected to meet the department official who pays the annuity money. The doctor accompanies the paying officer, treats cases of disease, vaccinates the Indians, and gives them simple talks on health and sanitation. In northern Quebec a doctor has been employed for several summer seasons to patrol the Transcontinental railway, and his work has resulted in a considerable improvement in habits of living among the Indians of the region. Some of the journeys made by these doctors involve great hardship.

FIELD NURSES AND MATRONS

The department has maintained for some years a staff of four travelling nurses in the Prairie Provinces and of one in Nova Scotia. These nurses make periodical visits to reserves and schools. Their duty is to instruct the Indian women in the care of children and home-making in general, to examine school children for defects, and to report cases of defect or illness to the Indian Agent and physician. In some instances these nurses have been able to hold very successful clinics to which the Indian mothers bring their babies for inspection and advice. In British Columbia two resident nurses are maintained, and in Alberta one. The work of these nurses is very satisfactory, and it is hoped that it will be possible to extend the service. On one reserve where infant mortality was unusually high, an enormous improvement followed the installation of a resident nurse.

In places where the number of Indians is not large enough to justify the employment of a more highly skilled worker, the services of a neighbour white woman are retained as a field matron. These women have usually the advantage of the advice of a physician, and in some cases of visits from the travelling nurses. Some of them possess considerable nursing experience, but their main function is to give instruction and advice in housekeeping and the care of children.

The department is also making a beginning in the way of co-operation with the various provincial and voluntary organizations which maintain District Public Health nurses. In some cases the assistance of the department makes it possible for a district nurse to be employed in a municipality to the mutual advantage of both the Indians and the white people there.

MEDICAL CARE OF SCHOOL PUPILS

Every residential school, except a very few where such service is not available, has the advantage of the regular oversight of a physician, and in many cases the pupils' health is cared for by a resident nurse. Pupils in day schools are examined by agency physicians and travelling nurses. This service is capable of further development, and it is hoped that it may soon be possible to

have a system of regular inspection of every Indian school pupil. All candidates for entrance to residential schools are examined before admission, particularly for the presence of active tubercular disease. Drugs and surgical supplies are furnished to principals of residential schools, and a considerable expenditure is made for the remedy of physical defects such as eye conditions and diseased tonsils and teeth which would tend to retard the studies of the pupils or make them subject to the invasion of tuberculosis.

COMMUNICABLE DISEASES

Epidemics of communicable disease arise from time to time on Indian reserves. The department has, during the past year, devised a set of regulations for the control of these diseases which promises to be of great advantage. Constant effort is put forth to keep vaccination against smallpox up to date, and a beginning is being made toward immunization against diphtheria.

Although the department is sometimes handicapped in the beginning of an epidemic by the reticence of the Indian in such matters, it has an advantage over white communities in the matter of the possibility of enforcing regulations once the outbreak is discovered. In a recent outbreak of smallpox practically every Indian was vaccinated within one week after the diagnosis was established, a procedure which would be difficult to carry out in any white Canadian community. The services of travelling nurses are of value in epidemics, as they are at once available for duty in such emergencies anywhere in the district which they cover.

The Department of Indian Affairs has no reason to feel ashamed of its medical service from a remedial standpoint. No appeal for medical treatment from a Canadian Indian goes unheeded, and no expense is spared to give the sick Indian the benefit of the best medical and hospital care available. There is, however, a vast field of preventive medicine which would yield a rich harvest in improved health and economic efficiency of Indians. It is the aim of the department to greatly extend the preventive side of its effort, but such action must await the provision of increased funds, and, to some extent, the awakening of interest in Indian health, on the part of both the Indians themselves and the general public, in the one case toward the support of the Government in making increased expenditure, and in the other toward the realization of the need for improvement.

FARMING AND STOCK-RAISING AMONG THE PRAIRIE INDIANS

FARMING

The spring was somewhat late, and the seeding of wheat at many points was not completed until after the 15th of May. The area under crop has shown an increase of 1,867 acres over the previous year. The seed went into the ground in good shape, and up to the middle of August the indications were for the heaviest crop in our farming history. However, about that time we had a succession of frosts, which injured the crops throughout the whole farming area in Saskatchewan and northern Alberta. The grade of the grain has, of course, been reduced considerably by this, but at the time of writing it is not known just what the extent of the damage has been. There have been between seventy-five and eighty-five threshing outfits at work at the present time, and notwithstanding the loss sustained by frost it is estimated that the Indians will harvest considerably over a million and a quarter bushels of grain. The oat and barley crops are fair. The former, however, is not as heavy as was expected, but the Indians will have a good supply of feed for their animals during the coming winter. During the summer the Indians prepared a large amount of summer-fallow; this work has been well done, and is quite equal to that of the white farmers. As years go by there is a decided improvement in the manner in which the Indians are attending to this branch of the work. The amount summer-fallowed in the three provinces this year was 33,815 acres, an increase

or 6,310 acres over last year. In addition to this they broke 5,848 acres, which was well done, and this has brought their total area under cultivation up to 105,312 acres. The Indians, during the past year, have purchased a large number of horses and increased their farming equipment considerably, and on many of the reserves they now have good working outfits. The horses are of a better type and are receiving better care at the hands of the Indians than ever before.

CATTLE

The cattle herds have increased considerably during the past year—between two and three thousand head. On some reserves the increase has been greater than on others, and this is due to the fact that the Indians at these points are giving closer supervision to their cattle. The herds of the Indians are now among the finest in Western Canada, and their cattle bring the highest prices on the Winnipeg and other markets. In one carload of cattle from an Indian reserve, the steers netted \$205 each. This, of course, is an enormous price, and shows that the cattle must have been exceptionally fine. The increase in calves this year will amount to between five and six thousand head. It is, of course, impossible to give the exact number, as an actual count cannot be made at this time, but it is known that the calf crop is most satisfactory. During the past season the department purchased between fifty and sixty thoroughbred bulls at the various sales conducted under the auspices of the provincial Department of Agriculture, and they are the finest that can be procured. Ninety per cent of the Indians' cattle are of the Shorthorn breed, which seems best adapted to their requirements. The Indians have sold in the neighbourhood of 1,500 head of steers and cows during the summer and fall, and in addition to this they have provided beef for their own needs on all reserves throughout Western Canada, and still their herds are increasing. There was a time not very long ago, when it was necessary to let contracts for large quantities of beef, to outsiders, but this is now a thing of the past, as in future the Indians will be able to provide their own beef.

EDUCATION

During the past few years, there has been an encouraging increase in the attendance of Indian children at the schools maintained by the department. For the fiscal year 1927-28, there was an enrolment of over 15,000 and the percentage of attendance was a record one. The following table shows the increasing nature of Indian educational work. More pupils are attending and they are attending more regularly:—

Fiscal year	Enrolment	Average attendance	Percentage of attendance
1915-16.....	12,799	8,080	63.13
1916-17.....	12,178	8,285	68.03
1917-18.....	12,413	7,878	63.46
1918-19.....	11,952	7,601	63.59
1919-20.....	12,196	7,649	62.71
1920-21.....	12,558	8,074	64.29
1921-22.....	13,021	8,668	66.56
1922-23.....	13,723	9,106	66.35
1923-24.....	13,872	9,188	66.23
1924-25.....	14,222	9,879	69.46
1925-26.....	14,782	10,598	71.69
1926-27.....	14,710	10,541	71.66
1927-28.....	15,018	10,866	72.35

A total of 340 Indian schools were in operation during the year—77 residential, 251 day and 12 combined white and Indian day schools. In Part II of this report will be found a list of these schools, showing the names of principals or teachers, locality, enrolment and attendance. Compared with the previous year, there was an increase of one day school.

Further efforts were made during the year to increase the efficiency at both residential and day schools. Closer supervision, better qualified instructors, more intensive vocational training and better buildings were the aims of the department. Parliament provided a record appropriation of over two million dollars, and it was possible to make many improvements in connection with both personal services and physical equipment. At Caughnawaga, a large brick building was erected for the important day school activity there. This school is now on a par with a good city public school. A staff of 14 Sisters and 4 lay teachers are engaged in Caughnawaga village. In addition, there is a separate school for Protestant children. The old main building at the Onion Lake Roman Catholic and St. George's Indian residential schools, in Saskatchewan and at Lytton, British Columbia, respectively, were replaced by modern schools, fully equipped for the maintenance and training of Indian children. At St. Philips, Sask., a small residential school was erected near the site of the old Roman Catholic boarding school, which was closed in 1913. Arrangements were made for the establishment of a much needed Indian residential school at Shubenacadie, N.S. A site with the necessary farm was secured and a suitable staff engaged.

Whenever opportunity offered, better qualified teachers were secured and the department insisted that suitable vocational instructors were employed by those managing the residential schools. At these latter institutions, special attention to the training in farming and in the manual and domestic arts was given by the department's inspectors and agents.

More regular attendance and better teachers and equipment have had an interesting effect on the academic standing of the pupils. The following table shows the percentage of the total enrolment that was reported as in Grade 5 and higher:—

Fiscal year	Total enrolment	Enrolment in Grade 5 and up	Percentage
1910-11.....	11,190	780	6.97
1911-12.....	11,303	828	7.32
1912-13.....	11,144	734	6.58
1913-14.....	11,714	766	6.54
1914-15.....	12,468	834	6.69
1915-16.....	12,799	897	7.01
1916-17.....	12,178	955	7.84
1917-18.....	12,413	903	7.27
1918-19.....	11,952	878	7.34
1919-20.....	12,196	889	7.29
1920-21.....	12,558	929	7.39
1921-22.....	13,021	1,046	8.03
1922-23.....	13,723	1,187	8.65
1923-24.....	13,872	1,187	8.56
1924-25.....	14,222	1,322	9.29
1925-26.....	14,782	1,468	9.93
1926-27.....	14,710	1,664	11.31
1927-28.....	15,018	1,957	13.03

Of the 1,957 pupils who were in the higher grades during the year, 65 were studying high school work. These students were enrolled in Indian schools. In addition, there are approximately 140 Indian young men and women attending collegiates, business schools, colleges and universities. Of these 110 are receiving some assistance from Parliamentary Appropriation for Indian Education.

The co-operation of the churches in the management of Indian residential schools was as follows for the year 1927-28:—

Roman Catholic.....	42	residential schools: enrolment.....	3,822
Church of England.....	20	" " " "	1,508
United Church.....	13	" " " "	1,300
Presbyterian.....	2	" " " "	165
Total.....	77	" " " "	6,795

The expenditure for Indian education from parliamentary appropriation for the fiscal year ended March 31, 1928, amounted to \$2,033,375.10, as follows:—

EXPENDITURE FOR YEAR 1927-28—INDIAN EDUCATION VOTE

[illegible]

The expenditure shown above was augmented by the contributions made by certain Indians whose tribal funds have for many years been used to meet the cost of schools upon their reserves. During the past year the total expenditure from this source has been \$62,215.18. The table following gives the details of the charges.

The contributions from the Interest Account of the Trust Funds were for current expenses, salaries of teachers, minor repairs and tuition grants. The expenditure from Capital was for repairs to day school buildings on the Six Nations reserve and for a new classroom and teacher's residence at the Dokis Indian day school.

It is of interest to note that this statement will not be found in any future report. Parliament has provided appropriation for the fiscal year 1928-29 to meet the charges heretofore borne by Indians. Free education for the Indians was definitely imposed by treaty in some provinces and by usage in others and as the only exceptions to the general rule were made in the case of Indians of the provinces of Ontario and Quebec who were fortunately in possession of tribal funds, it seemed discrimination to refuse to extend to them the bounty of the Government in this regard. It has therefore been decided that in future the education of these Indians shall be carried on without cost to them, thus completing a system of free education to all the Indian wards of the Crown in Canada.

LANDS AND TIMBER

LANDS

Sales of Indian lands and collections of payments on account of previous sales showed decided improvement during the year. For this continued satisfactory crop conditions in Western Canada were mainly responsible as a large proportion of surrendered lands sold for agricultural purposes are located in the three Prairie Provinces.

In the fiscal year 1927-28 new lands sales in area amounted to 11,480.35 acres, realizing \$113,956.70. Details concerning this phase of Indian land administration appear elsewhere in this report. It may be noted that the total quantity of surrendered Indian lands at present available for sale is 242,958.64 acres, and the principal outstanding on account of sales, \$1,634,306.78. As Indian lands are invariably sold on terms extending over a period of years the most of this large amount represents payments or instalments which have not to date fallen due. From the three Prairie Provinces during the year the sum of \$325,631.81 was collected on account of sales, a most satisfactory proportion of the amount outstanding. From the surrendered Blackfoot reserve lands alone was received the sum of \$219,530.73. Most of the collections on this reserve were made under what is known as "crop share agreements," a system recently inaugurated by the department whereby a percentage of each year's crop is set aside and sold and the entire proceeds credited to land purchases. This system has proven even more successful than anticipated and wider application to Indian land sales will undoubtedly be made.

LEASES

Under the provisions of section 11 of the Regulations for the Disposal of Indian lands, leases were issued to white men at the request of Indian locatees to the number of 86, and on March 31 last there were 1,253 leases current.

LOCATION TICKETS

Location tickets, granting title under the provisions of the Indian Act, to individual owners for lands on the reserves were issued during the past year to the number of 69, and on March 31 last there were current 2,604 location tickets.

ENFRANCHISEMENT

Under the provisions of section 114 of the Indian Act (formerly section 122A) there were enfranchised during the past fiscal year 36 Indians, heads of families, comprising a total number of men, women and children of 94. Under section 110 of the Indian Act (formerly section 107) there were 10 Indians enfranchised, comprising 42 men, women and children.

LAND PATENTS

During the fiscal year 1927-28 there were issued 234 patents to Indian lands purchased and paid for in full.

TIMBER

The quantity of timber cut for sale from Indian Reserves in the Dominion during the 1927-28 season was somewhat less than in the previous year.

The kinds and quantities cut, were as follows:—

Pine (white).....	1,122,186 f.b.m.	Ash.....	15,553 f.b.m.
Pine (red or Norway)....	222,043 "	Elm.....	105,607 "
Pine (yellow or bull)....	3,532,720 "	Oak.....	33,508 "
Pine (jack or banksian)...	506,620 "	Basswood.....	161,006 "
Spruce (various).....	3,039,432 "	Walnut.....	400 "
Hemlock (western).....	3,242,116 "	Poplar.....	135,819 "
Hemlock (eastern).....	1,333,986 "	Cottonwood.....	216,014 "
Cedar (red).....	2,146,308 "	Cordwood (mixed)...	8,317 cords
Cedar (white).....	884,954 "	Pulpwood.....	36,406 "
Fir.....	7,147,536 "	Shingle bolts.....	924 "
Balsam.....	208,871 "	Ties.....	24,310 "
Maple.....	1,250,365 "	Poles.....	1,819 "
Birch.....	615,996 "	Posts.....	4,555 "
Beech.....	186,823 "	Piling.....	4,374 lin. ft.

The total quantity of timber cut for sale, in terms of board measure feet was approximately forty-nine and one-half million, and in addition to this the Indians cut approximately eight million f.b.m. for their own use, for building, fencing and fuel.

Sales of timber during the year were:—

Matsayno Reserve, B.C.....	Deposit \$	332 50
Nanoose Reserve, B.C.....	"	150 00
Noosatch Grass Reserve, B.C.....	"	600 00
Langley Reserve, No. 5, B.C.....	"	375 00
Saughanaught Reserve, B.C.....	"	50 00
Gros Cap Reserve, Ont.....	"	2,000 00

Cash receipts were as follows:—

License dues and royalties.....	\$	60,002 87
Permit dues.....		18,889 28
Rentals and fees.....		2,325 50
Deposits.....		3,507 00
Payments on o/s and a/cs.....		459 08
Trespass dues.....		556 08
Fines.....		64 00
Interest.....		20 52
Sand and gravel royalties.....		4,133 83
Total.....	\$	89,958 76

There were 26 timber licenses current on April 30, 1928, being 5 less than the previous year, 4 having terminated, 4 relinquished, 1 cancelled and 4 new ones having been issued.

The expenditure for forest protection on Indian reserves during the year amounted to \$8,312.78, of which \$1,722.33 was used for extinguishing 15 forest fires, which, however, caused no appreciable damage.

Estimates of timber and reports on land were made of four reserves during the usual administrative work and this data has been added to the record of the timber resources of the Indians.

BUILDINGS

The following is a summary of the buildings erected in 1927-28.

INDIAN RESIDENTIAL SCHOOLS

Indian residential schools were erected at Lytton, B.C., Onion Lake, Sask., Kamsack, Sask., and a site was purchased for the new Indian residential school at Shubenacadie, N.S.

DAY SCHOOLS

A large day school was erected at Caughnawaga, P.Q.

WATER SUPPLY SYSTEMS, ETC.

A water supply system was installed at the Guy Indian residential school, at Sturgeon Landing, Sask.

Minor alterations were carried out to buildings and mechanical plants at several Indian Residential Schools.

HOSPITALS

A new hospital was erected for the Indians at the Six Nations reserve.

AGENTS' RESIDENCES, BARNS, OUTBUILDINGS

An agent's residence was erected at The Pas, and teachers' residence at St. Regis.

Outbuildings were built at Duck Lake, Sask., Fraser Lake, B.C., at the Coqualeetza Institute, Sardis, B.C. and a barn was erected at the Mohawk Institute, Brantford, Ont.

Additional houses were built for the Indians on the new reserve at Sydney, N.S.

SURVEYS

BRITISH COLUMBIA

Babine Agency.—New reserves were surveyed as follows:—Kitwancool band, Nos. 1, 2 and 3. Andimaul Band, No. 1. Kispax band, Nos. 4, 5, 6, 7, 8, 9 and 10. Hagwilget band, Nos. 17, 18, 19, 20, 21, 21A, 21B, 22, 22A, 23, 24, 25, 26, 27 & 28. Kitselas band, Nos. 4A. Resurveys were made of the following old reserves:—Kitwanger band, Nos. 4, 5, 6, 7 and 8. Kitsegukla band, No. 3.

Bella Coola Agency.—New reserves were surveyed as follows:—Kitimat band, Nos. 7, 9, 10, 11, 12, 13 and 14. Kitlope band, No. 4. Resurveys were made of the following old reserves:—Kitimat band, Nos. 6 and 8.

Lytton Agency.—(Railway belt).—New reserves were surveyed as follows:—Lytton band, Nos. 16A, 32 and 33. Pavilion band, No. 3A. Boothroyd band, Nos. 11, 12 and 13. Siska Flat band, No. 6 and addition to No. 5. Skuppah band, Nos. 3A and 4A. Spuzzum band, Nos. 1A, 2A, 3A, 4A, 5A, 7, 8, and 9. Boston Bar band, Nos. 1A, 8, 9, 10 and 11. Resurveys were made of Nanahout I.R. No. 1 for Lytton Bd. and 5A, Boothroyd Bd.

Skeena River Agency.—New reserves were surveyed as follows:—Tsimpsean Tribe. Port Simpson band, Nos. 32, 32A, 32B, 32C, 32D, 32E, 33, 33A, 34, 63, 64, 65, 66, 67, 68 and 69. Tsimpsean Tribe. Metlakatla band, Nos. 90, 91, 92 and 93. Kitkatla band, Nos. 19 and 19A. Kitkahta band, No. 3A, 7, 10, 12, 13.

Stuart Lake Agency.—New reserve was surveyed for the Cheslatta band, No. 1A.

Williams Lake Agency.—New reserves were surveyed as follows:—Nemaiah Valley band, Nos. 1A, 2A, 3 and 5. Canim Lake band, Nos. 3 and 5. Alkali Lake band, Nos. 9A, 11A, 16 and 18. Toosey band, No. 1A. Anaham band, No. 2A. Stone band, Nos. 1A, 3 and 4. Alexis Creek band, Nos. 1A, 2, 3 and 4.

NOVA SCOTIA

Surveys were made of property purchased for Shubenacadie and Boat Harbour reserves.

NEW BRUNSWICK

A survey was made of boundaries of Eel River Indian reserve.

QUEBEC

A number of additional lots were surveyed in the village of Caughnawaga.

Resurveys were made of a number of lots in the reserve survey and valuations were made in connection with the widening of the Châteauguay road and also surveys of the properties of the Roman Catholic church and the new school in the village of Caughnawaga.

ONTARIO

Surveys were made in connection with the following:—Subdivisions of a number of lots on Walpole Island; subdivision survey in connection with Indian holdings at Whitefish River Indian reserve.

Indian locations in the Rama Indian reserve. Island in the St. Lawrence River near Brockville. The West boundary of the Golden Lake Indian reserve.

SASKATCHEWAN

Investigatory survey and selection of lands in connection with the Little Red River reserve.

MANITOBA

Preliminary survey in connection with possible reclamation of lands in Peguis Indian reserve.

Investigations were made in connection with the hay supply of the reserves in the vicinity of Fairford.

BRIDGES—DRAINAGE—WATERWORKS AND IRRIGATION SYSTEMS, ALSO ROADS—DYKING AND WHARVES

The engineering works mentioned hereunder were carried out on different Indian reserves by the department during the current fiscal year.

BRIDGES

Repairs were made for the maintenance of bridges on the following reserves:—Lillooet, B.C.; Timiskaming, Que.; Manitoulin Island, Sarnia, and Walpole Island, Ont.; Pauls Reserve, Alta.; Salmon River, N.S.

DRAINAGE SYSTEMS

Drainage systems were surveyed and constructed to improve cultivated land on the following reserve:—Cowichan, B.C.

DYKING

Dyking works were carried out for the protection of farming land and the maintenance of highways on the following reserves:—Saanich and Deadmans Creek, B.C.; Nyenza and Eskasoni, N.S.

IRRIGATION SYSTEMS

Irrigation systems have been constructed or improved on the following reserves in British Columbia to assist Indians in their farming operations, etc.:—Lytton, No. 9; Anaham, No. 1; Canim, No. 1; Boston Bar; Dog Creek; Lillooet, No. 4; Fountain, No. 3; William's Lake; Botanie Lake; Clinton; Pemberton; Neskainlith; Bridge River; Soda Creek.

ROADS

Highways are gradually being constructed in co-operation with Provincial Department of Highways in Ontario and Quebec, and main roads improved on the following reserves:—

Province of Ontario.—Six Nations, Tyendinaga, Rama, Alnwick, Walpole Island, Muncey, Moravian, Oneida, Kettle Point and Stony Point, Golden Lake, Gibson, Sarnia, Cape Croker, New Credit, Fort William, Garden River, Shesheganing.

Province of Quebec.—Caughnawaga, Abenakis, Restigouche, Oka, Lorette, Maniwaki, St. Regis, Ouatichouan, Doncaster, Maria.

Province of New Brunswick.—Burnt Church.

Province of Nova Scotia.—Nyenza, Eskasoni, Salmon River, Whycomagh, Malagawatch.

Province of Prince Edward Island.—Lennox Island.

Province of Saskatchewan.—Ochapowace and Stony Reserves.

Province of Alberta.—Paul's Reserve.

Province of British Columbia.—Lillooet, Lytton, Nanaimo, Squamish.

SEWERAGE SYSTEMS

Sewage disposal systems were installed in connection with the following Indian village:—*Holmoca, B.C.*

Another section of the sewerage system, started last year on Abenakis reserve at Odonak, was continued this year.

WATER WORKS SYSTEMS

Water supply systems were installed to provide the following Indian villages and Indian residential schools with pure water for domestic purposes and fire protection:—*Bella Bella, Holmoca, Chekwelp, St. Mary Res. School, B.C., Duck Lake Residential School, Sask.*

WHARVES

Wharves were reconstructed and repaired at *Bella Bella, Klemtu, Kincolith, B.C.* and at *Norway House, Man.*

SUMMARY OF INDIAN AFFAIRS IN THE VARIOUS PROVINCES
BASED ON THE REPORT OF THE DEPARTMENTS' AGENTS
AND THE INSPECTORS FOR THE FISCAL YEAR ENDED
MARCH 31, 1927.

The local administration of the Indian lands, on the reserves scattered throughout the Dominion, is conducted through the department's agencies of which there are in all 111. The number of bands included in an agency varies from one to more than thirty. The staff of an agency usually includes various officers in addition to the agent, such as the medical officer, clerk, farm instructor, field matron, nurse, constable, stockman, etc., according to the special requirements of the agency in question. At many of the smaller agencies in the older provinces, where the Indians are more advanced, the work is comparatively light, requiring only the services of an agent. The work of the agencies is supervised by the department's inspectors, each inspector having charge of a certain number of agencies.

ONTARIO

Agencies.—The following agencies are included in the province of Ontario: Alnwick, Bay of Quinte, Cape Croker, Chapleau, Chippewas, Munsees, and Oneidas of the Thames, Christian Island, Fort Frances, Georgian and Snake Islands, Golden Lake, Gore Bay, Kenora, Lake Superior (Eastern and Western Divisions), Manitowaning, Missisaguas of the Credit, Moravians of the Thames, Parry Sound, Rama, Rice and Mud Lakes, Sarnia, Saugeen, Seugog, Six Nations, Sturgeon Falls, Thessalon and Walpole Island.

Tribal Origin.—The great majority of the Indians of Ontario are Ojibwas, and are of Algonkin stock. The Oneidas of the Thames, the Mohawks of the Bay of Quinte, the Mohawks of the Parry Sound district, and the Six Nations of Brantford are of Iroquoian stock. There is a band of Pottawattamies at Walpole island, and Delawares at the Caradoc agency; these are of Algonkin stock.

Occupations.—The Indians in the western and central parts of Ontario engage largely in farming. The reserves generally are well suited to this purpose and the activity of the department's field agents has resulted in a steady improvement both in the methods of operation and the results achieved. The success achieved by the returned soldiers of this province has been especially creditable and they are rapidly developing prosperous communities.

During the summer months Indians find a profitable source of income as guides and canoe-men. Many are employed at various industries and trades, while railway and navigation companies employ a large number. As a rule they are excellent bushmen and many find employment in the various lumber camps. There is still an excellent market for showshoes, canoes and moccasins, and these are usually manufactured by the other members of the community.

The women also have many sources of income; some are employed as domestics; others support themselves by making baskets and fancy work. In certain districts berry-picking is an important item and furnishes considerable income.

Dwellings.—A great majority of the Ontario Indians have comfortable farmhouses which compare very favourably with those of their white neighbours. Many own houses of brick and stone, but in the outlying and more remote districts the old log houses are in the majority. In the more settled districts the Indians have followed the examples of the whites and both houses and farm buildings are comfortable and of excellent construction.

New Ontario.—In the remote parts of Ontario hunting and fishing are still the chief sources of livelihood. While fur has been very scarce the price has been correspondingly high. Fishing, however, has not been as successful this year owing to the scarcity of the market and the low prices. Acting as guides and canoe-men during the summer months adds considerably to their income. While agriculture is not carried on to any extent, most of the bands grow considerable crops of potatoes and vegetables. They are, of necessity, more or less nomadic and consequently live in tents most of the year. This condition will greatly change as civilization progresses.

QUEBEC

Agencies.—The following agencies are included in the province of Quebec: Becancour, Bersimis, Caughnawaga, Lake St. John, Lorette, Maria, Mingan, Oka, River Desert, Restigouche, Seven Islands, St. Regis, Temiskaming and Viger and Abenakis of St. Francis, Gaspé.

Tribal Origin.—The principal tribes found in Quebec are: Iroquois at Caughnawaga, Lake of the Two Mountains, and St. Regis; the Hurons of Lorette are also of Iroquoian stock; the Montagnais, who are also of Algonkin stock, at Bersimis, Mingan, Lake St. John, Seven Islands; the Abenakis, also of Algonkin stock, at Becancour and St. Francis; the Micmacs, also of Algonkin stock, at Maria and Restigouche; and the Malecites, also of Algonkin stock, at Viger.

In the agricultural districts of the province the Indians are developing a keener interest in farming operations and are making a decided success. In the Gaspé peninsula the Indians find employment in the lumber camps and mills, but on the north shore of the gulf, fishing, hunting and trapping are still the principal sources of income. In the northern part of the province lumbering is the chief pursuit. One of the principal industries of the Indians of Quebec is making baskets, and many of the Indians spend the summer months at the resorts in order to dispose of the baskets, lacrosse sticks, racquets, moccasins, etc., to the tourists. Some of them, particularly in the Saguenay district, act as guides and canoe-men.

Dwellings.—In the older settled districts of the province the Indians own many excellent stone and brick houses. Generally speaking, the buildings are almost all of good construction, comfortable and sanitary. In the more remote districts, where hunting and trapping are still the principal occupations, the Indians necessarily live in tents during the greater part of the year.

The North Shore.—Along the north shore of the gulf of St. Lawrence, the Indians have been taking a marked interest in the fishing industry. At Mingan, Natashkwan, Romaine, St. Augustine, and Moisie, the fishing is under departmental supervision. Salmon and cod are the principal marketable fish, and are a source of considerable income to the Indians. The land is not suitable for extensive cultivation, but many of the Indians have very creditable gardens.

NEW BRUNSWICK

Agencies.—There are three agencies in the province of New Brunswick, the Northeastern located at Buctouche, the Northern located at Perth, and the Southwestern located at Fredericton.

Tribal Origin.—The majority of the Indians of New Brunswick belong to the Micmac race, which is of Algonkin stock. In addition to these there are some bands of Malecites, also of Algonkin stock.

Occupations.—In the Northeast division the Indians are mostly engaged in fishing, hunting and trapping. Some farming is carried on, and the Indians have rather tended to increase their interest in this regard.

The lumbering industry employs quite a large number and the Indians all through the eastern provinces have become very proficient in the lumber camps, on the river drives and in the mills. In the Northern division there is less farming carried on, and the Indians during the summer months find employment generally as day labourers. In the Southern division they support themselves chiefly by the manufacture and sale of Indian wares.

NOVA SCOTIA

Agencies.—There are nineteen Indian agencies in the province of Nova Scotia, namely: Yarmouth, Digby, Shelburne, Queens, Lunenburg, Annapolis, Kings, Windsor, Shubenacadie, Halifax, Cumberland, Colchester, Pictou, Antigonish-Guysboro, Richmond, Inverness, Victoria, Sydney, and Eskasoni.

Tribal Origin.—The Indians of Nova Scotia are of Algonkin stock, and bear the distinctive name of Micmac.

Occupations.—They follow various occupations, but, as a rule, do not confine themselves to any particular one. Many of them cultivate the land with indifferent success, but as there are exceptions in almost every case, so it is with our Indians; a few of them are succeeding very well as farmers. The majority of those living near industrial centres usually work as day labourers. Hunting, trapping, and acting as guides for sportsmen are favourite occupations, more especially with Indians of middle age. Basket-making and the manufacture of fancy moccasins, etc., are confined mostly to women. A profitable employment among Indians in a few sections of Nova Scotia is the manufacture of hockey sticks, and they appear to be experts at the business.

Dwellings.—With very few exceptions, Indians in Nova Scotia occupy houses of frame construction, well finished on the outside, but unfinished inside. Every settlement, however, has a few comfortable dwellings well finished throughout. Other buildings owned by Indians—barns and storehouses—are mostly of frame construction also.

PRINCE EDWARD ISLAND

Agency.—One agency is sufficient for the purposes of the department in this province, as the total Indian population is only 292.

Tribal Origin.—The Indians of this province all belong to the Micmac tribe, which is of Algonkin stock.

Occupations.—But few of the Indians of Prince Edward Island are farmers. The principal industries are basket-making and fishing. The oyster fisheries, which had been a complete failure for some years, are again profitable and have added somewhat to the income of the Indians.

MANITOBA

Agencies.—The following agencies are included in the province of Manitoba: Fisher River, Clandeboye, Norway House, Griswold, Portage la Prairie and Manitowapah, Pas and Birtle.

Tribal Origin.—The majority of the Indians of Manitoba belong to the Ojibewa race, which is of Algonkin stock. Bands of Swampy Crees are found at the Norway House and Fisher River agencies and in the York factory district; these are also of Algonkin stock. The Indians located at the Griswold agency are Sioux; there are also Sioux at the Birtle and Portage la Prairie agencies. There is a band of Chipewyans at Fort Churchill; this tribe is of Athapascan stock.

Occupations.—The reserves in Manitoba suitable for extensive agriculture are mainly within the Birtle, Griswold, and Portage la Prairie agencies. On some reserves during the last two years the crops have not been up to the standard and the Indians have somewhat lost heart in their farming operations, but generally speaking progress has been satisfactory.

In the northern agencies the occupations are mostly hunting and trapping, but fishing has been becoming a more and more important factor during the past four or five years, and considerable income has been derived therefrom. While fur has been scarce the price has been high and the market for fish has increased. All of the northern Indians are expert guides and canoe-men, and many find employment in this way or with the transport or fur companies.

In the southern and more settled districts many of the younger people seek employment as day labourers, and owing to the high wages have been fairly prosperous. The Indian women make needle work, baskets, etc., for which there is a ready market.

Dwellings.—In recent years the Indians have adopted more sanitary methods of living. Their houses are more comfortably furnished and of better construction than formerly. In the north the nomadic life of the Indians does not permit of other than the old-fashioned log house, but even these are being greatly improved and in some cases are being replaced by suitable frame dwellings.

SASKATCHEWAN

Agencies.—The following agencies are included in the province of Saskatchewan: Assiniboine, Battleford, Carlton, Crooked Lake, Duck Lake, Moose Mountain, Onion Lake, Pelly, Qu'Appelle and Touchwood Hills, File Hills and Isle à la Crosse.

Tribal Origin.—The most numerous tribes among the Saskatchewan Indians are the Ojibewas, Swampy Crees and Plain Crees, which all belong to the great Algonkin stock. In addition to these, Sioux Indians are found at the Assiniboine, Moose Mountain, Qu'Appelle and Carlton agencies, and on the Moose Woods reserve. In the Onion Lake agency there is a band of Chipewyans, who are of Athapascan stock. There are also a few Chipewyan Indians in the Isle à la Crosse district.

The principal occupation of the Indians of Saskatchewan is mixed farming and stock-raising. The close supervision which the department has had over these Indians has tended to greatly improve their method of farming and consequently their crops and income derived from them have greatly increased. Most of the Indians are well provided with good quality of machinery. As a

rule they have good stock and suitable houses. In the outlying districts, however, hunting and trapping are still the main sources of income and will so remain until civilization encroaches upon the hunting grounds.

Dwellings.—The dwellings of the Indians on the reserves where farming is carried on are now mostly of frame construction. The outbuildings, however, are generally of logs, but even there there has been some improvement.

ALBERTA

Agencies.—The following agencies are included in the Province of Alberta: Blackfoot, Blood, Edmonton, Hobbema, Peigan, Saddle Lake, Sarcee, Stony and Lesser Slave Lake.

Tribal Origin.—The Alberta Indians are of Algonkin stock, with the exception of the Sarcees near Calgary and the Beavers and Slaves in the Lesser Slave Lake agency, who are Athapasean, and the Paul's band in the Edmonton agency, who are Iroquoian, and the Stonies, who are of Siouan stock. The Algonkin Indians of Alberta are subdivided into Blackfoot nation, comprising the Indians of the Blackfoot, Blood and Peigan agencies, Plain Crees found in the Lesser Slave Lake, Saddle Lake, and Hobbema agencies, and a band of Ojibewas at Moberly Lake, in the Lesser Slave Lake agency.

The principal occupations of the Indians of Alberta are farming and stock-raising. Almost all the reserves in the settled districts of the province have large herds of horses and cattle.

In the northern parts of the province hunting and trapping are still almost the sole sources of income; there is practically no farming carried on and the construction of steamers on the Peace and Athabasca rivers, and of the railways to Peace River Crossing and Fort McMurray, have greatly lessened the wages of the Indians with the trading companies and transports. However, the price of fur has been even higher than in past years.

Dwellings.—In the southern part of the province the dwellings and farm buildings are of excellent construction and quality. Almost all the reserve where extensive farming is carried on boast of up-to-date modern dwellings, comfortable and well constructed. In the northern parts of the province the majority of the Indians continue to follow their primitive nomadic mode of life, and many of them still live in tents and tepees during the greater part of the year.

BRITISH COLUMBIA

Agencies.—The following agencies are included in the Province of British Columbia: Babine and Upper Skeena, Bella Coola, Cowichan, Kamloops, Kootenay, Kwawkewlth, Lytton, New Westminster, Okanagan, Queen Charlotte, Stikine, Stuart Lake, Vancouver, West Coast, Williams Lake and Skeena River.

Tribal Origin.—The Indians of the Bella Coola, Cowichan, Kamloops, Lytton, New Westminster, Vancouver, and Okanagan agencies belong to the Salish tribe. The Kootenay tribe is located in the agency of the same name. The Kwakiutl-Nootka tribe is located at the Kwawkewlth and West Coast agencies; the Haidas, in the Queen Charlotte islands; the Tlingits, in the Stikine; and the Tsimshians, in the Skeena River agency. The Indians of the Babine, Stuart Lake and Williams Lake agencies belong to the Athapasean race.

In addition to these there are about 3,000 nomadic Indians in the province who cannot be correctly classified according to linguistic stock or tribal origin.

Occupations.—The occupations of the Indians of British Columbia vary with their habitat. The Indians situated along the coast earn their livelihood principally by fishing. In many instances they own their own motor-launches,

nets and gear, while others are supplied by the various canneries. Many of the women are also employed in the canneries or in the hop fields, and make a very steady income.

The Indians of the Queen Charlotte islands own and operate their own small plant for rendering the oolachan or candle fish. In the inland parts of the province some farming operations are carried on and particularly in the irrigated districts grain, fruits of all kinds, and vegetables have been raised with success.

These Indians have been making marked progress in this regard and are now well equipped with modern machinery.

The Kootenay, Kamloops, Okanagan and New Westminster Indians own large herds of horses and cattle. While the Indians in the northern and remote parts of the province still depend upon hunting and trapping for their livelihood, the agents report a marked improvement in their manner of living.

Dwellings.—Except for the more remote districts the Indians have built comfortable and modern dwellings and outbuildings. Their progress in this respect has been perhaps more rapid than that of any other Indians of the Dominion.

NORTHWEST TERRITORIES

Agencies.—The department has now three agencies in the Northwest Territories, namely, Fort Simpson, Fort Smith, and Fort Resolution.

Tribal Origin.—The principal tribes found in the Far North are the Slave, Hares, Loucheux, Sicannies, Dogribs, Yellow-knives, Chipewyans and Caribou Eaters. All these tribes are of Athapascan stock. There are a few Crees in the neighbourhood of Chipewyan. These are of Algonkin stock. The most northerly tribes are the Takudah, who extend to the Mackenzie Delta; and the Copper Mines, who are located along the Coppermine river. The territory occupied by these two last-mentioned tribes is contiguous to that inhabited by the Eskimos.

These Indians depend entirely upon hunting and trapping for a livelihood. The department in 1921 made a treaty with the Indians along the Mackenzie river thus bringing under the supervision of the Dominion Government practically the only Indians in Canada with whom treat had not been made.

Occupations.—A few have been induced to raise small plots of potatoes. They own no horses or cattle, transportation being almost entirely by canoe along the great waterways, or by dogs in winter. They catch and preserve large quantities of whitefish for their own use and for consumption by their dog-trains in winter.

YUKON

Tribal Origin.—The Forty Mile, Blackstone, and Moosehide bands belong to the Takudah tribe. There is a band of Slavies at Lancing Creek who migrated from Fort Good Hope, on the Mackenzie river; another band of Slavies, called Nahanies, is located at the headwaters of the Pelly river. All these Indians are of Athapascan stock. At Mayo, Selkirk, Little Salmon and Carmacks there are bands belonging to the tribe known as Stick Indians. Bands belonging to the Tlingit tribe are found at Whitehorse, Teslin Lake, Champagne Landing, and Carcross.

Occupations.—Hunting, trapping and fishing are the chief occupations of the Yukon Indians, and they have been fairly successful during the past year. The women also derive some revenue from the sale of mocassins and curios of various kinds, while the men are expert at making tobogans and snowshoes. Practically no farming is carried on owing to climatic conditions, but some of the Indians cultivate patches of potatoes and other vegetables.

FINANCIAL

At the close of the twelve months ended March 31, 1928, capital of the Indian Trust Fund, which at the end of the preceding year amounted to \$12,860,953.69, had increased to \$13,203,366.84.

The amounts expended from the Consolidated Revenue Fund were as follows: Voted by Parliament for the purposes of the department, \$3,977,791.58, and annuities by statute, \$220,209.00.

On March 31, 1928, the balance to the credit of the Indian Savings Account for the funding of the annuities and earnings of pupils at industrial schools was \$206,977.98. Deposits and interest during the twelve months aggregated \$37,456.53, and withdrawals, \$37,042.14.

GENERAL

In 1924 a complete census was made by the department of the Indians and Eskimos of Canada, which was published in the annual report. This was the first census that had been made since 1916 and it shows slight increase in the Indian population as compared with previous records. A recapitulation of this census will be found in Part II of this report, which follows herewith and therein also will be found statistics with regard to Grain, Vegetable and Root Production; Land, Private and Public Buildings and Property; Live Stock and Poultry; General Effects; Value of Real and Personal Property and Progress during year; Sources and Value of Income; Schools; Indian Land; Civil Government; Appropriation Accounts and Indian Trust Fund.

I have the honour to be, sir,

Your obedient servant,

DUNCAN C. SCOTT,

Deputy Superintendent General of Indian Affairs.

The first of these is the fact that the medical profession is not a homogeneous body. It is composed of many different groups, each with its own interests and its own methods of action. The second is the fact that the medical profession is not a single entity. It is composed of many different groups, each with its own interests and its own methods of action. The third is the fact that the medical profession is not a single entity. It is composed of many different groups, each with its own interests and its own methods of action.

GENERAL REMARKS

The land sold during the year amounted to 11,480.35 acres, which realized \$113,956.70. The quantity of surrendered land in the hands of the department was approximately 242,958.64 acres. The principal outstanding on account of Indian lands sold amounted to \$1,634,306.78, a considerable portion of which has not yet become due.

ORGANIZATION CHART DEPARTMENT OF MINES

REPORT
OF THE
DEPARTMENT OF MINES

FOR THE FISCAL YEAR ENDING MARCH 31, 1928

To the Hon. CHARLES STEWART,
Minister of Mines,
Ottawa.

SIR,—I have the honour to submit, in accordance with the requirements of Parliament, the Annual Report of the Department of Mines for the year ending March 31, 1928.

The period covered by the present report has been one unequalled in activity and expansion in the history of the mining and metallurgical industries of Canada, and has been featured by a constantly increasing demand from all parts of the Dominion for the services of the Department. To meet this demand the investigations conducted both in field and laboratory by the scientific and technical branches of the Department have been extended to areas in every province of Canada. The list of these investigations, and the range and variety of the problems embraced, are in themselves sufficient to indicate the importance of the position that mining has already achieved in the industrial life of the nation, and the influence that it is likely to exercise on the course of our future economic development.

Statements of the functions and details of the operations of the several branches and divisions of the Department during the year, prepared by the heads of each branch or division, are to be found below. An examination of these statements will reveal that although much is being accomplished to further the economic development of our mineral resources, much still remains to be done, and that increased facilities for economic research along these lines, and consequently greater expenditure by both Dominion and provincial governments are very likely to be in the order of things for years to come. A growing recognition of the value of scientific and technical research in the solution of problems related to the utilization of our natural resources has manifested itself particularly in the mining and metallurgical industries. Metallurgical research has already resulted in a notable contribution to the wealth of the Dominion by rendering profitable many previously unprofitable deposits and by extending the lives of a number of the older mining camps. Equally valuable, if not quite such spectacular, progress is being made in other directions, notably in respect to the utilization of our low-grade fuel resources. Geological science is rendering invaluable assistance in locating and determining the oil-bearing formations of the west, and in the search for and exploitation of the metalliferous and other mineral deposits with which the Dominion is so richly endowed.

In the very diversified field of activity in which it operates, the Department of Mines is chiefly concerned with the various scientific and technical phases of

mining, milling, and metallurgical operations, and with delimiting, mapping, and directing attention to the mineralized areas of Canada, in assisting the mine operator and metallurgist in solving the problems continually arising in the business of extracting, milling, and smelting ores, and, through technological research, in the study of methods by means of which the product of the mine may be more efficiently utilized and the market for Canadian mineral products extended. This work, in its relation to national development, has a value far beyond that represented by the purely material results immediately secured. In the history of modern civilization mining has proved to be one of the greatest pioneering and colonizing influences, and the primitive mining camp of today is, in fact and often, the thriving and many-sided community of tomorrow.

During the year the Geological Survey had fifty field parties engaged in geological and topographical mapping and related work, operating in widely separated parts of the Dominion. This number was supplemented by various field investigations undertaken by the Mines Branch and the National Museum of Canada. Field work in geology, topography, mineral resources, palæontology, ethnology, and biology was continued from last year and new investigations were commenced; laboratory investigations embraced a wide range of subjects in the fields of mineralogy and petrography, ore dressing and metallurgy, fuel testing, ceramics, and road materials. To provide much-needed accommodation for the increasing work in fuel testing the construction of a new Fuel Research Laboratory at Ottawa was commenced, and it is expected that the new building will be ready before the end of the next fiscal year. Plans have also been made for a large-scale experiment in the manufacture of peat fuel and a very complete peat manufacturing plant, planned in accordance with the recommendations of the former Joint Peat Committee, has been built during the past year at Alfred, Ontario. This will be operated during the year on a basis approximating as closely as possible commercial conditions.

The Department has maintained during the year its general policy of co-operation with other departments of the Dominion and of provincial governments, and with the development branches of the railway companies, banks, chambers of commerce, and other Canadian organizations interested in the development of our natural resources. The general type of investigation undertaken by the Department differs distinctly from those conducted by other bodies, and the danger of overlapping is almost entirely eliminated. Where similar work is carried on—as is the case in some of the universities, provincial governments, and the National Research Council—every effort is made to co-ordinate the work of the Department with that of these various bodies. Close co-operation is also maintained with the Imperial Institute (London), the British Department of Scientific Research, the United States Department of Commerce at Washington, and with certain technical societies in the United States.

An outstanding event of the year was the meeting in Canada of the Second (Triennial) Empire Mining and Metallurgical Congress, which opened in Montreal on August 22, and closed in Quebec on September 28, following an extensive tour of the Dominion during which the principal mining and metallurgical centres were visited. The Congress was convened by the Canadian Institute of Mining and Metallurgy and was representative of every important phase of the mining and metallurgical industries in all parts of the Empire. Included in the total attendance, which exceeded twelve hundred, were delegates from mining and kindred associations established throughout the Empire and visitors from many foreign countries. The papers presented at the technical sessions of the Congress embraced a wide variety of topics related to recent progress, the present status and future prospects of the mining and metallurgical industries in almost every section of the Empire where these

industries are carried on. Specially prepared handbooks descriptive of Canada's mining and metallurgical industries were issued on this occasion by the Department, by several of the provincial governments, and by numerous private organizations. Every opportunity was given the visitors to secure an accurate idea of the extent and variety of our mineral resources and of their industrial possibilities, and the Congress was particularly impressed by the progress made in mining and metallurgy throughout the whole of the Dominion in the last few decades. The attendant publicity both at home and abroad, the technical discussions during the Congress, and the personal contacts made between outstanding mining men in different parts of the Empire, are factors that may mean much to the development of mining in Canada, and although it is impossible to estimate in terms of dollars the benefits which Canada will derive from this meeting on her own soil, it is not difficult to foresee that such benefits, both direct and indirect, will be of considerable importance.

The Deputy Minister, in addition to his administrative duties, devoted a considerable part of his time to other work devolving upon him as chairman or member of the following official bodies: Council of the Northwest Territories; Dominion Fuel Board; Canadian Committee of the World Power Conference; Advisory Committee on Mining Regulations, National Research Council; Niagara Board, Advisory Committee on Minerals of the Imperial Institute. Meetings of each of these bodies were held throughout the year. The work of the Lignite Utilization Board, of which the Deputy Minister has been a member since 1924, has now been brought to a close and a satisfactory disposition has been made of the leases and other rights, and of the equipment of the board.

In the autumn of 1927 the Deputy Minister accompanied the Minister of Mines on a visit to several European centres in which experimental work in the processing of fuels is in progress. The itinerary for this tour was planned in co-operation with the British Fuel Research Board and with official organizations in Germany, which permitted of a selection being made of the more advanced operations in both of these countries. Four low temperature retorts were inspected in Germany, and eight British plants, situated in South Wales, London, the Midlands, and in Scotland, were also examined. As a result of these investigations valuable information was gained which may have a bearing on the application of processing treatment to certain types of Canadian fuels should any of these developments prove applicable to Canadian conditions. Several processes designed to accomplish the liquefaction of coal or the conversion of coal into oil were examined. A small unit of the Bergius process installed in the British Fuel Research Station at Greenwich was inspected, and experiments in which the Fischer process is being essayed were witnessed at the Kaiser Wilhelm Institute of Coal Research at Mulheim on the Ruhr. Information was also secured in respect to a third process with which experiments are being made at Leuna in Germany. The possibilities involved in these different developments are of particular interest to Canadians because of our large reserves of low-grade coals. Although the liquefaction of coal is still in a comparatively early stage of advancement, important progress has already been made and it is highly desirable that further developments along these lines be carefully watched. While in Europe, the Deputy Minister participated in a meeting of the International Executive Council of the World Power Conference held at Cernobbio, near Como, Italy, September 5 to 10, and meetings in London of the Advisory Council on Minerals of the Imperial Institute.

The official mining newsletter series prepared by the Department and distributed from the High Commissioner's Office in London, has been maintained.

By means of this series, which was inaugurated in 1923, a rational and informed interest in Canadian mineral resources and mining operations is constantly sustained. This fortnightly service now reaches some four hundred selected newspapers, mining, banking, and investment houses in the United Kingdom and on the Continent. The titles of the twenty-eight articles dispatched during the year will be found following the list of papers and addresses appearing on pages 7 to 9.

As in preceding years, the results of all major investigations conducted by the Department in the field and in its laboratories have been published in the form of summary reports, special bulletins, maps, and memoirs. A great deal of information of scientific, technical, and current interest connected with the work of the Department is also disseminated through the public and technical press, and by means of addresses. In this phase of its activities the Department has continued to receive the valuable co-operation of the Natural Resources Intelligence Branch of the Interior Department. Requests received from a number of newspapers which proposed to issue special editions in honour of the Diamond Jubilee of Confederation led to the preparation by the Department of a series of thirteen special articles for release on this occasion. These articles were distributed to newspapers in many different parts of the Dominion and in the United Kingdom and included, in addition to reviews of progress made in the Canadian mining and metallurgical industries since Confederation, a number of articles prepared by members of the staff dealing with various other economic and cultural aspects of past and present phases of life in Canada. The annual series of educational lectures given during the winter months in the Lecture Hall of the Victoria Memorial Museum was again favourably received, and will be continued as heretofore.

Preliminary figures of mineral production recently published by the Dominion Bureau of Statistics show a new high record reached during the past year, when the value of the output rose to \$247,356,695, a gain of nearly \$7,000,000 over the record output in 1926, and of almost 200 per cent in the twenty-year period since 1907. Not only has 1927 been a record year for production; it has also witnessed the broadest and most important advance in development yet recorded in the history of Canadian mining, and has seen the field of operations extended and a more solid foundation laid for a still greater and more remarkable advance in the future. It can safely be said that never before has mining in the Dominion attracted and so consistently held the amount of interest that it does at the present time, and never has the effort to make the mineral-bearing regions of the Dominion yield up their wealth been so well organized and intensive, or so widespread.

An important feature of this record output, and one that has great industrial significance, is the diversity of fields over which it is spread. New output records have been established in a variety of metals and non-metallic minerals. Material advances have been made in the production of gold, copper, lead, and zinc, and in that of coal, cement, lime, and gypsum. An increase is also shown in the values of natural gas and petroleum, and an advance over production in 1926 is recorded for some twenty mineral products of varying industrial importance. Of the total production value recorded for 1927 over 99 per cent was contributed by nineteen different mineral products, each of which had an output of \$1,000,000 or more in value. On the whole a very healthy trend is visible to which greater emphasis is lent by the fact that, notwithstanding general declines during the past few years in the prices of mineral products, as revealed by the index numbers of the Bureau of Statistics, the total value of the annual mineral production steadily continues to increase.

The mining and metallurgical industries are yearly gaining in importance in the industrial life of the provinces. It has recently been said that mining may soon rank as the second of Canada's primary industries, and a study of the fields over which it is so rapidly expanding makes the realization of this prophecy appear not altogether impossible. Mining operations are now a matter of vital concern to three Canadian provinces, of prime importance to two others, and are becoming of increasing importance to the remaining three large provinces. In order of production in 1927 Ontario came first, British Columbia second, Nova Scotia and Alberta almost equal, Quebec fifth with a rapidly increasing production, and Manitoba, New Brunswick, Yukon, and Saskatchewan following in the order given. Developments in Quebec and more recently in western Manitoba and in Saskatchewan have thrown a new light on the mineral resources of these provinces, and the success of the pioneers in these fields has provided the incentive to greater activity and the more intensive examination of previously prospected areas. Vast areas hitherto entirely unexplored or which had been only hurriedly prospected have been made more readily accessible by airplane. The search for minerals is today contributing more than any other agency to the exploration of unmapped territory, and the map of the Dominion is being unrolled northward with remarkable rapidity. Enough is now known of the resources of the north to enable one to foresee the establishment, within a comparatively short space of time, of important mining and metallurgical centres throbbing with life and movement, and contributing materially to the greater economic development of the Dominion.

Most of the enterprises now operating in the Canadian mining field are in the hands of reputable concerns interested in the honest development of their properties. The stock exchange frenzy of 1926 and 1927 and the ease with which funds could then be secured proved an irresistible inducement to operators of many promotions of the mushroom type, incorporated principally with the object of mining the public. This very undesirable element has since, fortunately, to a large extent disappeared, partly because of the greater caution now manifested by the investing public and partly because of repressive measures adopted by the governments concerned and by the banks. It cannot be too clearly understood that mining in the exploratory and pre-development stage is, in very many cases, risky, and all that the investor can possibly hope for is the honest expenditure of the funds of the company by an honest and competent management. The Canadian mining industries offer, on the other hand, a wide variety of opportunities of proven and undoubted value which, from the investment point of view, do not carry the risks inevitably associated with issues of the more speculative classes.

The Department wishes to express its appreciation of the recent tribute made to the memory of the late George Mercer Dawson, Director of the Geological Survey from 1895 to 1901, by Mr. Fenley Hunter, of New York city. Mr. Hunter's tribute is in the form of a memorial tablet which was erected in September, 1927, on the right bank of Liard river, Yukon territory, on the site of a boundary post placed there in 1887 by Dr. Dawson during his explorations in those regions. The erection of this memorial to a great Canadian geologist and explorer by a citizen of the United States of America is a fine tribute not only to Canadian science, but also to the interest and appreciation of the people of the United States. A more detailed description and a photograph of the monument have been included in the report of the Director of the Geological Survey in this volume.

Dominion Fuel Board

The Dominion Fuel Board, during the year, was engaged not only with the investigations previously initiated but also with inquiries in connexion with the better utilization of fuels, and the new uses to which coal is being put.

In co-operation with the Mines Branch, Department of Mines, a fuel power survey was planned with a view to learning how the fuels of the Dominion are being utilized in industry and promoting more economic methods in the use of fuels. The board is keeping in touch with experiments and methods for burning pulverized coal and arrangements have been made for the Mines Branch to investigate the present status of the project. If this method is found to be practicable, the use of certain Canadian coals, the markets for which are at present restricted owing to their high content of low fusibility ash, may be considerably extended.

The first of a series of pamphlets on house insulation and allied subjects was published in English and French by the board during the year. The object of this pamphlet is to direct public attention to the large wastage of heat resulting from improper house construction and to suggest methods whereby this loss may be overcome. Public reception of the 25,000 copies issued was such as to necessitate the printing of a second similar edition. Other pamphlets of the series are in course of preparation.

Information obtained by the board from an earlier investigation of the use of wood as an auxiliary fuel in Ontario was passed to the Forestry Branch, Department of the Interior. A synopsis of the investigation will be published in the general report of the Fuel Board now in course of preparation. The annual survey for the purpose of ascertaining the extent to which imported anthracite is being displaced in Ontario and Quebec was in the year under review conducted for the Fuel Board by the Mineral Resources Division of the Department of Mines. Data obtained in this way provide a broad knowledge of our domestic fuel situation. The report on the survey indicates a notable increase in the use of the so-called "substitute fuels." The board continued its program of distributing throughout Ontario and Quebec, printed cards and pamphlets showing proper methods of burning coke and other fuels displacing imported anthracite. At the board's direction a revised pamphlet on the use of these substitute fuels, printed in both English and French, was prepared and distributed by the Mines Branch, Department of Mines.

Administration of the Domestic Fuel Act, passed during the Session of Parliament of 1927, was assigned to the Fuel Board. The board dealt with an application for the benefits of the Act during the period under review, and submitted the necessary recommendations to the Minister. The application was accepted.

At the conference of the Provincial Premiers and Federal Cabinet held at Ottawa in November, the deliberations included the development of a Canadian fuel supply. For use at this convention special briefs dealing with the fuel situation were prepared by the board. The board also prepared and submitted information for ministerial use in connexion with the framing of policies which the Government adopted for test movements to extend the markets for the coals of both eastern and western Canada.

Articles for press and journalistic publicity and public addresses on the fuel situation were included in the year's activities. Information relative to fuel matters was supplied by the board to different branches of the Government service, and many requests from the public for such information were dealt with.

The Natural Resources Intelligence Service, the Mines Branch, Geological Survey, the Dominion Water Power and Reclamation Service, and the Dominion Bureau of Statistics freely co-operated with the board.

The board proposes to issue soon a general report covering its activities and progress since the Interim Report was published in 1923.

Changes in personnel and staff during the year included the resignation of Mr. C. P. Hotchkiss as a member and executive secretary of the board. Mr. F. G. Neate was appointed secretary in the place of Mr. Hotchkiss. Mr. M. D. McCloskey was transferred from the Department of the Interior to the staff of the Fuel Board.

Your obedient servant,

CHARLES CAMSELL,

Deputy Minister.

OTTAWA, November 7, 1928.

List of Papers and Addresses

(NOTE.—Lists of the papers prepared and addresses delivered during the year by members of the staff of the Divisions of Anthropology, Biology, and Mineralogy are to be found in the Annual Report of the Director, National Museum of Canada)

General

- The Status of the Canadian Mining Industry, by Hon. Charles Stewart. Empire Mining and Metallurgical Congress, August 22, 1927.
- Canada's Mineral Wealth, by Hon. Charles Stewart. Canadian Progress, 1927.
- Our Mining Industry, by Hon. Charles Stewart. Canadian Mining Manual, 1927.
- Dominant Developments in Canada, by Charles Camsell. Financial Times (Montreal), August 26, 1927.
- The Dominion's Minerals, by Charles Camsell. Financial Times (London), November 21, 1927.
- Range of Canada's Mineral Wealth, by Charles Camsell. "Canada" Mining and Financial Supplement, July 30, 1927.
- The New Position of Canadian Mining, by Charles Camsell. Stock Exchange Gazette, London.
- Canada's Mining and Metallurgical Industries, by Charles Camsell. Industrial Canada, January, 1928.
- Canada's Mineral Resources and Development, by Charles Camsell. Special Canada Number, Empire Mail (London), March, 1928.
- Mining, by Charles Camsell. Gyro Club, Ottawa, April 13, 1927.
- The Mining Industry, 1927, by Wyatt Malcolm. Annual Financial Review number of the Gazette, Montreal.
- The Mining Industry, 1927, by Wyatt Malcolm. Natural Resources, Canada, vol. 7, No. 1, p. 4, January, 1928.
- The Second Empire Mining and Metallurgical Congress, by Charles Camsell. Canadian Institute of Mining and Metallurgy, March 8, 1928.
- The Forthcoming Meeting of the Second (Triennial) Empire Mining and Metallurgical Congress in Canada, by J. McLeish. Address to Rotary Club, Ottawa, August, 1927.
- The Geological Survey of Canada, by Wyatt Malcolm. The Canada Year Book, 1926, pp. 34-36 (1927).
- The Work of the Mines Branch, Department of Mines, by John McLeish. Address to the Lion's Club, Ottawa, May, 1927.
- Field Work and Investigations To Be Undertaken by the Mines Branch During the Season of 1927, by John McLeish. Special List of Journals and Officials.
- Activities of the Dominion Fuel Board, by F. G. Neate. Canadian Review, 1927.

Geology, Mining, Mineralogy, and Mineral Resources

- Geology of Canada, by Wyatt Malcolm. The Canada Year Book, 1926, pp. 16-27 (1927).
- Geology of Canada, by Wyatt Malcolm. Empire Congress number of the Globe, Toronto.
- Economic Geology of Canada, 1926, by Wyatt Malcolm. The Canada Year Book, 1926, pp. 28-34 (1927).
- Outline of Carboniferous Stratigraphy and Geologic History of the Maritime Provinces of Canada, by W. A. Bell. Transactions, Royal Society of Canada, section IV, 1927.
- Stratigraphy of the Northern Subprovince of the Lake Superior Region, by T. L. Tanton. Geological Society of America Bulletin, vol. 38, pp. 731-748.
- The Eastern Contact Zone of the Coast Range Batholith on Stikine River, by F. A. Kerr. Canadian Mining and Metallurgical Bulletin No. 189, pp. 179-183, January, 1928.
- Review of "Our Mobile Earth," by R. A. Daly; F. J. Alcock. Canadian Field Naturalist, May, 1927.
- Zoning of Mineral Deposits, by George Hanson. Royal Society of Canada, Proceedings and Transactions, vol. 21.
- Emulsions of Silicates, by T. L. Tanton. American Journal Science, vol. 15, pp. 66-68.
- Chemistry in Mining, by C. S. Parsons. Toronto Branch, Canadian Chemical Association.
- Economic Minerals, by H. F. Fréchette. Broadway Avenue Public School, Westboro.
- An X-Ray Study of the Garnet Group, by C. H. Stockwell. American Mineralogist, vol. 12, No. 9.

- Diamond Jubilee Celebration in the Gaspé Mineral Area, by F. J. Alcock. Canadian Mining Journal, July 22, 1927, p. 580.
- Recent Developments in Gaspé Peninsula, by F. J. Alcock. Canadian Mining and Metallurgical Bulletin, pp. 367-385, March, 1928.
- Industries of the Niagara Peninsula; Power and Transportation; Electro-Chemical Industries; Metallurgical Industries; Chemical Industries; by A. W. G. Wilson. Second (Triennial) Empire Mining Congress.
- Mining in Nova Scotia, by A. H. A. Robinson. Halifax Herald.
- Abrasives, by V. L. Eardley-Wilmot. Mineral Industry for 1926.
- Lead and Zinc in Canada, by T. W. Bingay and F. J. Alcock. Canadian Mining and Metallurgical Bulletin, pp. 920-943, August, 1927.
- Oil and Gas Developments in Canada, by G. S. Hume. Journal of the Institution of Petroleum Technologists, vol. 13, No. 83, August, 1927.
- Oil and Gas in the Maritime Provinces, by W. A. Bell. Second (Triennial) Empire Mining and Metallurgical Congress, Alberta.
- The Recent Zinc Discoveries near Sudbury, Ontario, by A. Buisson. Second (Triennial) Empire Mining Congress.

Fuels and Fuel Testing

- Low Temperature Carbonization and Coal Liquefaction in Europe, by Hon. Charles Stewart. Canadian Mining Journal, December 9, 1927.
- Recent Developments in Europe in the Treatment of Coal and Their Application to Canada, by Charles Camsell. Canadian Club of Ottawa, February 18, 1928.
- Low Temperature Carbonization and Liquefaction of Coal, by Charles Camsell. Canadian Mining Institute, Ottawa Branch, November, 1927.
- Research and Investigations of the Division of Fuels and Fuel Testing, by senior members of staff of the Division of Fuels and Fuel Testing. Canadian Chemistry and Metallurgy, August, 1927.
- Gasoline by Pressure Cracking of Canadian Shale Oil and Bitumen, by R. E. Gilmore, Canadian Chemistry and Metallurgy, November, 1927.
- Fuel Markets and Their Development, by F. G. Neate, Financial Times, London, England, December, 1927.
- Extended Use of Alternative Fuels, by F. G. Neate, January, 1928.
- Canada's Fuel Problem, by Charles Camsell. Address before Ottawa Canadian Club, February, 1928.
- Development of Welsh Coal Market in St. Lawrence District, by F. G. Neate. Financial Times, London, England, March, 1928.
- Improvement in Domestic Fuel Situation, by M. D. McCloskey. Toronto Saturday Night, April, 1927.
- Subsidy for Coke Plants, by M. D. McCloskey. Natural Resources Canada, April, 1927.
- Fuel Problem in Ontario, by F. G. Neate. Canadian Retail Coal Dealers' Association. Toronto, May, 1927.

Ore Dressing and Metallurgy

- The Ore Dressing and Metallurgical Laboratories, by W. B. Timm. Toronto Branch, Canadian Institute of Mining and Metallurgy.
- Improvements and Innovations in Canadian Flotation Practice, by W. B. Timm. Annual Meeting of British Columbia Branch, Canadian Institute of Mining and Metallurgy.
- Custom Concentrators, by C. S. Parsons and A. K. Anderson. Annual Meeting, C.I.M.M., Quebec, Que.
- Flotation Practice (2 papers), by C. S. Parsons. Mining Students, Queen's University Kingston.
- The Flotation Process, by C. S. Parsons. Engineering Society, Queen's University, Kingston.
- The Flotation Process, by C. S. Parsons. Ottawa Branch, Society of Chemical Industry.
- The Concentration of Ores of Western Quebec, by G. S. Godard. Annual Meeting, C.I.M.M., Quebec.

Ceramics and Road Materials

- Address to Ceramic Students of Toronto University, by H. F. Fréchette. March, 1928.
- Clay Handling and Delivery Costs, by J. F. McMahon. American Ceramic Society, February, 1928.
- Enamelling on Metal, by J. F. McMahon. Victoria Memorial Museum.
- The Enamelled Saucepan, by J. F. McMahon. Victoria Memorial Museum.
- Roads and Road Materials, by H. F. Fréchette. Special List of Journals.

Physiography and Topography

- A New Method of Determining the Rate of Recession of Niagara Falls, by W. H. Boyd. Transactions Royal Society, Canada.
- Co-ordination of Topographical and Geological Mapping in Relation to Mining Development, by K. G. Chipman and W. F. James. Canadian Institute of Mining and Metallurgy, Annual Meeting, Quebec, March, 1928.
- Canada's Physical Features Promise Rich Future, by D. A. Nichols. Confederation Issue, Ottawa Journal, June, 1927. Reprinted in several papers.

Palaeontology

- The Ancient Life of Canada, by E. M. Kindle. Mail and Empire and other Canadian papers.
- The Role of Thermal Stratification in Lacustrine Sedimentation, by E. M. Kindle. Trans. Royal Society of Canada, vol. 21, ser. 3, sec. 4, pp. 1-35 (1927).
- The Romance of Fossil Hunting, by E. M. Kindle (Review). Journal of Geology, vol. 35, pp. 95-96 (1927).
- Some Canadian Triassic Faunas, by F. H. McLearn. Trans. Royal Society of Canada, 3rd ser., vol. 21, sec. 4, pp. 61-73, Pl. 1, Fig. 7 (1927).
- Horned Dinosaur Group in National Museum of Canada, by C. M. Sternberg. Canadian Field Naturalist, April, 1927.
- Homologies of Certain Bones of the Ceratopsian Skull, by C. M. Sternberg. Royal Society of Canada, 3rd ser., vol. XXI, sec. IV, 1927.
- Hunting Dinosaurs in the Bad Lands, by C. M. Sternberg. Y.M.C.A., Ottawa, October 19, 1927.
- Dinosaurs, by C. M. Sternberg. Trinity Church; Ottawa Boys' Club, March 17, 1928.
- Hunting Dinosaurs in Alberta, by C. M. Sternberg. Kiwanis Boys' Club, Ottawa, February 3, 1928.
- The Age of Mammals, by C. M. Sternberg. National Museum of Canada Lecture Course, January 14 and 18, 1928.
- Evolution of the Horse, by C. M. Sternberg. Veterinarian Group, Professional Institute, Ottawa, March 7, 1928.

Mining Newsletter Series

(Distributed from the Office of the High Commissioner for Canada in London)

- Great Possibilities of the Stikine River Area, by F. A. Kerr.
- Copper in Canada, by A. H. A. Robinson.
- Progress of Exploration in Beardmore Area, by T. L. Tanton.
- Recent Zinc Discoveries near Sudbury, by A. Buisson.
- Ore Deposits near Portland Canal, B.C., by G. Hanson.
- Alberta Bituminous Sand for Paving Purposes, by S. C. Ells.
- Turner Valley Oil Field, Alberta, by G. S. Hume.
- Field Work of the Geological Survey, by Wyatt Malcolm.
- Nova Scotia Salt for Use in the Fisheries, by L. H. Cole.
- The Empire Mining Congress, by C. Camsell.
- The Acid Industry in Canada, by D. M. Stewart.
- Lead and Zinc in Sudbury District, by W. H. Collins.

- Mining Developments in Western Quebec during 1927, by W. F. James.
- Canadian Talc and Soapstone Industry Shows Progress, by H. S. Spence.
- Mining Development in Gaspé Peninsula, by F. J. Alcock.
- Progress of the Porcupine Gold Area, by A. Buisson.
- The Chibougamau District of Quebec, by J. B. Mawdsley.
- Antimony in Canada, by A. Buisson.

GEOLOGICAL SURVEY

W. H. Collins, Director

CHANGES IN STAFF

In the Geological Division, W. S. Dyer, assistant geologist, resigned on June 8, 1927, to take a position as geologist in the Ontario Department of Mines. C. H. Stockwell was appointed assistant geologist on June 4, 1927, and H. C. Gunning on January 1, 1928.

The Draughting Division was strengthened by the addition of two apprentice draughtsmen, G. S. Daughtry, on September 20, 1927, and W. C. Güssow, on September 21. To meet a need both in the Geological Survey and in the National Museum for relief models of geological, topographical, and other features, R. E. Ouimet, of the Topographical Surveys Branch, Department of the Interior, was appointed relief map maker on June 27, 1927. A. V. Waite was appointed process worker in the Photographic Division, on April 15, 1927, to replace L. Y. Clarke, who resigned in 1926.

Among the positions of a clerical nature, Miss V. I. Reid, stenographer in the Borings Division, resigned on October 16, 1927, and was succeeded on January 1, 1928, by Miss A. H. Campbell. P. J. Moran was appointed, on August 1, 1927, as principal clerk, to take over the duties of the late Alexander Young, deceased August 2, 1926.

On March 3, 1928, John James McGee, junior clerk, died. Mr. McGee had been in the Geological Survey for twenty-four years, and was held in esteem and affection by his associates.

PROGRESS OF WORK

A short explanation was made in last year's report of the need for classifying and making more accessible to users of Survey publications the information which is scattered through the great number of reports and maps that have been issued since 1842. This work of systematizing maps and reports is making satisfactory progress, though owing to the slowness of preparing and publishing such matter a few years must elapse before any marked results can be apparent.

The general geological map of Canada, on a scale of 1 inch to 100 miles, is now in its third edition, and, complementary to it on the same scale, is an index map to the mineral occurrences. Of thirty-four regional geological maps on a scale of 1 inch to 8 miles which are planned, four are published (Nos. 39A, 155A, 190A, and 204A), three are in course of publication, and work will shortly commence upon three others. A large number of 1 inch to 1 mile topographical and geological sheets, each covering 15 minutes of latitude and 30 minutes of longitude, are published or in various stages of preparation. This system, inaugurated about 1909 by R. W. Brock, Director at that time, is already well established, being also adopted by the topographical survey organizations in the Department of the Interior and the Department of National Defence.

The series of Economic Geology reports, which is designed to assemble into compact and convenient form the mass of information about mineral occurrences that is scattered through the reports of the Survey, the publications of the provincial Departments of Mines, and various periodicals, is also making good progress. Four reports—on talc, iron ores, arsenic, and a general report on the geology and economic minerals of Canada—are published; four others—

on oil and gas, lead and zinc, the rare-element minerals, and a handbook for prospectors—are in course of publication; and work has been commenced on four more.

These publications are largely supplementary to the usual activities of the Survey, the extent of which is increasing yearly.

NEEDS

Some growth in the Survey has been necessary to keep up with the growth of the mineral industry in Canada, the northward trend of railway communication, and prospecting, and the consequent demand for geographical and geological information. In a distorted fashion this growth is reflected by the table given below—distorted, because the diminishing purchasing power of money cannot be taken into account, and also because the expenditures mentioned include those for the National Museum as well as the Geological Survey, the former being a rapidly growing institution requiring more and more financial support. Neither does column one express the fact that the effective scientific staff of both Survey and Museum is augmented every summer by teachers and students from almost every Canadian university to carry on field work. The cost of their services is included in column two, which covers all costs of both institutions with the exception of salaries of permanent employees (column one) and the maintenance, heating, and lighting of the buildings, which is borne by the Department of Public Works. Even about 10 per cent of the salaries of permanent employees is covered by column two.

The salary pay-roll has kept pace fairly closely with the growth of the mineral industry. Expenditures for field work and all related operation costs (column two) has not advanced as rapidly and since 1920 there has been a decrease, in spite of the fact that since 1920 the number of field parties has increased about one-third and a much larger number of scientists from universities have been employed temporarily. In large measure this decrease has been accomplished by strict economy. However, economy has its limitations, and in the present case they seem to have been nearly reached. If more work is required from the Geological Survey more funds for column two will be needed.

But further support in this direction is not requested, except in very small amount, for there is another direction in which the need appears to be greater—an enlargement of the Victoria Memorial Museum, the home of the Geological Survey and the National Museum, in order to provide more laboratory and office room for scientific and technical work and more storage and exhibition space for museum purposes. This need is explained at some length in an article entitled "The National Museum of Canada" in the Annual Report of the National Museum for 1926, and is also referred to in the section of the present annual report of the Department which deals with the museum.

IN MEMORY OF

GEORGE MERCER DAWSON
GEOLOGIST SCIENTIST EXPLORER

BORN AUG. 1. 1849
DIED MARCH 2. 1901

THIS MONUMENT MARKS THE SITE OF ORIGINAL
WOODEN POST ERECTED BY DAWSON IN 1887 AS A
REFERENCE MARK FOR THE B.C.-YUKON BOUNDARY
LATITUDE 60° 1' 6"

THIS MONUMENT ERECTED 1927 BY FENLEY HUNTER
TO REPLACE ORIGINAL POST REMOVED BY HIM IN 1923

Year	Salaries (about 90% of permanent employees, Geological Survey and National Museum)	All other costs, Geological Survey and National Museum	Total cost, Geological Survey and National Museum	Value of mineral production in Canada (for calendar years 1900-1927)

MEMORIAL TO G. M. DAWSON

The diversified services rendered by the Geological Survey are especially well exemplified by the work of Dr. George M. Dawson, geologist and former Director, of whom the *Victoria Colonist* once said editorially: "In one sense he is the discoverer of Canada, for the Geological Survey, of which he has been the chief, has done more than all other agencies combined to make the potentialities of the Dominion known to the world." More recently another testimonial has been paid to Dawson by Mr. Fenley Hunter, of New York city.

Mr. Hunter has travelled extensively in northern British Columbia, Yukon, and the North West Territories, where the surveys made by Dawson and other early explorers are still, to a large extent, the best geographical information available. In the course of one of his trips he found a wooden post on the bank of Liard river, that had been placed there by Dawson in 1887, to indicate the position of the boundary between British Columbia and Yukon, which at that time was defined but not actually surveyed. The post was badly decayed, so Mr. Hunter had made and erected in its place in 1927 a metal monument in appreciation of the accuracy of Dawson's surveys and the far reaching extent of his explorations. These are all the more remarkable when it is remembered that, forty years ago, the main line of the Canadian Pacific railway was the only organized means of travel across western Canada, and also that most of Dawson's surveys were made with no better instrumental aid than a compass and a sextant.

Out of appreciation of this fine tribute by Mr. Hunter and also of Dawson's work, the Canadian Government had set aside a piece of land around the monument. The monument itself is of cast iron and bears an inscription as shown in the accompanying photograph. It is situated on the right bank of Liard river just north of the boundary line between British Columbia and Yukon.

An account of the expedition, in the course of which the original post was planted, is contained in the Annual Report of the Geological Survey, volume 3, 1887-88.

FIELD AND OFFICE WORK

Fifty field parties were sent to widely separated parts of Canada during the season of 1927. Thirty-six were engaged in geological work, thirteen in topographical surveying, and one in collecting minerals for the museum. Short accounts of the field work of these parties and of the laboratory and office work accomplished during the rest of the year are given in the following statements by the chiefs of divisions.

GEOLOGICAL DIVISION

G. A. Young, Chief Geologist, reports:

Yukon

W. E. Cockfield geologically and topographically explored an area of about 2,000 square miles in the vicinity of Dezadeash lake, southwestern Yukon. A main reason for undertaking this work was to outline a part of the western border of the Coast Range batholith, a body with which many important mineral deposits are associated in Yukon and British Columbia. Mr. Cockfield also examined ore deposits at Fifteenmile creek on Yukon river below Dawson; at Rude creek; and at Whitehorse. A report upon Dezadeash Lake area, accompanied by a map and short reports upon the ore deposits of the three localities mentioned, appears in Summary Report, 1927, Part A.

British Columbia

Victor Dolmage made a survey of the economic minerals in the part of northern British Columbia drained by Finlay river. Much interest has been displayed in this district following upon reports of the finding of important mineral deposits. A report and geological map of the area is published in Summary Report, 1927, Part A.

F. A. Kerr continued topographical and geological mapping of a strip of country along Stikine river from Telegraph Creek south to the International Boundary. During the last two seasons an area of about 1,000 square miles has been surveyed and studied. A part of the east margin of the Coast Range batholith lies within the area which, therefore, is of prospective importance as a mineral-bearing district.

George Hanson completed the geological study and mapping of an area of 200 square miles embracing part of the drainage basins of Bear and Marmot rivers in the vicinity of Stewart on Portland canal, where many mineral deposits, valuable chiefly for their lead, zinc, and silver contents, have been found. A memoir upon the work and two geological maps are in course of preparation.

J. R. Marshall commenced a geological and topographical survey of a hitherto unexplored and little prospected area stretching from the headwaters of North Thompson river west towards Clearwater lake. A brief, preliminary report upon the work so far as it has progressed is included in Summary Report, 1927, Part A.

C. E. Cairnes completed the study of the geology and ore deposits of Slocan mining area. During the past season geological field work was extended southward to include an adjoining map-area of 380 square miles, which includes New Denver, Silverton, Slocan City, and Sandon. Many mining properties and undeveloped mineral deposits lie within the two map-areas.

H. S. Bostock completed the detailed study of the gold-arsenic and other mineral occurrences at Hedley, and commenced geological mapping of an area

of about 400 square miles east from Similkameen river. Mr. Bostock also examined the Horne silver mine, 6 miles from Similkameen station. A report on this mine is published in Summary Report, 1927, Part A.

J. F. Walker, assisted by H. C. Gunning, completed the study of the geology and mineral resources of Lardeau area; a final report and geological map are being prepared. Messrs. Walker and Gunning also made a geological and geographical reconnaissance of Fry Creek basin and of several other areas along the east side of Kootenay Lake valley.

C. S. Evans continued detailed geological mapping of the territory bordering Columbia River valley. During 1927 he examined an area of more than 400 square miles immediately west of Golden. A memoir and maps representing the work of 1927 and preceding years are being prepared.

A. Anrep made a detailed examination of certain peat bogs near Vancouver and visited other peat bogs in the same general area and on Vancouver island. The investigation was made for the purpose of determining the suitability of the deposits for the manufacture of peat litter. A report presenting the results obtained appears in Summary Report, 1927, Part A.

Alberta

B. R. MacKay made a detailed geological survey of the Brûlé coal area on the Canadian National railway, 180 miles west of Edmonton. The results of this work, in the form of a report and map, will be presented in Summary Report, 1928, Part B.

G. S. Hume geologically mapped and studied an area of 150 square miles lying 20 miles west of Calgary and adjacent to Turner Valley oil and gas field. A preliminary report dealing with certain aspects of the 1927 field work is included in Summary Report, 1927, Part B.

Saskatchewan

F. H. McLearn commenced a systematic revision of the areal mapping, stratigraphy, and structure of southern Saskatchewan, similar to work in southern Alberta which has recently been completed and published (*See* Calgary sheet). He also investigated several localities where petroleum, gas, or other mineral occurrences were reported. A preliminary report is given in Summary Report, 1927, Part B.

Manitoba

W. A. Johnston continued the investigation of the surface geology, including the soils, of southern Manitoba and southeastern Saskatchewan. The geological mapping of the surface deposits of the areas covered by the Emerson, Virden, Turtle Mountain, and the greater part of the Winnipeg sectional maps was completed. The field work in Manitoba will, probably, be completed in 1928, after which it is proposed to prepare a report and map.

E. M. Burwash studied and mapped the geology of an area in the vicinity of Kississing (Cold) lake, 140 miles northwest of lake Winnipeg. The district is of importance because of mineral deposits already discovered. Mr. Burwash also examined a number of mineral occurrences along the route from Sturgeon Landing to Kississing lake.

J. F. Wright made a geological reconnaissance of about 1,000 square miles in Island Lake area, northeastern Manitoba. Considerable areas were outlined which, other conditions being favourable, may hold important mineral deposits. Summary Report, 1927, Part B, contains a report and map giving the results of the reconnaissance.

C. H. Stockwell concluded an investigation of the lithia-bearing pegmatites and associated rocks of southeastern Manitoba and adjacent parts of Ontario. The region explored has an area of 2,500 square miles.

Ontario

H. M. Bannerman completed the detailed examination of pyrite and iron-bearing formations in the vicinity of Nickel and Pipestone lakes, Rainy River district, and Staunton on the Canadian National railway, Thunder Bay district. Mr. Bannerman commenced a detailed study of the Timagami iron range, Nipissing district.

T. L. Tanton investigated many of the mineral deposits in the Port Arthur silver-bearing area, which borders lake Superior for 125 miles from Nipigon southwest to Arrow lake. The results of this work will be incorporated in a memoir now being prepared.

R. C. Emmons concluded the geological survey of the Woman River and Ridout quadrangles. Promising lead-zinc deposits, as well as other types of mineral deposits, occur within the district. The two maps and accompanying memoir are being prepared for publication.

T. T. Quirke completed a geological survey of the Key Harbour quadrangle, which borders the northeast corner of Georgian bay. The area holds deposits of non-metallic minerals of probable economic value. The geological map and report are being prepared.

W. H. Collins, assisted by R. Thomson, completed the geographical and geological mapping of Espanola quadrangle, which lies immediately west of the Sudbury nickel basin. The geological map of the area is being prepared for publication. Field work was extended to the adjoining map-area to the east, which includes part of the Sudbury nickel basin. Mr. Thomson began a special study of the nickel-bearing eruptive and various associated igneous formations.

C. Tolman, under the supervision of W. H. Collins, continued the mapping and studying of the Birch Lake granite, a body that extends an unknown distance northward from Espanola map-area.

G. M. Brownell, under the supervision of M. E. Wilson, geologically mapped the district in Leeds county represented by the southeast part of the Westport sheet of the Department of National Defence. Deposits of mica, iron ore, and galena occur within the area studied.

Quebec

H. C. Cooke made detailed geological examinations of various mineral deposits in Rouyn district, western Quebec. The results obtained will be incorporated in a memoir on the geology and mineral deposits of the entire Rouyn district.

W. F. James reinvestigated the geology and examined the principal mineral discoveries within Duparquet quadrangle, Rouyn district. A revised edition of the geological map is being prepared. An account of the mineral occurrences will be included in the memoir on Rouyn district above mentioned.

J. B. Mawdsley geographically and geologically explored the Kaopatina-Father Lakes area, about 1,700 square miles in extent and situated southwest of Chibougamau lake. West of Chibougamau lake, an area of 70 square miles, in which mineral deposits occur, was investigated in some detail. Routes leading from Monet station, Canadian National railway, to the main field of work were geologically surveyed. An account of this work appears in Summary Report, 1927, Part C.

T. H. Clark commenced studying and mapping the area in southeast Quebec, represented by the Sutton sheet, Department of National Defence.

F. J. Alcock made a detailed study and geological map of an area of 20 square miles surrounding the Federal mine, central Gaspe. The results of this work are presented in Summary Report, 1927, Part C.

New Brunswick

W. V. Smitheringale examined various manganese occurrences in Nova Scotia and New Brunswick. Mr. Smitheringale also visited Michipicoten district, Ontario, for the purpose of investigating the manganese-bearing iron formations of that district. The information relating to manganese is to be incorporated in a report on the manganese deposits of Canada. Several lead-zinc occurrences in Ontario were examined by Mr. Smitheringale.

F. J. Alcock examined a number of mineral deposits in New Brunswick and Nova Scotia. The information obtained concerning various lead-zinc deposits will appear in a report on the lead-zinc deposits of Canada.

Nova Scotia

E. R. Faribault continued the systematic geological survey of Nova Scotia. The area surveyed in 1927 completes the Digby quadrangle.

G. W. H. Norman, under the supervision of W. H. Bell, commenced the geological study and mapping of Ainslie quadrangle, Cape Breton. A main purpose of the work is a re-study of the Port Hood, Mabou, and Inverness coal fields.

Northwest Territories

L. J. Weeks returned from the Arctic in the autumn of 1927 after spending two summers and a winter geographically and geologically exploring the territory bordering and extending west from Cumberland sound, southeastern Baffin island. A report on the several seasons' work appears in Summary Report, 1927, Part C.

TOPOGRAPHICAL DIVISION

W. H. Boyd, Chief Topographical Engineer, reports:

During the year topographical and geographical surveys were carried out in British Columbia, Alberta, Ontario, Quebec, New Brunswick, and Nova Scotia.

British Columbia

A. C. T. Sheppard revised the Vancouver sheet, one inch to one mile. This area was mapped in 1920 and a comparison of the two maps furnishes striking evidence of the growth and expansion of the city since that time. Illness unfortunately forced Mr. Sheppard to give up field work the first of August. He was unable to undertake the detailed mapping of the Corbin coal areas.

Mr. Sheppard visited in the field the parties of J. W. Spence and J. A. Macdonald in order to advise on any matters relating to the field work.

J. A. Macdonald carried out the topographical mapping of a portion of the Topley quadrangle, latitude $54^{\circ} 30'$ to $54^{\circ} 45'$ north, longitude $126^{\circ} 00'$ to $126^{\circ} 30'$ north. This map is for publication at one inch to one mile with contour interval 100 feet.

Alberta

D. A. Nichols completed the east half of Jumpingpound quadrangle, latitude $51^{\circ} 00'$ to $51^{\circ} 15'$ north, longitude $114^{\circ} 30'$ to $114^{\circ} 45'$ west, and extended this mapping in a northwesterly direction. This work is part of a series of sheets on one inch to one mile covering the potential oil areas southwest of Calgary.

On his way to the field Mr. Nichols visited a landslide and change in the channel of Blanche river at Wawbewawa, Ontario. This was interesting from a physiographic standpoint and also from the economic side in showing the possibility of other slides under similar conditions. Both aspects are being considered in a special paper by Mr. Nichols.

J. W. Spence completed a topographical survey of Turner Valley quadrangle, latitude $50^{\circ} 30'$ to $50^{\circ} 45'$ north, longitude $114^{\circ} 00'$ to $114^{\circ} 30'$ west, and mapped portions of the Bragg Creek quadrangle, east half, latitude $50^{\circ} 45'$ to $51^{\circ} 00'$ north, longitude $114^{\circ} 30'$ to $114^{\circ} 45'$ west. The Bragg Creek sheet has a contour interval of 100 feet and the Turner Valley sheet an interval of 50 feet; both are for publication at one inch to one mile.

Ontario

A. G. Haultain carried out surveys in Rutter quadrangle, latitude $46^{\circ} 00'$ to $46^{\circ} 15'$ north, longitude $80^{\circ} 30'$ to $81^{\circ} 00'$ west, and Key Harbour quadrangle, latitude $45^{\circ} 45'$ to $46^{\circ} 00'$ north, longitude $80^{\circ} 30'$ to $81^{\circ} 00'$ west. These are geographical sheets for publication on a scale of one inch to one mile. He also extended the control, carried out the previous year, for the Espanola sheet, and carried out a number of surveys in Sudbury district for the control of mapping from aerial surveys.

Quebec

R. C. McDonald completed control surveys for the Taschereau sheet, Quebec, latitude $48^{\circ} 30'$ to $48^{\circ} 45'$ north, longitude $78^{\circ} 30'$ to $79^{\circ} 00'$ west. He also completed the primary traverse of the Canadian National Railways branch line to Rouyn and established a base to be used in the detailed mapping of the vicinity of Rouyn. The Taschereau sheet is for publication at one inch to one mile. Drainage and minor details on the Taschereau sheet will be put in from air photography.

K. G. Chipman commenced a detailed map, on a scale of 1 inch to 400 feet with 5-foot contours, to include the area in the vicinity of Noranda and Rouyn. This work is so arranged as to be easily extended as the development of the area may warrant.

New Brunswick

H. N. Spence completed the Carleton sheet, Quebec and New Brunswick, latitude $48^{\circ} 00'$ to $48^{\circ} 15'$ north, longitude $66^{\circ} 00'$ to $66^{\circ} 31'$ west. This work, commenced in 1926 and completed in 1927, is for publication at one inch to one mile.

R. Bartlett completed the surveys for the west half of the Loch Lomond sheet, latitude $45^{\circ} 15'$ to $45^{\circ} 30'$ north, longitude $65^{\circ} 30'$ to $66^{\circ} 00'$ west; and the Cape Spencer sheet, latitude $45^{\circ} 00'$ to $45^{\circ} 15'$ north, longitude $65^{\circ} 30'$ to $66^{\circ} 00'$ west. This sheet is for publication at one inch to one mile, and the drainage, with some minor detail of roads and culture, will be put in from vertical aerial photography.

K. G. Chipman mapped topographically on 1 inch to 1,000 feet the drainage basin of the Chamcook lakes near St. Andrews. This work was at the request of the Biological Board of Canada, who are conducting experiments in fish culture in these lakes and require a detailed map on which to plan their work and to show their information.

Mr. Chipman visited in the field the parties of R. C. McDonald, J. V. Butterworth, and H. N. Spence, in order to advise on any matters relating to the field work.

Nova Scotia

J. V. Butterworth started a geographical survey of Ainslie quadrangle, Nova Scotia, latitude $46^{\circ} 00'$ to $46^{\circ} 15'$ north, longitude $61^{\circ} 00'$ to $61^{\circ} 30'$ west. This area includes the coal fields at Inverness and Port Hood.

S. C. McLean, assisted by S. M. Steeves, junior topographical engineer, carried out the triangulation and traverse control of the Ainslie sheet; the triangulation control of the east half of the Oxford sheet; and the primary control traverse of the Port Mouton sheet in southwestern Nova Scotia. The work in southwestern Nova Scotia is now consolidated, the work of 1927 being tied in with the work of 1924, and also connected with the work of the Geodetic, the Topographical, and Hydrographic Surveys.

W. H. Miller completed surveys for the Oxford sheet, latitude $45^{\circ} 30'$ to $45^{\circ} 45'$ north, longitude $63^{\circ} 30'$ to $64^{\circ} 00'$ west. This sheet is for publication at one inch to one mile.

The following maps were completed for publication during the year:

Province	Map-sheet	Latitude and longitude	Scale
British Columbia.....	Topley.....	$54^{\circ} 30'$ to $54^{\circ} 45'$ $126^{\circ} 00'$ to $126^{\circ} 30'$	1 inch to 1 mile
Alberta.....	Bragg Creek—east half.....	$50^{\circ} 45'$ to $51^{\circ} 00'$ $114^{\circ} 30'$ to $114^{\circ} 45'$	1 inch to 1 mile
	Jumpingpound—east half.....	$51^{\circ} 00'$ to $51^{\circ} 15'$ $114^{\circ} 30'$ to $114^{\circ} 45'$	1 inch to 1 mile
Ontario.....	Key Harbour.....	$45^{\circ} 45'$ to $46^{\circ} 00'$ $80^{\circ} 30'$ to $81^{\circ} 00'$	1 inch to 1 mile
	Rutter.....	$46^{\circ} 00'$ to $46^{\circ} 15'$ $80^{\circ} 30'$ to $81^{\circ} 00'$	1 inch to 1 mile
	Ridout.....	$47^{\circ} 30'$ to $47^{\circ} 45'$ $82^{\circ} 30'$ to $83^{\circ} 00'$	1 inch to 1 mile
Quebec-New Brunswick.....	Escumiac.....	$48^{\circ} 00'$ to $48^{\circ} 15'$ $66^{\circ} 00'$ to $66^{\circ} 30'$	1 inch to 1 mile
New Brunswick.....	Chamcook Lake drainage basin.....		1 inch to 1,000 feet
Nova Scotia.....	Digby.....	$44^{\circ} 30'$ to $44^{\circ} 45'$ $65^{\circ} 30'$ to $66^{\circ} 00'$	1 inch to 1 mile
	Granville Ferry.....	$44^{\circ} 45'$ to $45^{\circ} 00'$ $65^{\circ} 30'$ to $66^{\circ} 00'$	1 inch to 1 mile
	Oxford—west half.....	$45^{\circ} 30'$ to $45^{\circ} 45'$ $63^{\circ} 45'$ to $64^{\circ} 00'$	1 inch to 1 mile

In connexion with the work of the enlarged Niagara Board, and at the request of Mr. Charles Camsell, one of the Canadian representatives, the chief topographical engineer undertook a precise survey of the crest lines of the Horseshoe and American falls. This work was successfully completed early in April, 1927, with the assistance of A. C. T. Sheppard and K. G. Chipman. An account of this survey is to be published by the Geological Survey.

Continuing his work in physiography, D. A. Nichols has selected and described slides and views illustrating Canadian physiography. Some of these have been added to our own series, some have been sent to universities and to Geneva, and many others have been supplied for illustrating lectures and scientific text books. Relief models of the Fort William-Port Arthur and Kokanee Park map-sheets have been prepared and are now on exhibition in Ottawa and elsewhere.

Reference to Mr. Nichols' visit to the Wawbewawa landslide is made in the report on field work.

Computations of the geographical positions of the permanent marks established in northern Manitoba along, and east of, Nelson river, including Hayes river, Fox river, Oxford lake, Gods lake, and Island lake, have been completed and supplied to the Topographical Surveys Branch, Department of the Interior, for use in their maps. Computation of the geographical positions of the permanent marks established in southwestern Nova Scotia, and along the Canadian National railways, Rouyn branch, have been completed. These positions are available on request to the Director.

MINERALOGICAL DIVISION

Eugene Poitevin, Chief of the Division, reports:

Owing to the steadily increasing interest shown by the public in the mining industry of Canada, the volume of work performed this year by this division was almost double that of any previous year.

FIELD WORK

A. T. McKinnon spent two months in Ontario and Quebec collecting minerals required for the preparation of our educational collections.

LABORATORY WORK

About 2,000 rock and mineral specimens for examination were received from geologists, mining engineers, prospectors, educational institutions, etc., over half of these being sent by prospectors. Prospectors are showing greater knowledge of geology and mineralogy and a greater capacity for appreciating the results of scientific investigation of the samples submitted. A great part of this progress is due to special instruction. Ontario, with its School of Mines at Haileybury and its travelling prospectors' classes, and British Columbia with its excellent work carried on by the Chamber of Mines at Vancouver and the associated Boards of Trade of that province, contribute effectively to the welfare of the mining industry. More recently Alberta, Quebec, New Brunswick, and the other provinces have taken similar praiseworthy action.

During the fiscal year just ended, Eugène Poitevin and H. V. Ellsworth have furnished, in addition to numerous verbal reports, more than 2,000 reports dealing with mineralogical problems. Mr. Poitevin completed studies on the various minerals described in the recently published Bulletin No. 46. H. V. Ellsworth also has continued his studies of the Canadian rare elements, and the preparation of the forthcoming report dealing with this subject. Seven papers were published by H. V. Ellsworth in the *American Mineralogist* and the *Mineralogical Magazine*. The titles of these papers are given in the deputy minister's statement in this report.

R. J. C. Fabry has carried out the analyses of three granites from Killarney, Ontario, for W. H. Collins and T. T. Quirke; one garnet-sillimanite rock from Ceylon for Dr. Frank D. Adams; one chlorite schist for C. E. Cairnes; one chromium-bearing, dolomitized rock for H. C. Gunning; and three specimens of

diamond-drill core. He has also made complete chemical analyses, for C. H. Stockwell, of the following minerals, which were obtained from the Silver Leaf Mining Syndicate, lot 17, range 16, township 16, southeastern Manitoba: spodumene, lepidolite, montebrasite, pink muscovite, lithiophyllite, margarodite, lithium-bearing muscovite, beryl. He has also analysed one specimen of hydro-talcite from Vimy Ridge, Megantic county, Quebec. The results of these analyses will be published in reports by the geologists above named.

MUSEUM WORK

The work of rearranging and cataloguing the systematic collections of Canadian and foreign minerals is being continued, but owing to the bad condition these collections were in, it will be some time before the work can be completed. The services of Dr. W. F. Ferrier were obtained again this year from January 3, 1928.

Cases of economic minerals which were formerly displayed at 227 Sparks street have been moved to the Museum. Altogether 34 cases of temporary exhibits have been put in the National Museum, more than 20 of which were put in during the fiscal year just ended.

Several fine specimens were added to the collections by purchase and by donations, an itemized list of which is given in the annual report of the National Museum.

EDUCATIONAL COLLECTIONS

The demand for collections Nos. 1, 2, 3, prospectors' sets, etc., has been very heavy this year, as shown by the following table. The magnitude of this work is indicated by the fact that 12,406 specimens were used in the collections and 22 tons of rocks and minerals required. These collections are sold to universities, high schools, and other educational institutions, in foreign countries as well as in Canada. Descriptive circulars are obtainable on request from the Director of the Geological Survey.

PALÆONTOLOGICAL DIVISION

E. M. Kindle, Chief of the Division, reports:

FIELD WORK

W. A. Bell was in Nova Scotia from June 5 to July 8 on a geological reconnaissance of the area comprising Port Hood, Mabou, and Inverness coal districts.

E. M. Kindle examined in June parts of the Welland Canal section, in the interest of the Department of Railways and Canals. The remainder of the field season was spent in Jasper park, Alberta.

F. H. McLearn was engaged in mapping and studying the structure of the eastern end of the Cypress hills in southwestern Saskatchewan. More than four months were spent in the field.

Miss A. E. Wilson was occupied during the larger part of a month in field work in the Cornwall quadrangle.

OFFICE WORK

The office work of W. A. Bell comprised preparation of a geological map of Pictou coal fields, additions to a memoir upon the geology of the Horton-Windsor formations of Nova Scotia and New Brunswick, and reports on the following collections of fossil plants:

- (a) From Brûlé coal-field, Alberta, for B. R. MacKay.
- (b) From Brazeau formation, Stireo and Coal valley, Alberta, for B. R. MacKay.
- (c) From Ravenscrag formation, Sask., for F. H. McLearn.
- (d) From Jasper park, Alberta, for E. M. Kindle.
- (e) From Sextant rapids, Abitibi river, Ont., for W. S. Dyer.
- (f) From the Milk River, St. Mary River, and Willow Creek formations, Alberta, for W. S. Dyer and M. Y. Williams.
- (g) Tertiary plants gathered by H. S. Bostock from White Lake district, B.C.

E. M. Kindle prepared a report on the geology of Jasper National park for the Commissioner of Canadian National parks. Articles were also prepared on certain sections in Jasper park, and on the character of the bottom deposits of lake Cavell, a glacial lake. Correlation reports based on fossils were prepared for members of the staff.

F. H. McLearn was, during a considerable part of the winter, occupied with the preparation of map, sections, and report on the eastern end of Cypress hills, published in the Summary Report, 1927, Part B. A report was prepared on collections of Mesozoic fossils received from the Hudson's Bay-Marland Oil Company, and collections made by G. S. Hume and other members of the geological staff. A short paper entitled "Some Canadian Jurassic Faunas" was published in the Transactions of the Royal Society of Canada. A first contribution to the Jurassic Ammonoidea of Skidegate inlet was completed, and is published in Museum Bulletin No. 54. A short paper on some new Jurassic ammonoids from the Fernie formation of western Alberta was handed in for publication. The study of Jurassic ammonoids from Skidegate inlet was continued. Some progress was made in the study of Upper Triassic ammonoids from the Schooler Creek formation, upper Peace river, B.C.

Miss A. E. Wilson was absent doing university post-graduate work during the first three months of the year. The remainder of the office work was devoted to carrying on the type catalogue re-identification.

C. M. Sternberg has prepared descriptions of two new armoured dinosaurs and has identified collections of vertebrate fossils sent in for determination.

Miss M. A. Fritz was engaged during July and August in grading, identifying, and labelling fossils in the old collections.

MUSEUM WORK

A considerable number of collections of fossils were sent out for the use of high schools. Two colleges were also supplied with study collections. An account of the specimens received and prepared for museum display is given in the annual report of the National Museum.

BORINGS DIVISION

E. D. Ingall, Chief of the Division, reports:

The Borings Division of the Geological Survey exists for the specific purpose of securing records of borings made throughout Canada in search for water, petroleum, natural gas, etc. It is now recognized universally that the

collecting of reliable data illustrative of the nature and structure of the strata passed through in boring is of the utmost importance for the intelligent direction of the efforts to locate gas, oil, water, etc. This work is carried on in co-operation with operators, and in some provinces with the assistance of the provincial and federal government organizations, and results in the building up of extensive reference files of well records sent in by drillers, geologists, and others.

Whenever possible, complete sets of samples are obtained from the operators. These samples are taken at intervals of 10 feet or less, with a view to acquiring an intimate knowledge of the characteristics of the various strata by means of microscopic, mechanical, and chemical examination of the cuttings, and the interpretation of any fossil evidence. Light is thus thrown on the conditions, favourable or unfavourable to the existence of gas, oil, or water in commercial quantities, such as the existence or absence of porosity, favourable structures, etc. Careful search of the cuttings is made for fossil forms, which often constitute the only evidence distinguishing strata of different geological ages, and, therefore, of different position in the succession of the strata. The small microscopic forms have to be thus relied upon, the larger fossils being destroyed by the process of drilling, except in the rare cases where a core drill has been used.

In many parts of Canada the obtaining of supplies of water pure enough for domestic use and free enough from mineral contents to be suitable for irrigation is limited to that held in the surface deposits overlying the bedrock strata, and efforts to obtain records from local drillers have been constantly made and the resulting logs incorporated in the reference files of the division. To obtain and retain the co-operation of thousands of local shallow well-drillers is a difficult task, and much remains to be done in this direction. This problem might be solved in the future by endeavouring to enlist the interest of the local drillers in the formation of drillers' organizations such as those recently started in the United States. The annual conventions held by these bodies have a great educational effect and could be used as a means of interesting their membership in the utilization of the Borings Division as a clearing house for the results of all the scattered borings, to the advantage of both drillers and their clients.

During the first fifteen years of existence of the Borings Division—it was created in 1908—the collecting of records and samples occupied a large part of the time of the small staff. In response to requests from drillers for interpretative advice, the determination of geological horizons and other geological conditions encountered in the various borings through the study of the samples received was necessarily confined to such preliminary chemical and microscopic examinations as could be made with the limited means at disposal. However, a large mass of borings data was accumulated and systematically filed, and a great quantity of sample material was collected and systematically arranged in sets representing some hundreds of borings and illustrative of the geology in depth of various parts of Canada. The number of samples of cuttings now on hand is about 70,000, besides sets of cores from various wells put down with the core drill. Though only a part of this accumulation has so far received preliminary study, it represents material which could only be obtained during the progress of the borings and will doubtless yield valuable detailed knowledge of the strata penetrated when more intensive research methods, now available, can be applied to it. In future years new questions will probably arise upon which light can be thrown by applying to this material improved research methods which will doubtless be developed, so that the sample material accumulated has not only a present but also a future value. A very good example of such unforeseen

needs lies in the utilization, in recent years, of the foraminifera and other small fossil forms in determining geological horizons as encountered in borings in the Cretaceous and younger formations of the western parts of the continent.

The falling off in late years of activity in the Ontario gas and oil districts, owing to near exhaustion of the pools at present known, has been offset by the very large increase in the operations in the Prairie Provinces. As a result of the increasing activities in western Canada, the staff of the division was increased in 1923 by the appointment of Mr. D. C. Maddox, who was entrusted with the work of sample examination, and this phase of the work has been gradually expanded and laboratory equipment developed. In the Prairie Provinces the preliminary determination of samples has been taken over by officials of the North West Territories and Yukon Branch of the Department of the Interior, in whom is vested the power to regulate all boring operations for gas and oil, but they supply samples to the Borings Division for more intensive geological, mineralogical, and chemical study.

The work of the Borings Division falls into two groups.

(1) The carrying out of the general policy of keeping in touch with boring activities throughout Canada and maintaining co-operative relationships with operators so as to secure logs, sets of samples, and all possible boring data. It includes also the systematic filing of all the information acquired and its utilization in aiding operators to solve the geological problems encountered, using also all information available in the geological literature dealing with Canada and the United States.

(2) Examination in the laboratory of samples collected and the preparation of well logs based on the results thus obtained. Reports descriptive of the methods adopted and of results attained, will be found in Parts B and C of the Summary Report of the Geological Survey, 1927.

During the past year important additions have been made to the equipment of the laboratory, and the staff was strengthened by the addition of F. J. Fraser, a graduate of Birmingham University, who is assisted by M. Mahoney. For the first time in the history of the division two men were able to give their undivided attention to the work of sample examination. As a result of this arrangement, and of Mr. Fraser's experience in laboratory methods as applied to sedimentary materials, it has been possible to greatly enlarge the scope of the laboratory work.

Apart from the routine examination of sets of samples, resulting in the geologically descriptive logs of the wells examined, special attention has been directed to the investigation of the possibly diagnostic value of the heavy mineral constituents of the samples of borings. These were separated by panning, microscopic slides were prepared, and their mineralogical characters determined under the microscope. These slides were prepared and filed for reference. Speaking of this work Mr. Fraser reports on the results of examination of material from the Prairie Provinces: "Few of the slides have been described in detail, but from the results of examination now being carried out many interesting points are evolving. With especial reference to the Turner Valley material, the slides already made represent mainly the Benton shale residues, characterized by apatite, tourmaline, and zircon with perhaps a limited range of spherical and octahedral pyrite. Blairmore residues, so far examined, also show garnet, and work in the near future should confirm and limit the range of this mineral in pre-Benton strata. A few post-Benton residues have been separated and examined and these invariably contain a much greater variety of minerals than the older beds. Epidote, garnet, and perhaps andalusite have been noted."

In addition to the above, tests for oil are made in many instances, using the distillation method and treatment with carbon tetrachloride. In the deter-

mination of limestone and dolomite horizons tests are made with cold and hot acid. Where called for, chemical tests for sulphates have been made. The proportions of material of different fineness have in some cases been determined by mechanical separation by sieves.

Of the work of investigating the minute fossil forms contained in the drill cuttings, with a view to determining their value as horizon markers, Mr. Maddox reports as follows: "During 1927 the work of collecting foraminifera from cuttings from borings in the Cretaceous shales of the western provinces was chiefly done by Mr. R. T. D. Wickenden, a student assistant attached for the summer months to the Borings Division. Mr. Wickenden is specializing in work of this nature and on his return to Harvard University undertook the study of these forms under Dr. J. A. Cushman. It is hoped that the work will be further extended during 1928 and will ultimately prove of great assistance in the task of working out the stratigraphy of the western Plains. Foraminifera have proved to be of the utmost value in the correlation of the Cretaceous formations in Texas by providing a basis for the location of stratigraphic horizons in a long series of shales which cannot be lithologically differentiated.

"In the western Plains of Canada the great thickness of the marine Cretaceous formation, largely shales, such as the Niobrara and Benton formations of the Colorado group, is in many cases inaccessible except by the use of the drill, and in the absence of surface exposures the stratigraphic position of samples within these formations is, in general, impossible to determine until the next underlying formation is reached. At present it is impossible in well samples to differentiate the marine Colorado shale from the overlying Lea Park marine shale of Montana age unless the two are separated by a lithological break as in the case of the Milk River sandstone. In the absence of surface geological information, this means that there will be a long succession, probably 2,000 feet or more, of shales indistinguishable lithologically from each other, and that the drill will have to penetrate to the underlying known marine formation before the stratigraphic position of the well is definitely known.

"The establishment of definite stratigraphic horizons within the marine shales at fairly shallow depths would be of inestimable value to the operator and would in many cases preclude the necessity of proceeding to the underlying known marine formations or would enable him to know the approximate depth at which he might expect to reach this latter. To the field geologist, the method might prove to be of great value, as enabling him to locate his stratigraphic position by the use of foraminifera when no other fossils were available."

Besides the laboratory work directly connected with the examination of well cuttings it has been possible to use the laboratory methods in assisting some of the field geologists, such as in the examination of a sample of volcanic ash from Cypress hills in Saskatchewan and of calcareous clay from the same province. Work has also commenced on samples of rocks, chiefly sandstones, collected by F. H. McLearn in southern Saskatchewan. Mr. Maddox reports: "The isolation and identification of the heavy minerals contained in these rocks formed the principal part of the work. Some mechanical analyses were also made. This work is likely to prove of much value as providing possible criteria for the identification of stratigraphic units in cases where fossils are absent."

Apart from the work done in examination of well cuttings from borings put down by either the churn drill or rotary methods, a certain amount of cores from wells put down by core drills have been available. Cores give, of course, much more definite results, being free from the uncertainties inherent in the fragmentary material produced by the ordinary drilling methods.

During the year samples have also been available for examination from a certain number of shallow wells bored to obtain local water supplies.

WORK DONE IN THE LABORATORY DURING THE YEAR¹

	<i>Samples examined</i>
Wells of the Northern Foothills Group (including Turner Valley)	
Big Chief, British Dominion, Bow R. No. 1, Calmont No. 1, Dalhousie No. 5, Foothills No. 1, Home No. 1, Illinois Alberta No. 1, McLeod No. 2, McLeod No. 3, McDougall-Segur No. 1, Ranchman's No. 1, Regent No. 2, Royalite No. 5, Royalite No. 7, Seneca No. 1, Sentinel, Spooner No. 1, Stockmen's No. 1, Vulcan No. 1.. . . .	4,965
Wells of the Southern Foothills Group	
Mount Royal No. 1.. . . .	31
Wells of the Northern Alberta Group	
International Oils, Black Rock Petroleum No. 2, International Bitumen No. 1A..	392
Wells of the Southern Plains of Alberta Group	
Devenish No. 1, Imperial Burdett, United Oils, Roth No. 2.. . . .	1,205
Wells of the East Central Alberta Group	
Imperial Ribstone, Ribstone Oils No. 1.. . . .	357
Wells of the Saskatchewan Group	
Simpson Oil Co.	45
Wells of the Manitoba Group	
Northern Manitoba Oil Co., W. J. Holmes Well No. 1.. . . .	124
Wells of the Canadian National Railways Group	
19 shallow wells drilled for water supplies.. . . .	285
Wells of St. Hyacinthe District, Quebec, Group	
Samples from 8 old wells for re-examination, Canadian Natural Gas Co. wells Nos. 1-5, National Gas Co. wells Nos. 1 and 2, St. Madeline.. . . .	1,473
New Brunswick	
D'Arcy Exploration Co. Gautreau No. 2 (old well for re-examination).. . . .	360
Prince Edward Island	
Doherty Interests well No. 2 (Governor island, Charlottetown).. . . .	189
Sundry Other Examinations	
Volcanic ash, Cypress hills, Sask.; calcareous clay for W. A. Johnston; sandstone, etc., for F. H. McLearn, southern Saskatchewan; kaolin, northern Ontario; igneous rocks, various sandstones, Sydney Mines, N.S., etc.	

In regard to boring activities throughout Canada during the present year a condensed résumé follows:

In British Columbia and the Yukon deep boring activities were very limited and no samples and records were sent to the Borings Division. As in the past, no cognizance was taken of the doubtless very large amount of core drilling prosecuted in testing individual mineral deposits, as these would be of interest to the owners only and would add nothing to the understanding of the general geological problems of the region.

Boring activities of a nature coming within the scope of the Borings Division researches were mostly connected with the deep wells being put down in the Prairie Provinces in continuing the search for gas and oil, the chief operations centring in Turner Valley district in Alberta. Thanks to the co-operation of Mr. C. C. Ross, supervisory engineer of the North West Territories and Yukon Branch, Department of the Interior, the division has received sets of samples from most of the important wells put down in the Prairie Provinces in search for gas and oil. This material has been submitted to intensive study in the laboratory of the division, and the results of this research have been placed at the disposal of the field geologists of the Survey and of the officials of the Interior Department office in Calgary for advisory use in the service of the operators. A total of 12,657 samples were received from the Prairie Provinces from 101 borings, which included some from 18 shallow water wells. Records of 39 shallow wells were received.

¹In the case of many wells the work done was in continuation of that commenced in 1926.

In eastern Canada little was reported in the way of deep borings. In Ontario the receipts of samples and logs were much less than formerly, boring activities being naturally much lessened as a result of the near exhaustion of the pools of gas and oil at present known, whose exploitation for nearly seventy years has been such an important economic factor in the peninsula of Ontario.

In the Palaeozoic region of eastern Ontario and central Quebec, sporadic efforts to locate oil and gas pools have been described in previous reports and there was a slight revival of interest, but no borings were undertaken. In view of this re-awakened interest, the 1,473 samples on file, obtained from deep borings put down in 1914 to 1916 near St. Hyacinthe, which, from lack of time, had received only preliminary examination, were further studied in the laboratory. The possibilities of this large area underlain by undisturbed sedimentary strata can hardly be regarded as determined by the few and scattered deep borings already made.

In the Maritime Provinces little new information was available regarding the long established Moncton gas and oil field. In view of the very considerable amount of information (logs and samples) already accumulated by the Borings Division through the courtesy of Dr. J. A. L. Henderson, who is in control of the operations of the New Brunswick Gas and Oil Fields Company at Moncton, it was agreed that samples should be sent only from important new wells which did not duplicate those samples already received.

In Nova Scotia no particular deep boring operations were reported, although some efforts were made by the International Petroleum Company and the Eastern Gulf Company bored a number of shallow holes to demonstrate structure at a number of points. Nothing conclusive was reported, however. In a province such as this where mining is active, a considerable amount of core drilling is always being prosecuted with the drills of the local Government Mines Department. The policy of the Borings Division being to confine itself to borings which throw light upon district geological problems, no records are sought of such borings as are of interest only to private owners of mineral deposits.

The outstanding interest in the Maritime Provinces centred in the deep boring put down by the Henry L. Doherty Company to test for oil on Governor island near Charlottetown, P.E.I. Samples were received last year from this company's No. 2 well to a depth of 4,127 feet, at which depth boring was suspended for the winter. On the resumption of work in the spring of 1927 the well was continued to a depth of 5,965 feet when operations were finished without encountering any definite change of formation. Samples to a depth of 5,870 feet were received and examined in the laboratory and the results communicated to the company.

DRAUGHTING AND REPRODUCING DIVISION

C.-Omer Sénécal, Geographer, and A. Dickison, Chief, Draughting and Reproducing Division, jointly report:

Maps Published April 1, 1927, to March 31, 1928

Series A	Publication number	Title	Remarks
192A	2124	YUKON	Geology. In report by W. E. Cockfield, Summary Report, part A, 1926
		Aishihik Lake area; scale, 1 inch to 4 miles.....	
194A	2134	ONTARIO	Geology. In report by R. C. Emmons, Summary Report, part C, 1926
		Wakomata Lake area, Algoma district; scale, 1 inch to 1 mile.....	
39A	1185	NOVA SCOTIA	Geology. Second edition
		Nova Scotia sheet; scale, 1 inch to 8 miles.....	

Maps in Hands of King's Printer, March 31, 1928

Series A	Publication number	Title	Date of requisition	Remarks
—	1726	Athapapuskow Lake region, Manitoba and Saskatchewan; scale, 1 inch to 3 miles..	Mar. 16, 1928	Geology. Reprint

2	Bridgewater sheet, No. 89, Lunenburg county; scale, 1 inch to 1 mile.....	Geology

In addition to the foregoing, eighty map and related figure illustrations were prepared for reproduction by zinc-cut process; draughting and other work necessary for the use of the geological staff was also executed.

The duties of the Geographer in connexion with the Geographic Board of Canada have, as usual, been attended to. The Geographer has in progress the preparation of a report and the computations for a "Transverse Polyconic Projection for General Maps of Canada".

PHOTOGRAPHIC DIVISION

G. G. Clarke, Chief of the Division, reports that the following work was accomplished during the year. A steadily increasing share of this output during recent years has been for other branches of the Department and for the public, to whom photographs for lectures, articles, and many other purposes are sold at cost.

	Inches	Inches	Number
Contact prints.....	4 by 5 to 36	by 48.....	14,904
Bromide enlargements.....	4 by 5 to 40	by 72.....	289
Exposures developed.....	3½ by 4½ to 6½	by 8½.....	4,309
Dry plate negatives.....	4 by 5 to 11	by 14.....	623
Wet plate negatives.....	8 by 10 to 24	by 30.....	125
Zinc plates.....	11 by 14 to 24	by 36.....	21
Photostat copies.....	7 by 11 to 11	by 14.....	95
Lantern slides.....	3½ by 4		587
Photos and titles mounted.....			2,203
Total.....			23,156

GEOLOGICAL INFORMATION AND DISTRIBUTION DIVISION

Wyatt Malcolm, Chief of the Division, reports:

The work of the division consists in answering inquiries for information regarding the geology and mineral resources of Canada. This information is imparted verbally to those making application in person, and is given in the form of correspondence, memoranda, and published reports and maps. A considerable part of the technical correspondence of the Geological Survey is dealt with.

Articles were prepared during the year for publication in the *Gazette*, the *Globe*, the British press, and the Canada Year Book. These articles dealt with such subjects as the importance of the mineral industry of Canada, the status of the industry, and the progress made. Numerous short articles were prepared for the use of the press, and were well received. In this way the readers of the newspapers and mining and scientific journals were kept informed of the nature of the publications issued from time to time by the Survey.

The publications of the Geological Survey and of the National Museum of Canada are distributed by this division. During the year 58,775 publications, exclusive of the French editions, were distributed. Of these, 7,247 were sent to addresses on the regular mailing lists, and 51,528 were distributed in compliance with written and personal requests for named publications, or requests for general or specific information.

LIBRARY

Mrs. F. E. Forsey, Librarian, reports:

Additions to the Library during the year include:

Books purchased.....	485
Volumes received as gifts or exchanges.....	826
Pamphlets.....	631
Maps.....	394
Periodicals subscribed for.....	203
Periodicals received as exchanges.....	423

Seven hundred and ten volumes were bound, and 154 maps mounted on cotton. The catalogue was increased by 3,119 cards, not including those added to the map and lantern slide catalogues.

The work of keeping the files complete by requests, claims, and acknowledgments amounted to 701 pieces of correspondence. The regular correspondence, having to do largely with reference work, loans, and bibliography, involved the usual amount of translating from foreign languages. Translating of articles and letters for members of the staff of the Museum and Survey has also been done in the library.

In the operation of the library loan system, the library supplied reference material to the following institutions, as well as to individuals: Universities of British Columbia, Manitoba, Toronto, Queen's, Chicago; to the Agricultural Colleges in Winnipeg, Guelph, and Ste. Anne; the Normal School, London; Royal Ontario Museum, Toronto; laboratories in eight provinces; and to twenty Government departments in Ottawa. Books and periodicals have been borrowed from the following: Library of Parliament, Mines Branch, Forestry Service, Carnegie Library of Ottawa, McGill and Toronto Universities, the Library of Congress, United States Geological Survey Library, New York State Library, and the Library of the Gray Herbarium at Harvard.

The current year shows a marked increase also in the loaning of maps, lantern slides, and photographs from the library collections. To administer these collections adequately in accordance with modern museum methods, an enlarged library staff is urgently required. Additions to the staff have been recommended in recent years on account of the rapid development and expansion of the library proper. It would seem that the time has come to provide for these insistent needs.

A constant effort to complete series of important periodicals has resulted this year in securing several notable acquisitions, among them being thirteen volumes of the "*Matériaux pour la carte géologique Suisse*", and volumes 54-79 of *Popular Science Monthly*, filling the gap between the years 1899-1911, and completing the series. Our set of the *Transactions of the Wisconsin Academy of Sciences, Arts, and Letters* has been brought up to date by the Academy's gift of volumes 17-22, 1914-1926; and the four volumes necessary to complete our series of *Handlinger of the Scandinavian Naturalists' Congresses* have been presented by Mr. F. Johansen. Among the many institutions whose gifts are gratefully acknowledged, special mention should be made of the Carnegie Institution of Washington, which generously presents to us all of its publications pertinent to the activities of the Survey and Museum.

The library will shortly add to its equipment for scientific research the comprehensive "*Card Index of New Genera, Species, and Varieties of American Plants*", which is compiled and published by the Gray Herbarium of Harvard University. This unique and important index is regarded as the most valuable aid to botanical research on the continent, and henceforth it may be consulted by botanists throughout Canada, either in person or by correspondence, in the library of the Geological Survey.

BRITISH COLUMBIA OFFICE

V. Dolmage, Geologist in charge, reports:

During the year the office was moved from the Pacific building to rooms 509-513 Winch building, Vancouver. It was visited by 4,200 people interested in mining and metallurgical matters; 629 inquiries were answered by letter and a very large number by telephone; there were distributed by hand and by mail 2,000 memoirs and summaries and 2,075 maps; a large number of rock specimens were examined and reported on and seventeen lectures on subjects related to mining and geology were given by the staff, composed of V. Dolmage, F. A. Kerr, and A. J. C. Nettell.

A short account of the origin and purpose of this branch of the Survey was given in the annual report for last year.

NATIONAL MUSEUM OF CANADA

W. H. Collins, Acting Director

A brief outline of the history of the Museum was given in this report for last year, and a more extended account appears in the first annual report of the Museum, for 1926. These articles show how the Museum has originated from the Geological Survey of Canada and what are its present relations to the Survey, a knowledge of which is necessary for a proper understanding of the activities and needs of both institutions, but particularly of the Museum.

COLLECTIONS AND EXHIBITS

The collections of natural history specimens are large and rather good, owing to the fact that they have been accumulating since 1843 and that during most of this period of eighty-five years good material was more abundant than now. The display of these collections for the benefit of the public is not so well forward, because the Museum has been compelled to move three times since 1910, first from the old Survey quarters on Sussex street to the new Victoria Memorial Museum in 1910, then to various temporary quarters in 1915 when the Parliament buildings were burned, and again back to the Victoria Memorial Museum in 1920. Consequently, an abnormally large share of effort is now needed for the development of exhibits.

During the past year two rooms were constructed at the sides of the entrance hall for the benefit of visitors. That on the east side is used as an information bureau and for the display and distribution of books, picture post-cards, and other Museum and Survey publications. The other houses a departmental telephone exchange, a telephone booth for public use, and a room for the Royal Canadian Mounted Police officers stationed in the building.

The staff of cabinetmakers and carpenters have continued construction of exhibition cases for display of minerals and ten of these were complete at the end of the year. A contract was let in January, 1928, to the Steel Equipment Company, of Ottawa, to build sixteen metal cases and it is expected that these will be in place before the end of 1928. Some additional cases have also been provided for special exhibits or for the enlargement of exhibition halls already organized.

NEED FOR ENLARGED QUARTERS

When the additional furnishings above mentioned are installed the exhibition halls will be practically full, but provision will have been made for less than half of the branches of natural history to which the Museum gives attention. This lack of space was discussed at some length in the first annual report of the Museum, for 1926. It was pointed out that the Victoria Memorial Museum building, originally intended as a home for the Geological Survey and Museum, is occupied also by the administrative part of the Department of Mines, the Dominion Fuel Board, and the National Art Gallery. In consequence, out of a total of twelve large exhibition halls and two smaller ones only four large halls and the two small ones are now available for Museum exhibits. Only in the case of anthropology and birds is it possible to develop permanent and comprehensive exhibits. Display of ores, minerals, mammals, plants, fossils, and other important features are being crowded into hallways and odd corners. Difficulty is also being experienced in finding office room for

the growing staff of the Survey. If the entire building were available for the Survey and Museum their staff and exhibition requirements would be nearly met, but there would not be sufficient room for storage of study collections and for work shops and laboratories. Wholly inadequate provision for these essentials to a scientific institution was made in planning the present building, and the only satisfactory solution appears to be an addition to the building.

Tentative consideration of this matter indicates that somewhat less than \$1,000,000 would be required to enlarge the museum building to meet requirements for the next twenty years or so. This is a formidable sum of money, but against it are to be offset certain considerable annual economies which would result. The Division of Mineralogy, which now occupies separate quarters about a mile away, would be housed in the Victoria Memorial Museum and there would be a yearly saving of \$10,000 to \$12,000 for rent, heating, and other services. Also, there should be a saving of \$3,000 to \$5,000 a year in temporary construction in the Victoria Memorial Museum itself, necessitated by the present cramped conditions. Averaging this annual saving at \$15,000, it represents the interest at 5 per cent on a capital investment of \$300,000. Moreover, it must be remembered that a much larger investment has already been made towards a national museum and that the additional amount wanted would probably make just the difference between a well-equipped, efficient institution and one that can not make an adequate return for what has been invested in it. The Victoria Memorial Museum must also be considered an important feature in any scheme for the improvement and beautification of the capital city and be supported with a liberality in correspondence with that accorded to other improvements. A national museum is an expression of the interest of its country towards the cultural aspects of civilization and should hardly be, therefore, an object of close economy. Compared with such sister institutions as the United States National Museum, the American Museum of Natural History, Field Museum, or even the Royal Ontario Museum at Toronto, the expenditure upon the National Museum so far has been small. The building of the American Museum of Natural History has already cost \$10,786,306.48 and extensions are planned which will enlarge it to about three times its present size.

There is only one thing of importance needed now in order to develop a national museum illustrative of the natural history, natural resources, and industrial products of the country that Canadians may regard with satisfaction—an addition of about 60 per cent to the present Victoria Memorial Museum building. It is a large requirement, but an essential one. It is quite apparent that the Government intended to support a national museum generously twenty years ago when the present building was built at the foot of Metcalfe street facing the Parliament buildings and it is to be hoped that this spacious policy will be continued. It will take two years or more to build an addition such as is needed, so it is hoped there will not be much delay.

DONATIONS

Interest in the Museum is shown frequently and in substantial manner by gifts of valuable material. This year a particularly valuable series of specimens of gold, platinum, palladium, and other rare metals obtained from the nickel-copper ore deposits of Sudbury district was presented by the Mond Nickel Company, and other fine material for the exhibit of nickel and its products was donated by the International Nickel Corporation and by Henry Wiggin and Company, of Birmingham, England. The section of the museum devoted to economic geology has been particularly favoured in recent years by gifts from the National Aniline and Chemical Company of Buffalo, the Imperial Oil Company, Mining Corporation of Canada, and other companies.

MUSEUM LECTURES

The Museum Lecture Committee, composed of H. I. Smith, M. E. Wilson, and C. L. Patch, reports that the course this year consisted of sixteen lectures, given by lecturers from twelve different technical institutions in the Government service. The course lasted from November 12, 1927, until March 14, 1928. Each lecture was delivered on a Saturday morning to children and on the following Wednesday evening to adults. The total attendance of children was 9,550 and of adults 2,312. Further details are given in the annual report of the Museum.

FIELD WORK

An account is given in the report of the Geological Survey, preceding, of investigations in geology, mineralogy, and palæontology. In addition, five field parties were engaged in anthropological work and four in biological work, short descriptions of which follow.

ANTHROPOLOGICAL DIVISION

D. Jenness, Chief of the Division, reports:

FIELD WORK

Five parties went out on field work during the summer.

D. Jenness visited Newfoundland to discover whether any traces remained of the extinct Beothuk Indians, and to investigate their relationship to the Indian and Eskimo tribes of Canada. Ever since their discovery by John Cabot, in 1497, mystery has attached to the Beothuk Indians of Newfoundland, who became extinct a century ago; they have stood by themselves, an isolated tribe that could not be definitely connected with any other Indian tribe in North America. Mr. Jenness' researches last summer seem to indicate that they formerly occupied a portion of Labrador peninsula contiguous to some early Eskimo tribes, and that they migrated to Newfoundland only a few centuries before Cabot's time.

C. M. Barbeau spent the summer on Nass and Skeena rivers, British Columbia, studying the northern branch of the Tsimshian group of Indians. In addition to his ethnological researches he made a special study of the native music in co-operation with Dr. Ernest Macmillan, of the Toronto Conservatory of Music.

H. I. Smith, archæologist, resumed his supervision of the work of preserving the totem-poles in Skeena River basin, British Columbia. He successfully restored eight totem-poles during the summer at Kitselas canyon, then moved to the vicinity of Prince Rupert to cast two petroglyphs and to supervise the partial excavation of a shell-heap.

W. J. Wintemberg conducted archæological researches first at Tadoussac, then westward along the north shore of St. Lawrence river as far as Three Rivers. His excavations at Tadoussac revealed evidence, not of an early Eskimo settlement, as had been reported previously, but of a somewhat peculiar Algonkian culture, either archaic or else a local variation.

J. C. Boileau Grant, Professor of Anatomy in the University of Manitoba, made an anthropometric study for the division of the Cree and Ojibwa Indians living on Island and Gods lakes, in northern Manitoba. Dr. Grant's field work was the first attempt to make a detailed anthropometric study of a Canadian Indian tribe. He examined over three hundred Indians at the two lakes he visited, and is now working up his notes and measurements into a full report.

OFFICE WORK

Scientific reports completed by the staff and handed in for publication during the past year were: "A Comparative Vocabulary of the Western Eskimo Dialects," by D. Jenness; "Materia Medica of the Bella Coola," by H. I. Smith; and "The Uren Village Site in Southeastern Ontario," by W. J. Wintemberg. Furthermore, two reports by former field workers were edited and submitted for publication: "Cree Tales," by Professor Leonard Bloomfield, and "The Bella Coola Indians of British Columbia," by Professor T. F. Mellwraith. Mr. Barbeau is completing his account of the totem-poles of Skeena river, British Columbia, and Mr. Wintemberg is preparing a report on the Roebuck village site in southeastern Ontario. Mr. Smith, having completed his "Materia Medica of the Bella Coola," is now arranging and titling a series of motion pictures that he has taken to illustrate the manners and customs of some Indian tribes in British Columbia.

The Division of Anthropology participated in several interesting events during the past year. It lent the services of Mr. Barbeau, and contributed French Canadian specimens, to the Canadian Folk Song and Handicraft Festival at Quebec, organized in May by the Canadian Pacific railway; in August it contributed a large collection of specimens to a festival at Joliette, Quebec, arranged by the Fathers of the Oblate Mission; it arranged a small exhibit for the meeting at Ottawa of the International Mining Congress in August; and it contributed most of the ethnological specimens for the Canadian West Coast Indian art exhibit shown at the National Gallery of Canada, Ottawa, in December, at the Art Gallery, Toronto, in January and February, and at the Art Association, Montreal, in February and March. It may be mentioned here, as indicating the standing which the division has attained in foreign countries, that Mr. Jenness was asked to lead a scientific expedition to Alaska during the summer on behalf of the National Geographic Society and the United States National Museum; the project was finally abandoned, however, through a disagreement between the two organizations concerning certain details in its arrangement.

MUSEUM WORK

The two exhibition halls assigned to the Division of Anthropology are undergoing extensive changes. The west hall, which is already filled with permanent cases, is being slowly reorganized; five of its cases were rearranged during the past year. The east hall, hitherto a medley of storage cabinets and small table cases, is to be equipped with large, glass-sided cases similar to those in the west hall, but with hinged doors that will make the specimens exhibited more accessible. These new cases are now undergoing assembly in the hall itself and will be installed and arranged during the coming year.

Accessions to Museum

The ethnological and archæological catalogues of the division show that its collections were augmented by about 800 specimens, but this total does not include a much larger number that are not yet catalogued. The majority of these specimens were obtained by members of the staff in the course of field work, but a certain number were donated, the North West Territories and Yukon Branch of the Department of the Interior being, as in former years, the chief contributor. The Canadian Pacific railway, through Mr. J. M. Gibbon, donated a motion picture reel depicting scenes among the Indians of the Pacific coast, and three other reels, illustrating the Nass River Indians, were presented by Dr. J. S. Watson, of Rochester, New York.

The division made two important exchanges of specimens during the course of the year. It exchanged a large collection of specimens from the Tsimshian Indians, B.C., with the National Museum of Denmark, Copenhagen, for a collection of Greenland specimens; and it exchanged with Lieut. G. T. Emmons, Princeton, New Jersey, some Vancouver Island wood-carvings for a collection of Tlinkit basket-making material. In addition, it made two donations: to the Royal Ontario Museum of Archæology, a collection of Eskimo specimens; and to Loyola College, Montreal, which is establishing a natural history museum, a collection from the British Columbia and Plains' Indians to serve as the nucleus of a Canadian ethnographical section in that college.

BIOLOGICAL DIVISION

R. M. Anderson, Chief of the Division, reports:

FIELD WORK

R. M. Anderson left Ottawa August 26 and was joined at Saskatoon by Dr. Seymour Hadwen, Chief of the Department of Veterinary Science in the University of Saskatchewan. They made an expedition through parts of the Wood Buffalo park near the boundary of Alberta and the North West Territories. With the assistance of the warden service of the Wood Buffalo park, they collected skins and complete skeletons of two large adult wood buffalo bulls, as well as black bear, beaver, and other smaller animals. Careful post-mortem examinations were made for external and internal parasites and signs of disease in all species, large and small, and blood slides were taken for future examination. Such co-operation by a distinguished parasitologist and expert in health of mammals, in field work with wild mammals, opens up great possibilities in a field comparatively unworked in this country, and if continued may lead to important discoveries in regard to the periodicity in numbers of various species of our fur-bearing and other wild mammals.

P. A. Taverner spent most of his time in office work, but did some local work in bird photography.

C. H. Young, and H. M. Laing, of Comox, began collecting small mammals in an intensive way about May 5 at Huntingdon, B.C., near the border of the state of Washington. They continued work at Sumas, Cultus lake, Lihumpton park, Hope, Hope-Princeton summit pass, Stevenson creek, and Princeton. The primary object of the expedition was to make a complete collection of the mammals found in southern British Columbia near the International Boundary line. The southern part of British Columbia is much cut up by alternating mountain ranges and valleys, which show different climatic conditions and consequent varied fauna and flora, due to variations in humidity and altitude. A number of North American species reach their northern limits near this region, and there are probably several species and subspecies occurring in this region which have never been taken in Canada. Near Huntingdon they took a fine series of the large Townsend mole, or Oregon mole, which had never been recorded from Canada previously, as well as specimens of the spotted owl and California cuckoo, both of which have been taken very rarely within our limits. Fine series of other species not previously represented in our collections were also taken, mammals totalling 915, and birds 78. Mr. Young returned to Ottawa about the middle of September; Mr. Laing remained in the field until October 10.

J. D. Soper started from Ottawa May 23 and proceeded to Munson, Alberta. Beginning work at this place he proceeded southwest to Coleman, Alberta, and

worked eastward, keeping most of the time within 30 or 40 miles of the International Boundary line where roads would permit, in southern Alberta, Saskatchewan, and Manitoba as far east as Turtle mountains, Manitoba. He collected in the vicinity of Coleman, Burmis, Milk river north of Sweet Grass hills, Deer creek, Eagle Butte, and Lodge creek on the western edge of Cypress hills in southeastern Alberta; south and east of Cypress hills in Saskatchewan, collecting near Battle Creek, Fort Walsh, Eastend, Val Marie, Lonesome Butte, Big Muddy lake, McDonald lake, and Glen Ewen, Saskatchewan; junction of Antler and Souris rivers, and Max lake, Turtle mountains, Manitoba. He left Max lake on November 3 and proceeded to Prince Albert, Sask., going north from there about 60 miles to Harper lake and Birch Bark lake, where he collected a pair each of prairie elk, moose, and mule deer, as well as a number of smaller mammals, finishing this work December 15.

Joseph Rochon left Ottawa August 15, and collected at Ste. Veronique, Labelle county, Quebec, until September 15. He collected 118 small mammals, including a specimen of the least weasel, a species not previously recorded from the province of Quebec.

C. L. Patch, D. Blakely, and C. E. Johnson did some field work in Ottawa district, principally collecting local material to fill out the collections and obtaining accessories for habitat group work.

M. O. Malte early in the spring visited the New York Botanic Garden and the American Museum of Natural History, New York; the United States National Herbarium, Washington, D.C., and the Gray Herbarium, Harvard University, Cambridge, Mass., for studies of critical plant genera and methods of arranging botanical museum exhibits. On June 21, he left, with W. R. Watson, student assistant, for northwestern New Brunswick, making his headquarters at St. Leonard. On July 12 he left there for North Sydney, N.S., to join the Canadian Arctic Expedition of 1927, under direction of Mr. George P. Mackenzie, North West Territories and Yukon Branch, Department of the Interior, which sailed on July 16 on S.S. *Beothic* for Greenland and the principal islands in the eastern part of the Canadian Arctic archipelago. Botanical collections were made at twelve ports of call on Ellesmere island, Devon island, Somerset island, Baffin island, and the south shore of Hudson strait, yielding about 4,000 herbarium specimens of flowering plants and ferns. The expedition returned to North Sydney, N.S., September 5. During the absence of the chief botanist in the Arctic, Mr. Watson continued botanical explorations in northwestern New Brunswick until the last week of August. The collections from New Brunswick totalled about 3,000 herbarium specimens, containing about 550 species.

OFFICE WORK

The only official publication issued by the Biological Division during the year was "A Study of *Buteo borealis*, the Red-tailed Hawk, and its Varieties in Canada," by P. A. Taverner, Museum Bulletin No. 48.

A report on Marine Algæ, being Part B, Report of the Canadian Arctic Expedition, 1913-18, was issued November 24, 1927, by the Department, under the supervision of R. M. Anderson, general editor of reports of this expedition. It comprised sections on "Bering Sea and Arctic Ocean Algæ," by the late Frank Shipley Collins; "Calcareous Algæ," by Mme. Paul Lemoine; and "Hudson Bay Algæ," by Marshall A. Howe.

Completed manuscripts prepared for publication by officers of the division include: "A Faunal Investigation of Southern Baffin Island," by J. D. Soper, covering his work of 1923-26; "Commercial Bent Grasses of the Genus *Arctogrostis*," by M. O. Malte; "Birds of the Belvedere Region, Northern Alberta," by P. A. Taverner; "Birds and Mammals of the Mount Logan Expedition," by H. M. Laing.

R. M. Anderson made an extended study of the natural history literature of the eastern Arctic region and found that considerable valuable and interesting material had been generally overlooked and was unavailable to most students on account of not being printed in English. He prepared a paper for the Washington meeting of the American Ornithologists' Union, November 16, 1927, on "The Work of Bernhard Hantzsch in Arctic Ornithology," which was accepted for publication in *The Auk* in 1928. In connexion with the Baffin Island work, he prepared a translation of Hantzsch's "Beobachtungen über die Säugetiere von Baffinsland" ("Observations on the Mammals of Baffin Island"), *Sitzungsberichte der Gesellschaft naturforschender Freunde zu Berlin*, 1913, pages 141-160. With the assistance of Mrs. R. M. Anderson, there was also prepared for the library a translation of Dr. Erich Hesse's "Bernhard Hantzsch's ornithologische Ausbeute in Baffinland" ("Bernhard Hantzsch's Ornithological Results in Baffin Island"), *Journal für Ornithologie*, vol. 63, No. 2, 1915, pages 137-228; also "Beiträge zur Kenntnis der Vogelwelt des nordöstlichen Labradors" ("Contribution to the Knowledge of the Avifauna of Northeastern Labrador"), by Bernhard Hantzsch, *ibid.*, vol. 56, pages 177-202 and 307-393. The first part of the last-mentioned paper was published in *The Canadian Field-Naturalist*, Ottawa, vol. 42, Nos. 1 and 2, January and February, 1928, and the second, more technical part, will follow.

P. A. Taverner contributed an important paper to *The Auk*, vol. 44, No. 2, April, 1927, pages 217-228, entitled "Some Recent Canadian Records." In this paper he recorded a number of Canadian bird occurrences which have not been formerly recorded, as well as a few others which have been published in media that are not generally available for reference, the whole being to some extent supplementary to his "Birds of Eastern Canada," and "Birds of Western Canada." Other members of the staff have contributed brief notes and reviews to periodicals but no formal articles have been listed.

MUSEUM WORK

Some progress has been made in installing biological exhibits in the Museum halls. A few small bird habitat groups with accessories have been prepared, and a considerable number of individual bird specimens have been freshly mounted or remounted from old material to fill out the gaps in the systematic exhibit collection of birds. In some of the families and genera of birds, specimens of each species known to occur in Canada are exhibited in some form. It is intended ultimately to have all the more commonly observed or important species represented in the different adult and juvenile plumages of both sexes in the different seasons. A number of small mammals have been mounted singly, and a habitat group of black-tailed prairie-dogs, taken at Val Marie, in southwestern Saskatchewan, the first authentic Canadian specimens of this species, were installed. Extensive increase in the number of mounted specimens of large species can not be made with the space at our disposal.

As a result of field work by members of the staff, considerable additions have been made to the reserve study collections of both mammals and birds, and many specimens suitable for mounting have been acquired. A few particularly desirable specimens have been purchased. Many valuable specimens have been obtained by gift or transfer from other departments, notably from the Canadian National Parks Branch and the North West Territories and Yukon Branch, Department of the Interior, and from the Royal Canadian Mounted Police.

The Canadian National Parks Branch, through the Commissioner of Parks, Mr. J. B. Harkin, has kindly sent in many specimens of large game and pre-

datory and fur-bearing mammals which have died from natural causes, or have been killed by park wardens, as well as confiscated for illegal trapping in the various national parks, Waterton Lakes, Yoho, and Jasper. The North West Territories and Yukon Branch have sent in several skulls of timber wolves and Arctic wolves from the northern districts, principally from the Wood Buffalo park. The Commissioner of the Royal Canadian Mounted Police, Colonel Cortlandt Starnes, has showed continued interest in our work and has encouraged the police detachments in the north to send in material to the Museum. The most notable accession secured last year from the police was a series of three skins and skulls of the small white Arctic caribou, or Peary caribou, taken by Staff-Sergeant (now Inspector) A. H. Joy on Axel Heiberg island in the spring of 1927. We are also indebted to Dr. Morten P. Porsild, Director of the Danish Arctic Station, Disko, Greenland, for the gift of three fine heads of the Greenland caribou, brought down by the Canadian Arctic Expedition of 1927. Both of these species have long been desiderata in our mammal collections.

Considerable progress has been made in identifying and arranging the systematic collections, particularly in botany, mammalogy, ornithology, and herpetology, and a large amount of data has been assembled along these lines for use in reports and memoirs now in preparation, or necessary as a foundation for future publications. The determination of the large amount of new material coming in from new districts has involved considerable study on the part of the technical officers of the Biological Division.

Accessions to Museum

Plants received outside of collections made by staff:

Mr. H. Groh, Ottawa, Ontario.....	53
Gray Herbarium, Cambridge, Mass.....	229
National Museum, Stockholm, Sweden.....	10
Dr. Morten P. Porsild, Disko, Greenland.....	132
Dr. B. Lynge, Oslo, Norway.....	87
Mr. E. A. Moxley, Owen Sound, Ontario.....	47
Mr. E. M. Kindle, Ottawa, Ontario.....	69
Fr. Marie-Victorin, Montreal, Quebec.....	191
Mrs. George Black, Dawson, Yukon.....	31
Dr. E. H. Moss, Edmonton, Alberta.....	60
Miss E. S. Dowding, Edmonton, Alberta.....	2
Mr. Wm. Herriott, Galt, Ontario.....	5
Mr. H. Mousley, Montreal, Quebec.....	8
Total.....	924

Plants distributed:

Gray Herbarium, Cambridge, Mass.....	253
National Museum, Stockholm, Sweden.....	26
Fr. Marie-Victorin, Universite de Montreal.....	104
Dr. B. Lynge, Oslo, Norway.....	65
Scholasticate of the Oblates of Mary, Ottawa.....	224
Dr. Selim Birger, Stockholm, Sweden.....	100
Total.....	812

Accessions to the zoological collections:

Mammals received and catalogued.....	2,097
Birds received and catalogued.....	307
Reptiles and amphibians received and catalogued.....	287
Birds' eggs in sets, and nests.....	6
Birds' stomachs (in formalin), for investigation of contents, received and catalogued.....	25
Insects collected (mostly Microlepidoptera).....	500

MINES BRANCH

John McLeish, Director

The organization of the Mines Branch continues substantially as revised in 1922, although the activities and amount of work undertaken in the major investigative divisions have been greatly extended. The expansion which the mining industry in Canada is now experiencing is reflected in the demand upon the Mines Branch for information concerning the industry, for test work on ore treatment, and for assistance in solving the many problems that continually arise in respect to the treatment of metallic ores, non-metalliferous minerals, and the manufacture of clay products. The public demands for information on the varied matters relating to fuels become more and more insistent, and the scientific study of fuels has become an industrial necessity. This is especially so in the matter of selecting, preparing, and cleaning coals for the market; of burning coal in its powdered form; of high- and low-temperature carbonization, and of the latest developments in coal liquefaction.

To meet these demands the activities of the Mines Branch are being extended as rapidly as appropriations permit, but insufficient housing accommodation for both laboratories and staff is proving a severe handicap.

Although no additional duties have been assigned to the Branch during the past year, several developments indicate important and interesting new lines of procedure. One of these is an agreement entered into with Base Metal Extraction Company, a British organization, under which the company built and equipped a laboratory in Ottawa on the departmental property for the experimental test and demonstration of a metallurgical process for treating complex zinc ores. An agreement was also made with the Cassel Cyanide Company under which the company is to maintain for two years a research fellowship in selective flotation, the appointee carrying on his investigations in the departmental laboratory under the direction of the Chief of the Ore Dressing Division.

A private attempt to develop a peat industry having failed apparently through lack of funds, the Government followed the recommendation of the Peat Committee, made in 1924, for the construction and operation of a small commercial plant according to plans recommended by the committee. An agreement was entered into with Peat Fuels, Limited, for the taking over of the old plant, its reconstruction, and operation. A complete plant has been built during the past year at Alfred, Ont. This plant will be operated on a commercial basis during the season of 1928.

Progress was made on the construction of a Fuel Research Laboratory in Ottawa. The new building will house the present staff of the Division of Fuels and Fuel Testing; provide better accommodation for the small-scale chemical work in solid fuels, oils, and gases; and new accommodation for large-scale investigations in respect to the cleaning, burning, and carbonizing of coal.

Many members of the staff contributed to the success of the Second Empire Mining and Metallurgical Congress which met in Canada during August and September. A large amount of literature on the mining and metallurgical industries of Canada was published for the Congress and representatives accompanied both main excursions, the one to northern and western Canada, and the other to northern and eastern Canada and Newfoundland.

CHANGES IN STAFF

Six permanent positions were vacated during the year by resignation: two of these were chemists; three, clerks; and one, laboratory helper; a seventh permanent position was made vacant by the death of Michael Bones, labourer.

Eleven vacant permanent positions were filled during the year by appointment under competition: of these four were engineers or chemists; four, laboratory assistants or helpers; and three, clerks or stenographers.

Thirty temporary appointments were made in Ottawa during the year, in addition to field assistants and labour at Alfred in connexion with the construction of the peat plant. These included two engineers, nine student assistants and laboratory helpers, ten clerks and stenographers, one mechanic, and eight labourers. The services of nine temporary employees, including four clerks, four student assistants, and one labourer, were discontinued during the year.

The positions of seven technical officers and one laboratory assistant were improved during the year by promotion or reclassification.

The construction of the peat plant at Alfred required the services of 25 men for varying periods of time.

On the organization of the Mines Branch in 1907, the staff comprised 21 persons, of whom 13 were technical officers including administrative officers, engineers, chemists, and assayers.

In 1920 the staff had increased to 98, of whom 35 were technologists including engineers, chemists, and assayers; 22 clerks, and 41 mechanics, labourers, laboratory assistants, messengers, etc.

In 1928 at the end of March, the number employed was 151, including: 56 administrative officers, engineers, chemists, and assayers; 12 technical clerks and draughtsmen; 22 clerks and stenographers; 18 laboratory assistants, in several grades; and 43 mechanics, labourers, messengers, etc.

MINERAL RESOURCES DIVISION

The Chief of the Mineral Resources Division, A. W. G. Wilson, spent about three months on field service in various parts of Canada during the season of 1927. Short trips were made to points in southern Ontario, where new work was in progress on old prospects, in continuation of the search for sources of rare minerals containing rare chemical elements, especially zirconium, caesium, and rare earths. A reconnaissance trip was made in company with M. F. Goudge, departmental specialist on limestones, to Prince Edward Island, and afterwards to cap d'Or, N.S. At the latter point a quantity of zeolites were collected for use in some experimental work in the absorption of rare gases required in the manufacture of vacuum tubes and special lights and beacons. Part of August and all of September were devoted to attendance at the Second Empire Mining and Metallurgical Congress, including the western excursion, for the purpose of imparting information concerning Canada's mineral resources, their development and utilization. Towards the end of the year a week was spent in visiting the plants of the Aluminum Company of Canada at Arvida, Shawinigan Falls, and Toronto; a number of other plants in the vicinity of Toronto and Hamilton, where aluminium products are fabricated, were also visited in prosecution of a general study of the development of this industry in Canada. The services of this officer were, on several occasions, requisitioned by the Advisory Board on Tariff and Taxation in connexion with technical matters relating to several of the reference hearings.

H. S. Spence was engaged during the season in resurveying the feldspar and mica industries, and industries utilizing these products. The data assembled will be embodied in reports shortly to be issued, designed to show the present

status of these industries, and to supplement the information contained in monographs on these minerals published some years ago.¹ During the course of field work Mr. Spence secured a special consignment of graphite ore for the purpose of initiating an investigation into the possibilities of producing a flake graphite suitable for the manufacture of graphite crucibles. Mr. Spence attended the Second Empire Mining and Metallurgical Congress as a departmental representative, and he accompanied the Congress on its western tour to British Columbia and return to Quebec and Thetford Mines.

L. H. Cole was engaged during the field season in resurveying the gypsum and salt industries of Canada. The latter part of July and the first part of August were spent in examining and sampling gypsum deposits in Nova Scotia and New Brunswick. A visit was paid to the salt mine at Malagash. Again, during the month of October and the first half of November additional gypsum deposits in Cape Breton, in the vicinity of Antigonish, and in Hants county, Nova Scotia, were examined and sampled. The samples obtained are large commercial samples and are to be used in laboratory research work. Mr. Cole also secured samples from a number of salt springs not previously examined. The most important result of the field work is the discovery of the occurrence of potash salts in well borings from an exploratory well at Gautreau, in the valley of Petitcodiac river, New Brunswick. These borings were placed at the disposal of the Department for examination through the courtesy of Dr. J. A. L. Henderson, Managing Director of the Maritime Oil and Gas Company, Limited. Mr. Cole attended the Second Empire Mining and Metallurgical Congress as a departmental representative, and he accompanied the Congress on its western trip to British Columbia and return via Quebec and Thetford Mines.

S. C. Ells continued his work on the bituminous sands of northern Alberta, leaving Ottawa on May 8, and returning on October 15. The work of the season constitutes a logical sequence in the program planned some years ago when the first study of the bituminous sands was initiated by the Mines Branch, and included drilling and demonstration paving. In a preliminary report on the bituminous sands, issued by the Mines Branch in 1914, it was indicated that only after detailed exploration by means of adequate equipment can the true value of any portion of the bituminous sand area be determined. Subsequent investigation has amply confirmed this contention. It has, therefore, appeared desirable to attempt to develop efficient drilling equipment which will not only pass through heavy overburden but will also recover accurate core samples of the bituminous sand itself. During 1927, three wells were commenced and carried to the desired depth. As a result, it is realized that the most efficient type of drilling equipment has not yet been developed. It is, however, considered that results already achieved will prove of practical value to any who may contemplate extensive core sampling of these sands. For many years, natural rock asphalts, including bituminous sand, bituminous sandstone, and bituminous limestone, have been used in the United States for paving purposes. The record of early development of rock asphalt paving was, however, marred by many failures. Such failures not only entailed the loss of large sums of money, but, for a time, seriously prejudiced the public against the use of the natural material. Failure was due to various causes which are now well recognized. Among these were lack of uniformity in the materials quarried and shipped, and carelessness or lack of skill in subsequent manipulation. It appeared desirable, therefore, to undertake a limited amount of demonstration paving. During parts of 1926 and 1927, upwards of 35,000 square yards of wearing surface were laid at Jasper, Alberta. This work involved selection of an area from

¹ Spence, H. S.: "Feldspar."

Spence, H. S.: "Mica."

which suitable bituminous sand could be secured; opening up of a quarry with mining and shipping of the required tonnage of bituminous sand; designing and operating a commercial mixing plant suitable for the manipulation of bituminous sand; and laying the mixture in place. The first three divisions of this work were undertaken by the Mines Branch; the last was done by the Parks Branch. Wearing surfaces laid at Jasper included approximately 12,100 linear feet of motor highway, 3,200 square yards of garage drives and parking space, and 2,100 square yards of walks within Jasper Lodge grounds.¹

M. F. Goudge continued the systematic survey of the limestone resources of Canada, which has now been in progress for three years. Six months were spent on field work, chiefly in eastern Canada, where practically all the field work in this investigation has now been completed. Early in the season a number of modern lime plants in the eastern United States were visited to study the latest developments in the lime industry in that country. Mr. Goudge's services were loaned to the executive of the Second Empire Mining and Metallurgical Congress as assistant to the train secretary in charge of the eastern excursion to the Maritime Provinces and Newfoundland.

A. H. A. Robinson is engaged primarily in the compilation of a report on "Lode Mining for Gold Ores in Canada." About three months were spent in the field during the past season; during July and part of August mining camps in British Columbia, including Anyox, Stewart, Britannia, Allenby, Trail, Nelson, and Kimberley were visited and current activities and outlook noted; short visits were paid to other localities in western Canada to discuss with local government and university officials current developments in the mineral industries in the western provinces. Mr. Robinson joined the eastern excursion of the Second Empire Mining and Metallurgical Congress on August 24, and accompanied the party to Newfoundland. Leaving the party on its return to North Sydney, on September 17, the following two weeks were spent in visiting localities in Nova Scotia where gold mining or prospecting were in progress.

V. L. Eardley-Wilmot has been engaged in compiling a report on "Artificial Abrasives," which constitutes one of the parts of his monograph on "Abrasives and Their Uses."² His next assignment is the preparation of a monograph on "Silver Mining in Canada." About two months were spent on field work in preliminary studies incidental to the compilation of this report, visits being paid to Cobalt, South Lorrain, and Gowganda. Mr. Wilmot was also assigned as a departmental representative on the eastern trip of the Second Empire Mining and Metallurgical Congress. While on this trip he examined additional diatomite deposits in Nova Scotia and Newfoundland. Before returning to Montreal he spent several days inspecting the diatomite deposit at Digby neck, Nova Scotia, and in discussing details of proposed future operations with the owners.

Arthur Buisson, mineral technologist in charge of the records section of this division, spent two months in the principal mining centres of southern British Columbia; and he also made brief visits to Winnipeg and to Sudbury area. At the end of the season about ten days were spent in Rouyn area of western Quebec. These inspection trips are made annually to secure first-hand knowledge of current developments and local conditions in the various mining camps visited. Mr. Buisson especially remarks on the optimism regarding the mining industry which prevails in both western and eastern Canada. He notes also the introduction of many modern improvements, and the remodelling of concentrators, which is contributing to the present healthy condition of the industry. Mr. Buisson joined the Second Empire Mining and Metallurgical Congress at Vancouver, and returned with the party to Montreal before proceeding to Rouyn area in continuation of his field work.

¹ A report on this work is now in press.

² Mines Branch rept., Nos. 673, 675, and 677.

C. H. Freeman and Eric H. Wait, junior engineers attached to the records section of the Mineral Resources Division, were assigned as field assistants to H. S. Spence and L. H. Cole during the field season. E. H. Wait was loaned to the Second Empire Mining and Metallurgical Congress to act as assistant train secretary for the eastern excursion; Mr. Freeman was retained in the office at Ottawa while other members of the technical staff were absent during the period of the Congress meetings.

J. M. Casey, statistician for the Mines Branch, devoted more than six months to conducting a survey of fuels used for domestic purposes in Ontario and Quebec during 1926. In connexion with this survey about two months were spent in field work in the various cities and towns of these provinces. An inquiry was also conducted respecting bunker coal consumption along the Great Lakes and St. Lawrence river. During the year a number of statistical investigations of old records of mineral production were made for the Dominion Bureau of Statistics, the Ontario Bureau of Mines, or for the use of officers of the Department of Mines.

ORE DRESSING AND METALLURGICAL DIVISION

W. B. Timm, Chief of the Division, reports that the applications for experimental test and research work on ore treatment have steadily increased with the greater activity in the mining industry. The laboratory work of the division, especially on the flotation of base metal sulphide ores is becoming more widely known among mining operators. Their keen appreciation of this work has resulted in the laboratories being taxed to their limit. The amount of work performed was fully 50 per cent greater than in the previous year, with a considerably larger amount in progress and waiting to be undertaken at the end of the year. The division has reached a point where in order to meet the demands of the industry more laboratory space is urgently required.

The permanent staff was increased during the year by the appointment of A. K. Anderson, grade III engineer; by the transfer of J. D. Johnston, junior chemist, from the Fuel Testing Division; by the appointment of H. L. Beer, junior chemist; and W. F. White and A. E. Larochelle, laboratory assistants.

Co-operative arrangements were entered into with the Base Metal Extraction Company, Limited, and the Cassel Cyanide Company of Canada, Limited. The Base Metal Extraction Company built and equipped a laboratory for experimental test and demonstration of a hydro-metallurgical process developed in England, for the treatment of bulk concentrates from mixed base metal sulphide ores. The Mines Branch conducted the concentration and roasting tests, the company the leaching, electrolytic, and other tests for the production of the metals. The Cassel Cyanide Company placed in the laboratories under Mines Branch direction and supervision a research fellow on the use of cyanide for the selective flotation of base metal sulphide ores, especially those containing copper and zinc minerals.

W. B. Timm spent three months in the field securing information on the progress made in ore dressing and metallurgical practice. C. S. Parsons, J. S. Godard, and H. C. Mabey accompanied the Empire Mining Congress on their tour of Canada; C. S. Parsons the eastern tour, J. S. Godard the western, and H. C. Mabey part of the eastern. C. S. Parsons and J. S. Godard spent three weeks in the field at Kirkland Lake, Ontario, demonstrating the feasibility of the flotation of cyanide tailings in the milling plants. C. S. Parsons and R. K. Carnochan spent a week visiting the iron ore concentrator at Lyon, and the tale and garnet plants in northern New York state. R. J. Traill visited the

non-ferrous smelting and refining plants of the northwest, including Trail, Tacoma, Kellogg, Anaconda, and Great Falls, and also of the Atlantic seaboard, securing information on the progress made in hydro-metallurgical and electro-chemical practice. He also visited Minneapolis to obtain the latest information on the test work being conducted on the direct reduction of iron ores at the Minnesota School of Mines.

LABORATORY INVESTIGATIONS IN ORE DRESSING AND METALLURGY

C. S. Parsons, A. K. Anderson, and J. S. Godard conducted the investigations on the treatment of metallic ores as follows:

The gold ore of the Sylvanite mine, Kirkland Lake, Ont.
 The gold ore of the Blue Quartz mine, Painkiller lake, Ont.
 The lead-zinc-gold ore of the Yankee Girl mine, Ymir, B.C.
 The lead-zinc-silver ore of the Planet mine, Nicola, B.C.
 The copper-zinc ore of the Amulet mine, Rouyn, Que.
 The gold ore of the Francoeur mine, Boischatel, Que.
 The gold ore of the Cooper mine, Michipicoten, Ont.
 The gold-silver ore of the Premier mine, Premier, B.C.
 The copper-zinc ore of the Sherritt-Gordon mine, Manitoba.
 The gold ore of the Kirkland-Premier mine, Kirkland Lake, Ont.
 The cyanide tailings of the Wright-Hargreaves mine, Kirkland Lake, Ont.
 The cyanide tailings of the Kirkland Lake mine, Kirkland Lake, Ont.
 The copper-gold ore of the Archean mine, Clericy, Que.
 The lead-zinc ore of the Stirling mine, Cape Breton, N.S.
 The gold ore of the Reno mine, Ymir, B.C.
 The silver ore of the Toric mine, Alice Arm, B.C.
 The lead ore of the Confederation Group, Cambourne, B.C.

R. K. Carnochan and R. A. Rogers conducted the investigations on the preparation of non-metallic minerals, as follows:

Calcite tailing from the Kingdon mine, Galetta, Ont.
 Silica sands from Silico Limited, Montreal, Que.
 Garnet rock from Langlade Garnet Syndicate, Langlade, Que.
 The drying of epsom salts.
 Graphite tailings from Dominion mine, Buckingham, Que.
 Asbestos rock from the Nicolet mine, Danville, Que.
 Sandstone from the Canada Glass Products, Limited, East Templeton, Que.
 Gypsum from the Manitoba Gypsum Company, Falkland, B.C.
 Quartz pebbles from Cypress hills, Alberta.
 Silica sands from Black island, lake Winnipeg, Man.
 Diatomite from lake Michel, Chertsey, Que.
 China clay from Huberdeau, Que.

During the year there was undertaken an investigation on the concentration of Canadian graphite ores for the production of crucible flake and a comparison of Canadian, United States, Madagascar, and Ceylon flake for the manufacture of crucibles.

R. J. Traill, W. R. McClelland, and J. D. Johnston conducted the following investigations:

The application of a modified Eustis process to the treatment of high iron-copper concentrates for the recovery of the copper and precious metal values, and of the iron as electrolytic iron, and the sulphur content as elemental sulphur.

The metallization of the iron content in ilmenite ores for the purpose of determining operating conditions and data as a guide to proposed commercial plant installation and the production of a quantity of metallized material for further investigation by private enterprise on the production of titanium pigments.

H. C. Mabee, chief chemist in charge of the chemical laboratories of the division, reports that approximately 7,000 determinations were made on 1,684 samples of ores and products of test operations. B. P. Coyne, R. A. Rogers, and H. L. Beer performed the analytical, and L. Lutes the assay, work. Some preliminary work was done on the Eckel process for the production of iron slag cement, and on a hydrometallurgical process for the treatment of stibnite ore for the recovery of metallic antimony.

FUELS AND FUEL TESTING DIVISION

B. F. Haanel, Chief of the Division, reports increased activity in investigational and routine work. The chemical staff was increased by the appointment of E. J. Burrough as engineer, grade II. G. P. Connell continued on loan as junior chemist from the Chemical Division, and R. J. Offord was appointed to the junior chemist vacancy resulting from the resignation of A. F. Gill. Temporary appointments during the year were: C. J. Coleman, E. G. O. Way, and H. T. Fortune, all as laboratory helpers.

In addition to planning and directing the work of the division, Mr. Haanel attended the regular meetings of the Dominion Fuel Board. He was largely occupied with construction and equipment details in connexion with the new fuel research station as well as with the erection and tryout of the peat plant at Alfred. He visited the coke plant of Hamilton By-Products Limited in that city. During the year he prepared several reports on low-temperature carbonization, coal liquefaction, and other processes for the treatment of coals, among which was the N-T-U process for distilling oil-shales. A plant for distilling oil-shales according to this process was operated in California, but owing to a drop in crude oil prices it was temporarily closed down. Mr. Haanel also prepared a paper entitled "The Bearing of High and Low Temperature Carbonization, and Synthetic Fuel Processes, on Canada's Fuel Problems" for presentation at the World Fuel Conference to be held in London, England, during September, 1928. He also attended the opening meetings of the Empire Mining and Metallurgical Congress held in Montreal, in August, 1927; the annual meeting of the Engineering Institute of Canada held in Montreal, February, 1928; and the annual meeting of the Canadian Institute of Mining and Metallurgy held in Quebec city during March of the same year.

E. S. Malloch and C. E. Baltzer completed the full report on the tests of various fuels made in a domestic hot water boiler. During the month of May work was commenced on the Fuel Power Survey for the province of Ontario, with particular reference to the district of the city of Peterborough. This work was completed and fully reported on at the end of the fiscal year.

A. W. Mantle, mechanical superintendent attached to the Division of Fuels and Fuel Testing, reports increased activity in the mechanical section. The construction and installation of, and repair to, apparatus, machinery, etc., involved a total expenditure, for labour and materials, of over \$23,000.

Under the direction of the chief engineer and the immediate supervision of R. E. Gilmore, superintendent of the fuel testing laboratories, the investigational work was conducted under four sections, viz.:

- (A) Coal carbonization and briquetting, engineer, R. A. Strong;
- (B) Oil-shale and bituminous sands, engineer, A. A. Swinnerton;
- (C) Oils and gases, engineer, P. V. Rosewarne;
- (D) Chemical laboratory (solid fuels), chemist, J. H. H. Nicolls.

Mr. Gilmore spent some time in connexion with the new laboratories, the selection of carbonization equipment for which took him and Mr. Strong on an extensive trip to coal experiment stations in Pennsylvania, Ohio, and Illinois. He assisted in the preparation of the annual report on fuels and fuel testing, and did considerable work in the matter of the classification of coals. As representative of the Department of Mines he attended two meetings of the A.E.S.C. Sectional Committee on coal classification.

J. H. H. Nicolls, besides looking after the routine analyses of solid fuels, conducted experiments on the caking index of Canadian bituminous coals. With the assistance of J. L. Bowlby, he carried out a large number of tests for the purpose of comparing methods of analysing coal and other solid fuels, as a pre-

liminary to the publication of the "Standard Methods of Analysis as used in the Fuel Testing Laboratories", and also continued his study of the application of different schemes for classifying Canadian coals according to the chemical and physical characteristics.

P. V. Rosewarne, assisted by R. J. Offord, conducted the fifth annual gasoline survey, consisting of 83 samples from 13 widely separated Canadian cities, and made a further study of the feasibility of reclaiming of used automobile crankcase oils. In addition to attending to the analytical work pertaining to samples of liquid fuels coming in from other Government departments, commercial firms, and private individuals, Mr. Rosewarne prepared for publication a set of standard methods for analysing lubricating oils. He represented the division at the Detroit meeting of the American Chemical Society, and at the Petroleum Congress at Tulsa, Okla.

R. A. Strong paid special attention to coal carbonization and briquetting problems. The results of tests that were made in the by-product ovens of the Winnipeg Electric Company were quite promising, for it was shown that certain Canadian coals from the Crowsnest area will produce as good coke as that obtained from the imported coal now used. Mr. Strong, with the assistance of E. J. Burrough, also conducted a series of high temperature carbonization tests on Canadian coals in the new (Koppers) laboratory electric tube furnace for the purpose of determining the yield and quality of the tar and gas by-products. The results of these tests will be published in the "Investigations of Fuels and Fuel Testing for 1927".

A. A. Swinnerton studied processes pertaining to the heat treatment of oil-shales and bituminous sands. He made a field investigation in the Maritime Provinces, conducted retorting tests on oil-shales from New Brunswick, and with the assistance of G. P. Connell made a further study of the alterations of the bitumen from Alberta bituminous sands.

Chemical Laboratory Work

During the year, a total of 850 samples of solid, liquid, and gaseous fuels were examined. Of these, 470, approximately 55 per cent of the total, were sent in from other divisions of the Mines Branch, from the Geological Survey, from other Government departments, from public institutions, commercial firms, and private individuals. The remaining 45 per cent pertained to investigations conducted by the technical staff of the division. Of the total samples submitted from outside the division, 146 were from other divisions of the Mines Branch, mainly from the Mineral Resources Division, 27 from the Geological Survey, 94 from the Department of Soldiers' Civil Re-establishment, 78 from other Government departments, and 125 from public institutions, commercial firms, and private individuals.

The following is a classification of the samples analysed according to standard laboratory methods by Messrs. C. B. Mohr, assistant chemist; G. P. Connell and R. J. Offord, junior chemists; G. E. LeWorthy, senior laboratory assistant; G. Connolly and W. Kritsch, laboratory assistants; and K. W. Bowles, C. J. Coleman, E. G. O. Way, and H. T. Fortune, laboratory helpers.

Solid fuels; total samples examined.....	381
Coals (various kinds).....	328
Cokes and chars.....	39
Peat and miscellaneous.....	14
Liquid fuels; total samples examined.....	200
Gasoline.....	106
Lubricating oils.....	122
Other petroleum oils and miscellaneous.....	62
Gases from coals, oil-shales, etc.....	31
Bituminous sands and oil-shales.....	148

CERAMICS AND ROAD MATERIALS DIVISION

Howells Fréchette, Chief of the Division, reports increased activity in the division and much progress in the investigations under way. In some lines of investigation particularly gratifying results have been obtained.

J. F. McMahon, ceramic engineer, was appointed to the permanent staff as engineer, grade II, July 14, 1927.

J. G. Phillips, ceramic engineer, was appointed to the temporary list as engineer, grade II, August 19, 1927, and was retained as such throughout the balance of the fiscal year.

The growing volume of laboratory work necessitated additional laboratory assistance during the latter part of the year. Laboratory helpers were employed for nine months and one labourer for four months.

CERAMICS

At the request of the Mining Bureau of the Winnipeg Board of Trade, in July Mr. Fréchette was sent to Manitoba to study the difficulties being encountered in the attempts to produce high-grade face-brick within the province. Visits were made to the various plants and the nature of their problems was ascertained. As a result of advice given, considerable improvement in the ware was attained at one plant to the west of Winnipeg, but the problem confronting the operators at Winnipeg was found to be much more serious. At Winnipeg two clays are available for brickmaking. A shallow surface clay which burns to a very light buff has been used for many years in the manufacture of common brick. The supply of this clay is being rapidly depleted, and the cost of winning and transporting it to the brick plants is becoming a very serious item. Underlying this surface clay is a thick bed of red burning clay which, were it not for one very serious fault, would produce good face-brick. This is a tender-drying clay of the type known as gumbo. When moulded into bricks it is almost impossible to dry them without cracking. At one of the Winnipeg plants, face-brick is being manufactured from this underclay mixed with a silty clay obtained about 100 miles west of Winnipeg. The cost of transportation is high and the results are not very satisfactory. The manufacturers, the Alsip Brick, Tile, and Lumber Company, Limited, are anxious for a means of overcoming the drying difficulties, which will permit them to use the local underclay alone. On Mr. Fréchette's recommendation, the Department undertook the problem, and appointed Mr. Phillips to assist in an exhaustive research on this clay to determine means of processing it so as to overcome the cracking in drying. Coincident with the request for aid from Winnipeg, the Redcliff Brick and Coal Company, Limited, of Redcliff, Alberta, asked the assistance of the Department in overcoming the difficulty of drying their brick rapidly without excessive breakage. This problem, being the same as that of the Winnipeg brick manufacturers, was included in the research. A very comprehensive study of possible means for solving the problem has been made and a large amount of experimental work done on the clays from Winnipeg and Redcliff. As a result of this laboratory work, two methods of overcoming the drying faults of these clays were developed which may be expected to give good results and at a sufficiently low cost to be economic. It is proposed to conduct large-scale tests at a brick plant for the purpose of obtaining cost data and to establish definitely the applicability of the processes to mass production. The successful solution of this problem will mean much to the brick industry throughout the Prairie Provinces, for almost all the brick clays of that section of the country possess the fault of being tender-drying to an extreme degree. By rendering the clay fit for rapid drying, the brick plant capacities may be easily increased and the quality of the ware greatly improved.

In August Mr. Fréchette made a reconnaissance of the clay and shale deposits of Prince Edward Island, preliminary to a detailed study of these resources which is planned for 1928.

In September he visited the Grand Lake coal area in New Brunswick where he studied the possibilities for the establishment of clay working industries to utilize the large tonnage of shales mined incidental to the production of coal. Representative samples were taken for laboratory study. These have been subjected to thorough tests by Mr. McMahon, to determine their suitability for the manufacturing of ceramic wares.

During the summer, Mr. McMahon made a study of the excavation and transportation of clays at thirty brick and tile plants in Ontario. Information as to the cost of the various operations was secured and much general data gathered which will serve in determining the most economic methods of operation under specific conditions.

Grey face-brick is in fairly strong demand in Ontario and Quebec, and the market is being supplied from foreign sources as the local manufacturers have been unable to produce them. Several manufacturers have asked that a method of production be worked out for their clays. Mr. Collin now has this problem under way. It is usual to produce this grade of brick from a low-grade fire-clay, into which is mixed a small percentage of manganese dioxide. The low refractoriness of Canadian brick clays constitutes the main difficulty, as they cannot be burned to a sufficiently high temperature to produce the reaction which seems to be necessary between the manganese and the clay to develop the grey colour.

Much progress was made by Mr. Collin on the investigation of ceramic bodies for electrical heating devices. More than 4,000 test pieces were burned to various temperatures. Impact tests were made on about half that number of test pieces to determine their toughness. The percentage of shrinkage and water absorption was determined on each set of test pieces. A number of plants manufacturing this type of ware were visited and samples of the mixture used were obtained at three of them. Test pieces have been made from these and will be used to determine the relative value of the bodies compounded in the laboratory and the commercial bodies now being manufactured.

During the year 133 samples of clays and shales were tested. Tests were also made on one sample of mineral pigment, four samples of limestone, three samples of marl, three samples of pyrophyllite, and four samples of talc.

Transverse strength was determined on three samples of building brick.

A series of tests was made for a manufacturer desirous of producing dry-press brick from a clay previously used for another type of brick.

Tests were run to determine whether spraying would be more advantageous than dipping in the manufacture of glazed brick.

Experiments were made on the production of buff brick from a red-burning clay.

Four samples of fire-brick were tested and reported on for Government departments.

Numerous refractory shapes were made for use in the ceramic laboratory and for other laboratories of the Department.

The facilities of the laboratories and the assistance of the staff were, on several occasions, placed at the disposal of other departments for special tests.

In co-operation with the Research Council of Canada, an exhaustive laboratory investigation of the suitability of the magnesite from Grenville township, Quebec, for the manufacture of high-grade refractory brick, has been under way during the entire year. This work was conducted at first by Mr. R. T. Watkins, and later by Mr. J. W. Craig, ceramic engineers, and the results so far obtained show good prospects of success.

ROAD MATERIALS

During the early part of the field season, R. H. Picher, road materials engineer, visited thirteen stone quarries in the province of Quebec in districts not previously covered, and eight samples were collected for testing. Most of these quarries are not worked for the production of road metal, but have a large amount of waste rock which constitutes an important and easily available source of supply for road material and concrete aggregate.

Mr. Picher began a detailed investigation of the road material resources of Prince Edward Island.

The laboratory work consisted in testing the samples collected during the field season and also in conducting an investigation on cement mortars with various types of stone aggregates.

CHEMISTRY DIVISION

F. G. Wait, Chief of Division, reports:

From April 1, 1927, to March 31, 1928, twelve hundred and seventy-eight specimens have been reported on.

The work of the different members of the chemical staff has been as follows:

H. A. Leverin during the summer investigated the rate of drying of peat under the climatic conditions prevailing at Alfred, Ontario. He made numerous chemical analyses of a wide variety of materials, including abrasives, gypsums, silica sands, rock salt, brine, and alloys. He has also made several mineral identifications.

E. A. Thompson made chemical analyses and microscopic examinations, with photomicrographs, of two telluride ores for the Ore Dressing Division, and of sand from the Alberta bituminous sands. A metallographic examination and analysis was made of a piston from an airplane engine for the R.C.A.F. Complete analyses were made of seven samples of mineral water, of nineteen feldspars, and two micas, as well as a number of partial analyses and mineral identifications.

A. Sadler had charge of the furnace assays. He examined five samples of earths as to their suitability for use as fullers' earth, and determined the dehydration point and the behaviour on heating of six diatomites. He made complete analyses of eight rocks and minerals, and partial analyses of a large number of specimens.

James Moran's principal work has been the analysis of the air sampled in the coal mines of western Canada. Two hundred and fifty-two such samples have been analysed and reported on. He made partial analyses of a large number of limestones, assisted in the identification of minerals, and made tests of two rocks for radio activity.

C. L. O'Brian was engaged in the analysis of limestones and dolomites collected by the Mineral Resources Division.

R. J. Offord, prior to his promotion and transfer to the Fuel Testing Division on August 23, 1927, made 144 furnace assays for gold and silver, tested two specimens for radio activity, and made partial analyses of several limestones.

James Rivington, appointed senior laboratory assistant in November, 1927, working under direction and supervision of Mr. Sadler, made a large number of furnace assays. He assisted in the preparation of stock, volumetric solutions, and in the general work of the laboratory.

DOMINION OF CANADA ASSAY OFFICE, VANCOUVER, B.C.

The report of the Assay Office for the calendar year ending December 31, 1927, shows a decrease of business as compared with that of the previous year.

The net value of gold bullion deposited during the year was \$1,750,599.35, being a decrease of \$773,738.23 as compared with the year 1926. This is due chiefly to a lower production of bullion by a few of the principal shippers to this office and a fall in the value of placer gold production in British Columbia during the year. There is, however, every indication of a betterment during 1928; it is expected that the large gold dredge which operated throughout 1926 at Antler creek, Cariboo district, B.C., and which was being moved during the whole of last season to its new location at Cunningham pass, will be producing again in the late spring. Developments in other parts of the Cariboo and in Lillooet district also promise to further augment the gold yield during the coming season as compared with the year just closed.

GOLD BULLION

The following is a statement of gold bullion deposits at this office from the opening of the institution in July, 1901, to the close of business on December 31, 1927:

Number of deposits.....	23,324
Troy ounces.....	2,914,729.90
Net value.....	\$46,260,262.99

The purchase and disposal of the gold bullion deposited during the year 1927 required a total of 1,645 meltings and 1,645 assays, quadruplicate assays being made in each instance, including the melting into large bars of the smaller deposits after purchase, and the assaying of same before shipment.

The aggregate weight of all deposits before melting was 108,080.89 troy ounces, and after melting 102,224.55 troy ounces, included in which were 59 deposits containing a large proportion of lead requiring to be cupelled in a large muffle furnace. The total weight of these deposits before melting was 11,689.19 troy ounces and after melting and cupelling 7,642.76 troy ounces, showing a loss by melting and cupellation of 34.617 per cent.

The average loss of melting all other bullion deposited, viz.: 96,391.70 troy ounces before melting and 94,581.79 troy ounces after melting, was 1.878 per cent.

The loss in weight by assaying (base and parted silver) was 31.62 troy ounces, making the weight of bullion after melting and assaying 102,192.93 troy ounces, the average fineness of same being 827½ gold and 135½ silver.

The net value of the gold and silver contained in deposits was \$1,750,599.35 and was received from the following sources:

	Number of deposits	Before melting and assaying	After melting and assaying	Net value
		Troy oss.	Troy oss.	\$ cts.

DRAUGHTING DIVISION

H. E. Baine, Chief Draughtsman, reports:

Maps published during the fiscal year ending March 31, 1928, and listed in the catalogue of Mines Branch publications, are as follows:

Map No. 171, Sudbury nickel region; scale, 1 mile to 1 inch (reprint).

Map No. 692, Diatomite deposits in the Maritime Provinces; scale, 17 miles to 1 inch (approx.).

Maps Prepared (not published)

FUEL POWER SURVEY

Map of northern portion of the province of Ontario (4 sheets); scale, 35 miles to 1 inch.

Map of western portion of the province of Ontario (4 sheets); scale, 12 miles to 1 inch.

Map of eastern portion of the province of Ontario (4 sheets); scale, 12 miles to 1 inch.

Maps on Hand

Map showing the distribution of the principal limestone formations in southern Quebec; scale, 8 miles to 1 inch.

Map showing the distribution of Ordovician limestone formations in Ontario; scale, 8 miles to 1 inch.

Map showing the distribution of the Silurian and Devonian limestone formations in southern Ontario; scale, 8 miles to 1 inch.

Map of limestone formations in Nova Scotia.

Map of limestone formations in New Brunswick.

Map of limestone formations in Gaspé peninsula, Quebec.

Map of limestone formations in southern Manitoba.

Map of limestone formations in southern Alberta.

Map of limestone formations in British Columbia.

Two hundred and forty-seven page maps, drawings, charts, and flow-sheets were prepared during the year.

Nine hundred and eighty-three negatives, and black and white prints were made from the photostat machine.

Five hundred and sixty-one negatives, black and white, and blue prints were made from the blue-print machine.

Seventy-one half-tone blocks and zinc cuts were sent out, received, and filed during the year.

DISTRIBUTION OF PUBLICATIONS

During the fiscal year ending March 31, 1928, the distribution of Mines Branch reports, bulletins, memorandum series, press bulletins, maps, lists of mine operators, etc., amounted to 137,498 copies. This is the largest distribution made in a single year by the Mines Branch, and it is accounted for to a great extent by the wide distribution of the pamphlet entitled: "Instructions for Burning Coal, Coke, and Peat."

Mr. H. A. Adams and Mr. C. R. Herbert were employed temporarily as clerk, grade II, and packer and helper, respectively, during the year, to assist in the distribution work.

LIBRARY

Mrs. O. P. R. Ogilvie, Librarian, reports:

Accessions to the library, 1927:

Books (by purchase).....	355
Books (by gift).....	74
Books (annual binding).....	166
Books (complete unbound volumes).....	165
Canadian Government documents (by gift and exchange).....	1,727
British and Foreign Government documents (by gift and exchange).....	1,114
Scientific societies, bulletins, proceedings, and transactions (by gift and exchange).....	1,262
Pamphlets (by gift).....	67
Trades catalogues (by gift).....	190

Accessions to the library during 1927 exceeded those for 1926, and much time was devoted to readjusting the shelves, that this increase might be properly placed.

Requests for translations of French and German technical articles were received in the library with such frequency that the services of a temporary assistant were required in order to meet this constantly increasing demand.

The year's work was marked by the installation of additional equipment, and much progress was made toward a general readjustment through the library.

EXPLOSIVES DIVISION

Lt.-Col. G. Ogilvie, Chief Inspector of Explosives

Explosives Factories

The only new factory licensed in the year ending March 31, 1928, was that of the Dominion Fireworks Manufacturing Company, Dixie, Ont. Two factories ceased operation: the National Explosives Company, Limited, Camp Mohawk, which closed in August, 1927, and the Mexco Company, Swastika, Ont., at the end of the calendar year.

The demand for commercial explosives, judged by their production, continues to increase, the output during 1927 having been over 10 per cent more than that of 1926.

A fatal accident occurred at the factory of the Canadian Explosives Limited, Beloeil, Que., on January 21, 1928. The unfortunate victim was engaged in the weekly cleaning of an outside catch tank in which the final waste waters from a nitroglycerine house are collected. This waste, which is largely in the form of a thin mud, is absorbed with sawdust and removed to the burning-out grounds. It contains a small quantity of occluded nitroglycerine. At the time of the accident the temperature was below zero Fahrenheit and it is believed that the nitroglycerine was detonated by some inadvertent blow. The man was killed instantly. The presence of nitroglycerine in the wash water is normal, as is also the procedure adopted in a flat terrain for the removal of the waste, but the possibility of the introduction of new devices for the more complete elimination or destruction of the nitroglycerine is engaging the attention of the manufacturers.

An accident whereby the operator lost the sight of an eye and sustained other injuries, and an associate worker was also injured, occurred at the Dominion Cartridge Company's factory, Brownsburg, Que., on October 14. Primed .22 shells were being shaken into a loading tray when the accidental explosion of one of these caused an *en masse* explosion of the primed shells on the bench—a wholly unexpected sequel with these shells. This accident has been dealt with in the Annual Report of the Explosives Division, but it is of interest to note here that the same phenomenon was observed on February 20, 1928, but thanks to the precautionary measures adopted, no injuries were sustained by the personnel.

Magazines

There were 271 magazines under license on March 31, 1928. Licences had also been granted for 200 temporary magazines during the year.

Two permanent magazines were broken into. A case of detonators was stolen from one and two cases of dynamite from the other. A temporary magazine was also broken into and four cases of dynamite stolen.

Temporary magazine buildings, used for the keeping of explosives required in harbour construction at Port Colborne, were destroyed by the storm of December, 1927, and the contents—747 cases of dynamite and 18 cases of electric detonators—were swept into lake Erie. An officer of the division attended the salvaging operations and examined the explosives. All were recovered, 427 cases repacked with serviceable dynamite, and the remainder destroyed.

Explosives Condemned

Seven considerable stocks of high explosives, totalling 2,008 cases on inspection, were condemned, deterioration having been accelerated by exposure

when kept on outlying operations. These were destroyed by the owners. In addition, the equivalent of 1,720 pounds, distributed over 11 magazines, was condemned or destroyed, also 2,375 pounds of black blasting powders, 1,500 detonators, and a few minor items.

Prosecutions

Prosecutions were taken in nineteen cases. One, on a charge of failing to safeguard explosives awaiting transshipment, was dismissed. Convictions were obtained and fines imposed in the others. In nine cases the offence was unlawful keeping of explosives, in eight failing to keep records of receipts and issues, and in one, intoxicated when in charge of a vehicle conveying explosives.

Importations

Six hundred and eighty-one permits for importation and thirty-four special permits were issued during the year. The rejections of Chinese fireworks presented for importation continue to be high—over one-quarter of those entering via Vancouver having been refused admission in 1927. Shipments made to merchants in eastern Canada, through wholesale dealers in the United States, have latterly been practically free from rejection, as these dealers, knowing what is authorized in Canada, take the precaution of examining the consignments from China before distribution—by no means a simple task judging by the variety found in direct shipments.

Authorization of Explosives

Two new explosives were presented for authorization, examined and accepted. Of 186 samples of manufactured fireworks 79 were authorized.

Accidents

The summary of accidents occurring in the use of explosives, as given in the annual report for the division, shows a slight decrease, but those arising from playing with explosives still form its most notable, and regrettable, feature. Playing with explosives accounted for 40 accidents with 4 killed and 49 injured, out of a total from all causes (manufacture and use) of 127 accidents with 38 killed and 135 injured.

The leaflet, referred to in last report, has been issued to all schools and school inspectors in Ontario, and to the Departments of Education in all western provinces, Quebec, and Nova Scotia, who have also kindly co-operated in the matter. Many of the accidents are undoubtedly due to ignorance, and it is hoped that the admonitions and instructions given in schools may be of very material assistance in reducing the number of these accidents.

General

The activities of the deputy inspectors of the Royal Canadian Mounted Police have made possible the inspection of unlicensed premises throughout the country. During the year about 2,200 inspections were so made, besides 700 by inspectors of the division. The reports received record relatively few cases of failure to comply with the regulations. The difficulty of adequately covering the ground has been felt most in eastern Canada, but this, in the last two years, has been largely overcome by the special patrols made by the Royal Canadian Mounted Police.

The deputy inspectors of that force have also co-operated in the inspection of magazines, in the conduct of prosecutions, examination of imported fireworks, and have rendered notable service in the promotion of public safety by the instructions they have given, on all appropriate occasions, regarding the safe handling of explosives.

EDITORIAL DIVISION

F. Nicolas, Editor-in-Chief

The strength of the English publication section of the Editorial Division remained unchanged during the fiscal year ending March 31, 1928.

During the fiscal year thirty-three separate English publications were issued by the Department, consisting of annual reports, memoirs, bulletins, and pamphlets; there were issued also twenty-one lists of mine operators and mines. Ten reports were published in French.

At the end of the fiscal year there were in the hands of the King's Printer four English reports and one French translation of the Geological Survey, seven English reports of the Mines Branch, and one English report of the Explosives Division. Several reports, also, were being edited preparatory to dispatch for printing, and several French translations are now nearly ready for the printer.

The following list includes the publications issued by the various branches of the Department during the fiscal year, under the supervision of the Editor-in-Chief, and the French publications distributed¹ during that period:

DEPARTMENT OF MINES

Report
No.

English Publications

2142. *Report of the Department of Mines for the Fiscal Year ending March 31, 1927*: 59 pages; 3,000 copies; published January 31, 1928.
Canada: Geology, Mines, and Metallurgical Industries (Handbook for the Second Empire Mining and Metallurgical Congress)—by Wyatt Malcolm and A. H. A. Robinson; 214 pages; 40 plates; 16 maps; 2,500 copies; published June 20, 1927.
Department of Mines: Some of the Services it Performs (Pamphlet reproducing a series of twelve advertisements relating to the Department of Mines); 17 pages; 12 plates; 2,000 copies; published July 15, 1927.

French Translations

2123. *Rapport du Ministère des Mines pour l'année se terminant le 31 mars, 1926*; 83 pages; 1,200 copies; published August 26, 1927.
 2148. *Rapport du Ministère des Mines pour l'année se terminant le 31 mars, 1927*; 63 pages; 1,250 copies; published March 29, 1928.

GEOLOGICAL SURVEY

English Publications

2115. *Memoir 151. Geological Series 132. Minto Coal Basin, N.B.*—by W. S. Dyer; 42 pages; 3 figures; 2 maps; 2,500 copies; published May 2, 1927.
 2118. *Summary Report of the Geological Survey, Department of Mines, for the Calendar Year 1925, Part C*; 175 pages; 3 plates; 14 figures; 4 maps; 3,500 copies; published July 7, 1927.
 Separate: *Destor Area, Que.*—by B. S. W. Buffam; 105 pages; 1 plate; 3 figures; 1 map; 306 copies; published September 14, 1927.
 2120. *Memoir 152. Geological Series 133. St. Urbain Area, Charlevoix District, Que.*—by J. B. Mawdsley; 58 pages; 2 plates; 9 figures; 1 map; 2,000 copies; published June 9, 1927.

¹ The distribution of English publications was made as usual by the branches that prepared them.

Report
No.

2121. Memoir 153. Geological Series 134. *Benff Area, Alberta*—by P. S. Warren; 94 pages; 7 plates; 1 figure; 1,800 copies; published August 29, 1927.
2125. Bulletin 46. Geological Series 47. *Contributions to Canadian Mineralogy and Petrography*—by E. Poitevin, H. C. Cooke, and H. C. Gunning; 45 pages; 3 plates; 10 figures; 1,500 copies; published September 24, 1927.
2127. *Summary Report of the Geological Survey, Department of Mines, for the Calendar Year 1926, Part B*; 57 pages; 4 figures; 3,000 copies; published April 7, 1927.
2131. Economic Geology Series 4. *Arsenic-bearing Deposits in Canada*—by M. E. Hurst; 181 pages; 21 figures; 2,500 copies; published September 24, 1927.
2135. *Summary Report of the Geological Survey, Department of Mines, for the Calendar Year 1926, Part A*; 60 pages; 1 plate; 2 figures; 1 map; 3,000 copies; published September 13, 1927.
2136. *Summary Report of the Geological Survey, Department of Mines, for the Calendar Year 1926, Part C*; 143 pages; 1 plate; 21 figures; 1 map; 3,000 copies; published December 5, 1927.

French Translations

2122. Mémoire 144. Série géologique 128. *La région cartographiée du mont Albert, Québec*—by F. J. Alcock; 79 pages; 6 plates; 5 figures; 1 map; 1,000 copies; published September 15, 1927.
2126. *Rapport sommaire de la Commission géologique, Ministère des Mines, pour l'année civile 1924, Partie C (extraits)*; 50 pages; 2 plates; 3 figures; 3 maps; 1,000 copies; published September 8, 1927.
2139. *Rapport sommaire de la Commission géologique, Ministère des Mines, pour l'année civile 1925, Partie C (extraits)*; 124 pages; 1 plate; 4 figures; 4 maps; 1,000 copies; published March 31, 1928.

NATIONAL MUSEUM OF CANADA

2133. Museum Bulletin 48. Biological Series 13. *A Study of BUTEO BOREALIS, the Red-tailed Hawk, and Its Varieties in Canada*—by P. A. Taverner; 20 pages; 3 plates; 1 figure; 1,000 copies; published December 16, 1927.

MINES BRANCH

English Publications

671. *Investigations of Fuels and Fuel Testing, 1925*; 184 pages; 7 plates; 17 figures; 4,000 copies; published October 27, 1927.
- Separates:
- Examination of Typical Cokes Sold in Canada as Household Fuels*—by R. E. Gilmore, C. B. Mohr, and others; 27 pages; 2 plates; 1 figure; 1,500 copies; published August 31, 1927.
- Tests of Various Fuels made in a Domestic Hot-water Boiler at the Fuel Testing Station in Co-operation with the Dominion Fuel Board*—by C. S. Malloch and C. E. Baltzer; 30 pages; 6 figures; 1,000 copies; published August 14, 1927.
- Low-temperature Carbonization of Bituminous Coals*—by R. A. Strong; 41 pages; 4 plates; 5 figures; 500 copies; published August 31, 1927.
- Analyses of Solid Fuels*—by J. H. H. Nicolls; 31 pages; 500 copies; published August 14, 1927.
673. Abrasives, Part I: *Siliceous Abrasives*—by V. L. Eardley-Wilmot; 119 pages; 14 plates; 8 figures; 4,000 copies; published September 2, 1927.
675. Abrasives, Part II: *Corundum*—by V. L. Eardley-Wilmot; 51 pages; 5 plates; 6 figures; 4,000 copies; published May 30, 1927.
677. Abrasives, Part III: *Garnet*—by V. L. Eardley-Wilmot; 69 pages; 4 plates; 19 figures; 4,000 copies; published May 27, 1927.
- Pamphlet: *Experimental Ore Testing and Research Laboratories*—by W. B. Timm; 9 pages; 3,000 copies; published June 10, 1927.
682. *Preliminary Report on Limestones of Quebec and Ontario*—by M. F. Goudge; 75 pages; 16 plates; 3 figures; 4,000 copies; published August 1, 1927.
684. *Use of Alberta Bituminous Sands for Surfacing of Highways*—by S. C. Ellis; 37 pages; 5 plates; 10 figures; 4,000 copies; published July 13, 1927.
- Canadian Shale Oil and Tar Sand Bitumen as Sources of Gasoline by Pressure Cracking*—by R. E. Gilmore; 8 pages; 500 copies; published July 16, 1927.

Lists of Mines and Mine Operators in Canada:

Natural Gas and Petroleum Wells; 1,500 copies; published July 20, 1927.
 Asbestos; 1,000 copies; published June 11, 1927.
 Cement Mills; 500 copies; published June 7, 1927.
 Sand-Lime Brick Plants; 500 copies; published June 7, 1927.
 Lime Kilns; 1,000 copies; published June 21, 1927.
 Sand and Gravel Deposits; 1,000 copies; published July 19, 1927.
 Stone Quarry Operators; 1,000 copies; published July 18, 1927.
 Metallurgical Works; 1,000 copies; published July 9, 1927.
 Milling Plants; 1,500 copies; published August 1, 1927.
 Feldspar; 1,000 copies; published July 26, 1927.
 Graphite; 1,000 copies; published July 23, 1927.
 Mica; 1,000 copies; published August 1, 1927.
 Copper and Nickel-Copper; 1,500 copies; published July 7, 1927.
 Silver-Lead-Zinc; 1,500 copies; published July 30, 1927.
 Gypsum; 1,000 copies; published August 1, 1927.
 Salt Wells and Mines; 1,000 copies; published July 20, 1927.
 Talc and Soapstone; 1,000 copies; published July 19, 1927.
 Gold; 1,500 copies; published August 18, 1927.
 Silver; 1,500 copies; published August 11, 1927.
 Quartz; 1,000 copies; published August 6, 1927.
 Producers of Miscellaneous Non-Metallic Minerals; 1,000 copies; published March 12, 1928.

Report
No.

French Translations

685. *Recherches touchant les Ressources minérales et l'Industrie minière, 1924* (extraits); 72 pages; 4 figures; 1,200 copies; published March 19, 1928.

DOMINION FUEL BOARD

English Publications

8. *Why You Should Insulate Your Home*—prepared by G. D. Mallory, for the Dominion Fuel Board; 15 pages; 7 drawings; 25,000 copies; published August 4, 1927.
 Reprint of No. 8: 25,000 copies; published in January, 1928.
Instructions for Burning Coal, Coke, and Peat; 14 pages; 2 figures; 100,000 copies; published September 17, 1927.
Regulations Pertaining to the Domestic Fuel Act; 8 pages; 250 copies; published October 31, 1927.
Agreement and Regulations; 8 pages; 100 copies; published November 19, 1927.

French Translations

9. *Avantages de l'Isolation thermique de votre Maison*; 16 pages; 7 drawings; 5,000 copies; published January 5, 1928.
Instructions pour le Chauffage au Charbon, au Coke et à la Tourbe; 11 pages; 2 figures; 25,000 copies; published January 9, 1928.

EXPLOSIVES DIVISION

English Publications

21. *Annual Report of the Explosives Division of the Department of Mines for the Calendar Year 1926*; 23 pages; 2,000 copies; published May 5, 1927.
Storage of Explosives; Reprint: 21 pages; 5,000 copies; published July 6, 1927.
Beware of Detonators; 4 pages; 1 plate; 20,000 copies; published July 9, 1927.

French Translations

22. *Rapport annuel de la Division des Explosifs du Ministère des Mines pour l'année civile 1926*; 24 pages; 1,000 copies; published August 12, 1927.
Méfiez-vous des détonateurs; 4 pages; 1 plate; 5,000 copies; published July 9, 1927.

DISTRIBUTION OF FRENCH PUBLICATIONS

The French publications of the Department of Mines, including those of the Geological Survey, the Mines Branch, and the Explosives Division, are distributed by the Editorial Division of the Department, the distribution being under the direct supervision of P. E. Levesque, who is also in charge of the translation section of the Editorial Division. During the fiscal year 1927-28, 14,928 copies were distributed in Canada and foreign countries, as follows: 3,251 to addresses on the mailing lists, through the Printing Bureau Distribution Office; 4,677 copies in compliance with written or personal requests, distributed from our distribution office; and approximately 7,000 copies of the pamphlet on "Instructions for Burning Coal, Coke, and Peat" to coal dealers. This distribution does not include, however, the publications sent by the Dominion Fuel Board and the Explosives Division to their correspondents.

ACCOUNTING DIVISION

ACCOUNTANT'S STATEMENT

P. R. Marshall

The funds available for the work and the expenditure of the Department of Mines for the fiscal year ending March 31, 1928, were:

	Grant	Expenditure	
		Amount	Total
	\$ cts.	\$ cts.	\$ cts.
DEPARTMENT—			
Amount voted by Parliament.....	106,169 00

REPORT OF THE MINISTER OF AGRICULTURE

1927-1928

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to submit to Your Excellency a report of the Department of Agriculture for the fiscal year ended March 31, 1928.

The work of the department was carried out in a most satisfactory and efficient manner, and there will be found included herein a summary of the operations of the different branches of the department, all of which is laid before Your Excellency under their respective headings.

New legislation affecting the department was passed by Parliament during the period covered by this report as follows:—

Chapter 40 of the Statutes of George V, 1926-27. The Agricultural Pests Control Act, 1927. An Act which dealt with the control, manufacture, importation and sale of insecticides and fungicides used in agriculture. Assented to April 14, 1927.

Chapter 57 of the Statutes of George V, 1926-27. An Act amending the Fruit Act, which provided for the inspection and issuance of export certificates in connection with fruit intended for export. Assented to April 14, 1927.

Chapter 60 of the Statutes of George V, 1926-27. An Act to amend the Live Stock and Live Stock Products Act, 1923. This amendment was primarily for the purpose of putting into effect certain recommendations that had been made to the department in connection with the operation of co-operative associations on live stock exchanges and stockyards. Assented to April 14, 1927.

The following Orders in Council were passed during the period covered by this report, establishing new regulations or amending existing regulations under the various Acts and policies administered by the department:—

By Order in Council P.C. 717 of April 20, 1927, the regulations under the Destructive Insect and Pest Act were amended in order to provide, amongst other things, for steps to be taken towards the control of the Oriental Peach Moth in Canada.

By Order in Council P.C. 718 of April 20, 1927, the counties of Verchères, Chambly, St. Jean, Laprairie, Napierville, and part of the county of Richelieu were set aside as a tuberculosis-free restricted area.

By Order in Council P.C. 794 of May 4, 1927, the regulations in regard to restricted areas were amended in so far as the movement of cattle into or out of restricted areas are concerned. Provision was also made for the transportation of veterinary inspectors conducting the tests, while the payment of compensation for reacting grade bulls, steers and lumpy-jaw cattle was withdrawn.

By Order in Council P.C. 1079 of June 6, 1927, the regulations under the Dairy Industry Act were amended in order that some changes could be made in the specifications for butter boxes.

By Order in Council P.C. 1708 of June 6, 1927, the county of Prince Edward, in the province of Ontario, was established as a restricted area.

By Order in Council P.C. 1111 of June 8, 1927, the regulations under the Fruit Act were amended in order to provide for the marking of fruits in ungraded packages.

By Order in Council P.C. 1202 of June 24, 1927, the regulations under the Fruit Act were amended to make certain changes in the dimensions of cantaloupe crates, bushel baskets, etc.

By Order in Council P.C. 1609 of August 8, 1927, regulations were established under the Fruit Act for the inspection of fruit offered for export out of Canada, and by Order in Council P.C. 1482 of September 24, 1927, the regulations covering the sale of apples in baskets were amended.

By Order in Council P.C. 1526 of August 11, 1927, the regulations under the Destructive Insect and Pest Act, dealing with the importation of peaches, peach nursery stock, etc., from certain United States areas, were amended.

By Order in Council P.C. 1787 of September 24, 1927, regulations were established under the Live Stock and Live Stock Products Act, covering the grading of hogs at country points.

By Order in Council P.C. 1858 of September 24, 1927, authority was granted for the issuance of a proclamation bringing the Agricultural Pests Control Act into effect as from October 1, 1927.

By Order in Council P.C. 2059 of October 22, 1927, the island of Bouchard, in the St. Lawrence river, was set aside as a restricted area.

By Order in Council P.C. 87 of January 16, 1928, the regulations under the Meat and Canned Foods Act were amended in order to place on a proper basis the shipment of carcasses from one province to another by bona fide farmers.

By Order in Council P.C. 183 of February 4, 1928, the regulations under the Meat and Canned Foods Act covering the inspection of preserved fruits and vegetables were amended.

By Order in Council P.C. 182 of February 4, 1928, the county of Mississquoi, in the province of Quebec, was established as a restricted area, and by Order in Council P.C. 229 of February 10, 1928, the county of Iberville was established as a restricted area.

By Order in Council P.C. 262 of February 17, 1928, the parishes of Prince William, Dumfries, McAdam and Kingslear, in the province of New Brunswick, were established as a restricted area, and by Order in Council P.C. 445 of March 20, 1928, the counties of Rouville and Brome, in the province of Quebec, were established as a restricted area.

WORLD'S POULTRY CONGRESS

In the month of July, 1927, the World's Poultry Congress was held in Ottawa, and proved to be entirely successful. Representatives and exhibits were brought from many countries in Europe, from the United States and from all parts of the British Empire. The proceedings of the Poultry Congress have been published in a special report.

DIAMOND JUBILEE DINNER

As a part of the Diamond Jubilee celebration which took place last year, the Royal Agricultural Winter Fair, held in October, 1927, was made the occasion of an Agricultural Jubilee. The Department of Agriculture staged a comprehensive exhibit covering all branches of agriculture, and as part of the celebration, an All-Canadian Products dinner was held shortly after the opening of the fair.

IMPERIAL AGRICULTURAL RESEARCH CONFERENCE

In October, an Imperial Agricultural Research Conference was called in Great Britain at which representatives of the agricultural research workers from all parts of the British Empire were present. The Canadian representatives were Dr. J. H. Gridale, Deputy Minister of Agriculture; Dr. E. S. Archibald, Director of Experimental Farms; Mr. W. T. Macoun, Dominion Horticulturist; Dr. J. M. Swaine, Associate Dominion Entomologist, and Dr. E. A. Watson, Chief Animal Pathologist.

The deliberations of the conference were of very great value, and as a result it is hoped to co-ordinate the work of all the agricultural research workers within the Empire in order to make the results of that work more effective.

DOMINION EXPERIMENTAL FARMS AND STATIONS

Wet weather during May delayed seeding operations generally throughout Canada and, on the whole, the season was fairly well advanced before this work was finished. Weather conditions improved in the latter part of June and into July. Crops made excellent growth, with the exception of fodder corn which suffered from the excessive moisture. On the whole, crops of all descriptions did exceptionally well, and larger yields were obtained than earlier conditions promised. The quality of grains and potatoes, however, was lowered by the adverse conditions experienced during the season. The total value of all field crops in 1927 is estimated by the Dominion Bureau of Statistics at \$1,134,192,600 as compared with \$1,104,983,100 in 1926.

AREAS AND ESTIMATES OF YIELD AND VALUE OF FIELD CROPS 1927

CENTRAL EXPERIMENTAL FARM

DIVISION OF ANIMAL HUSBANDRY

Horses.—The breeding policy at the Central Experimental Farm is directed toward production, at cost, of the horses required for general farm labour, and it also serves as a basis for the advice offered to farmers in such matters. During the year eight foals were raised, all sired by the imported stallion "Sandy Mac." This horse has developed well, and is proving very sure and prepotent. The established standard of excellence of the working force of horses has been well maintained during the past year.

Cattle.—Poor markets in Great Britain, the meat trade war between British and American interests in the Argentine, and the high prices obtaining for cattle in the United States markets have resulted in the closing of the trade in live cattle between Canada and Great Britain for the time being. The foregoing conditions have made it more profitable for the Canadian breeder and feeder to dispose of his cattle in the United States markets. A report of the last experimental shipment of cattle to Great Britain, on March 26, 1927, will be found in the annual report of the Division of Animal Husbandry for the year ending March 31, 1927.

The Central Experimental Farm has maintained its position in the front rank as a producer of high class dairy bulls. During the year, seven Ayrshire, two Holstein, and two Jersey bulls were inspected and passed for Advanced Registration, four of these animals being registered in Class A.A. The Advanced Registration of females has also been taken up through the policy inaugurated by the Holstein Freisian Association.

In conjunction with the Health of Animals Branch, special studies are being made of the problem of contagious abortion. Additional pasture for the main herd is much needed. While no outstanding individual milk production records were made, the general average of the whole herd has been well maintained.

Sheep.—The flock of sheep consists of Shropshires, Leicesters, and cross bred ewe lambs of these two breeds. The average weight of Shropshire fleeces was 6.95 pounds and that of Leicesters 7.36 pounds; the former however graded better.

Swine.—The herd of swine consists of pure bred Yorkshires and Berkshires. The decline in pork prices resulted in a falling off in the demand for breeding stock. Of the 91 head sold for this purpose, 72 were boars. Tests are under way to determine the economic value of Acid Utal, the feeding value of Provendine, and the value of "Smoked Salt" for the home curing of pork and bacon. A number of feeding experiments are also under way.

Dairy.—In conjunction with the Division of Bacteriology further studies have been made of the milking machine from the standpoint of efficiency and the production of clean milk. The manufacture of cream, butter, buttermilk, Cheddar cheese and Meilleur cheese was carried on as usual in the dairy.

DIVISION OF FIELD HUSBANDRY

On the Central Experimental Farm all the main farm crops yielded well in 1927, with the exception of potatoes which yielded only 125.7 bushels per acre as compared with an average of 246.3 bushels per acre over a six-year period. The yields of crops secured on the Central Farm are much heavier than the average yields in the province of Ontario, due largely to the fact that the land receives a liberal application of manure, good seed is planted, the crops are grown in good rotations, and the proper tillage methods are followed.

This would appear to indicate that if such practices were more generally adopted throughout the country, and in many instances this might be done at a fairly reasonable cost, the result would be very materially increased yields.

All the hay crops, including red clover alone and timothy alone, gave excellent yields. Two cuttings of hay are always harvested. Corn for silage although yielding somewhat above the average was not fully matured, having a dry matter content of only 18 per cent as compared with the usual 20 to 25 per cent. This was probably due to the rather cool summer. On heavy clay soil at Ottawa unthinned sunflowers are very much superior to corn, the average yield over a period of six years being 16.52 tons and 10.1 tons per acre respectively. On a light loamy soil however the yields of these two crops are about equal, but as the corn is easier to handle when ensiling and gives a slightly superior silage it is preferred over sunflowers when grown on this type of land.

Occasionally difficulty is experienced in making desirable silage from crops other than corn. Practically all legumes are liable to give trouble if the proper methods of ensiling are not followed, but alfalfa is perhaps more difficult than any other crop to ensile. A series of experiments are now under way with a view to learning the best stage at which to cut crops so as to produce the best silage, what amount of wilting, if any, should be given in the field before placing the crops in the silo, whether or not water should be added to the silage, and whether any other crop may be added to certain silage crops to improve their quality.

An experiment has been conducted for the past sixteen years on a four-year rotation of mangels, oats, clover hay and timothy hay, in order to determine the yields which may be obtained by applying farm manure to one piece of land, commercial fertilizers to another, and a mixture of these materials to a third piece of land. The results are in favour of farm manure although commercial fertilizers have also given profitable returns. However where farm manure is available it should be conserved and used to the best advantage, but where the quantity is insufficient the use of a certain amount of commercial fertilizers might well be considered.

Much useful information on crop rotations and cultural methods will be found in Bulletin 72, new series, entitled "Crop Rotations and Soil Management for Eastern Canada," and Bulletin 98, new series, entitled "Crop Rotations and Soil Management for the Prairie Provinces," both of which have recently been issued.

Very useful information has been obtained from experiments under way at the Dominion Experimental Station, Swift Current, Sask., for the purpose of ascertaining what rotations and cultural methods conserve soil moisture most effectively, what crops use the smallest quantity of water in their growth and what crops will stand over long periods of drought and resume growth when moisture conditions again become satisfactory.

Experiments have been undertaken with a view to improving the extensive areas of range lands in southern Alberta and Saskatchewan so that more cattle may be carried thereon than is now possible. This work is being conducted on a portion of the ranch of Gilchrist Brothers Limited who are co-operating to the extent of supplying and looking after the range cattle which are placed on the various fields of the ranch.

DIVISION OF HORTICULTURE

The Melba apple, originated in the Division of Horticulture, received outstanding recognition during the past year, both in the United States and in Europe, being awarded the Wilder Silver Medal, the highest award of the American Pomological Society, and also a Gold Medal Diploma at the International Horticultural Exhibition, held in Brussels, Belgium. A collection of

new and promising varieties of apples for commercial use was sent to the International Horticultural Exhibition at Paris, France, and was awarded the Grand Silver Gilt Medal Diploma.

The Dominion Horticulturist was Chairman of the Fruit Committee of the Imperial Agricultural Research Conference, and delivered addresses at the Fifth International Genetic Conference and at the International Horticultural Congress.

One of the major lines of experimental work carried on by the Division is the breeding of new varieties of fruits, and certain varieties originated in the division are now gradually taking their places among the varieties recommended for planting in Canada.

Nutritional studies with strawberries and apples have been under way for the past three years, and the work is now being expanded. In connection with strawberries some very interesting and suggestive results have been obtained and information is being accumulated which should ultimately be of value in diagnosing malnutrition.

The extension experiments in Quebec orchards are now concentrated on two areas, Abbotsford and Chateaugay.

In co-operation with the Canadian Seed Growers Association the Division is assisting in making available, as soon as possible, high class vegetable seed produced in Canada. There is a great demand for the new varieties of early corn originated in the Division of Horticulture, and three of these, Pickaninny, Banting and Early Malcolm are now in the hands of seed merchants.

A new species of lilac has been originated in the Division. It is known as *Syringa Prestoniae* and is a cross between *Syringa villosa* and *Syringa reflexa*. There are many charming varieties.

Experiments under glass with fruits, vegetables and flowers were carried on along much the same lines as in previous years. Home canning and dehydration experiments also were continued.

CEREAL DIVISION

An important phase of the work of the Cereal Division is the production and development of superior new varieties or strains of cereals. While other means are not neglected the Division depends chiefly upon artificial crossing of carefully chosen parent varieties as a means of obtaining improved types. This work is confined chiefly to the Central Experimental Farm at Ottawa and to the Federal Rust Research Nursery located at the Agricultural College, Winnipeg, Man. A number of exceedingly promising combinations have been effected and it is the policy of the Division to send out seed of these most promising "populations" to the different branch Farms throughout Canada, where they are thoroughly exploited. Naturally, spring wheat, owing to its supreme importance to Canada, has received the greatest attention, but due consideration has been given to other grain crops.

Work is now under way towards developing a classification of oat varieties which may be helpful to the breeder, to the grower of registered seed, and to the trade. A number of new oat forms which show exceptional promise have been produced by this Division.

In view of the recent revival of interest in the malting barley trade, varieties particularly suitable for malting purposes are now being sought.

In 1926 the division distributed Garnet wheat to some 3,000 farmers throughout Western Canada for trial. The results of those trials, together with those recorded at the various branch Farms and by special co-operators, have been published in bulletin 83, new series, entitled "Garnet Wheat." Another variety which is attracting a good deal of attention is "Reward" produced by

this division from a cross between Marquis and Prelude. It appears to have the ability to cope with stem rust better than most of the other common wheat varieties.

The work of breeding for disease resistance is carried on at the Dominion Rust Research Laboratory and Nursery at Winnipeg and it may be stated that very definite and substantial progress has been made.

Realizing the great importance to Canada of maintaining the highest possible quality in the spring wheat produced in the Prairie Provinces an immense amount of work is carried on annually by this division in comparing not only the baking qualities of different varieties in general but the effects on the quality for baking purposes of different varieties and selections when grown under widely different conditions.

Every effort is being made to assist and encourage all organizations and individuals who are interested in the production of Elite Stock Seed. In this work the division co-operates closely with the Canadian Seed Growers' Association.

Considerable attention is being devoted to a proper classification of cereal varieties. The Division has also continued its assistance to the Canadian Seed Growers' Association in connection with the verification of Elite Stock Seed.

Farmers have been encouraged to test leading varieties of different kinds on their own farms. In addition to furnishing valuable information, this plan has established a bond between these men and our branch Farms and Stations.

DIVISION OF FORAGE PLANTS

Variety tests of field corn for fodder were continued at the Central Experimental Farm, Ottawa. The different lots of corn are being divided into groups according to the length of time required to mature. The results will be reported accordingly and this should be of distinct advantage to growers seeking information as to the most suitable variety for any district. It has been necessary to discontinue the variety tests of corn at the Harrow Experimental Station, owing to the prevalence of the corn borer.

Sunflowers were tested at the Central Experimental Farm for yield and general suitability. In conjunction with the Canadian Seed Growers' Association tests were conducted with a number of varieties of field roots for the purpose of determining their eligibility for registration. Tests of annual hays had to be held over this year due to the lack of sufficient land. It was again demonstrated that red clover seed produced locally is much superior for Canadian conditions than imported seed.

An important phase of the work of this division is the breeding of improved strains of grasses, clovers, field roots, corn and sunflowers, and some promising material is being developed. A strain of purple top swede has been selected for its globe shaped root, short neck, and quality and firmness of flesh. A few recombinations of the more desirable looking inbred strains of corn were tested against the original parent varieties, and in practically all cases the recombinations were superior to the original parent varieties. A large number of inbred strains of sunflowers appear quite outstanding both in their growth characteristics and in their ability to withstand disease.

The classification of forage plants is proceeding, and in this connection there is in course of preparation a pamphlet on soy beans.

In connection with the investigations of experimental methods our efforts during the past year were directed largely towards securing fuller information on the relationship of the method of handling shrinkage samples to their ultimate dry matter content.

The problem of turf grass and range improvement was given considerable attention. Several of the strains of bent grass are proving themselves to be outstanding under conditions prevailing at the Central Farm.

A comprehensive series of experiments is being laid out at the Dominion Range Experiment Station, Manyberries, Alberta, where range investigations are being conducted jointly by this division and the Division of Field Husbandry.

POULTRY DIVISION

There has never before been such a marked development in the poultry industry in Canada as that which took place during the past year. Better hatching results were obtained than in 1926, and an expansion of this branch of the industry is indicated for the coming season. The favourable season induced rapid growth of young stock and satisfactory maturity. Slightly increased feed prices were more than offset by the prices of eggs, which were considerably higher than in the previous year. Winter egg prices remained fixed for a longer period than usual, probably due, to some extent, to the anti-dumping regulations.

The third World's Poultry Congress, which convened at Ottawa from July 27 to August 4 was outstandingly successful. The Dominion Poultry Husbandman was General Director of the Congress, and he has now been honoured with the Presidency of the International Association of Instructors and Investigators in Poultry Husbandry under whose auspices the triennial congresses are held.

The poultry work at the Central Experimental Farm was exceptionally satisfactory. The increased production is attributable to the breeding work which has been carried on for a number of years. The registration and contest work has increased to such an extent that it is now one of the major activities of the division.

Considerable progress has been made in the experimental work throughout the Experimental Farms system during the past year. The greatest limiting factor at present is the incidence of disease, but every effort is being made to overcome this difficulty. With the appointment of trained assistants and poultrymen upon the branch Farms there has been an increase in the experimental work, and experiments of a more scientific nature have been undertaken.

In the thirteen egg-laying contests conducted by this Division during the past year, the average egg production per bird was 172.5 as compared with 122.5 eight years ago. Poultry registration is expanding rapidly. The activities of the division in the province of Quebec are confined chiefly to registration work, although assistance is given in the way of lectures and demonstrations as the need arises.

Poultry disease work is carried on in co-operation with the Health of Animals Branch.

DIVISION OF CHEMISTRY

That the value of chemistry as applied to farming operation is becoming more and more recognized is evidenced by the constantly increasing demands received by this Division for information in respect to soils, manures, fertilizers, feeding stuffs, etc. As an indication of the volume of work undertaken it may be stated that during the past year 4,338 samples were received for examination and reported on. These samples comprised soils, manures, fertilizers, forage, plants, fodders, feeding stuffs, waters, dairy products, insecticides and fungicides, and samples from the Meat and Canned Foods Division.

An investigation has recently been undertaken to determine the effects of long-practised irrigation on soils in Alberta, more particularly in respect to its influence on their tilth.

From the analysis of a series of silage samples—alfalfa, sweet clover, oat, pea and vetch, and corn—undertaken in connection with experimental work being

carried on by the Division of Field Husbandry, it would appear that the ensiling period did not materially affect the composition of the silage. Alfalfa silages from wilted material possessed a higher protein content than from unwilted, and full bloom alfalfa gave a silage slightly richer in protein than the crop ensiled at the one-tenth bloom stage. The silage from sweet clover cut at bud stage possessed a slightly higher protein content than from the crop cut in full bloom.

As in the past experimental work with fertilizers was carried on at several of the branch Farms and Stations, and additional work was undertaken with a number of new fertilizers which have recently appeared on the market.

The results of the investigations into the merits of the Sugar Jack system of processing dry roughages into moist succulent feed have now been published in bulletin form.

The experiment being conducted by this division to collect Canadian data on the subject of "close grazing system of pasturage" is attracting much attention.

Results obtained so far in connection with the soft pork investigations justify the statement that immaturity and lack of thrift (from whatever cause) are the two chief, perhaps the sole, causes of softness.

In addition to making chemical analyses and physical examinations of insecticides and fungicides appearing on the Canadian market, much co-operative work is carried on with the Entomological Branch.

DIVISION OF BOTANY

In connection with the International Exchange of Seeds 3,366 packets were received and 4,835 packets were sent out. Several enquiries were received relative to the cultivation of Peppermint, and the propagation of plants suitable for feeding muskrats. Bulletin 78, new series, entitled "A Short Guide to Canadian Genera of Seed Plants," was published during the year.

This division renders considerable service to the public in such matters as plant identification, weed and poisonous plant consultation, outside extension work, and the investigation of special problems. Weed surveys conducted for the past five years have fairly well covered the territory from the Atlantic coast to Lake Superior.

The potato inspection and certification service has resulted in larger yields and higher prices for the growers. Up to the end of the calendar year 800,000 bushels of the 1927 crop had been shipped abroad.

The examination of nursery stock of all kinds for admission into Canada has occupied the services of one of the officers at the Central Laboratory almost continuously. Field work in connection with decay in balsam fir was continued in Gaspé.

Potato diseases and problems pertaining to seed potato certification are the major problems under investigation at the Charlottetown and Fredericton laboratories, while the laboratories at Kentville, N.S., St. Catharines, Ont., and Summerland, B.C., are concerned chiefly with the control of diseases affecting orchards and orchard crops. A greenhouse constructed at the St. Anne de la Pocatiere laboratory will greatly facilitate the research work being carried on at that point.

Very satisfactory progress has been made in the investigations being carried on at the Dominion Rust Research Laboratory, Winnipeg. Twenty-six forms of stem rust have been found in Western Canada. The effectiveness of sulphur dusting as a method of rust control has been established beyond doubt.

Root and crown diseases of cereal plants are the major problems under investigation at the Saskatoon laboratory. Here also rust and smut investigations are being carried on in co-operation with other laboratories. In co-opera-

tion with the Plant Breeder of the Department of Field Husbandry, University of Saskatchewan, a study is being made to ascertain the value of plant breeding in controlling crown and root diseases.

FIBRE DIVISION

With a favourable season, a good crop and a slight advance in the price of flax the past year was the most encouraging year the Canadian flax growers have experienced since the post-war slump. The acreage is being gradually increased, and the price secured this year for seed for export purposes will no doubt have a stimulating effect on the production of fibre flax in Canada.

Approximately four tons of pedigree fibre flax seed were secured through the Empire Marketing Board, in the spring of 1927, for propagation in Canada. In order to maintain its purity, the six growers in Ontario, amongst whom it was distributed, were not permitted to grow any other variety. Of the resulting crop 1,200 bushels were shipped to Northern Ireland in time for the 1928 seeding, and sufficient seed to sow approximately 1,500 acres still remains in Canada. This will be sown in Western Ontario during the coming season under regulations similar to those enforced in 1927.

The acreage of hemp this year was no greater than that of 1926 due largely to the present unsatisfactory method of scutching. Two machines, designed for scutching hemp, were tested at Ottawa during the past year. One of them is promising.

A new method of harvesting flax which was tried out this year, was found possessing some advantages where ordinary commercial fibre flax seed is sown and where difficulty is experienced in getting flax pulled.

In the matter of yield of fibre per acre a variety of flax known as J.W.S. has demonstrated its superiority over other varieties tested.

DIVISION OF AGRICULTURAL BACTERIOLOGY

This division renders an exceedingly useful service not only to farmers but also to other Farm Divisions and the various branch Farms through the examination and analysis of samples of water from farm wells, milk and milk products, feeding stuffs, preserved food, soils, etc. which are submitted for microbiological testing.

The campaign to encourage the practice of inoculating legumes is being continued. During the past year 3,975 cultures were prepared and sent out, 73 per cent of which were for alfalfa inoculation. Of the reports received from farmers during the year 73 per cent indicated that inoculation had been of benefit.

Particular attention has been directed towards experimental research through the investigation of problems of a bacteriological nature, including bacteriological studies of the milking machine in relation to clean milk production. It is probable that at the end of 1928 the Division will be in a position to make definite recommendations for the benefit of users of milking machines.

With a view to reducing bacterial contamination, a comparison is being made of methods of treating dairy utensils feasible on the average farm where a supply of steam for sterilization is not available. In addition thereto the division has maintained a systematic bacteriological control of the milk supply and pasteurizing system in connection with the dairy at the Central Farm.

Studies of the bacteria concerned with foul brood diseases of bees were continued. Better media for cultivating the organism responsible for American foul brood disease have been devised, thus facilitating its isolation from diseased material. In connection with European foul brood a thorough study is being made of the bacteria found in diseased material.

Studies of fermentation of honey are being conducted in co-operation with the Bee Division.

TOBACCO DIVISION

In Ontario and Quebec the spring opened early, and although the growth of seedlings was retarded by the cool weather in May there was an abundant supply of plants for transplanting. The spring season being much more backward in British Columbia there was a scarcity of vigorous plants at transplanting time, and many of the fields were planted late. Damage by cutworms, wireworms and flea beetles was also much more extensive than in the East. Harvesting and curing were accomplished under favourable weather conditions in Ontario and in the Yamaska valley in Quebec, but in the l'Assomption-Montcalm district in Quebec excessive rainfall lessened the yield and lowered the quality. In British Columbia the later sown crops were badly damaged by heavy rains. Late harvesting, unfavourable curing weather and lack of experience on the part of many growers resulted in some heavy losses, but on the whole the crop yield was quite high and of fair quality.

Leaf tobacco exhibits were shown at the Central Canada Exhibition, Ottawa, Sherbrooke Fair, Quebec, Essex County Fair, Leamington, Ont., and in co-operation with the Ontario Department of Agriculture at the Canadian National Exhibition, Toronto.

Members of the divisional staff attended growers' meetings and gave lectures stressing the importance of producing high quality tobacco rather than heavy crops of leaf of indifferent grade. Inspection trips were also made throughout the various tobacco growing districts and information was obtained on the condition of the crop, diseases, insect pests, etc.

Varietal tests were conducted at Fredericton, N.B., Farnham, P.Q., Ottawa and Harrow, Ont., Morden, Man., Swift Current, Sask., and Invermere, Summerland, Kelowna, Agassiz and Saanichton, B.C. At Harrow, Ont. seed beds covered with cello-glass held the moisture well and required less attention than the beds covered with glass or cotton. The plants however, were a little later than those produced under glass but earlier than those produced under cotton. Experiments on seed bed sterilization, and studies on the effect of various cultural practices on the nicotine content of tobacco, were continued at Ottawa. Unfavourable weather interfered with the tobacco work at Morden, Man. Varietal and cultural tests were also conducted in the Okanagan valley, B.C.

The total tobacco crop in 1927 amounted to about 43,916,700 pounds, which is the largest yet produced in Canada. Unfortunately there was considerably more low grade Burley and dark air-cured tobacco produced than the market could absorb, consequently prices were lower than in 1926 and a proportion of the crop remained in the hands of the growers after the buyers had obtained their requirements.

The export market continued to develop, and nearly six million pounds of tobacco were exported to the United Kingdom in 1927. Great caution however must be observed in the matter of future expansion, and more attention given to the production of high quality, well graded leaf of the type demanded by the market.

BEE DIVISION

The crop of honey harvested during the season of 1927 was one of the largest in the history of Canada. Winter losses throughout Ontario and the eastern provinces were comparatively light, but in the west the winter was severe and losses were heavy.

In co-operation with the Division of Horticulture studies have been made with a view of determining the value of honey bees as agents in the cross-pollination of fruits. This year black currant bushes were used in the experiment instead of apple and plum trees as formerly. From the results obtained it would appear that bees are not necessary for the cross-pollination of black currants.

In connection with the work of queen breeding and rearing considerable difficulty was experienced in getting the queens to take their mating flight, due to unfavourable weather conditions.

Italian bees have shown less inclination for swarming than Carnolians and have also produced a much larger amount of honey.

Package bees, obtained from the southern States early in the spring, were united with colonies which came through the winter in a weak condition, but due to unfavourable weather in the spring and early summer no benefit was obtained from the extra bees.

During the season a total of 2,192,680 pounds of honey for export was inspected. There was a decided improvement in the quality of the honey and methods of packing over that of 1926. The exporters report that this inspection service has benefited the export trade.

Samples of honey collected from various parts of Canada have been graded for the purpose of ascertaining the range of colour and quality produced. A number of samples of honey imported into Great Britain were also obtained in order to determine the kinds of honey demanded on that market. These latter samples have been graded and compared with the Canadian samples and definite grades for Canadian honey are now being formulated.

An investigation into the causes and methods of control of fermentation in honey is being conducted in co-operation with the Division of Bacteriology. A study of the causes of granulation has also been started.

The seasonal reminders sent to beekeepers throughout the Dominion on request are becoming increasingly popular and are in great demand.

In addition to the eighteen branch Farm apiaries, there are also a number of small outapiaries which are maintained for special experimental work.

DIVISION OF ILLUSTRATION STATIONS

The Illustration Stations form a connecting link between the Experimental Farms and Stations and farmers living in districts remote from such institutions. It is through these Illustration Stations that the results of the researches and experiments conducted at the Experimental Farms are carried to the distant farmers. One hundred and sixty such Stations were operated during the past year.

The soils in many of the districts served by these Stations are lacking in fertility, and keen interest is being shown in the illustrations undertaken by the division, comparing the use of chemical fertilizers alone and in conjunction with barnyard manure.

For the past ten years this division has been encouraging the growing of red clover seed on the Illustration Stations in Ontario and Quebec and many of the Stations are now producing a substantial surplus. Similar efforts have also been made in northern Ontario in connection with alsike clover seed with splendid results.

The production of pure seed of suitable varieties is an important phase of the work of the Illustration Stations, and, being in a position to meet the demand for such seed, they are performing an exceedingly useful and profitable service to the respective communities. The sales during the past year amounted to 30,942 bushels of seed grain and 11,892 bushels of seed potatoes.

On the whole there has been a great improvement in the live stock kept on the Illustration Stations particularly on many of the older established stations where good sires and suitable feeds have been used. A number of the operators now have pure-bred accredited herds and are able to supply their neighbours with well bred animals as breeding stock. Improvement has also taken place

in the poultry plants, and in the laying qualities of the flocks, which has been brought about by selection and by the introduction of males bred from high producing females.

During the year the supervisors organized and addressed one hundred and twenty field and public meetings and also assisted at short courses and acted as judges at fairs and ploughing matches.

DIVISION OF EXTENSION AND PUBLICITY

This division, as its name implies, is concerned with bringing to the attention of farmers and others interested, the activities of the Experimental Farms Branch, and the services of that branch which are available to agriculturists generally. One of the chief means of doing this is through the preparation and presentation of agricultural educational exhibits at fairs and exhibitions. This service is in keen demand and is greatly appreciated by the public. The special work done by the Federal Department of Agriculture in connection with the Agricultural Jubilee which was held at the Royal Winter Fair, Toronto, was supervised by this division.

A bureau of lantern slides is maintained, and ten sets are available without rental charge to all horticultural and agricultural organizations and schools throughout Canada.

During the past year more than two hundred press articles were sent out by this division, in both English and French. In this way seasonal and regional information is presented in simple form to farmers throughout the Dominion and the division gratefully acknowledges the cordial co-operation of the agricultural papers and daily and weekly newspapers in Canada.

There is an increasingly heavy demand for "Seasonable Hints" and an edition of 476,000 copies was necessary to meet requirements in March, 1928. This is an increase of 58,000 copies for the year.

During the past year more than eighty publications were edited in this division, including the annual reports of the various divisions and branch Farms, bulletins, pamphlets, circulars, and revised publications.

A number of small collections of photographs, seeds, fibre, etc., were prepared at the request of various educational institutions for use in connection with their teaching work, and the chief of the division addressed a considerable number of service clubs, horticultural societies and agricultural organizations on the work of the Dominion Experimental Farms.

OTHER ACTIVITIES

In addition to the many lines of work already enumerated there are many other activities at the Central Experimental Farm, one of the most important of which is the draughting of plans. In the draughting room, not only are sketches and complete working drawings prepared for new buildings to be erected on the Experimental Farms themselves, but assistance and advice is freely given to farmers on the construction and repair of farm buildings. During the past year thirty-three sets of drawings were prepared, including sketches and complete working drawings, and 900 blue prints were distributed to applicants. Complete drawings and specifications were also prepared for a cattle barn for the Health of Animals Branch, and illustrations of a dehydrator were prepared for the Dehydration Committee. There is also maintained a very useful collection of cost data and photographs of new buildings, and a commencement has been made on the revision of all branch Farm maps.

BRANCH FARMS AND STATIONS

EXPERIMENTAL STATION, CHARLOTTETOWN, P.E.I.

Cold winds in the latter part of April and throughout May retarded early spring growth. Seeding was not general until May 24, but all crops germinated well and July showers induced rapid growth. The weather was favourable during the harvest season, and during the mild weather of the late autumn the roots and corn made strong growth.

The pure-bred Ayrshire bull, Ravenwood Victor—72902—Class A, and five of his daughters and four other cows, qualified in Record of Performance during the past year. Twenty-seven steers used in feeding experiments returned a total profit of \$307.27 over all costs of feed. Yorkshire swine are kept for breeding purposes.

Much valuable information has been accumulated from a number of crop rotation experiments which have been in progress since 1912. From the results obtained from co-operative tests carried on throughout the Island, it would appear that the sugar beets produced are quite suitable for the manufacture of sugar.

Cereal breeding work is being carried on in the new greenhouse and some very promising new selections have been obtained. Variety and strain tests of cereals and forage crops were continued. A bulletin by the Dominion Chemist on the "Soils of Prince Edward Island" is now in the hands of the printers. The largely increased use of fertilizers throughout the province, no doubt, is due in a large measure to the fertilizer work which has been carried on at this Station.

In the poultry work efforts are being directed not only towards increasing the production but also the size of the egg. In the ninth Prince Edward Island Egg Laying Contest sixteen birds qualified for registration.

Twenty of the twenty-two colonies of bees which were put away in wintering cases came out strong, but the backward spring of 1927 was unfavourable for the bees.

Excellent work is being done through the twelve Illustration Stations which are supervised by the Charlottetown Experimental Station.

EXPERIMENTAL FOX RANCH, SUMMERSIDE, P.E.I.

The research work carried on during the past year has yielded some valuable information on the seasonal requirements of silver foxes in captivity. For instance it has been demonstrated that the diet should vary with the seasons, and in this connection it is advisable to divide the year into three periods. Between May 15 and August 15 it appears necessary that the foxes obtain the essentials of green vegetation either by eating the green vegetation itself or by eating the flesh of animals that have been recently feeding on green vegetation. Under these conditions the foxes have shed their fur in a natural and favourable manner. In the latter part of August the foxes begin to put on weight and store up fat in their bodies and from then until the end of October favourable results have been induced by feeding rations containing animal fats and a certain amount of ripe vegetation in the form of whole wheat flour, corn meal, rolled oats, tomatoes, swede turnips, carrots, beets, etc. The vegetables, however, should be reduced to a very fine pulp. There appears to be a change in the requirements of silver foxes about the beginning of November. It has been demonstrated that high meat rations produce very unfavourable results when fed during the early fall months, but from the beginning of November and throughout the winter months a high meat ration has produced very favourable results.

The improper feeding of cows' milk has been the cause of very heavy losses in the silver fox industry. It often causes severe gastric disturbances. In the experimental work which has been conducted very favourable results have been obtained by adding cereals to the milk and feeding finely ground beef tripe at the same time.

It appears probable that the high mortality amongst fox pups is largely due in many cases to a deficiency of the anti-scorbutic vitamin "C" in the rations of breeding foxes during the fall months, which tends to induce later a very severe form of infantile scurvy amongst new-born pups. Very beneficial results have been obtained from feeding lemon juice and orange juice daily to the females nursing the affected pups.

Many other problems are under investigation and much valuable information is being accumulated.

Advice and assistance in many problems connected with the raising of silver foxes in captivity has been freely given to a large number of fox breeders, many of whom have visited the Experimental Fox Ranch. In addition the superintendent has prepared a number of papers which have been published in the official organ of the Canadian Silver Fox Breeders' Association, and in other journals.

EXPERIMENTAL FARM, NAPPAN, N.S.

Seeding was fairly general towards the end of May. The weather during the growing season, however, was decidedly unfavourable. There was an excess of moisture and crops suffered from lack of proper cultivation. Grain crops were flattened, and fruit trees suffered considerable damage, resulting in a reduction of about forty per cent in the fruit crop. All grain crops were below the average in yield and quality.

The herd of cattle at this Farm includes pure-bred Guernseys, and grades of the Ayrshire and Holstein breeds. Some very interesting cost data are being recorded. The results of the steer-feeding experiments indicate that heavy meal feeding is not economical. Breeding and feeding experiments were continued with the herd of Yorkshire swine, and with a flock of pure-bred Shropshire sheep.

The row method of testing varieties and strains of cereals is proving much superior to the larger plots formerly used. In the variety and strain tests of corn, Longfellow and some of the Northwestern Dents continue to give the highest yields. Tests of grasses and clover, sown alone and in combination, were continued.

Northern Spy, Tolman Sweet, Bethel and Duchess apples were the best yielders this year. In spite of the unfavourable weather conditions, the apple crop when harvested was very clean, but scab developed very rapidly after packing.

In the poultry work special attention was given to the pedigree breeding of Barred Rocks. The relative merits of fish meal and beef scrap as protein feeds for poultry are being studied, and a number of feeding tests are under way. A very satisfactory increase in the average production per bird was noticeable in the egg-laying contest.

A comparison is being made of the relative merits of Ephos basic phosphate, Malagash salt, and sulphur and gypsum in the control of potato scab. Different fertilizer formulae for potatoes are also being tested.

Different methods of swarm control are being studied each year in the apiary. The average production per colony was 72.6 pounds of honey.

EXPERIMENTAL STATION, KENTVILLE, N.S.

Seeding was general early in May. A much needed rain on July 11 revived the crops which had suffered considerably from lack of precipitation. A heavy wind and rain storm on August 24 caused the grain to lodge badly. This made harvesting difficult and resulted in much loss. Much fruit also was destroyed.

During the past year there has been a marked improvement in type and production in the herd of dual-purpose Shorthorn cattle at this Station. Eighteen cows qualified in Record of Performance. Yorkshire swine are kept and breeding stock was sold to local farmers.

Expectations of an apple crop above the average vanished when on August 24 high winds damaged the trees and materially reduced the yields. A late infection of apple scab from an early infection on the foliage and fruit caused further loss. Plums ran from fair to good and there was an improvement in prices over previous years. The excessive rains damaged strawberries somewhat, but the crop on the whole was fair. Bush fruits and raspberries gave a fair yield only. Cultural and variety tests with vegetables were continued.

Under average soil conditions the strain of Bangholm turnips resistant to club root continues to give excellent results. Sunflowers did very well in the past season, but corn got away to a poor start due to weak vitality in the seed.

Variety tests of oats, barley and wheat were continued but yields were unusually light due to lack of precipitation in June and early July. Heavy rains in August caused the grain to lodge.

Results of experiments covering a period of years indicate that the application of Malagash salt to the soil is of little benefit in increasing crop yields. Tests with Sydney (open hearth) slag and Bessemer slag imported from Europe indicate that the phosphoric acid is more readily available in the latter. Many other fertilizer tests are under way.

The growth of flax for fibre was checked by the dry conditions of June and early July, but hemp did well and gave a good yield of fibre of fair quality.

A very satisfactory year was experienced in the poultry contest work. The 200 hens returned a profit of \$621.35 over feed costs.

Different types of hives were tested in the apiary, the best returns being obtained from the ten-frame Jumbo.

In tests conducted on the fourteen Illustration Stations which are supervised from this Station it has been demonstrated that a lack of phosphoric acid is responsible in many cases for poor yields.

EXPERIMENTAL STATION, FREDERICTON, N.B.

Ploughing was begun much earlier than usual but seeding was not general until June. With timely rains during June, July and August, hay, grain and fodder crops except corn made a splendid growth, and pastures were good until fall. Unsettled weather delayed harvesting operations, and the grain was late ripening and badly filled. Hay and roots were good crops, but the corn was rather immature when cut. Weather conditions during August and September favoured the spread of potato blight.

The dairy herd at this Station consists of Ayrshires, Holsteins, and dual purpose Shorthorns. A number of bull calves from cows with creditable milk records have been sold to farmers. By careful breeding improvement is being effected in the pure-bred stock. Some interesting feeding experiments are under way. There is also an exceptionally fine flock of Shropshire sheep at this Station. The best of the ram lambs were sold for breeding purposes. Young breeding stock from the herd of pure-bred Yorkshire swine is in great demand all over the province.

In addition to crop rotation, manure and fertilizer experiments, tests are also being made of different rates and dates of sowing oats, rates of sowing wheat, and planting corn in hills versus drills.

Cultural, spraying, variety and fertilizer experiments are in progress in the orchard, and efforts are being directed towards obtaining a desirable winter apple for New Brunswick conditions. Experiments have also been undertaken to determine the feasibility of growing vegetables for canning purposes in New Brunswick. The production of disease-free stock was the principal line of potato work.

Rod-row tests of varieties and strains of cereals were continued. The Fredericton District Co-operative Seed Growers' Association with headquarters at the Fredericton Experimental Station is performing a very useful service by distributing clean home-grown registered seed, and by operating a custom seed cleaning plant for the benefit of local farmers.

The fertilizer experiments are of prime importance in view of the extent to which fertilizers are used in the province. Considerable work along this line is now under way.

Forty-eight birds qualified for registration in the seventh New Brunswick Egg Laying Contest. A study is being made of the results of breeding upon the size of eggs.

Experiments have clearly demonstrated the superiority of Canadian clover seed over clover seed imported from southern Europe. A hybrid corn has been produced by crossing Twitchells Pride with Wisconsin 7. At the Fredericton Station this hybrid for the past three years has given a yield about equal to that of Wisconsin 7, but has been decidedly earlier.

The commercial possibilities of the flax crop are being studied and some tests with hemp were also conducted. Some interesting and very useful experimental work was carried on in the apiary. The eighteen Illustration Stations supervised from this Station not only illustrate the best farm practices, but also serve as centres for the distribution of seed grain and potatoes, as well as pure-bred poultry and live stock.

EXPERIMENTAL STATION, STE. ANNE DE LA POCATIERE, P.Q.

Spring opened up a little earlier than usual but cold wet weather during the latter part of April made it difficult to work the land. Seeding on drained land was accomplished early in May. A period of drought in June was followed by an abundance of well distributed rain in July. Harvesting was done under favourable conditions. The grain crop was good, hay was above the average, while the root crop was one of the largest ever harvested. It was a poor year for corn, but the potato and fruit crops were excellent.

The breeding of Percheron horses at this Station has been somewhat handicapped by the lack of a first-class stallion. Recently however, an outstanding three-year old stallion, Chacal (12951) (165185) was imported from the famous Percheron district of Nogent-le-Rotrou, France. This horse should have a very appreciable influence in raising the standard of breeding in this district. The herd of pure-bred Ayrshire cattle is now headed by two class A.A. bulls, Ste. Anne Lord Kyle 12th (97949) and Ottawa Supreme 28th. In addition to carrying on breeding and feeding experiments, young bulls of good breeding are sold to local farmers. The results of five years' experiments show that a Leicester-Shropshire cross is very satisfactory for mutton production. Breeding and feeding experiments were also carried on with a herd of Yorkshire swine.

Rotation experiments, tests of fertilizers versus manure, and the usual variety tests of cereals and forage crops were continued. Farmers in this dis-

trict would be in a better position to supply their live stock with a balanced succulent ration if they produced more roots, peas and oats and vetches. Registered seed grain was produced and made available to farmers. The flax growing industry was stimulated by the installation of a scutching plant at this Station, and the use of better seed, and the adoption of improved methods of culture and retting have resulted in a larger yield of fibre.

This seasons's apple crop was the largest to date. The Melba, Loba, Sandaw, and Bruna are very promising varieties. Over 4,000 scions of the leading varieties of apples were distributed during the year. Variety, cultural and spraying experiments were carried on with small fruits, vegetables and potatoes.

Fertilizers used alone and in combination are being tested on a four-year rotation of swede turnips, barley, clover and timothy or mixed hay.

Barred Plymouth Rocks are the only breed of poultry kept. Pedigree breeding has resulted in a large increase in egg production. Considerable experimental work is being carried on and cockerels, pullets and hatching eggs are sold to farmers at reasonable prices. In the egg laying contest 13 birds qualified for registration.

In spite of cool weather in the spring and early summer honey production was up to the average. The twenty Illustration Stations supervised from this Station are doing excellent work.

EXPERIMENTAL STATION, CAP ROUGE, P.Q.

There was less sunshine, greater precipitation and somewhat colder weather during the growing season of 1927 than the average for the past fifteen years. The crops on the whole were good.

Experimental work in the breeding, feeding, housing and management of pure-bred French Canadian horses is carried on at the St. Joachim Horse Farm which is under the direction of the Superintendent of the Cap Rouge Experimental Station. From 1922 to 1926 horses bred and reared at this Station have won more than 400 prizes in the show-ring. At Cap Rouge there is an exceptionally fine herd of French-Canadian cattle which is fully accredited, and with which experimental work is carried on. There is also a herd of Yorkshire swine from which breeding stock is sold to farmers.

In field husbandry, soil management and the relative value of different crop rotations are being studied. Crop production costs are also recorded.

Variety and cultural tests and the breeding of fruits and vegetables are also carried on. Extensive tests have also been made with a considerable number of varieties and strains of trees, shrubs, herbaceous perennials, annuals, tubers and bulbs.

Some fine selections have been made of Manchurian barley, Huron wheat and Banner oats, and work is now being carried on with Arthur peas and Solo peas. A number of very useful fertilizer experiments are also under way.

Variety and strain tests of forage crops are in progress. Some breeding work has also been started.

The pedigree breeding of Barred Rocks is the chief line of poultry work, but feeding, housing and management experiments are also being carried on. Cockerels for breeding purposes and day-old chicks as foundation stock are sold to local farmers.

EXPERIMENTAL STATION, LENNOXVILLE, P.Q.

The first seeding was done on April 19, but growth was retarded by the cold wet weather during May and June. Hay was an excellent crop, though late. Grain, root and potato crops were good and pastures were in splendid shape throughout the season.

Included in the dual-purpose Shorthorn herd at this Station are twelve promising daughters of the bull "Wellwood Lassie's Lad." At this Station also there are dairy herds of Ayrshires and Jerseys, from which fourteen bull calves were sold during the past year for breeding purposes. Ninety-one stockers were fed during the winter. Some cross breeding work with sheep is being carried on to ascertain the value of different crosses in the matter of quality and finish of market lambs. Experiments in feeding for bacon production are being carried on with a herd of Yorkshire swine.

Rotation, cultural and fertilizer tests are in progress, and the cost of producing various crops is being recorded. Thirteen acres of land are devoted to forage crop experiments, which include variety tests, and some breeding work with a variety each of mangels and swede turnips. Attention is also being given to grain mixtures for ensilage. Breeding work is in progress with oats and fall wheat. In addition to the regular variety tests of forage crops and cereals a special series of variety tests is being conducted in co-operation with the Quebec Provincial Seed Board. Included in this special series of tests are corn, mangels, swede turnips, oats, barley, wheat, peas and beans.

Variety and cultural tests of vegetables and variety tests of strawberries, bush fruits, plums and apples are also under way, and co-operative experiments in commercial apple orchards at Abbotsford and Chateauguay are supervised from this Station.

Hemp has given large yields of good fibre in each of the five years it has been under test, but flax for fibre has not given such satisfactory results. The yields have been large but the fibre has been of poor quality.

Forty-nine birds qualified for registration, in the fifth Quebec Western Egg Laying Contest. Barred Rock hen No. C.H. 188 made a remarkably fine showing, laying 305 eggs in 365 days. Particular attention is being given to the selection of hens having good production with satisfactory egg size.

In the apiary a study is being made of methods of swarm control, outdoor and indoor wintering and sources of nectar, and a comparison is being made of different types of hives.

EXPERIMENTAL STATION, FARNHAM, P.Q.

The weather during April and May was favourable for the production of good tobacco seedlings. Transplanting, however, was not general until the first week in June. Precipitation was well distributed throughout the growing season. Harvesting and curing were done under very favourable weather conditions. The crop was the heaviest since 1920.

In the matter of tobacco seed bed sanitation, tests are being made of the relative efficiency of a number of dust disinfectants. Formalin has given the most satisfactory results so far. Experiments, which have been conducted to determine the effect of manure, fertilizers and lime on the yield and quality of tobacco, have shown that lime is harmful when used alone or in combination with manure or manure and fertilizers. The use of fertilizers, however, increases the yield of tobacco and is profitable. Slightly larger yields have been obtained from level cultivation than from ridging. In tests comparing the relative efficiency of drilling versus broadcasting fertilizers for growing tobacco the best results have been obtained when the fertilizers are spread in the rows and well mixed with the soil. This year on the plots fertilized with spent hops and yeast the tobacco matured slightly faster than on the plots which had received manure or manure and fertilizers. The crop, however, was slightly over-ripe when harvested, which may account for the poor quality of the leaves produced by the spent hops and yeast. Further studies have been made of the effect of the preceding crop on the subsequent growth of tobacco. Different crop rotations are also being studied.

Connecticut Havana No. 142 A3X (Resistant Havana) continues to be the most promising strain of cigar binder tobacco for the Yamaska valley. Of the seven varieties or strains of cigar fillers tested in 1927, the most promising are the Spanish Kendig and the Little Dutch Ragondorf.

Two field days were held at the Station during the season and were well attended. Addresses were also given before farmers' clubs and tobacco growers' associations at different points. Very useful demonstrations of tobacco seed bed disinfection were staged at St. Cesaire.

Tobacco fields in several parishes were inspected and although wild fire was present on several farms the damage was much less severe than in 1925 and 1926.

Different varieties of tomatoes, beans, peas and sweet corn were grown to test their suitability for canning purposes.

During the year a small cattle barn was erected and small herd of dairy cattle of the Ayrshire breed has been established at this Station.

EXPERIMENTAL STATION, LA FERME, P.Q.

The growing season was somewhat cooler than the average for the last ten years, but precipitation was higher and was spread over a longer period. The number of hours of sunshine was about average but during the month of August there was less than usual.

Six pure-bred French-Canadian horses are kept at this Station for breeding purposes. There is also a dairy herd of Ayrshire cattle, pure-breds and grades, with which experimental work is carried on. Several registered bulls were sold during the past year to farmers in the district. Breeding and other experimental work is carried on with a flock of Cheviot sheep. The herd of Yorkshire swine is headed by the boar Kapuskasing Wonder, 625-122297. Twenty-eight head were sold for breeding purposes during the year.

A number of field husbandry experiments are being conducted, including various crop rotations, a comparison between ensilage crops and field roots, and a surface drainage experiment. The forage crops under test are field roots, sun-flowers, corn, clover, timothy and alfalfa, grass mixtures for hay and cereal mixtures for annual hay. Comparisons are based on the absolute dry matter yield. Different varieties of flax have also been tested with excellent results, but tests with hemp have not been very encouraging.

Cereal work has been enlarged by the addition of rod-row tests.

Valuable data have been acquired from the various fertilizer experiments carried on at this Station.

Vegetables, small fruits, tree fruits, and ornamental plants and shrubs are being tested in order to determine the kinds and varieties best suited to this district. Cultural experiments are also being carried on.

The pedigree breeding work with poultry which has been under way since 1924 has resulted in a very substantial increase in the average production per bird. Careful studies are being made on the subject of incubation and a number of feeding trials have been conducted.

It is hoped to increase the size of the apiary and to undertake experimental work with bees. Several Illustration Stations have been established in the district.

EXPERIMENTAL STATION, KAPUSKASING, ONT.

The season opened up quite early and on May 7 several acres of wheat and oats were seeded. Germination was good but growth was rather slow until well on in June owing to cool weather. Precipitation during the growing season was about average, and crops on the whole grew remarkably well. The grain crop

was particularly good, but hay, especially new meadows, suffered to some extent from a dry period the latter part of June and early in July. Wet weather made it difficult to cut and cure the hay and grain.

The cattle at this Station consist of pure-bred Ayrshires and Shorthorns and grades of these two breeds. Some interesting feeding experiments have been conducted and cost data have been recorded. A flock of registered Shropshire sheep and a herd of registered Yorkshire swine are kept, with which experimental work is carried on. Breeding stock is sold to settlers.

Field husbandry work consists of crop rotation and cultural experiments. Most of the crop rotation experiments have covered at least one complete cycle and much valuable information has been accumulated. A comparison is also being made of the effect of corn, sunflowers, turnips and oats, peas and vetch on the crop following.

Forage crops experiments are an important line of work at this Station, and include not only variety tests but also tests of rates and dates of seeding, and a comparison of different methods of seeding. Much useful experimental work is being carried on with different fertilizers. Experiments with flax and hemp are also under way. Horticultural work consisted of variety tests with raspberries, gooseberries and all the common vegetables, as well as various cultural tests.

The Barred Plymouth Rock breed of poultry seems to be particularly well suited to this locality. During the past year hatching eggs, day-old chicks, and cockerels were supplied to settlers, from the Farm flock. Considerable experimental work is being carried on.

The past season was not particularly favourable from the beekeepers' point of view. The honey crop was not as large as usual, and only twenty-seven queens were successfully mated. Eight Illustration Stations are now supervised from this Station.

EXPERIMENTAL STATION, HARROW, ONT.

The season opened up a little earlier than usual and it was possible to prepare and sow tobacco seed beds during the latter part of March and the first week in April. The transplanting of tobacco plants began on May 20. The corn crop was poor and was further damaged by the corn borer. Conditions were splendid for the harvesting and curing of the tobacco crop.

The experimental work covers practically every phase of tobacco culture, etc., which would be of value to the growers. The types of tobacco grown this year were White Burley, Green River and flue cured, and good yields of leaf of excellent quality were obtained. Burley and Green River were sold at twenty-two cents and the flue cured at thirty-two cents per pound. Over a period of eleven years the semi-hot glass-covered tobacco plant beds have proved superior to all other types of plant beds tested. The use of manure and commercial fertilizer on all types of tobacco proved profitable. The relative merits of drilling versus broadcasting commercial fertilizers for the tobacco crop have been under test for eleven years, and in seven of the eleven years the results have been in favour of drilling. Splitting the stalk when harvesting the tobacco has resulted in a quicker and brighter cured leaf and less shed burn.

Steer feeding experiments were again carried on in order to determine if it is profitable to produce beef by winter feeding.

The usual variety tests of cereals and forage crops were continued and a quantity of registered Banner seed oats was produced.

Substantially larger profits have been obtained from the tobacco crops in the four and five-year rotations than from the continuous planting of tobacco.

Of the six varieties of hemp tested for seed production Raccolta C.D. No. 19 gave best results, producing 18 bushels of seed per acre.

All varieties of early tomatoes yielded well, particularly several strains of Alacritty x Hipper. The use of fertilizer for the potato crop proved very profitable.

EXPERIMENTAL STATION, MORDEN, MAN.

Seeding was greatly delayed on account of wet weather with the result that many farmers seeded only about three-fourths of their usual acreage to wheat. Growth during the early summer was quite rapid but stem rust developed and caused considerable damage to wheat and oats. It was a favourable season for pastures, hay crops, berries, ornamental plants and most vegetables.

The herd of Ayrshire cattle at this Station is fully accredited and all the cows are entered in the Record of Performance test. A much needed new dairy barn has been constructed. There is also a flock of registered Hampshire sheep and the demand for ram lambs for breeding purposes has been very keen.

A study of the influence of cultural practices in the control of root rots in wheat is being carried on in co-operation with the Division of Botany. Some interesting information upon the cost of producing crops is being obtained from the five different crop rotations in operation at this Station.

During the past year controlled fruit breeding was continued on an enlarged scale with apples, plums, cherries, raspberries and strawberries. Further plantings were made in the trial orchards. In the seedling apple orchard 57 trees were selected as showing special promise. Those seedlings which prove their adaptability and worth will be propagated and made available through the commercial nurseries to the general public. There are also some promising plum seedlings and it is hoped that soon there will be some new varieties which will combine good quality, general hardiness and early maturity. Some comparatively tender varieties of tea and hybrid perpetual roses are doing remarkably well in the rose garden. Rose breeding is carried on on quite a large scale. There are now 226 different named sorts of trees and shrubs in the arboretum.

Varieties of common and durum wheats, oats, barley and peas were tested in rod rows. Grimm and Baltic alfalfa seem particularly well adapted to this locality. A strain of North Western Dent field corn selected at this Station yielded 43.21 bushels of clean seed per acre.

Pedigree breeding and experimental work is carried on with a flock of Single Comb Rhode Island Reds.

Good results were obtained in the apiary. An over-wintered colony produced 397 pounds of extracted honey.

A commercial plantation of $4\frac{1}{2}$ acres of tobacco yielded a fair crop of leaf in spite of adverse weather conditions.

EXPERIMENTAL FARM, BRANDON, MAN.

The season was late opening and seeding was further delayed by wet weather. The Assiniboine river flooded about 200 acres on the Farm and half of this area did not dry off in time to be cropped. Hay was a heavy crop and corn did well in the latter part of the season. Excessive moisture and rust lessened the yields of grain.

Fourteen cows in the dual-purpose Shorthorn herd at this Farm have Record of Performance certificates and eleven others are now entered in the test. Substantial improvement has been effected in the milking qualities of this herd. Breeding and feeding are the two principal lines of investigational work. A herd of Yorkshire swine is maintained and breeding stock is sold to farmers. Efforts are being directed towards improving the bacon type of hog. Experimental work is also carried on with a flock of Oxford Down sheep and grades of the same breeding.

Crop rotation and cultural experiments, and tests with manures and fertilizers have yielded a considerable amount of valuable information, especially in the treatment of summer-fallows.

In addition to the regular rod row tests of cereals the production of Elite Stock seed of some of the registerable varieties is under way. There are now on hand more than 100 pure line selections of wheat which have shown a high degree of rust resistance, and these will be given a milling and baking test.

Particular attention has been given to the improvement of corn as fodder. The cool wet spring served to demonstrate very clearly the marked superiority in the matter of germination at low temperatures of seed of northern grown origin over that received from the corn growing States of the Union.

Variety tests with vegetables have been carried on at this Farm since 1890 and unsatisfactory varieties have been eliminated. Poultry breeding work is carried on with a flock of Barred Plymouth Rocks with particular attention given to the development of production and weight of eggs while at the same time maintaining the character of the breed in respect to colour, body weight and type. In the recent Manitoba Egg Laying Contest 62 birds qualified for registration.

Co-operative tests with cereals, corn and alfalfa are being conducted amongst farmers in order to obtain information as to the most suitable varieties for different districts.

EXPERIMENTAL FARM, INDIAN HEAD, SASK.

The season opened very promisingly and wheat seeding commenced on April 27, but a severe hailstorm on July 9 and a heavy infestation of rust caused heavy losses.

Breeding and experimental work is carried on with Clydesdale horses. The regular feeding of potassium iodide and the use of vaccines during pregnancy appear to be beneficial in the control of navel ill. Horses from this Farm were successful in competition at the Toronto Royal and Chicago International shows. "Lady Price" was made Grand Champion at Chicago. The beef cattle at this Farm are Shorthorns while the dairy herd is composed of Ayrshires. Records of feed, milk production and cost of raising heifers are kept. There are also herds of pure-bred Shropshire sheep and pure-bred Yorkshire swine. Breeding stock is in demand.

Crop rotations designed to meet the requirements of the grain and diversified farmer have been under investigation for the past fifteen years, and much valuable information has been obtained. A study is also being made of summer-fallow substitutes, summer-fallow treatment, and dates and methods of seeding various crops. Marquis continues its leadership among the wheat varieties, while MacKay is the leading variety of pea. Banner and Victory oats are the most satisfactory for average conditions.

Hay and pasture crops did very well. There was practically no winter killing of grasses and clovers. Northwestern Dent corn produced a very high yield of ensilage.

It was an unfavourable season for horticultural crops. Considerable damage was done by the severe hailstorm on July 9 and unfavourable weather in September interfered with the normal ripening and harvesting of the crops. In addition to the usual variety tests of fruits, vegetables and flowers some selection and breeding work was carried on. A new greenhouse has been erected which will greatly facilitate experimental and research work.

A successful hatching season was experienced in the poultry plant. Steady improvement is being effected in the flock of White Wyandottes by the use of vigorous male birds from dams with high production records. The eighth Saskatchewan Egg Laying Contest was conducted in the new contest house. Sixty-one birds qualified for registration.

EXPERIMENTAL STATION, ROSTHERN, SASK.

The abundance of moisture during the season of 1927 produced a wonderful growth of fodder and garden crops, but it also favoured an epidemic of rust, delayed threshing, and depreciated the quality of the grain.

An excellent herd of dairy cattle has been developed from two Holstein-Friesian heifer calves purchased in 1914. One of the twelve cows which completed lactation periods during 1927, R.E.S. Johanna Keyes Lass, produced 19,647 pounds of milk testing 3.65 per cent butter fat. Lambs resulting from crossing a Suffolk ram on grade Leicester ewes averaged 12 pounds heavier than grade Leicester lambs of the same age. Feeding and breeding experiments are carried on with Yorkshire, Tamworth and Berkshire swine and their crosses.

Crop rotation and cultural experiments were continued. Of the different varieties of wheats tested Marquis and Garnet have given the highest average yield over a six year period. Due to the abundant precipitation alfalfa yielded two cuttings of from 1½ to 2½ tons per acre instead of the usual small single cutting. Western rye grass and awnless brome grasses also did well.

In addition to the usual variety tests of fruits and vegetables some breeding work was started. Several thousand plum and apple seedlings have been planted on which to bud some of the more promising varieties.

Satisfactory progress is being made in the poultry work, which is confined to Barred Plymouth Rocks. There has been a steady improvement in egg size and in the number of eggs laid.

There are 47 colonies of bees in the apiary and for the past 3 years the bees have been wintered outside without loss, but for several years there have been heavy losses during the months of May, June, and part of July, from some unknown cause.

EXPERIMENTAL STATION, SCOTT, SASK.

The spring season was rather backward and seeding was not general until May 9. Sunshine during May was much less than usual, and the weather remained cool throughout June. July was an ideal month, but a frost on August 8 did considerable damage. Rust also was severe, and adverse weather conditions delayed the completion of threshing operations.

Breeding and feeding experiments were continued with the herd of pure-bred Shorthorn cattle at this station, and in addition twenty steers were carried on a feeding test. Grading up experiments are being conducted with flocks of Shropshire, Cheviot and Rambouillet sheep, by the use of pure-bred sires. The feeding of one per cent potassium iodide in the salt to ewes during the gestation period appears to have been effective in controlling goitre. Breeding and feeding experiments were also conducted with a herd of Yorkshire swine, and a number of head of breeding stock were sold to farmers.

Crop rotation experiments occupy an area of approximately 200 acres and include straight grain crops, grain with hay and pasture crops, and grain with hay and summer-fallow substitutes. Nine separate cultural experiments are also in progress.

All cereal tests are carried out on summer-fallow land. The testing of new selections and the purity of different varieties is done in head rows. Elite stock seed of Marquis 10 B and Early Red Fife was produced and is being multiplied for sale in limited quantities as first generation seed. Local variety tests were undertaken in co-operation with farmers throughout Northwestern Saskatchewan, with a view to determining the varieties best suited to the various districts.

Forage crops work consists largely of testing varieties and strains for hardiness, yield, and drought resistance under Northwestern Saskatchewan conditions.

Very satisfactory progress has been made in the poultry work. All birds retained for breeding purposes and all cockerels and pullets sold to farmers were blood tested for the bacillus of white diarrhoea.

The season was not favourable for honey production. The highest yield from one colony was 86 pounds.

EXPERIMENTAL STATION, SWIFT CURRENT, SASK.

Wheat seeding commenced in April but on account of unfavourable weather was not finished until early in June. The season on the whole was cooler and the rainfall was greater than the average. Frost, rust, and unfavourable harvesting weather adversely affected the yield and grade of wheat.

Herds of Shorthorn and Holstein cattle and Tamworth swine are maintained, and breeding stock is sold to farmers.

A good deal of study has been given to the adaptability of various farm implements, especially the combined harvester-thresher, in regard to which much useful information has been obtained. The regular crop rotation and cultural experiments were continued.

The cereal work has not only been enlarged, but the more extensive replication of rod-row tests has resulted in greater accuracy, and the work has been facilitated by the increased use of specially devised machinery for cereal investigation work.

Experimental results over a period of years indicate that forage crops fluctuate more widely in yield from season to season than do cereal crops. This year the corn crop was so badly damaged by frost as to be practically worthless, but practically all other forage crops did very well.

There was an unusually good growth of ornamental trees and shrubs and the appearance of the grounds has been greatly improved. Bush fruits also did well but many of the trees in the fruit plantation died during the winter.

Additional accommodation has been provided for the poultry work by the construction of another laying house and an incubator room. The standard of the flock has been much improved, egg production was increased, and there was a keener demand for breeding stock.

EXPERIMENTAL STATION, LETHBRIDGE, ALTA.

In spite of the fact that abnormal weather conditions seriously delayed seeding operations, the ample precipitation during the summer produced heavy crops of all kinds. Alfalfa and sugar beets were about the only crops on which irrigation water was used in this district during the growing season. Stormy weather in the fall delayed threshing operations which were not completed until spring. Many acres of sugar beets were left undug owing to the early freeze-up.

Two systems of farming are being carried on at this Station, irrigated and dry, not with the object of comparing the relative merits of the two systems, but rather to study their individual problems. Much useful information has been obtained from the rotation and cultural experiments which have been under way on both areas for a number of years. The effect of irrigation water on the physical and chemical conditions of the soil are being studied. Data from five years' experiments in the use of irrigation water are now being compiled for publication.

Included in the cereal variety tests were wheat, oats, barley, beans and peas. Except in the case of the older and more important varieties these tests are conducted in rod rows. Registered Marquis wheat was grown on part of the dry area and was sold to farmers in the district as registered seed. The best time of seeding and the most practical method of retting hemp are problems which are being studied.

Comparative tests were conducted on both dry and irrigated land with different varieties of corn, swede turnips, mangels, sugar beets, carrots, grasses and clovers, and selections were made of Northwestern Dent corn and a few other varieties with a view to developing strains better adapted to local conditions for grain and for "hogging off."

A constructive breeding policy is being carried on with a stud of Percheron horses. In co-operation with the Health of Animals Branch a study is being made of contagious abortion in cattle. The Station herd of pure-bred Holsteins at present is negative to abortion Bacillus of Bang. Steer and lamb feeding trials are also under way. It has been demonstrated that the cheap straw shed and the portable cabin, when coupled with proper feeding, are quite suitable for winter hog production.

The apple crop was exceptionally good. Bush fruits also were good but plums were a failure. The usual varietal and cultural experiments with vegetables were continued.

The Alberta Egg Laying Contest, conducted at this Station, is proving a valuable aid to the poultrymen of the province. Breeding work is carried on with a flock of Barred Plymouth Rocks which is now recognized as an excellent source of foundation breeding stock.

An experimental apiary of about 100 colonies serves as a valuable aid to the beekeeping industry in southern Alberta which is increasing in importance each year.

EXPERIMENTAL STATION, LACOMBE, ALTA.

The spring season was backward and cool. Frequent showers and warm temperatures during June and July were interspersed with bad hail storms. Some of the late-seeded, late-maturing varieties were damaged by fall frosts. In spite of these conditions one of the heaviest crops ever produced in Central Alberta was harvested and threshed in fair condition with excellent weather prevailing.

Horse breeding is carried on with pure-bred Shires and Clydesdales. The imported Shire stallion "Snelston Topper" (1608) (38528) has done excellent service. His colts give every indication of developing into good big drafters. A herd of pure-bred Aberdeen Angus cattle is also maintained, from which breeding stock is supplied to farmers at reasonable prices. There is also an excellent dairy herd of Holsteins. One of the herd sires is in Class XX and another in Class X, while all the young bulls old enough for inspection are in class X. The entire herd of females of milking age successfully passed the Advanced Registration Inspection. Both herds are fully accredited. Breeding and feeding experiments are conducted with herds of Yorkshire, Tamworth and Berkshire swine.

Results obtained from the crop rotation experiments indicate that the early maturing varieties of wheat are the most profitable crop for central Alberta. The conservation of soil moisture is of the utmost importance in crop production.

Cereal work is one of the major activities at this Station. During the past season some 150 named wheat varieties and 740 pure line wheat selections were tested. In most cases in the district served by this Station Garnet wheat gave higher yields and graded higher than other sorts grown on the same farm.

A mixture of different legumes when grown in combination with different grasses produces a large crop of more palatable hay than either the legumes or grasses seeded alone. The advisability of including sunflowers or corn as part of the crop produced for ensilage purposes has been demonstrated.

The horticultural work at this Station is attracting a great deal of attention. The usual varietal and cultural tests were conducted. Poultry breeding work with a flock of White Wyandottes aims at increasing egg production and the size of eggs, together with good breed type, fertility, and hatchability.

In the apiary Italian bees have given better results than Caucasians and Carniolans. The highest yield of extracted honey from one colony was 210 pounds.

EXPERIMENTAL SUB-STATION, BEAVERLODGE, ALTA.

Although spring opened somewhat later than usual, there was ample moisture, and excellent crops were harvested throughout the Upper Peace district.

In addition to the regular rod row tests of varieties and strains of cereals, some of the more suitable sorts were submitted to further tests in sextuplicate drilled plots under conditions representing field culture as closely as can be obtained in plot work. The yields were very gratifying. While there was little or no snow covering the ground, low temperatures resulted in an unusual degree of injury to winter wheat. The yield of Marquis wheat has averaged 36 bushels 43 pounds per acre over a thirteen year period, while the twelve-year average for Victory oats is 89 bushels 18 pounds and for O.A.C. 21 barley 41 bushels 19 pounds. It is worthy of note that no rust whatever was found on commercial grain crops, but on a few susceptible varieties purposely sown late a very few rust pustules were found on wheat in September.

Good yields of hay were obtained but new seedings of clovers were completely winter killed. New seeded grasses also sustained severe injury with the exception of western rye, brome and timothy. Alfalfa and clover protected with a good top came through fairly well, but there was considerable killing of alfalfa where the aftermath had been removed.

The effect of topography upon minimum temperature occurrence is being studied. By the use of a hygro-thermograph it is hoped to determine whether the exceptional dryness of atmosphere is responsible for the phenomenally wide spreads in temperature in this region. Marked differences have been noted between two points half a mile apart with a difference of 107 feet in elevation.

Fruits and vegetables again did well. Many kinds of flowering shrubs and perennials succeed, and there seems to be no limit to suitable annuals.

A long winter without snow banking, followed by a lingering spring, was largely responsible for the heavy loss of bees wintered out doors in cases.

EXPERIMENTAL STATION, SUMMERLAND, B.C.

Precipitation during the season of 1927 was much greater than usual, and there was an ample supply of irrigation water. Alfalfa, roots, tomatoes, melons and tobacco suffered from the excessive moisture, but the fruit crop was good both as to quality and quantity.

The herd of Jersey cattle made a very creditable showing and again successfully passed the annual Accreditation Test. The flock of Cheviot sheep was disposed of because of lack of proper pasture and other accommodation. Very satisfactory progress has been made in the breeding of an improved bacon type hog of the Berkshire breed. Several brood sows and gilts, and one boar from the Berkshire herd at this Station were exported to New Zealand.

Investigational work on the storage and handling of apples was continued. It is worthy of note that those growers who followed the recommendations made as the result of investigational work carried on at this Station suffered comparatively little loss from Jonathan break-down. Further work is being done on this problem. Good progress has been made in the breeding of hardy resistant root stocks, and new varieties of fruit. The breeding of select strains of tomatoes and cantaloupes has been very successful. The usual variety tests of vegetables were continued, as was also the work with fertilizers. New lawns and shrubberies have been developed and aster breeding is being carried on. The new greenhouse which has been erected will greatly facilitate the horticultural work.

An excellent crop of good quality tobacco leaf was produced at the Station. Much valuable information has been obtained from the varietal and cultural experiments which have been conducted, but in order to meet the increasingly heavy demand for reliable information on the subject of tobacco culture, under irrigation, the work is being expanded.

EXPERIMENTAL STATION, INVERMERE, B.C.

Spring seeding conditions were ideal and germination was above the average. Growth, however, was slow until late in June. There was an abundant first crop of hay and it was harvested in good condition, but part of the second crop had to be ensiled due to the wet weather.

Included in the fourteen head of horses at this Station are a registered Clydesdale stallion and three registered mares. Three filly foals were reared during the year.

The herd of Ayrshire cattle is headed by the bull Ottawa Lord Kyle 22. His calves show promise of developing into good individuals. This is an accredited herd, and all animals as they freshened during the past year were entered under Record of Performance. The Station is meeting a steady demand for Yorkshire swine for breeding purposes. There is also the nucleus of a flock of Hampshire sheep.

Crop rotations of from three to ten years' duration are under way. The outstanding crops in these rotations are alfalfa, peas and potatoes.

Cereal work consisted of rod-row variety tests of oats, barley, wheat and field peas.

The forage crops variety tests included alfalfa, clover, grasses, mangels, turnips, carrots, sugar beets, corn and sunflowers.

Varietal and cultural tests of fruits, vegetables and flowers were conducted, and an apple orchard of 300 trees was set out at Windermere. Considerable attention is being given to work with peas and potatoes. A fairly extensive fertilizer test is also under way.

Excellent progress has been made in the poultry work during the past year. In the matter of egg production the general flock average was good, and four hundred well developed pullets which were placed in the laying house late in October, are doing splendidly.

The past year was a fairly successful one in the apiary and the bees went into winter quarters in good shape.

On the Windermere area a number of hedges and shade trees were planted and the ground has been prepared for general experimental work.

EXPERIMENTAL FARM, AGASSIZ, B.C.

Weather conditions during the past season were not conducive to heavy crop yields. The fruit crop was poor, grain yields were below the average, potatoes were injured by frost, and corn did not mature well.

With the exception of one gelding and a pony all the horses at this Farm are pure-bred Clydesdales and most of them were bred on the Farm. Eight horses exhibited at the Vancouver Winter Fair did exceptionally well in strong competition. Representatives from the herd of pure-herd Holstein cattle were exhibited at New Westminster and at the Royal Winter Fair, Toronto, and gave a good account of themselves. Some interesting data have been secured on blood testing of dairy cattle for abortion. The 1927 wool clip from the flock of Dorset sheep averaged 8.58 pounds per fleece. Lambing results were quite satisfactory. Breeding and feeding experiments are carried on with a herd of Yorkshire swine.

The rod row system of testing cereals is employed at this Farm. Forage crops under test include corn, sunflowers, mangels, carrots, sugar beets and annual hays. Satisfactory results have been obtained from a four-year rotation of hoed crop, grain, hay and pasture. Hemp made a good growth but owing to adverse weather conditions the seed did not mature. Flax for fibre, sown on May 28, gave higher yields than were obtained from earlier seedings. Tobacco grew well, but wet weather hampered harvesting operations with the result that the crop became overripe, and considerable damage was done to the leaves by wind.

Varietal and cultural tests of vegetables, fruits and flowers were continued. A start has been made on the production of Scarlet Runner beans, Daisy peas, and Early Flat Egyptian beet. A much needed new horticultural building has been erected.

Barred Plymouth Rocks are the only breed of poultry kept. Breeding and hatching results were excellent this season. In the Egg Laying Contest production was not as high as in the two previous years, but four birds passed the 300 egg mark.

In the apiary efforts are being directed towards enlargement, and experimental work was temporarily suspended.

EXPERIMENTAL STATION, SAANICHTON, B.C.

During the spring season, which opened somewhat later than usual, the rainfall was below the average. Autumnal rains, however, were early and excessive. This year's hay crop was perhaps the best yet harvested on the Saanich peninsula. Cereal crops also were good, but harvesting was carried out with difficulty. Potatoes were an excellent crop but in most cases they had to be dug by hand owing to the excessive rains. The fruit crop, on the whole, was light but prices were better than usual. Fodder crops were fair.

A small herd of pure-bred Jersey cattle headed by the bull, Babbacombe Bright Raleigh, is maintained at this Station. Experimental work includes studies in the cost of feeding milking cows, milk production, and cost of raising heifer and bull calves and cows.

Three, four and five-year crop rotations are under way, and the cost of producing each crop is determined and recorded.

Horticulture is the major line of work at this Station. It has been clearly demonstrated that by following a simple cultural system orchard trees may be carried through summers with practically no rainfall, without serious injury. The work with vegetables includes variety and cultural tests, the production of Elite Stock seed and studies in planting and in the use of fertilizers. Tests are also being conducted with bulbs, annual flowering plants, biennials, perennials, and flowering shrubs. Variety tests with tobacco have been conducted, and tobacco leaf of fair quality has been produced.

Head rows, rod rows and larger plots are used in the tests of varieties and strains of cereals.

Different varieties and strains of clovers and grasses are being tested, and corn and sunflowers have been compared with the standard mixture of wheat, oats and vetch. Some useful fertilizer studies are also under way.

With poultry special attention is directed towards the breeding, hatching, feeding and rearing of chicks. The Egg Laying Contest conducted at this Station is of especial interest to the people on Vancouver island.

In addition to the apiary at the Station, outapiaries have been maintained in fireweed areas with good results.

DEPARTMENT OF AGRICULTURE

EXPERIMENTAL SUB-STATIONS

The various Experimental Sub-Stations were established primarily to demonstrate the agricultural possibilities of the districts in which they are located. In spite of the difficulties under which the work is carried on much valuable information has been obtained which may serve the prospective settler as a guide in his farming operations.

At Fort Vermilion the season of 1927 was one of the driest on record. Nevertheless, very fair yields of fully matured crops of all varieties of cereals were harvested. While the cultivated hay crop was below the average there was an ample supply of native hay of good quality. In extremely dry seasons the annual fodder crops are much more dependable both as regards yield and quality than many of the perennial grasses which require more moisture. A number of varieties of corn were fully matured when harvested on September 7. Howes Alberta Flint led in the percentage of ripe cobs. Of the garden corn Golden Bantam was best this season. Tomatoes and garden beans did very well, and all varieties of currants produced fair yields.

At Salmon Arm, B.C., the spring was very dry but later in the season there was an excess of moisture. A fair crop of oats was harvested. Hay also gave a fair yield but the quality was poor. Most garden seeds failed to germinate. Experimental work was continued at Forts Smith, Resolution and Providence, Northwest Territories, and at Betsiamites, P.Q., under the direction of the Fathers in charge of the missions at those points.

DAIRY AND COLD STORAGE BRANCH

GENERAL

The season of 1927 was somewhat unfavourable for milk production in Ontario and in the three prairie provinces and, to some extent, in Quebec, but when comparison is made with the season of 1926, which was an extremely favourable one, the decrease is over-emphasized.

The following table gives the preliminary report of creamery butter and factory cheese production in Canada during 1927 as compared with 1926 production.

CREAMERY BUTTER

Province	1926	1927	Increase	Decrease
	lbs.	lbs.	%	%
P. E. Island	1,844,213	2,328,554	26.26	
Nova Scotia	4,759,590	5,108,110	6.65	
New Brunswick	1,413,454	1,885,252	33.37	
Quebec	50,822,389	56,724,357	11.61	
Ontario	62,530,133	59,800,000		4.37
Manitoba	15,418,630	14,231,026		7.71
Saskatchewan	16,629,136	11,995,531		27.87
Alberta	19,912,466	16,425,000		17.52
British Columbia	3,849,276	4,120,000	7.03	
Total	177,209,287	172,617,840		2.60

FACTORY CHEESE

British Columbia.....	194,070	164,000		15-50
Total.....	171,731,631	143,042,121		16-71

The partial failure of the 1926 fodder corn crop in Ontario, which resulted in a shortage of silage and some inferiority in quality, was a factor in the situation in that province, as shown by the fact that the decrease in cheese output was chiefly in the early part of the season. Towards the end of the season, production was nearly up to that of the corresponding period of the previous year.

Good wheat crops were responsible for the falling off in creamery butter production in the Prairie Provinces. The creamery operator whose profits disappear with a reduced output, gets small consolation from the fact that the cream producers have slackened their efforts because they are, or think they are, doing better in wheat growing.

The drop in butter production of 4,591,427 pounds, coupled with an increased home consumption, resulted in an actual shortage which made it necessary to import butter to supply the home demand. The mistake was made of importing more than was needed. The reports of the Bureau of Statistics show that the storage stocks on April 1, 1928, exceeded those of April 1, 1927, by 4,860,826 pounds.

Another factor in production for 1928 was the unusually large export of cows to the United States. These conditions are temporary, because even if the demand for cows in the United States should continue or even increase, it can be met by raising calves that are now slaughtered and the herds maintained at the same time. A good and steady market for dairy cows would mean another source of revenue for the farmer.

THE EXPORT TRADE

The export of cheese bears a very close relation to the total production year by year. The export of butter, however, shows no regular relation to total production. The maximum surplus available for export (34,128,944 pounds) occurred in the year 1902 when the total production of creamery butter was about 40,000,000 pounds, or less than one-quarter the volume produced in 1927, in which year there was an actual shortage of butter to supply the domestic demand. It is true that during the fiscal year ended March 31, 1928, the exports of butter from Canada amounted to 2,643,300 pounds, but the imports exceeded that quantity by several million pounds. The chief reason for this difference is that the per capita consumption of butter in Canada is over 27 pounds per year, and that of cheese is only 3.92 pounds. Increases of population affect the butter situation much more than that of cheese.

The fact that this country has been obliged to import butter has caused some comment. The fact is generally overlooked that in recent years the volume of cream and milk exported to the United States has been equivalent to about 25,000,000 pounds of butter. If this milk and cream had not been exported, there would have been a surplus of butter in Canada. No importation of butter would have been necessary, but the price of butter in Canada would then have been on the basis of the world's market and, consequently, lower than it has been during the past year.

It may not be out of place to recall the fact that this country was short of butter in the years 1912, 1913 and 1914 and the imports from other countries during the winter period in those years were nearly as large as in the year under review. It is also worthy of note that this former period of shortage and heavy imports was followed by years in which the creamery industry made greater progress than in any other period in its history.

The indications are that the export of cream will be very much reduced after June 1 when permanent United States permits will be required to comply with the regulation under the United States Cream and Milk Import Act.

THE GRADING OF DAIRY PRODUCE

The appointment of federal graders in Alberta in the spring of 1927 completed the service in all the provinces, except New Brunswick and Nova Scotia. Arrangements are made for the grader stationed in Prince Edward Island to perform the occasional service required in these two provinces.

A summary of the gradings of creamery butter and cheese in 1926 and 1927 is submitted for general information.

CARGO INSPECTION

The cargo inspection service, inaugurated in 1900, has been extended until it now covers all ports from which perishable produce is exported from Canada including Halifax, St. John, Quebec and Montreal, Vancouver and at Portland, Maine, during the winter months. The service at Vancouver covers shipments to the Orient, to Australia and New Zealand and also to the United Kingdom via the Panamá canal.

The cargo inspectors report on the kind of produce, with the names of consignor and consignee, and the quantities in each shipment, together with a statement as to condition of packages, temperature of the produce when loaded, the position in which it is stowed in the ship, etc.

Locked recording thermometers are placed with the cargo in the different chambers, and blue prints of these records are made and distributed along with other information that may be considered useful to the agents of the shipping companies, to the engineers of the ships and to any interested shipper.

Complementary to the service at Canadian ports, cargo inspectors are located at London, Southampton, Bristol, Liverpool, Manchester and Glasgow. These inspectors report on the condition of cargoes of perishable produce as discharged on the docks and remove the thermograph records, which are mailed to Ottawa for blue printing and distribution.

This is a voluntary service performed without any statutory authority, but its value as independent evidence in case of complaint or dispute is so well recognized that it receives the cordial support and co-operation of the shipping companies as well as the exporters of produce.

Shipments of United States produce, for export to the United Kingdom, have been attracted to the St. Lawrence route because of the existence of this service.

ICED BUTTER CAR SERVICE

By arrangement with the railways, iced butter cars are operated on regular weekly schedules over definite routes from country points to Montreal, Toronto, and other market centres. These cars pick up shipments at way stations in less than carload lots and thus provide a service for creameries which would not otherwise be available except for shipment in car loads. The department guarantees the earnings at the carload rate from starting point to destination, plus \$8 per car to apply on the cost of icing. The earnings are sufficient

on many of the routes to cover the guarantees and the total deficit is small considering the service rendered. Cars are inspected as to condition, cleanliness and proper icing and the quantities carried in each car are noted in the reports of the inspectors. Without such a service, the ordinary country creamery would be greatly handicapped in disposing of the butter produced. The alternatives would be (a) to ship by ordinary freight or express, or (b) to hold the butter until a minimum car load should be accumulated. In either case, the quality would suffer.

ICED CHEESE CAR SERVICE

The department arranges with the railways to supply iced cars for the carriage of cheese on demand of the shippers through the local railway agents. There is no guarantee of earnings on these cars which are usually loaded to full capacity at the stations where they are placed. The department pays \$8 per car towards the cost of icing, on a limited number of cars. The object of this service is to secure the carriage of the cheese at low enough temperature to avoid the deterioration due to overheating.

DAIRY NEWS LETTER

A mimeographed Dairy News Letter of about ten closely typed pages, containing monthly statistics of grading, exports and imports of dairy produce and international news items of interest to dairymen, is published on the tenth of each month. It is sent to cheese factories and creameries, to provincial officials and to any person who is sufficiently interested to ask to have his name added to the mailing list.

DAIRY MARKET INTELLIGENCE

A Market Letter is published every Monday during the active manufacturing season at 2 p.m. giving a resumé of the Montreal, Toronto and New York butter and cheese markets, and the transactions on the country boards during the previous week. A cable on the London, England, market, the number of boxes of cheese and butter graded during the previous week, with the figures for the corresponding week of the previous year, in Ontario and Quebec (exclusive of Quebec city) and the receipts of butter at and the exports from the port of Montreal are also included. In addition to these summaries, the Montreal and Toronto butter and cheese markets are quoted up to noon on the day of issue.

As practically all cheese produced in Ontario and Quebec is now graded, the quantities graded are the best available information respecting current production. This does not apply to butter of which only about 25 per cent is graded. A large proportion of the butter produced is put up in prints for immediate local sale and this class of butter is not graded.

SUBSIDIES TO COLD STORAGE WAREHOUSES

Several proposals to erect cold storage warehouses under the terms of the Cold Storage Act were brought forward during the year. Contracts were entered into for small cold storages at Stellarton, N.S., Riviere du Loup, P.Q., and Chicoutimi, P.Q. The warehouses at Chicoutimi and Riviere du Loup have been completed and the first instalment of the subsidy has been paid. The warehouse at Stellarton, N.S., has not yet been completed.

Further contracts have been made for the payment of subsidies on terminal cold storage warehouses at Halifax, N.S., and New Westminster, B.C. The construction work on these proposals has not yet been started.

The terms of a contract provide that the Federal Government shall pay 30 per cent of the approved cost of the warehouse in four instalments; 15 per

cent on completion of the warehouse, at the end of the first year 7 per cent, at the end of the second year thereafter 4 per cent, and at the end of the two next succeeding years 2 per cent, providing the warehouse is maintained and operated to the satisfaction of the Minister of Agriculture.

CREAMERY COLD STORAGE BONUSES

Specifications and blue-prints of plans for creamery refrigerators were prepared and sent free to all creameries making a request for them. Under this plan of assistance, any creamery constructing a refrigerator in accordance with the plans supplied is eligible for a bonus of \$100 provided that the reports of daily temperatures during the summer months and the report of an inspection by an officer of the branch are favourable.

The total number of applications received during the year was 45 of which 36 were approved and paid, the other 9 being refused or held over until the next year pending necessary alterations and improvements.

RESEARCH IN DAIRYING

Investigational work commenced by the Division of Dairy Research into a butter defect known to the trade as "surface taint" was concluded in 1927. The results were published in Pamphlet No. 91, N.S. entitled "Surface Taint Butter."

During the year research was carried out in co-operation with the American Dairy Science Association for the purpose of establishing a standard method for the microbiological examination of butter. From this investigation a standard technique has been developed for the estimation of moulds and yeasts in Canadian pasteurized butter.

A modification of the present butter score card has been made for the judging of exhibition butter, whereby manufacturers are awarded credit for improved methods of sanitation.

Details of the results of the above were published in Pamphlet No. 92, N.S., entitled "Studies on Moulds and Yeasts in Creamery Butter."

Considerable time has been given to studies on undesirable flavours in Cheddar cheese. Such factors as starters, water supplies, sanitation, sterilization of equipment are still being investigated.

As in former years, a number of dairy meetings and conventions were addressed. Assistance has been given to dairy manufacturers with problems requiring technical solutions.

THE ADMINISTRATION OF THE DAIRY INDUSTRY ACT

The staff engaged in the administration of the Dairy Industry Act was the same as during the previous year with the addition of another inspector at Montreal, P.Q., appointed in November. The inspection force now consists of one chief inspector, five full-time inspectors and six part-time inspectors. The more important provisions of the Act are those prohibiting the manufacture and sale of:—

- (a) Butter adulterated either by means of foreign fat or by more than sixteen per cent of water;
- (b) Butter and cheese containing less than the specified minimum of milk fat;
- (c) Butter in prints of improper weight;
- (d) Butter or cheese which is falsely or improperly branded.

Inspectors made preliminary tests for water content of samples of butter secured from manufacturers, wholesalers and retailers. Samples which accord-

ing to the preliminary tests show more than sixteen per cent of water as well as samples of butter or cheese suspected of being adulterated by means of foreign fat or of containing less than the legal minimum of fat were submitted for chemical analyses. Inspectors made preliminary tests of 9,436 samples of butter, of which 1,027 samples showed more than sixteen per cent of water.

The following statement shows the number of convictions secured on account of various offences and amounts of fines imposed:—

Offence	Number of Convictions	Fines
Excess water in butter.....	103	\$ 1,895 35
Butter Substitutes containing Fat other than that of Milk or Cream.....	7	1,830 00
Short weight Prints of Butter.....	8	140 00
	118	\$ 3,865 35

Convictions secured during the year show an increase of 58 as compared with the previous year, and fines an increase of \$2,123.80.

The authority conferred by the Act to seize and confiscate illegal dairy products or equipment used in the manufacture or manipulation of illegal dairy products is only exercised in extreme cases. Following is a statement of such confiscation of butter showing the number of confiscations on account of different offences, the number of pounds so confiscated and the proceeds from the disposal of the same:—

Offence	Number of Confiscations	Number of Pounds Confiscated	Net Proceeds
Butter for sale containing over 16% water....	11	738	\$ 116 73
Substitute for Butter containing Fat other than that of Milk or Cream.....	8	1,369	220 48
Total.....	19	2,107	\$ 337 21

The proceeds from fines imposed and from sale of confiscated products have been remitted to the Receiver General.

MILK UTILIZATION SERVICE

The work, which has for its object the dissemination of information as to the food and nutritional value of milk and its products, has been carried out along the more or less established lines during the year. The dietitians employed in this work had booths for demonstration purposes at the leading exhibitions, attended meetings of health and child welfare organizations, women's institutes, dairy conventions and other similar gatherings. A phase of the work which seems to be popular as well as effective is in connection with the schools—public schools to reach the children, and normal schools to interest and instruct prospective teachers.

The publications used in this work are being reprinted frequently to meet the continued demand.

A new poster entitled "Milk, Builder of Nations," of artistic design, has been much in demand by Public Health Nurses, school teachers, milk distributors, and other interested people.

GENERAL NOTES

A very important activity of the Dairy and Cold Storage Branch is the attendance by members of the staff at the various annual dairy conventions and special dairy meetings held throughout the year. The Commissioner and other members of the headquarters staff attended and gave addresses at all the provincial conventions in Canada during the past winter.

The dairy produce graders are employed during the slack season to make demonstrations of grading at the dairy schools and at special meetings of cheesemakers held throughout the cheesemaking sections of the country. There has been a very marked growth of interest in such matters since the adoption of the grading system in 1923. The cheesemakers exhibit very commendable ambition to become familiar with the standards required to secure the highest grades.

Another service which demands a good deal of time on the part of the headquarters staff is the large correspondence on technical subjects relating to dairying and cold storage.

There were two resignations from the staff during the year. Mr. W. F. Jones, B.S.A., who was Chief of the Division of Dairy Manufactures, resigned to accept a commercial position. Mr. E. W. Light, Dairy Grader, Saskatoon, Sask., resigned to take up another line of work. The position vacated by Mr. Jones has not yet been filled, and Mr. Light's position was filled by a transfer from the Montreal staff. An assistant dairy produce grader was promoted in Montreal to fill the vacancy so caused.

HEALTH OF ANIMALS BRANCH

The three divisions of this Branch are jointly concerned with safeguarding our live stock industry, the maintenance of our foreign markets and export meat and canned food trade. Every precaution is taken to prevent the entrance of disease from foreign countries and research work is constantly carried out on problems of disease and method of control.

ANIMAL CONTAGIOUS DISEASES DIVISION

The freedom from extensive outbreaks of scheduled contagious diseases has permitted the employment of a large number of our veterinary officers in the control and eradication of bovine tuberculosis throughout the country.

Serious contagious diseases continue to be prevalent in foreign countries. There is need of constant vigilance therefore to prevent the introduction of these epizootics into the Dominion as a single outbreak would menace our entire export trade. Canada has an enviable record of freedom from contagious disease which all concerned are anxious to maintain.

Foot and Mouth Disease.—Serious outbreaks of foot and mouth disease have occurred practically all over Europe.

The order of May, 1926, imposing restrictions on imports from Mexico, was cancelled by order issued March 7, 1928, as foot and mouth disease no longer exists in Mexico.

In England foot and mouth disease has been prevalent for a considerable time.

As Scotland had been free from foot and mouth disease for a long period an order was issued on May 6, 1927, that permits for the importation of ruminants and swine from that country would be considered provided the animals to be imported had been in Scotland for the preceding sixty days and were shipped direct to Canada.

On June 6, 1927, an order was issued that permits for the importation of ruminants and swine from England would be considered as no case had been reported since April 6, 1927. As, however, foot and mouth disease again broke out in England, all permits for shipments from England were cancelled by order of July 8, 1927, but permits were considered for ruminants and swine direct from Scotland or Ireland provided the animals were accompanied by an affidavit indicating they had been in those countries for a period of sixty days immediately preceding date of shipment.

In the Irish Free State foot and mouth disease broke out after several years' freedom from the disease and an order was issued on February 21, 1928, prohibiting the importation of ruminants and swine from Ireland.

The certification of fodders used in packing merchandise has been fairly general and any fodder-packed shipments not accompanied by satisfactory certificates have been disinfected at our fumigation stations in Vancouver, Montreal, and St. John, N.B. The charges made at these stations are high in order to discourage uncertified shipments.

As some difficulty was experienced in getting satisfactory certificates and effective disinfection a new order was issued on March 21, 1928, to come in force on June 1, 1928, prohibiting the importation of merchandise packed in hay, straw, or any other product of the soil from all countries excepting the United States, New Zealand, and the Union of South Africa unless (1) accompanied by a certificate signed by an authorized veterinarian of the country of origin that the packing used has been subjected to formaldehyde fumigation, or (2) the packages are disinfected in one of the fumigation stations maintained for that purpose at certain seaports.

As the exact certificate required and the method of fumigation are clearly outlined in the order it is hoped that the procedure will be simplified and at the same time adequate protection will be afforded our live stock from infection with such epizootics as foot and mouth disease.

Our export store cattle trade with Great Britain has entirely ceased during the past year. The veterinary inspectors required to accompany store cattle have therefore been available for tuberculin testing in restricted areas for the eradication of bovine tuberculosis.

Glanders.—One case of glanders was discovered in Ontario. This was the only case in the Dominion during the year. Glanders is controlled by a policy of slaughter and payment of compensation.

Hog Cholera.—Hog cholera was dealt with in Ontario and Quebec. Only four outbreaks occurred, which were quickly controlled under our policy of slaughter of infected animals and payment of compensation along with immunization of all swine in close proximity with anti-hog cholera serum.

All foreign hogs are quarantined for thirty days before being allowed to enter Canada and the feeding of collected garbage is permitted only under license. These regulations have been effective in reducing the number of outbreaks of hog cholera.

Mange.—Mange in cattle has been detected in the provinces of Alberta, Saskatchewan, Manitoba, Ontario, and New Brunswick. The number of clinical cases is not large, but the number of cattle held under quarantine and treated as contacts is considerable, especially when mange occurs in range herds.

Early diagnosis is essential and it has been necessary to institute prosecution proceedings against any owner who fails to report suspicious cases.

Sheep Scab.—No sheep scab is known to exist in Canada at the end of this fiscal year. The flocks quarantined in Alberta have all been released after treatment.

Horse Mange.—Horse mange has occurred in New Brunswick, Manitoba and Alberta. No trouble has been experienced in controlling these outbreaks, but in Manitoba a considerable amount of time has been occupied in examining horses on Indian Reserves on which mange was detected.

Anthrax.—Anthrax was confirmed in one outbreak in Quebec and one in Ontario. This disease is rarely encountered in Canada but as it is a very fatal disease in all classes of live stock, supervision is maintained over all hides, skins, wool and hair from infected countries, and if uncertified they go forward under restrictions to be disinfected at destination.

Dourine.—Dourine, a serious disease affecting the horse-breeding industry, has not been detected in the Dominion for eight years.

Rabies.—Rabies has been restricted to Alberta, Ontario and Quebec. In Alberta the outbreak occurred in Calgary and was quickly eradicated. In Ontario and Quebec the disease has been troublesome but has been kept under control by individual quarantines of all contacts in conjunction with the enforcement of municipal by-laws by local authorities.

Tuberculosis.—Satisfactory progress has been made in the control of bovine tuberculosis. Public opinion has advanced more rapidly than our ability to keep pace with it. Applications for assistance under the different tuberculosis plans cannot all be dealt with promptly and many unavoidable delays occur.

The progress in eradicating and controlling tuberculosis is limited by the number of veterinary inspectors available and the expenditure incurred.

Accredited Herds.—There are now three thousand two hundred and thirty-five (3,235) fully accredited herds in Canada and two thousand five hundred and eighty-eight (2,588) are under process of accreditation, while two hundred and sixty-four (264) are awaiting test.

Supervised Herds.—The owners of nine hundred and sixty-seven herds took advantage of this plan. These are stockowners who are unable to comply with the requirements to come under the Accredited Herd Plan.

Municipal Tuberculosis Order.—No new municipalities have been accepted under this plan for five years. Supervision is still maintained over the herds supplying milk to the thirty municipalities throughout the Dominion which were previously accepted. The time has come when the municipalities concerned must be prepared to maintain the veterinary supervision of the herds supplying them with milk as is provided for in the Municipal Tuberculosis Order.

The order is largely a public health measure and from the agricultural point of view much better progress could be made with the same number of veterinary inspectors employed in restricted area testing.

Restricted Areas.—The testing of all cattle in specified areas for the eradication of bovine tuberculosis is rapidly gaining favour with cattle owners as they are then no longer suspicious of their neighbours' cattle and the risk of infection is practically removed.

Under the restricted area plan tuberculosis-free herds are protected from infection while infected herds are cleaned up and are no longer a source of danger.

Restricted areas become recognized centres for buyers and they feel an added security in purchasing in districts practically free from tuberculosis. Restricted areas have been established in all provinces except Alberta.

The new areas in which cattle have been tuberculin tested during the year are as follows:—

An extension of the Huntingdon area in Quebec, including the counties of St. John, Napierville, Laprairie, Chambly, Vercheres and a portion of Richelieu west of the Richelieu river. In this area over 50,000 cattle were tested with 5.9 per cent of reactors.

The counties of Missisquoi and Iberville in Quebec, a further extension of the restricted area in Quebec, was commenced in February, 1928, and work is still in progress. At the end of the year, March 31, 1928, approximately 28,000 cattle had been tested with 18.9 per cent of reactors.

Prince Edward county in Ontario with over 24,000 cattle had 2.1 per cent of reactors.

The province of Nova Scotia, excluding Cape Breton, was commenced in September, 1927, and at the end of the fiscal year over 177,000 cattle have been tested with 2.4 per cent of reactors.

An extension of the Harvey area in New Brunswick, including over 2,000 cattle, was completed in March, 1928, with only 0.54 per cent of reactors.

The first annual retest of the Fraser Valley area in British Columbia was conducted from March to May, 1927. Over 46,000 cattle were retested and infection was reduced to 1.1 per cent.

Inspection of Stock Cars and Yards.—All stockyards are periodically cleansed and disinfected under supervision of officers of this division. All stock cars are cleansed and disinfected under supervision at a number of centres throughout the Dominion. This is carried out as a routine measure. Stock cars or other cars which have conveyed hides, wool or other products conveyed under restrictions are cleansed and disinfected before being used for any other purpose. Only approved disinfectants in proper strength of solution are permitted in this work, all of which is carried out under supervision of our officers.

PATHOLOGICAL DIVISION

The erection of the new Research Laboratories, upon which work was commenced during the year 1926, has been completed. The building has just recently been occupied by the Pathological Division as their new headquarters and research centre. It is a modern, fireproof, four-story structure, 122 feet in length and 42 feet in width, designed and constructed as an institute for research in comparative pathology. The installations include electric power, water pressure and vacuum pumps, high-pressure steam, a refrigeration system, bacteriological incubator rooms, oil-burning furnaces, etc.

Considerable laboratory equipment has yet to be installed, but very satisfactory progress is being made. New stables are also in the course of construction. The department, through the Health of Animals Branch, will now be in a position to extend the services of the Pathological Division to undertake further important researches, and to meet the reasonable demands of the live stock interests in connection with the problems of animal disease, control and prevention.

The activities of this division are grouped under (1) research into animal diseases and the development of scientific, efficient and practical methods of controlling and preventing animal disease; (2) the manufacture of biological products, such as tuberculin, mallein, serums and vaccines; (3) laboratory services in connection with the diagnosis of disease, the identification of specimens, parasites, etc., and work of an investigational nature carried on both at the laboratory and in the field; (4) examinations of meat and canned food products.

The volume of work performed in the past twelve months is far in excess of that of any previous yearly period. It is conducted at the Biological Laboratory, Ottawa; the Research Station, Hull, P.Q.; the Veterinary Research Stations at Lethbridge, Alta., and at Agassiz, B.C.; and at the Central Experimental Farm, Ottawa.

Tuberculosis.—This is one of the most important and, at the same time, the most difficult problems of disease control and prevention. Intensive research in the laboratories is carried on simultaneously with work in the field and is in constant association with the objective of the department's campaign to establish tuberculosis-free herds and areas, and to eliminate all known sources of infection.

The changing character of the tubercle bacillus and the chemical nature of its toxins and products; the various types of infection that are encountered and transmission from one animal species to another; individual and racial susceptibility and resistance, hereditary influences, etc., are some of the factors that have to be reckoned with and studied by laboratory methods.

The work of Professors Calmette and Guérin of the Pasteur Institute, France, and the claims made for their vaccine known as "B.C.G." (Bacillus-Calmette-Guérin) have revived the possibilities of prophylactic vaccination. Exhaustive research in this connection is a necessity which this department was one of the first to recognize and undertake. The B.C.G. method of anti-tuberculosis vaccination has been preceded by many others which at one time or another were strongly and prematurely advocated, but which proved either too dangerous or of no practicable value as measures of control and immunization. Our researches upon this question, continued from year to year and involving experiments upon a large number of cattle and over a thousand laboratory animals, have shown quite clearly that the original claims made for B.C.G. vaccination could not be substantiated. These, in fact, have now been considerably modified by the originators of the vaccine. Even so, B.C.G. prophylactic vaccination is still a matter of doubt, and is gravely questioned both in Europe and in America. The results and the evidence derived from our own research and experiments up to this time do not support or afford justifiable grounds for recommending or even permitting the use of B.C.G. vaccine as a practical, safe and efficient means of controlling bovine tuberculosis in this country. Further research is in progress, and the vaccination question cannot be answered or decided one way or the other at this time; but it is as well to state that the hopes and expectations aroused and propagated by making or accepting premature announcements have not been realized.

However, the question has been productive of renewed, intensive and widespread research into the nature of tuberculosis resistance and immunity; and every additional fact bearing upon this phase of the tuberculosis problem is a gain and an advance towards its solution.

Tuberculin.—The laboratory manufacture of tuberculin has been increased enormously to meet the requirement for tuberculin testing of cattle. For the year ending March 31, 1927, the output was 1,241,971 test doses, and for the year ending 1928, 2,024,232, which, at a valuation of only 5 cents per dose, this being less than one half of the commercial price, represents a sum of \$101,211.60.

Our researches into the chemical nature and properties of tuberculin have resulted in improved methods of preparation and standardization, and in the issue of a product that is giving complete satisfaction.

Studies have been made and are in progress upon tuberculous infection of poultry and of swine. Avian tuberculosis is assuming more and more importance and is evidently increasing in districts engaged in intensive poultry farming. Furthermore, our laboratory examinations during the past year have shown that tuberculosis is appearing on some of the silver black fox farms, and, finally, the interesting discovery was made that a number of wild crows were severely infected with the disease. This latter observation is not only of much interest scientifically, but also from a practical point of view, as the possibility of crows, as scavenger birds, being a medium for carrying and spreading infection, cannot be overlooked.

Rabies.—The laboratory diagnosis of rabies was made in 45 cases. One hundred and four heads were received and evidence indicating rabies was found in 36 dogs, 2 sheep and 7 cattle.

Bovine Infectious Abortion.—With the object of demonstrating the possibility of maintaining or building up herds of cattle free from abortion infection, and in co-operation with the owners of a limited number of selected herds, a large number of blood tests have been made and repeated at periodic intervals. It is quite possible, by taking the necessary measures as are indicated by the results of the blood tests, to free a herd from this troublesome infection.

Poultry Diseases.—Research and experimental work on poultry diseases has been considerably extended, and practical ways and means of preventing many of the troubles affecting poultry, based upon scientific knowledge, are being developed and recommended. Special attention has been given to bacillary white diarrhoea, and approximately 6,000 blood tests have been made for determining the carriers of this infection.

Parasitic Infestations.—Losses in young animals of all classes, pigs, lambs, calves, poultry, foxes, etc., are reported as very heavy, and there can be no doubt that a proper control of parasitic infestations and diseases is necessary for the successful raising of any class of live stock. The life cycle and the habits of the more important of such parasites is under continuous study. The solution of this problem lies unquestionably in methods of preventing infestation by a proper rotation of pastures and the maintenance of sanitary conditions in enclosures and pens.

Miscellaneous.—Six thousand seven hundred and fifty-two specimens and samples were received for laboratory examination. There has been a very heavy correspondence with live stock owners in connection with disease or abnormal conditions upon which advice was needed.

Imperial Agricultural Research Conference, London, Eng.—The chief pathologist attended this important conference. One of the decisions arrived at, and unanimously agreed upon, was the organization and establishment of a Bureau of Animal Hygiene for the main purpose of collecting information on this subject gathered from all parts of the Empire and disseminating it to Government institutions and research workers.

MEAT AND CANNED FOODS DIVISION

During the year just ended there was an increase in the total number of animals slaughtered in establishments under inspection of approximately 142,000.

No improvement was shown in the British bacon market, which was reflected in the prices paid to producers for live hogs. On the other hand, prices for good beef animals were never so good, with the exception of the period following the close of the war.

The demand for well-bred and well-finished beef animals continues to be good and there is every prospect of it being maintained, especially in the United States, where the demand for this class of meat food is strong.

It is also encouraging to note that the demand for Canadian bacon is growing in some of the larger centres in the United States. It is becoming more evident that to gain and hold the foreign market, it is essential that the production of meat-producing animals must be on the basis of quality.

If the necessary attention is given to breeding and feeding as well as to the proper preparation of the finished product, the demand for Canadian meat products will continue.

With respect to sanitation and equipment in the various plants, the high standard that has obtained in previous years is being well maintained.

There were more establishments under inspection than in the previous year, and a number of other plants are making the necessary arrangements in order that they may obtain the benefits of inspection in the coming year.

During the past year certain of the regulations governing the inspections of meats were amended in order to carry out more effectively the intent of the Meat and Canned Foods Act.

The plants engaged in the canning of fruits and vegetables were very busy during the year. There was a heavy pack of peas, which were generally of a better quality than usual.

The season was not good for corn and the pack was light. The poor season materially affected the early pack of tomatoes. They ripened slowly and were not a good colour. The later crop, however, was abundant and good in colour, which permitted a good average crop of good quality.

There was a poor crop of apples and the evaporators and dehydrators had a short run. Prices were good and few were left in the country at the close of the season.

The plants handling condensed and evaporated milk had a good year, there being a ready market for their products. This trade is increasing rapidly and new plants are being built with every prospect of doing good business.

The regulations governing the inspection of preserved fruit, vegetables and milk were amended during the year and new standards of quality were made operative. These standards of quality in connection with canned fruits and vegetables are creating on the part of the purchaser a confidence which is reflected in the continued increase in the consumption of this class of food.

THE LIVE STOCK BRANCH

HORSE DIVISION

During the fiscal year just closed there was a continued improvement in the horse industry. In fact from all standpoints it was the banner year. Those engaged in the industry report a steady demand at higher prices with a consequent stimulation of interest and more breeding. During the calendar year 1927, upwards of 18,500 horses were shipped from the Prairie Provinces to Ontario, Quebec, and the Maritimes, the two former taking upwards of 8,000 each. In addition some 2,850 horses were bought in Saskatchewan, Alberta, and British Columbia for shipment to Russia, making a total of approximately 21,400 taken out of the western provinces during the year. The horses purchased for Russia were of the lighter type for which there is little demand in this country. Accordingly the finding of a market outside the country by the department really meant so much found money for the breeders.

In the last report the fact was mentioned that the department had found a market for 1,000 range horses in Russia. These horses were bought by officers of the Live Stock Branch and delivered at Leningrad. Last year, while the Russians had their own inspectors in the country, the work of buying, shipping, and delivering on ship board at Quebec was performed by officers of this branch, including even the buying of feed for the voyage to Russia. This assistance was a service rendered by the department in the interests of the western breeders. Russian agents are again in the country arranging for further shipments, which would go to prove that the horses already sent have been satisfactory.

The demand for saddlers and hunters, also polo ponies, continued steadily throughout the year at very satisfactory prices; in fact good specimens brought considerably more money than previously. Owing to the supply not being equal to the demand, the various districts in Canada which make a specialty of breeding this type of horse were literally combed for suitable specimens.

The keen demand throughout the year for big drafters for various kinds of city work, farm chunks, lumberwoods horses, heavy and light delivery, police, fire and remount horses, as well as saddlers and hunters at good prices, made the year, from a financial standpoint, most satisfactory and at the same time did much to encourage more horse breeding.

CLUBS

The number of Horse Clubs in operation during the year was slightly larger than previously, practically all of them being located in the three Prairie Provinces. The demand for club stallions, which must be good specimens, as they are subject to inspection, has been the means of encouraging importers to bring in a better class of stallion than heretofore. The organizing of a club in a district really establishes community breeding and makes the district a headquarters for a certain type of horse. Being forced to continue from year to year with stallions of the same breed has done much to improve the type and quality of the horses. This in turn provides better breeding mares as the years go by and as the old ones drop out. Clubs also are protected as to the kind of horse that stands for service in their district while stallion owners are guaranteed a definite number of mares at a stated service fee. At the end of the service season one-third of the fees are collected by the club and handed to the owner, thus saving him considerable expense and annoyance and at the same time guaranteeing him a definite amount at a specified time.

BREEDING STATIONS

During the year, seven breeding stations were in operation. Undoubtedly a couple more would have been started but for the scarcity of good, big, thoroughbred stallions of the hunter type. The growing demand for saddlers, hunters, and light delivery horses, as well as for driving and working on the farms, has created a great deal of interest in this policy. The fact that there are several markets for colts of the hunter type and all at remunerative prices is an assurance to the breeder than even if a horse does not possess the quality necessary to bring a high price as a saddler or hunter, he nevertheless can be disposed of at a fair price and is also a useful animal on the farm. The fact that, while green horses of the saddler and hunter type bring good prices, training enhances their value greatly, has led men and boys on the farms to spend much of their spare time in educating the colts. This is not only proving beneficial to the breeder from a monetary standpoint but is also giving the farm boys an added interest in farm life; in fact it is a form of recreation for which the city man pays high. As an example of the change that has taken place during the last half dozen years, it may be pointed out that colts that could then be bought for \$100 while \$125 was considered a very good price now bring from \$200 upwards, and those that have been given a certain amount of training bring up to \$500, while those that have been trained and mannered bring much more, the prices varying according to the size, conformation, and quality of the horse.

The average percentage of colts throughout the years has been very satisfactory. The result of last year's breeding operations, particularly at some of the stations, has been considerably above the average. At one Station the average for four stallions was 67 per cent in foal of the mares bred. The greatest handicap at the present is the lack of suitable stallions. A few, however, are being imported yearly, and it is hoped that this number may be increased for the coming year.

THE HUNTER, SADDLE, AND LIGHT HORSE IMPROVEMENT SOCIETY

Though spoken of for some time, it was within the last two years that a definite attempt was made to organize a Hunter Society along the lines of those already in existence in Great Britain and Ireland. The initiative was taken by certain Toronto fanciers, who enlisted the aid of well-known horsemen throughout the province, with the result that the above-named society was formed.

During the year, however, the department, feeling that the society would do a great deal of good in the interests of the industry and would be a benefit to the country, made a generous grant to the society for the purpose of enabling it to start work. The idea is to carry on work similar to that of the societies in England and Ireland; that is to say, to open a stud book for the purpose of taking in suitable foundation mares and eventually suitable stallions possessing the required breeding, using as sires big, thoroughbred stallions of the hunter type. This society is so formed as to take in all provinces, and already steps have been taken to interest the various provincial departments and societies. Already some four hundred mares have been inspected and approved for the new book.

FUR FARMING

Silver Foxes.—The number of fox breeders has gone on steadily increasing, due no doubt to the high prices being paid for good pelts in the markets of the world. As an example of what this means and as an item of interest it may be said that one firm of Canadian foxmen secured just under \$1,200 for a choice pelt at the recent London sales. While each year, as in every other business, many poor pelts go on the market from foxes that have been killed out of season, or that died from one cause or another, or that through ill health failed to fur up properly or that have gone off, which affect the average of all the pelts put on the market, nevertheless the average price was good. When, however, the poor stuff is eliminated and only the fair and good pelts considered, the average price for the year was remarkably good. The demand for breeding stock, all things considered, was particularly good in certain sections at fair prices, although not to the same degree as during the previous two or three years. This is not to be wondered at, however, when it is remembered that fox farming has been firmly established in every province of the Dominion. It has become one of our stable industries that is returning to the country a splendid yearly revenue.

Other Fur-Bearers.—There has been a steady increase during the year in the number of people engaged in fur farming. Last year attention was drawn to the fact that the demand for mink exceeded the supply and that the prices for both breeders and pelts had increased very greatly during the last three or four years. The prices for breeders has continued, while mink pelts went as high as \$52, which is, it is reported, a record. As an indication of the interest being now taken in mink breeding, it might be stated that an inquiry has recently come from Belgium as to the obtaining of some 250 to 300 pairs for shipment to that country. Mink thrive well in captivity and can be taken care of with a minimum amount of trouble, while the returns on investment are particularly good.

There has also been a considerable increase in the breeding of chinchilla rabbits and muskrats as well as some increase in the breeding of various kinds of fur-bearers heretofore mentioned. Frequently inquiries are received regarding the obtaining of marten for breeding purposes. Owing to the scarcity and the difficulty of obtaining these little animals, however, it is impossible to secure anything like the number required.

Badger farming in Western Canada is now getting under way, while raccoon raising, particularly in the province of Quebec, is becoming well established. A percentage of the many letters received ask the question as to the future of fur farming. Considering the two chief factors, viz: that the supply from the wilds is diminishing, while the demand for furs is increasing, it is safe to assume that the raising of fur-bearing animals will continue to be a paying industry and one that will prove a definite source of revenue to the country.

CATTLE DIVISION

THE DOMESTIC BEEF MARKET

A year ago, in co-operation with the Department of Agriculture, a committee was appointed by producers east and west to inquire into the possibility of developing the domestic market for beef. Officers of the department were chairman and secretary, respectively, of this committee.

As a result of the activities of the committee, the problems affecting the beef industry have been very widely discussed throughout the country during the past year. While it is admitted that since the spring of 1927 producers of beef cattle in Canada have enjoyed a profitable market, it is realized that this may prove to be only a temporary condition. In the past, this section of the live stock industry has been subject to such extreme fluctuations in price levels that at times it has seemed almost doomed to extinction. As a result, there is a very general feeling not only among producers but in the trade that the present is an opportune time to endeavour to establish the business upon a more secure foundation.

In order to provide an opportunity for the consideration of the committee's report and for the discussion of all problems relating to the industry, a Dominion beef cattle conference has been called by the department at Winnipeg on June 28 and 29, 1928. It is hoped that a plan agreeable to producers, to consumers, and to the trade providing for the grading of beef for the domestic market will develop out of the discussion at the conference. With this accomplished, it should then be possible to relate export requirements to those of the home market and to build a national production policy which all interests can get behind in promoting the breeding and finishing of cattle to suit these requirements.

There is no question that Canadian farmers can produce cattle of the desired quality if reasonable assurance of an attractive outlet can be given. If the home market can be made to provide the initial incentive, the industry will be placed in a position to take the fullest advantage of export opportunities as they occur. A high standard of quality combined with continuity and volume of supply are fundamental essentials in holding export markets. It is of paramount importance, not only to Canadian producers but to the revenues of the country, that the present favourable situation in the beef industry be capitalized to develop to the maximum its potentialities as a source of supply for the world's markets.

BOYS' CATTLE-BREEDING CLUB POLICY

Since 1921, the work undertaken in conjunction with the various provincial departments under this policy has been steadily enlarged. In the province of Quebec, agricultural practice in many districts has been revolutionized as a result of the activities carried on by the clubs. This has been due largely to the close co-operation which has existed between the provincial and the federal departments in promoting this phase of the work and to the definite supervision which has been continuously exercised. While the number of clubs has been increased each year, care has been taken that applications were not accepted in excess of the number of suitable heifers available. In Nova Scotia and in Prince Edward Island, excellent results have been obtained through club activities and during the past two years the work in Ontario has been steadily expanded.

One of the important features of the policy is the valuable experience which the boys are securing in the feeding, showing and judging of live stock. At the annual competitions, the boys have furnished a real demonstration of proper showing and some of the competitions have attained remarkable proportions. As an example, it may be mentioned that last season the members

of one club brought out forty-nine head of pure-bred stock which represented their holdings after three seasons' work and included only foundation heifers and their descendants.

Possibly the most important results are being obtained in the development of the boys themselves. The general experience in financing and in business methods and the keeping of accurate records of feed costs and production all contribute to the development of real breeding instinct. The ability which the boys have attained and the intelligence which they have displayed in the feeding and handling of dairy stock is attested by the large number of club heifers which have qualified in Record of Performance.

CALF FEEDING CLUB POLICY

This policy, which has for its objective the training of young boys and girls in the proper feeding, caring and exhibiting of calves, was inaugurated in the province of Quebec six years ago. From a start of 10 clubs in the first year, the work has grown steadily until some fifty competitions have been held in that province during each of the past two years. In 1927, the policy was extended to the Maritime Provinces, a total of thirty-five competitions being authorized. In each province, the work is carried on jointly by the provincial and federal departments, the provincial department in each case providing 50 per cent of the prize money actually awarded and also assisting in supervising the clubs during the season. The policy has been amended from time to time and now provides for the feeding and care of the calf being continued under supervision until the following year when it is shown as a yearling. As some of the clubs have as high as eighty members, competitions arouse an exceedingly high degree of interest and enthusiasm, practically the whole countryside turning out for these events. An attendance of 1,000 or over is not uncommon. The influence of this work on the community is accordingly far reaching in its effect and clubs rapidly develop into community breeding centres. In addition to the financial awards which the boys receive, the instruction in all phases of live stock feeding and management which they so readily absorb and the increased interest which they take in general live stock and farm work is considered by many of the parents to be one of the most valuable features of the policy.

During the season of 1928, it is expected that at least eighty-five clubs will be in operation in Quebec and a total of fifty in the Maritime Provinces.

ADVANCED REGISTRATION OF DAIRY BULLS

This work, which was started in 1925, is now firmly established in the confidence of breeders of dairy cattle. It is noticeable that reference to Advanced Registry credentials is featured in newspaper writeups of outstanding pure-bred herds as well as in the advertisements of individual breeders.

While the number of bulls which have been passed has not been high in relation to the total number annually produced, it is felt that recognition which has been given to the bulls which have been granted Advanced Registration has resulted in a more definite fixing of attention on the essential qualifications of a sire if he is to prove of value at the head of a dairy herd. This has been reflected in a very material increase in entries of cows in the Record of Performance, as breeders are beginning to realize that to find ready and profitable sale, young bulls must not only be good individuals themselves but they must also be from dams of recognized merit as regards production.

RECORD OF PERFORMANCE FOR PURE-BRED DAIRY CATTLE

Although some restrictions have been imposed on the service by charging a small entry fee and by limiting the acceptance of applications for entry to those who have at least three pure-bred cows of milking age, the past year has again shown an expansion in the work. Eight hundred more cows have been entered for the test than in any previous year.

The appointment of ten additional inspectors has enabled the work to be carried on efficiently and has benefited the owners of cows entered in the test very considerably. Although the work has increased in all provinces, the number of new entries from the province of Quebec is phenomenal and it will not be long before additional inspectors will be required for that province.

From the time of its inception, the object of the Record of Performance has been to provide reliable information as to the milk and butter fat production of pure-bred dairy cattle for full lactation periods and thereby to enable dairy farmers to select animals which will effect general improvement in their herds. The steady expansion of the work year by year indicates that the value of proper production credentials is becoming generally recognized by commercial dairymen as well as by breeders. The first question which is invariably asked to-day by a prospective purchaser is, "What are the records of the animal itself or its ancestors?"

The following is a summary of the number of cows entered in the Record of Performance during the past year and the number of certificates issued for cows and bulls during the same period, also the number of cows and bulls which have qualified for certificates since the inauguration of the Record of Performance.

COW TESTING

The Cow Testing service, planned to point out the poor producing cows in grade dairy herds, continued to progress during the year 1927. All of the original associations, numbering 86, organized in the early part of the year 1926, continued in the work. These, with 18 new associations, gave a total of 104 associations operating in the past year with a total of 15,003 cows under test.

During July, at the request of the Provincial Department of Agriculture for Manitoba, cow testing was undertaken by the branch in that province and a dairy promoter was appointed to take up the work. For the balance of the season of 1927, the promoter devoted his attention to introductory work and succeeded also in starting four associations in the work before the close of the cow-testing year.

The following is a summary of the distribution and amount of cow-testing service work conducted for the year 1927:—

Province	Associa- tions	No. of Herds	No. of Cows
Alberta.....	3	41	438
Quebec.....	49	647	9,002
New Brunswick.....	16	201	2,207
Nova Scotia.....	31	449	2,993
Prince Edward Island.....	5	60	363
Total.....	104	1,398	15,003

The Cow Testing Register plan was introduced in 1925 and has made steady progress. It is applicable in any district in which a Cow Testing Association is being supported by the Dominion Live Stock Branch, to a limited number of herd owners who wish to select the best cows in their herds for breeding purposes. The supervision given by the branch is sufficiently close to justify the issuing of a production certificate to any cow which reaches a standard of 6,000 pounds milk and 300 pounds fat in twelve consecutive months.

Since the Cow Testing Register was started to March 31, 1928, 35 herds have been entered from the provinces of Alberta, Manitoba and Quebec. From a total of 579 cows entered, 124 certificates have been issued. Sixteen cows have two certificates to their credit, having produced the required amount of milk and butterfat two years in succession.

POULTRY DIVISION

The satisfactory condition of the poultry industry apparent in the last two years has been well maintained in 1927. While it is true that prices for eggs obtained by the producers have been high, the highest of any country in the world, and about three cents higher on the average than for the previous year, it is the remarkable freedom from fluctuation that has made the Canadian market peculiarly a producers' market.

Consumptive demand has been steady and this demand, in contrast to the old-time speculative demand for storage, has proven the dominant factor in maintaining the market at profitable levels. Experience in the last three years in Canada is proving beyond a doubt that the consumers' preference for quality in eggs functioning confidently through national standards is the true guide not only to profitable production but profitable trading as well.

Several factors occurred during the year which will have a lasting beneficial effect on the poultry industry:

The first was the final passing by all of the provinces of the enabling legislation making operative beyond question of a doubt the egg regulations as applied to domestic trading.

The second was the holding at Ottawa of the World's Poultry Congress and Exhibition. The congress did many things; not the least of these was the lasting impression made on the minds of the people of Canada of the magnitude and importance of the poultry industry.

To the visitor, two things stood out:

1. The soundness and breadth of the economic principles underlying the progress of the poultry industry in Canada as illustrated in the Canadian Educational Exhibit, and

2. The outstanding merit and vitality of Canada's poultry breeding stock, as viewed not only in the exhibition rooms proper but in the extensive exhibits of the British Columbia and other R.O.P. breeders' associations, these being not only one of the chief centres of attraction but the busiest place in the whole congress in point of business transacted.

Canada did extremely well in the Poultry Congress, and the problem now presenting itself is how best to capitalize the advantages gained.

From an export standpoint, the brightest opportunity at the moment is in the sale of breeding stock. Certain parts of Canada, more particularly British Columbia and Ontario, are doing well in this regard at the present time. Only recently have Canadians come to appreciate the real merits of the Prairie Provinces as a rearing ground par excellence for poultry. The production of 300-egg hens on the prairies has brought people to a realization of the possibilities of Manitoba, Saskatchewan and Alberta in a poultry breeding way.

In the export of eggs and market poultry, 1927 was an off year, very little poultry and only some small shipments of eggs going to Great Britain. Prices in Canada have been too high for export, and the firm, even tenor of the home demand has kept the home market above an export level. The market on eggs has been stronger than the market on poultry. It is expected, however, that as soon as the standards that are being prepared for dressed poultry are introduced they will react in the interests of the poultry market in much the same manner as has the standardization of eggs.

In brief, the achievements in the poultry industry of Canada in the last few years have been nothing short of phenomenal when it is considered that in a country of comparatively small population like Canada it has been possible in the last few years to increase the production by over 100 million dozen and still not have enough eggs to supply the home demand, as is evidenced by higher prices to producers, a reduced export trade, and little or no falling off in imports.

ADMINISTRATION OF EGG REGULATIONS

The very satisfactory condition of the Canadian egg trade referred to in the introduction to this report is due in a large degree to the standardization of egg grading throughout the Dominion. The effect has been most apparent in the increased home consumption. Canada leads the world in per capita consumption of eggs. Ten years ago per capita consumption in Canada and the United States was about the same, to-day Canadians eat ten dozen more eggs per capita per year than the United States, and from twelve to fifteen dozen more than Great Britain.

Consumers do appreciate and demand does respond to uniformly high quality in eggs.

Possibly the average consumer is more fastidious about eggs than other food products, for no product is possibly more quickly susceptible to favourable or unfavourable consumer demand. The fact is that with variable quality or with

uncertain quality, consumption did not increase. In the last few years with a standardized product, consumption has increased, and further, if the same uniformity in quality can be maintained and improved there is no reason why under present urban living conditions it should not still further increase and grow.

The following is a table of the increase in per capita consumption in eggs in Canada in the last ten years:—

PER CAPITA CONSUMPTION OF EGGS IN CANADA

—	Population	Production	Export	Import	Per Capita Consumption
					Doz.
x1901.....	5,371,315	84,132,802	11,363,064	951,745	15.1
x1911.....	7,206,643	123,071,034	87,420	2,926,856	17.5
1920.....	8,631,475	144,475,072	6,322,838	6,515,928	16.8
1921.....	8,788,483	193,049,154	5,444,014	6,582,739	22.1
1922.....	8,940,150	219,058,468	3,619,356	8,140,547	25.0
1923.....	9,416,457	227,186,598	2,900,111	6,623,253	25.4
1924.....	9,226,740	238,648,685	2,716,604	4,980,704	26.1
1925.....	9,364,200	249,778,867	2,466,270	3,726,311	26.8
1926.....	9,390,000	262,080,369	1,776,559	4,156,474	28.1
1927.....	9,519,000	278,277,227	448,206	4,576,671	29.67

x Census

1920-27 Bureau of Statistics.

The egg regulations first became effective in the spring of 1918, the standards and inspection service covering only export and interprovincial trading at the time.

Inspection of imports was introduced in 1922 and the regulations extended to include domestic trading in 1923 and 1924. Before grading for the domestic market was adopted a nation wide experiment was undertaken to ascertain the response from the consuming public to a standardized product. Representative retailers in the principal urban centres were invited with Department assistance to test out the utility of the standards.

The merchant agreed for a period to sell eggs only in accordance with the Government grade. The department undertook to secure for the merchant a supply of eggs graded in accordance with the standards. Demonstrations of grading were arranged in the stores and suitable window displays provided. So great was the consumer response that those merchants who accepted the department's invitation not only doubled, trebled and quadrupled their sales, but increased their patronage for other supplies as well. It was upon this basis in fact that domestic grading was introduced.

The regulations affecting domestic trading embrace two distinct phases:

1. The sale of the graded product between dealers and to consumers.
2. Graded return to producers.

Under existing regulations the first of these has permitted of more effective administration. On the one hand there is a specific grade definition, on the other, tangible evidence in candling, as to whether the quality is as presented. The graded return, however, has to do with bookkeeping and the actual payment of moneys. In a word, the second has necessitated the inspectors becoming detectives and accountants in addition to their knowledge of eggs and the evidence even then can not be made as decisive as with the actual quality of the grades to pass upon.

It is expected, however, with prospective amendment of the regulations in hand that this phase of the administration can be materially strengthened.

The following tables show a comparison of the work of the inspection service for 1926 and 1927.

IMPORTS, 1927

	Fresh	Storage	Total
Montreal.....	34,436	8,981	43,417
Quebec.....	9,564		9,564
Ottawa.....	3,124	400	3,524

Sault Ste. Marie.....		200	200
Windsor.....	2,122	50	2,172
Nova Scotia.....	430	271	701
Misc. East.....	25	150	175
Winnipeg.....	5,815		5,815
Vancouver.....		1,947	1,947
Misc. West.....	1,222	514	1,736
Total.....	79,116	21,168	100,284

Exports have fallen off largely because of the higher level of prices in Canada and the very excellent condition of the home market.

The reduction in imports, approximately 18,000 cases, is very gratifying. The close scrutiny of the Egg Inspection Service has largely curtailed the importation of processed eggs from the United States. Processed eggs are eggs which have been subjected to a treatment of mineral oil, have then been placed in storage and either marketed in that condition or subjected to sandblasting to remove the oil. In the United States these eggs are being sold as fresh eggs and were represented to Canadian importers as being fresh. Under the Canadian regulations they must be sold as preserved, and this requirement has largely curtailed their importation into Canada. In instances where the samples drawn have been under doubt, recourse has been had to a chemical test.

The confidence which egg grading has established in the public mind has increased to a tremendous degree the demands for the Inspection Service.

In addition to the regular work of inspection by approval, the inspection staff have made approximately 30,000 calls on retail and wholesale dealers for the purpose of checking up their compliance with the regulations and correcting abuses and irregularities. They have also been engaged in giving lectures before student bodies, women's clubs, etc., and candling and grading demonstrations at all the principal exhibits throughout Canada, school fairs, boys' and girls' clubs, etc.

There were 90 prosecutions for infractions of the egg regulations during 1927, resulting in 86 convictions. Two cases were dismissed because of lack of confirmatory evidence, and two on technicalities.

CO-OPERATIVE MARKETING AND POULTRY PROMOTION

The egg and poultry co-operative organizations continue to gain strength and become more and more an increasingly important factor in the trade organization of the country. Their place in the industry is being more and more recognized by private enterprise and the return which they have been able to make to their members, as a result of the stable markets maintained, has greatly enhanced their standing both among their own members and producers as a whole.

In Manitoba and Saskatchewan the steps taken by the co-operative to enlist the sympathy and utilize the services of the local merchants as collecting media in the country have gone far to enlist good feeling and strengthen public opinion.

The officers of the Promoter Service have conceived and laid the foundation work for many of the successful egg and poultry co-operatives to-day, and frequently it has been necessary for these men to assume full direction of the activities until such time as the volume received was sufficient to warrant the appointment of a business manager.

The introduction of carlot shipment of live poultry is largely a promoter innovation, as is also live poultry grading. In many districts community hatcheries, backed by a system of approved flocks, have been introduced, and lately turkey approval work has been added to their other activities.

The establishment of egg grading stations, more particularly in Ontario, is serving a useful purpose in many sections in the sale of the graded product. It is the intention as well to include under the Promoter Service the dressed poultry inspection work.

During the year real endeavour has been made to co-ordinate more closely federal and provincial activities. Possibly the most striking illustration of the effectiveness of this program is apparent in the province of New Brunswick, where a careful planning of the whole policy for agriculture took place some two years ago. The part which each department and each man was to take was mutually agreed upon and the whole of the provincial and federal officers operating in that district co-ordinated in a most effective manner.

Having in mind the broad scope of the promoter work, the men in charge are instructed to give constant attention to the application of the two fundamental principles which form the bed-rock of every successful business—economical production and efficient marketing.

With these objectives before them, the promoters, through their thorough knowledge of conditions and public opinion in their districts, on one hand interpret to the department the needs of those districts, and on the other carry back and interpret to those districts departmental policy devised to meet those needs.

DRESSED POULTRY STANDARDS

The national conference convened in Winnipeg last January endorsed the principle of dressed poultry grading with the recommendation that the standards when prepared be made voluntary for one year before becoming legally effective. A committee which was appointed to complete the recommendations of the conference has held several meetings, and the intention is that not only will the standards be put into actual operation in 1928 in a voluntary way, but also that an intensive program will be undertaken leading to an increased consumption of Canadian poultry meat on both the home and export markets.

TURKEY APPROVAL

For some time past a feeling has existed in practically all provinces of Canada that too little attention has been paid to the development of the turkey industry. The ravages of disease, largely through the inability of the individual breeder to secure vigorous, healthy breeding stock has been largely responsible for this sentiment, and the feeling has gained decided strength since the organization of the large poultry marketing co-operatives. The operation of these organizations has served to focus attention on the fact that Canada was producing too few of the large, full-breasted birds demanded by the market.

The necessity for some policy is most apparent in the prairie provinces, in Ontario, and in Quebec. In a number of districts in these provinces steps have been taken to cull some of the best flocks and the results which have been obtained have made these flocks noteworthy as local centres for desirable breeding stock. Other districts also have learned of the utility of this stock and a demand for it has sprung up which is far in excess of the supply. The consider-

ations suggest the advisability of a national policy of turkey approval to encourage the production of better breeding stock. The possibilities of this work are very great, not alone from a domestic standpoint, but from an export standpoint as well.

EGG AND POULTRY MARKETS INTELLIGENCE

The market reporting work of the Poultry Division consists of the publication of daily and weekly reports, giving the prices and conditions on the egg and poultry markets of Canada, Great Britain and United States. Where possible services of officers of the branch are utilized in securing this information although in a number of centres it is necessary to engage independent organizations.

The chief development in the market reporting work in the past year has been the changing of the weekly report from a stencilled to a printed publication. The new report has met with much favour in the country. It is widely read and followed, and the circulation has increased rapidly.

RECORD OF PERFORMANCE FOR POULTRY

The distribution of vigorous males from high-producing strains to the farms of Canada is the most important factor in economical production. Some years ago when the export market was playing a much more important part in the up-building of the Canadian poultry industry than it is to-day, it was apparent that if Canada was to meet the competition on the British market of the many countries placing their product there it was necessary in addition to sending forward the highest quality possible to devise some means whereby the cost of production in Canada, the number of eggs per bird, and the number of eggs per pound of feed fed, would compare favourably with that of any other country. To this end, policies were devised that would identify in a definite manner the really worthwhile strains and families being developed by poultry breeders within the Dominion. The policy of Record of Performance was conceived primarily for this purpose and its growth and utility in the nine years of its existence is amply evidenced to-day in the greatly increased year-round production on the farms of Canada and the demand that there is for Canadian poultry breeding stock from practically every other nation in the world.

The utility and breadth of application of Canada's national breeding policies for poultry were shown at the World's Poultry Congress by a model which showed in the foreground typical male birds of high producing strains. On either side were exact reproductions of plants of typical Canadian breeders, backed by the experimental work of the colleges and the Experimental Farms. From the breeders' plants a stream of these cockerels was shown going back to the approved flocks, the breeding stations, and the community hatcheries from which emanate the great mass of eggs for hatching and day-old chicks to the farms of Canada.

A further endorsement of Canada's initiative and progress in this direction is the fact that since the visit to Canada, two or three years ago, of certain prominent British poultrymen there has been a persistent agitation in England for the adoption of a similar policy. In the United States, no less than eight states have already adopted a record of performance system and there is a determined agitation to give it a national status in a unified, administrative way, similar to that so effective in Canada.

As an indication of the popularity of this work in Canada the current entry in Record of Performance for the year 1927-28 consists of 38,371 birds, an increase of 35 per cent over the previous year. In this connection it is very noteworthy that the largest proportionate increase is in the Prairie Provinces, Alberta having more than doubled last year's entry. Nova Scotia has also

shown a great increase over last year; the number of breeders entered in British Columbia and Ontario is about the same, but both provinces show substantial gains in the number of birds entered.

EXHIBITS AND PUBLICITY

The various policies of the Poultry Division can only be of the greatest benefit to the country at large when their existence and value are given wide publicity and to this end the medium of exhibits at agricultural fairs has been widely used. During the past year exhibits have been sent to all the leading fairs in Canada and to a number of smaller poultry shows and the attendance and interest which has been displayed have amply justified the expenditure. A feature of exhibit work which has been given prominence during the year has been the staging of demonstrations on egg cooking. These have been given at the Canadian National Exhibition and the Royal Winter Fair at Toronto and the success which has attended the demonstrations there has warranted the extension of this feature to other shows. Practical and experienced demonstrators have been engaged and along with their demonstrations on the preparation of egg dishes they have explained fully the value of the egg regulations to the consumers. An inspector is present to give demonstrations on egg grading and it is found that through these two media the housewife is given a very forceful demonstration of the worth of the regulations.

The Canadian exhibit at the World's Poultry Congress has been acclaimed widely as perhaps the best of its type ever staged and portions from this exhibit will be used widely in the exhibits work of the Poultry Division during the coming year.

A publicity project inaugurated during the past year which has met with much success has been the issuance of publicity paragraphs on eggs. These paragraphs have been printed on slips suitable for enclosing in egg cartons and they have dealt with such subjects as egg grading, the food value of eggs and egg dishes in a way that would be most attractive to consumers. They have been distributed to the trade and producers at cost and have met with a very encouraging response, over a million and a half having been sold to date.

SHEEP AND SWINE DIVISION

SHEEP

The lamb crop in Eastern Canada was one of the best in the history of the industry. A good lambing season was followed by a summer which, while cool, was favourable for the growth and development of nursing lambs. A growing tourist trade stimulated the demand for early lamb and the eastern sheep producers were fortunate in finding a steady market for early lambs as they matured.

Western range conditions were unfavourable at the lambing season, but this was to some extent offset by a season with plenty of rainfall which kept the range pastures in excellent condition throughout the season. Range lambs were somewhat above the average in weight going into the feed-lot and required a shorter feeding period to bring them up to market weights.

Market prices were slightly lower during the greater part of the year than for the previous twelve months, but were sufficiently steady to maintain confidence. Interest in sheep raising has been good and the demand for breeding ewes exceeded the supply. The demand was good for pure bred rams, but was not sufficient to absorb all ram lambs. Breeders were advised to feed the surplus of ram lambs through to yearlings. During the year numerous shipments of sheep were exported to the United States and other countries. The raising of the embargo for a short period against imports from Britain, on account of foot and mouth disease, enabled Canadian importers to bring in

some new blood which will be helpful in the improvement of Canadian pure-bred flocks.

The wool clip was of choice quality, being bright, clean and strong in fibre. Wool prices were not high, but the movement was good with prices tending to higher levels. A large proportion of wool sales were made to British and continental buyers indicating that the grade and quality of Canadian wool is attracting wider notice on the world markets.

SHEEP FAIRS AND LAMB SALES

The Sheep Fair and Lamb Sale is more and more coming to be recognized as an essential factor in organized sheep-producing centres. The success which has attended fairs already held by districts from year to year is resulting in a steady demand for new fairs in other districts where organized production is in the process of evolution. The various improvement activities related to sheep extension and promotion work are culminated commercially, as well as educationally, in the Sheep Fair and Lamb Sales Policy. The docking and castration of lambs which have been recommended for years have now become fairly general in practice, in fact farmers are not allowed to exhibit undocked and uncastrated lambs at the sheep fair. Lambs exhibited and sold through the fairs on account of being ewes and wethers escape the cuts which have been instituted by the packing industry at the principal stock yards of the Dominion. A great many districts now realize the importance of the use of supplementary feeds and grain for the finishing of lambs, in order that the finish may be improved and the grade higher. A larger percentage of sheep fair lambs each year are going into the good to choice grades.

The sheep fair and lamb sale has provided the necessary demonstration to convince the farmer that it pays to use a pure-bred ram and that, in addition, it is necessary to cull his ewe flock replacing undesirable ewes with ewe lambs of improved breeding. These fairs have demonstrated beyond doubt the economic saving through reduced marketing cost where several hundred lambs are marketed co-operatively. When a sufficient number of fairs are organized in the province, especially where the dates run consecutively, it is possible for lamb buyers to arrange to follow the fair schedule, thus developing greater competition in the buying of lambs at country points. Sheep fairs and lamb sales establish the local price for lambs in the districts in which they are held. As sheep fair lambs are of improved quality, the price established is always for a quality product and, hence, is the highest price that the market can afford to pay. Through the holding of these fairs a speculative element in marketing lambs has been to a large extent eliminated. Through the introduction of local competition in buying, the local sales committees are now able to gauge the competitive purchasing limits of buyers representing the different markets, sales being made to representatives at the marketing point which can pay the most money for a quality product.

Sheep fair organizations are becoming organized on a more permanent basis from year to year. Penning accommodation is being provided and where the fairs are held in conjunction with the country fair more adequate and modern pens are being provided. When the sheep fair and lamb sale is held in conjunction with the county fair, the sheep section is much larger and of greater interest and educational value to those in attendance at the fair. The lambs are delivered to the fair grounds before ten o'clock on the morning of the fair. Each farmer's lot is weighed as it arrives, the lambs being graded according to weight and as far as possible according to finish. Entries are made in groups of five or groups of ten. The judging is performed on the basis of correct market weights, uniformity, finish and type. The weighing of each group and the judging gives the various exhibitors an opportunity to study the good points and the poor points of the various entries. Further information regarding the judging may be obtained on request from the judges. The

class for ram and progeny provides ample material for demonstrating the importance of prepotency in sires. Pure-bred rams whose progeny stand high in the market classes are always keenly sought after as flock sires and in this way many useful lambs which previously went for slaughter are now being retained for breeding purposes as long as they remain useful.

As soon as the judging is completed, the sales committee for each fair proceeds to sell the lambs. Many of the fairs have adopted the policy of selling by public auction to the highest bidder, a method which seems to give general satisfaction, as it permits of competitive bidding by both local and outside buyers. The lambs are sold according to grade, the No. 1 lambs being sold first, followed by No. 2 lambs and the culls. It has been found most profitable to sort out the feeders and culls in order that they may be offered for sale to local buyers. The demand for choice ewe lambs for the establishment of new flocks is growing from year to year. The sales committees endeavour to ascertain the probable number of ewe lambs that are likely to be required for prospective buyers of breeding stock and these are sorted out as the lambs are delivered in the morning. Breeding stock is offered for sale in lots to suit prospective buyers. The selection of suitable ewe lambs for breeding purposes and the encouragement of their sale locally is perhaps one of the most valuable features of the lamb sale. Grants for the sheep fairs and lamb sales are provided by the federal and provincial Departments of Agriculture. Each fair has the necessary organization which is assisted by the promotion staffs of the federal and provincial departments. Additional money for special prizes is secured from donations by the local citizens or organizations who are interested in the development of the sheep industry. In 1927, 123 sheep fairs were held at which 43,700 lambs were sold. The lambs as marketed averaged between 80 and 90 pounds for the various provinces.

PURE-BRED RAM PREMIUM POLICY

It is doubtful if any policy had done as much to influence the purchase of pure-bred rams as the Ram Premium Policy. Since its inception in 1919 something over 10,800 rams have been purchased by farmers who had not previously used a pure-bred ram. The usefulness of the policy even at this date is evidenced by the fact that in 1927, 1,178 second premiums were paid and 1,525 first premiums were accepted. The policy is now definitely responsible for the establishment of new sheep-breeding centres each year. Such districts through the use of one breed of rams are making steady progress in the grading up of their ewe flocks. Market lambs are also showing greater uniformity from year to year. Exchange of rams is facilitated, thus reducing overhead expense for purchase of sires. Dipping of flocks which is being practised for the first time is effecting a great saving in feed to say nothing of added comfort, improved wool and better lambs. Docking and castrating are also adding to the appearance and marketability of the lamb crop from year to year.

The following tables show the extent to which the policy is applied in the various provinces, also the number of rams of the various breeds for which application is made:—

BOYS' AND GIRLS' SHEEP CLUB POLICY

This policy, which was approved in 1927, has been generally popular throughout the Dominion. During its first year eleven clubs were organized and to date clubs organized under this policy have been responsible for the establishment of over one hundred new sheep flocks in the Dominion. Sheep Clubs are already commencing to be a big factor in creating further interest in sheep raising.

Sheep club members have the co-operation of the Canadian banks in providing loans for the purchase of ewes or fencing subject to the regulations of the policy.

The selection of a sheep club district usually rests with the district field man or promoter and the selection is usually based on his knowledge of the district, its adaptability for sheep raising and the aptitude of the farmers or young people towards live stock.

Having decided upon the district it then becomes necessary to interest a minimum of ten junior farmers or boys and girls in the keeping of a flock of sheep. This means personal contact work and the natural ability on the part of the promoter who does it to sell the idea of sheep raising to the people with whom he comes in contact. As soon as the ten or more have agreed to establish sheep flocks, the formation of a sheep club is assured. The initial step is to call a meeting of all interested parties and organize the club, electing the various officers, including the advisory committee.

At the organization meeting the breed question has to be settled as all the members must agree to raise the same breed of sheep. Matters such as buildings, fencing, cost of ewes, date of purchase and financing of individual members will come up at the organization meeting. In the event of a number of the members requesting a loan from the bank to finance the purchase of ewes or the building of fences, it at once becomes necessary to interest the local bank manager. The promoter has to see to it that the necessary fencing and housing accommodation are provided on each farm before the ewes are purchased and made available for distribution.

When the preliminary organization details have been attended to and the ewes have been bought and distributed to club members, they are given very close personal supervision for the first year after the flock is established. This includes direction during the breeding season, instruction in feeding and management during the winter months, care at lambing time, a shearing demonstration, docking and castrating demonstrations, dipping demonstrations, instruction and control of parasites and any other phase of the sheep industry which the new beginners should know in order to handle the flocks carefully and get the best results.

Many sheep club members have had remarkable success in their sheep flock enterprise during the first year.

RAM GRADING

Graded rams continue to be in demand in all provinces where the ram-grading policy applies. Buying either by individual farmers or by associations for interprovincial trade or for export is rapidly reaching the point where transactions are made on the basis of XXX and XX standards. Demand for XXX rams continues to increase and is particularly noticeable in a year like the one just past, when there was a surplus of medium-quality stock. With increased competition in the breeding of pure-bred stock it is becoming increasingly necessary for pure-bred sheep breeders to cull out undesirable breeding ewes and maintain an approved sire whose breeding record is known at the head of the flock.

The grading of rams is now performed in eight out of the nine provinces. A total of 3,006 rams were graded in the present fiscal year.

WOOL GRADING

Centralized wool grading was again carried on at Weston, Carleton Place, Lennoxville, Fredericton, Truro, Charlottetown, and at several points on Manitoulin Island. Wool graders were again provided to handle the co-operative consignments of wool shipped for co-operative sale. The volume of wool graded in 1927 was somewhat larger than that handled in 1926. Canadian wools continue to show improvement in their preparation for market, the fleeces being well rolled and tied and the clip as a whole showing a very small percentage of rejects or low-grade wools. The growers were again charged with one-tenth of a cent per pound for grading service. The active demand which pertained throughout the year made it possible to move graded wools freely into the Canadian trade and for export purposes at prices slightly in advance of the previous year. The following table shows the amount of wool graded by provinces in 1927:—

Province	Range	Western Domestic	Eastern Domestic	Total
British Columbia.....	58,537	210,942	260,479
Alberta.....	1,154,145	338,036	1,492,181
Man. and Sask.....	226,557	434,705	661,262
Ontario.....	656,816	656,816
Quebec.....	91,427	91,427
Nova Scotia.....	61,175	61,175
New Brunswick.....	18,286	18,286
Prince Edward Island.....	20,986	20,986
Sundry Shipments.....	43,221	324,421	367,642
	1,482,460	993,683	1,182,111	3,648,254

PURE-BRED RAM CLUBS

To date a total of 103 ram clubs have been organized, six new ones being organized in 1927. Replacements for clubs already organized and rams required for new clubs organized amounted to 1,386 head.

Farmers in the district where Ram Clubs have been organized are coming to recognize the importance of the pure-bred sire in flock improvement and increased value of market lambs, so that it is only a matter of time until the pure-bred sire will be used on every flock in these districts.

SWINE

The past year was not as satisfactory to hog raisers as the previous one. Prices were considerably below the average of last year and although feed prices

have been considerably lower the margin of profit has narrowed to the point where only a small profit remains. The number of hogs marketed will show an increase of between 175,000 and 200,000 head. This increase was anticipated as a result of the relative margin between feed and hog prices which existed last year and which made pork production particularly profitable. This increase is noted in every province in the Dominion, with the largest increase in the western provinces. The year's increase is divided approximately as follows: Alberta, 20 per cent; Saskatchewan, 29 per cent; Manitoba, 16 per cent; Ontario, 25 per cent; Quebec, 7 per cent; Maritime Provinces, 3 per cent.

While there is a lot of hog feed available, particularly in Saskatchewan and Alberta, certain areas are short, particularly the province of Manitoba, where the oat and barley crops were almost a complete failure. At the moment hog prices are not satisfactory in relation to feed prices and unless there is a turn upwards during the fall months breeding operations will likely be curtailed.

There has been a surprisingly good demand for good breeding stock of bacon type. This is particularly true in the province of Alberta. Quebec province also shows considerable improvement in this respect. There are still too many young boars being used, but farmers and associations are gradually coming to appreciate the necessity for keeping in service tried sires of the desired type with good breeding records. The present period of narrow profits has seen less reaction to lower prices, thus indicating that swine production is becoming more stabilized.

The hog runs at the various stock yards are now showing decided bacon tendencies, indicating that the bulk of commercial hogs are out of bacon-breeding stock.

The export bacon market during the past year has been extremely unsatisfactory to Canadian shippers. Decreased purchasing power in Britain, accompanied by increased supplies coming forward from continental Europe has kept bacon prices at a relatively low level when compared with hog prices on this continent. This condition has made it almost impossible for Canadian packers to remain in the export business, consequently hog prices in Canada have been in continual adjustment with those in the United States. Fortunately, the quality of Canadian bacon is beginning to attract attention in the United States and our decrease in exports to Britain has been partly offset by increased exports to the south. Furthermore, consumptive demand in Canada has been maintained at its maximum or near it, with some increase due to consumption resulting from the tourist trade.

HOG GRADING

Early in the year the department called a conference of the packers, the producers' representatives, and provincial and federal officials to review the work being done under this policy. No general review of the work had taken place since the 1921 Swine Conference, when it was agreed that the basic price for hogs would be set on the thick smooth grade and that a minimum premium of 10 per cent over the basic price would be paid in favour of the select bacon grade. The 1927 conference dealt more particularly with the question of premiums and differentials. The meeting again approved of the principle of hog grading and felt it essential that the policy should be maintained and that it receive the support of the packing industry to the extent of purchasing and settling on a graded basis to as great an extent as possible, such graded settlement to provide as large a differential in favour of bacon hogs as is economically sound. The conference also decided that the initial differential between select and thick smooth prices should be one-half cent per pound and that this

differential should be reviewed from time to time by the Joint Swine Committee. The conference further thought it necessary that steps be taken to insure that the information regarding grade be carried back to the producer.

To give effect to this recommendation, the department by Order in Council P.C. 1787 amended Regulation 11, so as to make it necessary for drovers to either grade or mark for identification hogs purchased at country points. This new regulation has only been put into effect in Eastern Canada as the limited staff made it impossible to take care of the additional work involved all over the country. It is intended to apply this regulation to Western Canada as soon as the introductory work in the East is completed. Since September 17, 1927, the packers have been buying all hogs on a graded basis. This in conjunction with the introduction of the new regulation has tended to put hog grading on the best basis since its inception in the fall of 1922.

1923	3.67	0.16	1.17	1.52	0.14	100

The above table shows the percentage of each grade of hogs for the past five calendar years in each province in the Dominion and also summarizes these figures for Canada as a whole.

Statistics now cover five complete years of operation under this policy and reveal a steady improvement in quality. Unfortunately, the actual improvement in quality can not be fully presented by a statistical record as the average quality of the hogs in the Thick Smooth grade is now very much higher than in 1923.

BOYS' AND GIRLS' SWINE CLUBS

The Boys' and Girls' Swine Club Policy even after seven years of operation continues to be a big factor in swine improvement in the provinces of Prince Edward Island, New Brunswick, Nova Scotia, Manitoba, Saskatchewan, Alberta, and British Columbia. In these provinces, with the exception perhaps of Prince Edward Island, the demand for Swine Clubs continues to increase and as a result of clubs the community breeding of bacon type hogs is being established throughout these provinces. Following the organization of Swine Clubs, hog raising has been introduced on many farms where hogs were not previously kept. Much new interest has been created in the raising of bacon hogs and in the older clubs,

through the activities of members, the breeding of hogs has now reached the point where regular shipments to market are being made of hogs a high percentage of which are in the select bacon grade.

Each spring the Swine Clubs are responsible for the distribution of a large number of richly bred bacon type gilts. In most cases gilts are retained and become brood sows on the farms in which they are placed. Swine Club members are visited from time to time when such matters as proper feeding rations, feeding of dairying by-products, the growing of green feeds, proper location of pens and the provision of outside hog yards are discussed. In so far as possible members are kept advised of the progress which various members of their club and other clubs are making and in this way confidence is created and interest is maintained in the development and finishing of hogs at correct market weights. The improvement in the type of hogs marketed, from swine club districts, is the best testimonial for the effectiveness of this policy in laying the foundation for improved conditions as applied to both breeding and marketing practices.

The local Swine Club Fairs were again held during the year in each Swine Club district. These are proving a greater success each year as in addition to providing a medium for educational work in demonstrating hog grading, finish and market values, they are gradually demonstrating the importance of breeding operations so that carloads of hogs of the proper type can be offered for sale at regular and stated intervals. Each member exhibits a pair of hogs and in the older clubs where brood sows are kept litters of finished hogs are exhibited. In this way the members and parents have an opportunity to study the results of careful feeding and management. The importance of breeding is not overlooked and members who stand high in the classes at the various hog fairs invariably have no difficulty in selling their good female stock for breeding purposes to farmers in the district. The Swine Club Fairs also develop a knowledge in the art of exhibiting pigs and each year a larger number of Swine Club members are gaining sufficient confidence and experience to enter their stock for competition at county and other larger fairs. In addition to practical suggestions on feeding and management, Swine Club members are given instruction on the judging of hogs during the summer months, and at the local fair the members of each club compete in a judging competition. The two best judges from each club constitute a team to enter the Inter-Club Judging Competition for the province, this competition being held at a central point in each province. The Canadian National Railways and the Canadian Pacific Railway give the winning teams in the various western provinces free transportation to the Central Judging Competition and the winning teams for each province are the guests of the railways at the Royal Winter Fair, Toronto, where they again compete in a competition which includes judging and the giving of a demonstration on the export bacon market. As a result of judging work many Swine Club members are being trained in the art of judging. The trip to the Central Judging Competition gives at least two members from each team in each province a personal contact with the agricultural representatives and stockyard marketing facilities, while the trip to the Royal Winter Fair gives the winning team in each province an opportunity to visit the best live stock exposition on the North American continent.

In 1927 the swine clubs marketed fifty-six carlots of finished market hogs. Decker Swine Club in Manitoba had the distinction of again producing a carload of hogs with 100 per cent selects. Roland Swine Club in Manitoba also produced a carload with 100 per cent select bacon hogs.

The following table gives the number of carloads and the total number of hogs, and the percentage of select bacon hogs marketed by provinces:—

Province	No. of Clubs	Carlots Marketed	Total Hogs Marketed	Per cent Select Bacon Hogs
Prince Edward Island.....	3	3	89	60.1
Nova Scotia.....	25	22	867	57.0
New Brunswick.....	32	3	163	39.2
Manitoba.....	33	12	994	54.1
Saskatchewan.....	11	3	184	27.1
Alberta.....	17	13	881	24.8
British Columbia.....	9	83

The assistance in organizing and directing of Swine Clubs is taken care of by the agricultural representatives and agronomists of the provincial departments. Supervision and personal contact are carried on co-operatively between officials of the Dominion Live Stock Branch and the provincial Departments of Agriculture. Prize money for the local fairs is contributed one-third by the Dominion Live Stock Branch and two-thirds by the provincial Departments of Agriculture and the local districts. Prize money for the Inter-Club Carlot Competition and the Inter-Club Judging Competition is contributed by the Dominion Live Stock Branch.

BACON HOG FAIRS

Bacon Hog Fairs have continued to further swine improvement work, particularly in the provinces of Ontario, Quebec and Prince Edward Island. In the province of Quebec Bacon Hog Fairs are held in conjunction with Bacon Hog Clubs. These are authorized in districts where farmers' clubs have been organized and where approved boars are in use in the club district. Each Bacon Hog Club to qualify must market at least one carload of commercial hogs through its Bacon Hog Fair. In the provinces of Ontario and Prince Edward Island the Bacon Hog Fairs are organized in districts where it is considered necessary to revive interest in the keeping of bacon type hogs. Furthermore, they may be held in different seasons of the year with a view to influencing the period of hog marketing for the particular districts in which they are held.

These fairs make provision for both market and breeding classes and the prizes are derived from equal grants from the Dominion and provincial Departments of Agriculture, supplemented by local contributions.

The market classes are graded by an official grader as they are brought into the fair and the judging of both market and breeding classes is performed in such a way that the fullest and most complete information is available to all in attendance.

Through the Bacon Hog Fairs, community breeding of hogs is being definitely applied. In addition to featuring the production of market and breeding stock, they focus interest in prolificacy in brood sows, thrift and vigour in offspring, economy in production and ideal market weights and finish. The fairs also provide a medium through which farmers can purchase good gilts without going to excessive expense or trouble. Where possible Bacon Hog Fairs are held in conjunction with county or local agricultural exhibitions. As progress in community enterprise develops, it is expected that they will become established as a local institution operating on a self supporting basis and continuing to serve the farmer as a medium through which a high standard of quality will be maintained in the swine breeding stock of the community.

The following table indicates the number of Fairs held in 1927, together with the number of hogs marketed and the grading of same:

No. of Fairs	Market Classes	No. Selects	Per cent Selects	Price Received
Ontario—10.....	1,407	635	45.1	\$9.10-\$11.00
Quebec—60.....	6,447	1,334	20.7	8.10- 13.00

PURE-BRED SOW CLUBS

The Province of Quebec was the first province to organize pure-bred sow clubs. In the province there were a number of districts where there was practically no pure-bred stock and the swine breeders' association felt that it would be a distinct advantage to organize a group of pure-bred breeders in each of these districts. Accordingly eight of these clubs were organized in 1927, and twenty pure-bred Yorkshire sows were placed by purchase with farmers in eight different districts. The Swine Breeders' Association, the Provincial Department of Agriculture and the Dominion Live Stock Branch contributed equally towards prize money for the Club Fairs which were held in the fall.

At these fairs the sows were judged according to bacon standards. Many of the sows showed excellent development, good bacon conformation and plenty of breed character at the time of the fairs. A small percentage indicated a general lack of quality and type as required in pure-breds and a recommendation was made to the owners that such stock be sold for slaughter and replaced with pure-breds of approved quality.

It is probably too soon to make definite forecasts as to the future of these clubs. Present indications, however, point to the establishment of upwards of one hundred new breeders, many of whom are likely eventually to take an important place as pure-bred breeders of bacon-breeding stock in the province.

ADVANCED REGISTRATION FOR PURE-BRED SWINE

During the past few years, officers of this division have endeavoured to secure information which would make it possible to develop recognition for breeding stock that has proved its ability in the production of bacon hogs. The idea of a central testing station was tried out but the lack of detailed information relating to the breeding capacity of the stock submitted to test and also the lack of a proper means for correlating the information that was obtained, made it impossible to announce a program of work along this line, which would be satisfactory to conditions in all parts of the Dominion. For some time past, valuable information has been and is now being secured on the relative merits of breeding stock, by analysis of hog grading statistics. This has been developed in some districts with a view to showing the percentage of selects from the various boars in the district. This work has accomplished considerable good and has been made effective largely through the co-operation of various provincial organizations. The bacon hog competitions and conferences which were held at different points in the Dominion were also intended to direct the attention of breeders along the lines of performance in their breeding stock. It is interesting to note that in one competition, which was held in the fall of 1924, ten out of the fifteen prize-winning pairs in the carcass competition were either sons or daughters of grandsons and granddaughters of a certain boar. This fact thus revealed resulted in a keen demand for the progeny and descendants of this boar and was the result of a material improvement in the commercial hogs produced over a considerable area.

The question of evolving a practical policy which would encourage the building of authentic informative records concerning our pure-bred breeds of hogs was also before the Joint Swine Committee for some time. This committee after considerable study of the many problems involved, recommended to the department the establishment of an Advanced Registry Board for pure-bred swine, to work with officers of the department in developing such a policy.

As a result of the work already done, the department was impressed with the need of some policy which would be continuous and would result in the establishment of a permanent and informative record concerning our pure-bred swine. Furthermore, it was obvious that before any seal of approval could be placed upon breeding stock by means of special registration, information is required about the offspring of such animals, on the points of prolificacy, fecundity, hardiness, suitability of type and conformation and capacity to lay on flesh for a small amount of food. The lesson from Denmark demonstrates the vital importance of studying the methods of animal testing in all their bearings. The plant breeder, before he can compare the genetic yielding capacity of different varieties, has to study and evolve a satisfactory technique. There are certain factors which interfere with the accuracy of animal testing, and corrections for these must be determined and applied, so that the work which is carried out for the practical information of breeders can be interpreted in its proper way. The department therefore felt that it would be advantageous during the experimental development of such a policy, to have associated with the work representatives of the various interests concerned with improved registration.

The recommendation of the Joint Swine Committee was consequently accepted and a special board was formed on the invitation of the department. This board is under the chairmanship of the Chief of the Swine Division of the Live Stock Branch and is composed of the Dominion Animal Husbandman, two or three swine breeders, a representative of the National Live Stock Records Committee, a representative of the Industrial and Development Council of Canadian Meat Packers, and a secretary appointed from the officers of the Live Stock Branch. Its duties are to draft a policy and to advise the department in regard to its development and administration, the responsibility for which in the first instance rests with the chairman of the board.

This board has recommended the initiation of an experimental policy for pig testing and recording as the basis for Advanced Registration of Swine in Canada. The policy is to be experimental in its preliminary stages, inasmuch as opportunity will have to be provided for the establishment of corrections in accordance with the experience and information obtained. Furthermore, the practicability and advisability of incorporating record of performance data on our official pedigrees can thus be definitely determined.

The board's proposals have received the approval of the Department of Agriculture and a supervising inspector is being appointed to take charge of the work with such additional temporary help for inspection as is necessary. The department is also providing for the payment of express on pigs sent to slaughter tests, the purchase of stationery and equipment and the travelling expenses of inspectors and certain members of the board. It is proposed that these charges be kept at a nominal figure during the experimental stage of the policy, but the information thus obtained as to costs will prove of value in a future estimation of the practicability of this type of work.

BACON GRADING

Conditions in Britain during the year were not conducive to the introduction of a definite policy in connection with the standardization and grading of products for export. In view of the increased exports to the United States, with an ever-increasing tourist trade in Canada, some attention has been given to

devising ways and means whereby the merchandising of Canadian pork products could be improved within the Dominion and at the same time permit of greater popularization with the United States tourists. Steps are being taken to collect information fundamental to such a project. The British market during the close of the year has shown increased strength and it may be found advisable on the re-establishment of our trade with Britain to apply a policy of standardization already worked out, backed by advertising and publicity.

SHEEP AND SWINE DEMONSTRATION WORK

The amendment of the Hog Grading Regulations requiring drovers either to grade their hogs or, in lieu thereof, mark each individual farmer's lot, necessitated a large amount of additional hog grading demonstration work at country points, preparatory to drovers and shippers undertaking hog grading on their own account in accordance with the Hog Grading Regulations. As a result of this demonstration, work drovers have been trained in the art of hog grading practice, and upon assuming responsibility for grading under the regulations, have become regular and individual educational factors in educating the farmer as to the quality of his hogs in relation to the official grades. Local grading has also brought about a closer degree of purchase and sale on a graded basis at country points.

Local hog grading demonstrations and local grading on the part of drovers have done much to stimulate further the introduction of better breeding stock and a consequent improvement in the quality of commercial hogs.

The establishment of many new flocks of sheep on farms and ranches has developed a demand for a large amount of demonstration work at country points. While a great deal of the country has been covered in so far as demonstrations on dipping, docking, and castrating as well as sheep shearing and the preparation of wool for market are concerned, there is still much of the country that requires instruction and advice on these matters. The cuts on undocked and uncastrated lambs which now apply at stock yard centres have resulted in many farmers attempting to trim their lambs without expert advice and in a great many cases this has resulted in loss. In other cases farmers are diffident about performing these operations unless shown how and, in consequence thereof, there has been very little slackening off in the demand for these demonstration services.

The construction of hundreds of concrete dipping tanks has demonstrated that the permanent tank and community dipping is the most effective means of keeping the farm flock free of ticks and other external parasites. The low cost and serviceability of the concrete tank has stimulated the demand for their construction and, in consequence thereof, the present staff is hardly able to take care of the requests that are received from sheep-breeding districts for directions along this line. When dipping is done cheaply and effectively, farmers realize that it is essential for the production of good market lambs and better wool. The practice of annual dipping is now becoming general in many districts, especially those that have permanent tanks and where dipping demonstrations have been held. The expansion of the sheep industry is tending to create a bigger demand for sheep shearing demonstrations and instruction on the proper methods of preparing the fleeces for market. In order that the number of expert sheep farmers might be increased in the country, a number of special classes were held, these being well attended. Students from these classes are now contracting for sheep-shearing work in a number of districts, and where they operate the fleeces are properly rolled and tied. Encouragement is being given towards the organization of carlot shipments, thus reducing market expenses and tending to stimulate the consignment of wool for grading and co-operative sale.

SHEEP AND SWINE MARKETING COURSES AND SPECIAL MEETINGS

Series of sheep and swine marketing courses were again held during the year. Farmers in Eastern Canada were interested in the application of the new hog grading regulations requiring the local grading of hogs or in lieu thereof the marking of each farmer's lot of hogs, and this feature of the program no doubt accounted to some extent for the increased attendance at swine courses. Another feature which added much to the attractiveness, educational value, and general interest of both sheep and swine marketing courses was the demonstration cars supplied by the Canadian Pacific and Canadian National Railways in the province of Ontario. These cars made it possible to carry market classes of both sheep and hogs for the various courses. Demonstration material and all necessary equipment were available at all times.

These courses commence in the late fall, extending through until April. The program for the most part covers two days, although numerous courses are held of one-day duration. In Ontario many of the courses were held in conjunction with the regular short courses organized by the Ontario Department of Agriculture. The program for the first morning in the case of sheep usually consists of lectures and discussions on sheep raising in general, the breeds of sheep and points in connection with the establishment of flocks, feeds and feeding. At swine marketing courses, the first morning is usually devoted to a hog-grading demonstration, particularly where the date of the course has been arranged to coincide with a regular hog-shipping day. This gives the farmer an opportunity to study market requirements and market type in hogs, as well as getting acquainted with the official grades of hogs. Other matters dealt with at the sheep courses are: flock improvement and the production of market lambs, lamb grading, finishing for market, wool grading and co-operative wool marketing, the grading of lamb carcasses and how to cut a lamb carcass for the retail trade. Demonstrations are also given on shearing, dipping, docking, and castrating. At the swine marketing courses, markets at home and abroad are discussed in detail. Judging classes are used to demonstrate the type and quality of breeding stock necessary for the production of select bacon hogs. Feeds and feeding, including rations for the growing pig as well as rations for finishing purposes, buildings and equipment, and practical suggestions in hog management are also dealt with. Such courses appear to be of special interest to farmers, particularly now that the grading and co-operative sale of both hogs and lambs make it possible to relate market conditions back to the individual farmer in terms of dollars and cents. The demand for marketing courses and meetings was larger than ever in 1927 and the attendance reached as high as 300 at certain courses.

During the year a great many special and regular meetings were held in the various provinces. These meetings are called for the purpose of dealing with the application of policies, the organization of clubs and associations, organization of sheep and bacon hog fairs, the initiation of hog grading and other matters pertaining to the sheep and swine industry.

CO-OPERATIVE SHEEP AND SWINE MARKETING

The organization of co-operative live stock shipping associations continues to be an important phase of sheep and swine promotion work. In the Maritime Provinces, the organization of the Maritime Co-operative Live Stock Marketing Board has culminated in a centralized marketing organization, the live stock shipping interests of the three Maritime Provinces. Shipping clubs in each of the provinces which have been developed or local units still retain their local identity and in addition are represented through the Board of Directors in the Central Organization.

In all three provinces, promoters have done a great deal of personal contact work in order that the larger idea of central marketing might be developed in the minds of the farmers, thus resulting in the union of existing clubs and the organization of new live stock shipping centres.

In connection with live stock pooling in western Canada, there have been many problems confronting co-operative shippers, such as centralized grading and selling, shrinkage in transit, weighing at country points, careful handling by all interests connected with live stock marketing, a development of export markets and other problems requiring investigation which are local to Western agriculture. The sheep and swine promoters in these provinces have been actively associated with research as pertaining to all these problems.

In new districts and in outlying sections of provinces east and west, it has been necessary in numerous cases to introduce breeding stock or supplement stock already in the district with a view to stimulating production to the point where co-operative shipping associations could function to the benefit of the farmer. As a result of promotion activities, co-operative sheep and swine marketing is being extended to many new districts.

SIRE LOAN POLICY FOR RAMS AND BOARS

Loans of rams and boars were restricted to special districts and special circumstances. In Alberta loans of both rams and boars were rather heavy, due to a demand from foreign-speaking settlements for bacon type boars and pure-bred rams. Similarly, in Manitoba, loans of rams in particular were required in districts suffering from poor crop conditions. Sheep Clubs and Swine Clubs received loans to meet club requirements. There are at present 204 rams and 261 boars on loan.

SIRE PURCHASE POLICY FOR RAMS AND BOARS

Assistance in the purchase of breeding sires is a service which individual farmers and associations are coming to use more and more. In the province of Quebec ram purchasing delegates are appointed by clubs or districts and when orders for twenty-five or more pure-bred rams are required the purchasing delegate is able to reduce purchasing cost and at the same time secure better average quality of stock for the district. The newer and northern sections of the province find individual purchasing of live stock too expensive and are resorting more and more to the service which the promoter can render by purchasing through the Sire Purchase Policy. Closely associated with the purchase of rams and boars has been the selection and purchase of brood sows and breeding ewes. The policy is particularly adapted for newer districts or those distant from pure-bred breeding centres.

SHEEP AND SWINE EXHIBITS

Boys' and Girls Sheep Clubs were a special feature of the sheep and swine exhibit at the Canadian National and Royal Winter Fair, Toronto. The inside stationary exhibit which covered the Western Class "A" Fair circuit featured the necessity for developing a national liking for Canadian bacon and Canadian lamb within the Dominion. Pointing out that the consumer must be assured of quality and grade in product, a number of special exhibits were prepared during the year featuring wool grading and wool improvement, the ideal market lamb and the problems connected with lamb marketing, hog grading and the problems connected with the production of the select bacon hog, such as feeding and management, prolificacy, bacon type, etc. Ideal lamb carcasses and quality in bacon cuts, as applied to the Canadian trade, were also illustrated with a view to directing the consumer so that the demand for better quality meats would be increased.

GOAT PROPAGANDA WORK

The goat industry continues to expand, due to the ability of the goat to adapt itself to the varied conditions which obtain throughout the Dominion, and at the same time provide a source of milk supply for families under conditions where the dairy cow is an impossibility. The demand for breeding stock continued active throughout the year and many inquiries were directed to breeders of goats who were likely to have stock for sale.

Arrangements have been made with the Goat Breeders' Association for the initiation of the Record of Performance Test for milk goats and it is expected that applications will be received from a number of breeders shortly. It is very probable that within the next year a number of goats will be qualifying under the Record of Performance system.

Exhibits of goats at the three British Columbia fairs and at some of the larger fairs in the other provinces, particularly at the Canadian National Exhibition, Toronto, were very creditable, in fact exceeded all previous records, indicating that the goat breeders are alive to their opportunities and that the industry is due for further progress.

MARKETS INTELLIGENCE AND STOCKYARDS SERVICES

The Markets Intelligence and Stock Yards Services of the department are administered through the Live Stock Branch. These services represent the means by which the department promotes the marketing of commercial live stock in Canada. Annually about 1,250,000 cattle, 300,000 calves, 4,000,000 hogs and 500,000 sheep and lambs are liquidated through facilities and services under the supervision of the Dominion Live Stock Branch. The value of such marketed stock varies between \$125,000,000 and \$130,000,000 per annum.

The present condition of the live stock industry is most encouraging and the market strongly on the upgrade, especially for all classes of farmers' cattle. The assistance provided by the department has done much toward stimulating confidence in production.

The marketing services supplied through the branch are designed to stimulate production and trade through the following media:—

Through the Live Stock Commissioner, regulations are being enforced, governing the construction, maintenance and operation of public stock yards throughout the Dominion, and the methods employed in the actual sale and purchase of all live stock marketed at such yards. As well, the Markets Intelligence Service makes available to producers and trade, detailed information as to supply and demand of commercial live stock marketed at, or passing through, any or all of these yards. Further, this service includes a bureau of broad and detailed intelligence in regard to general live stock and meat trade, both domestic and foreign, and issues daily, weekly, monthly and annual reviews and comments on supply and demand on domestic and foreign markets.

The stock yards duties are discharged by qualified officers of the branch stationed at each of the public stock yards. These yards, nine in number, are located at the following places: Calgary, Alta.; Edmonton, Alta.; Saskatoon, Sask.; Prince Albert, Sask.; Moose Jaw, Sask.; Winnipeg, Man.; Toronto, Ont.; East End, Montreal, P.Q.; and West End, Montreal, P.Q.

The market data and allied information are obtained through co-operation as between the stock yard agents and their assistants and the Markets Intelligence editorial and statistical staff at headquarters.

During the past year total live stock values have been advancing and have exceeded those of the previous year by a considerable amount. Average returns on the rank and file of the cattle offerings have been eminently satisfactory during the greater part of the market period. The market conditions influencing

the sale of this stock were analyzed for the benefit of producer, trader and consumer, and also permanent statistical records made of each purchase and sale, for future reference.

The chief activities of the services are hereunder enumerated.

Enforcement of regulations, as provided under the Live Stock and Live Stock Products Act, resulting in—

- (a) The bonding of commission men, operating on public stock yards;
- (b) The operation of live stock exchanges under Government supervision;
- (c) The regulation of service charges;
- (d) Improvement in and supervision of the accommodation provided for live stock; and
- (e) The regulating of the quality and cost of feed supplied.

Officers of the branch located at the Central Stock Yards at Montreal, Toronto, Winnipeg, Calgary, Edmonton, Prince Albert, Moose Jaw and Saskatoon, graded for publicity purposes all live stock offered for sale, obtained detail as to the selling price, origin and disposition of the stock, and, as well, the general condition of supply and demand.

The stock yards officers supplied the press with daily market news, letters and representative live stock sales. These, together with the weekly, monthly and annual analyses of supply and demand, have practically eliminated all other markets information services. Accurate analysis and quick service has in this way taken place of the often contradictory and ambiguous statements of market conditions formerly in circulation.

The Inter-Stock Yards Telegraph Service inaugurated during 1919 was continued throughout the year. Telegrams are prepared by each stock yard agent after a careful analysis of the condition of trading and are wired each day as soon as the market is established, to the other stock yard agents. Previously, only those who could afford a telegraph service were able to benefit through immediate knowledge of the day's trading conditions at other than their own market.

The Daily Press Telegraph Service, inaugurated in 1919, is being continued. This consists of analysis of the conditions of supply and demand, telegraphed each day over the Canadian Press Limited, for publication in the daily news press of Canada. These wires are prepared by the officers at each of the yards at 11 a.m. and 4 p.m. daily, and appear the same evening and the following morning in practically every evening and morning paper in Canada.

The Weekly Markets News Service is being provided to the agricultural press of Canada, to district representatives of agriculture, to a selected producers' mailing list, to the various provincial Departments of Agriculture, and to the British and American trade. This service consists of an analysis of live stock supply and demand, comments on prospects for future markets, statistical tables showing the grading, numbers, average price, price range for bulk of sales and top prices of all live stock offered for sale, the disposition and comparative receipts of the same, the grading of hogs under the Hog Grading Policy and the exports of live stock to foreign countries.

To meet a growing demand for the same, the Markets Service undertook in March, 1925, the translation into French of the commentary section of the weekly Live Stock Market Report. The French edition is being mailed to the French press, agronomes in Quebec and to a list of live stock producers who have requested the report.

A special report on the opening market of each week is prepared by the stock yards representatives and sent to the farm press in time for publication in the current issue.

Each month publicity is given to the live stock industry by the distribution of information on domestic and foreign crops, weather conditions, live stock and allied industries.

Memoranda on production, distribution and consumption of live stock and live stock products, both domestic and foreign, are prepared for the information of officers of the department and outside parties.

This service continues to build up an information bureau on the statistical position of the live stock industry, general conditions under which live stock production is undertaken, the foreign live stock situation, world's animal food-stuffs situation, the condition of the import and export trade in live stock and live stock products and the financial conditions influencing the industry.

The service is recording the point of origin, class, grade and sex of all stock offered for sale at stock yards. These records cover the sales during the past six years and are compiled in such a way as to be of value in estimating the condition and extent of the marketable surplus, either locally, provincially or for Canada as a whole. A monthly statement is sent to each of the agricultural representatives in the various provinces of Canada, showing the shipments from his particular county, in detail, to public stock yards, abattoirs and on export.

The inspected packing plants throughout the Dominion continue to supply weekly statements as to their country purchases. As a large percentage of the total annual slaughterings by inspected establishments are not sold on the public market, the information obtained is indispensable to a complete survey of the supply and demand situation.

Through arrangements as between the Department of Agriculture and the Department of Customs, the branch records and issues information covering the origin and destination of all classes of live stock exported from the Dominion. This information completes the record of the total movement of Canadian live stock during any period of the year and allows for the working out of formulae on which to estimate probable production and distribution.

A weekly cable service of the British market for Canadian cattle and bacon is telegraphed by the division to the Canadian newspapers. The information is being supplied by the most reliable operators on the markets at Glasgow, Liverpool and London. These cables are elaborated in the Branch and given the widest publicity possible through the medium of the Associated Press of Canada and our periodical publications.

A daily wire service is operated between the stock yards officers and the United States markets, with a view to obtaining exact and immediate knowledge of the prospects for export. Considerable financial benefit to the live stock industry is resulting from this service, shippers now being better able than heretofore, to estimate the margin between domestic and foreign market prices before making shipment.

The Eighth Annual Review of the Live Stock and Meat Trade Situation has been published and distributed.

The Eighth Annual Report of the Origin and Grades of Commercial Live Stock has been published and distributed.

The policy whereby immature calves offered for sale on public stock yards, are subject to condemnation, was again administered by the Live Stock Commissioner through the stock yards representatives. This policy has been effective for a number of years and has resulted in marked improvement in the quality of veal offered for public consumption.

The markets staff is taking care of the compilation of the statistical information in connection with official hog grading under the federal Hog Grading Policy. The stock yards agents co-operate with the hog graders in promoting satisfactory development of grading of hogs at the yards.

The stock yards agents have extended their activities toward promoting familiarity with required market types of live stock. On request, the agents have addressed meetings, paid visits to farms for the purpose of grading the stock into the various classes and, as well, have encouraged the clearance of unsuitable feeding stock and the purchase of that of good feeding type and quality.

A radio markets and agricultural news service, developed during the spring of 1924, has been appreciably extended. Under arrangements with the Canadian National Railways Radio Department, the Markets Service broadcasts the latest reports on the live stock markets in Canada twice each week, supplementing the live stock, poultry, farm produce, crop and weather reports with talks on farm practices and general agricultural developments. At present, this service is being broadcast weekly from the following cities: Moncton, Toronto, Montreal, Winnipeg, Calgary, Edmonton, and twice weekly from Ottawa. In addition, daily noon reports are broadcast from Moncton, Montreal, Toronto and Winnipeg, giving a summary of quotations on the same morning's markets. During the present fiscal year, daily afternoon broadcastings are being made from Ottawa. Live stock markets, dairy produce, eggs and weather report data make up the programs and they are specially designed to be useful to the producers in Eastern Canada.

During 1928-29, this division will confine its efforts to enlarging further the projects already in operation.

THE SEED BRANCH

The Seed Branch encourages the production of superior seed; maintains laboratories for testing seeds, feeding stuffs and fertilizers; supplies markets information; provides an inspection service to grade seed, hay and straw; and administers the Seeds Act, Feeding Stuff Act, Fertilizers Act, Inspection and Sale Act, and Agricultural Pests' Control Act. The branch organization includes four main divisions, and for the enforcement of the Acts, Canada is divided into six inspection districts.

THE LABORATORY DIVISION

With the increased scope of the control work carried on by the Seed Branch, the laboratory division is extending its activities from year to year. Originally equipped for seed testing only, it now offers facilities for microscopical and chemical analyses of feeding stuffs and fertilizers, and the testing of binder twine and other commodities controlled by the Inspection and Sale Act.

The work of the whole division was formerly carried on in the central laboratory at Ottawa; but the large number of samples and the need for prompt service made necessary the establishment of other seed laboratories. During the past year 54,146 samples were received in the five laboratories situated at Ottawa, Quebec, Toronto, Winnipeg and Calgary. A new laboratory is being equipped at Sackville, N.B., to serve the Maritime Provinces. Samples originating in this district have been analyzed at Ottawa. Feed and fertilizer samples are submitted to micro and chemical analysis at Ottawa.

The following table shows the number of samples received in each laboratory during the past year, and their sources:—

	Trade	Customs	Official	Total
Quebec.....	3,145	1,361	271	4,777
Ottawa.....	6,740	1,660	2,374	10,774
Toronto.....	7,527	4,089	1,323	12,939
Winnipeg.....	12,200	1,652	627	14,479
Calgary.....	9,533	1,375	269	11,177
Totals.....	39,145	10,137	4,864	54,146

Trade refers to samples sent in by merchants, farmers and institutions.

Customs refers to samples taken by Customs or Seed Branch officials in accordance with the provisions of the Seed Importation Regulations.

Official samples are those taken by inspectors from lots which are sold or offered for sale and suspected of violating the Seeds Act.

The samples are analyzed for purity and tested for germination, the two main factors on which the grades provided under the Seeds Act are based. In the following table the number of purity and germination tests are shown for each laboratory:—

	Purity	Germination	Total
Quebec.....	4,726	3,365	7,891
Ottawa.....	5,810	6,963	12,773
Toronto.....	10,870	9,238	20,108
Winnipeg.....	8,360	11,774	20,164
Calgary.....	3,869	11,561	15,430
Totals.....	33,465	42,901	76,366

One of the greatest difficulties in this division is the very uneven distribution of the work over the year. Naturally most of the samples are received between the harvest and seeding time, but January, February and March are always much busier months than November and December. The following table shows the percentage distribution by months of all the tests made in the laboratories:—

	Purity	Germination
January.....	14.0	15.3
February.....	17.0	19.7
March.....	20.6	20.1
April.....	11.7	9.6
May.....	7.2	5.6
June.....	4.4	3.5
July.....	1.5	1.1
August.....	2.8	1.4
September.....	2.5	2.2
October.....	3.7	3.5
November.....	5.9	7.8
December.....	8.7	10.2

The nucleus of a permanent staff is maintained, and as far as time permits investigations are carried on during the summer months. Each laboratory has definite projects which aim at improving the methods of seed testing or are of direct importance to agriculture in the particular district. Four major papers were published on this work during the year, and other projects were brought nearer to conclusion. The inspection division relied on the laboratory staff for help in many of their investigations, notably a number of seed drill

surveys which were made to ascertain the quality of seed used by the farmers. The results of these surveys serve as excellent material for better seed campaigns which are carried on in co-operation with the provinces.

EDUCATIONAL AND OTHER ACTIVITIES

The distribution of the several sets of weed seed collections has been continued. Reprints of papers on investigations were widely circulated. The educational exhibits which were prepared for a number of winter fairs attracted favourable comment from farmers and other interested parties.

The seed trade has an eminently international aspect by reason of the localized nature of seed production, particularly for many kinds of forage crop and vegetable seed which are distributed from certain centres all over the world. In order to allow an unhampered distribution of suitable seed, and to check undesirable practices in international trade, it is highly necessary that methods of seed testing be uniform all over the world, and that seed testing stations keep at all times in close contact with each other. For this reason considerable time was spent by officers of the laboratory division on several projects advanced by the International Seed Testing Association, notably the drafting of international rules for seed testing.

Four series of referee samples were analyzed in each of our laboratories in co-operation with some seventy seed-testing stations all over the world, in order to further the uniform application of the rules and facilitate the international trade in seeds.

MICRO-ANALYSIS OF FEEDING STUFFS AND FERTILIZERS

During the past year 1,285 samples were analyzed microscopically. Most of the samples were sent to the laboratory by the inspectors. They may be classified as follows:—

Mixed feeds.....	472
Manufacturers' by-products.....	248
Mill feeds.....	397
Screenings, etc.....	91
Chops.....	70
Fertilizers.....	25
Tonics.....	2

The mixed feeds were found to require continual checking, as many of them differed from the registration claim in at least one ingredient. For the most part, however, the materials used as constituents were found to be of excellent quality.

As a result of feeding experiments, manufacturers are adding to their formulæ materials such as cod liver meal, yeast, iodized salt, and mineral substances.

The greater number of by-products examined were for abattoirs or fisheries. Most of them were quite good, but the adulteration of meat meals of high protein content, by the addition of hoof meal or blood meal, was detected in some cases. The majority of other by-products were as claimed. Variations in manufacturing processes and broad definitions tend to make some of them, notably the oat by-products, show a wide variation in composition and feeding value.

Most of the mill feeds, chops and screenings were of good quality. A few very dirty mill feeds were sent to the laboratory by dealers. One bran examined had almost fifty per cent of foreign material. This was a most unusual sample. During the past few years these products have been clean and fairly uniform.

The examination of fertilizers was a new development. These had all aroused the suspicions of inspectors or of consumers, and most of them were found to differ from the manufacturers' claims, many containing worthless materials as adulterants.

In addition to the general routine, investigations have proceeded for the discovery of new methods to facilitate the work of analysis.

CHEMICAL ANALYSIS OF FEEDING STUFFS AND FERTILIZERS

There was a hundred per cent increase in the number of analyses made at the Ottawa laboratory. Most of the samples were taken by the inspectors throughout the Dominion, but a number were received from farmers and manufacturers, who are charged a fee of five to fifteen dollars, according to the number of analyses required.

The samples received may be classified as follows:—

Feeding Stuffs—	
Mixed feeds.....	619
Bran.....	165
Shorts.....	161
Middlings.....	94
Feed flour.....	48
Screenings, sculpings and scourings.....	95
Tankage, meat and fish meals.....	119
Oat hulls and by-products.....	57
Other cereal by-products.....	93
Oilcake meals.....	55
Miscellaneous.....	77
Total.....	1,583
Fertilizers—	
Mixed.....	86
Pure salts.....	105
Tankage, bone meal, etc.....	72
Basic slag.....	27
Acid phosphate.....	21
Miscellaneous.....	15
Total.....	326

The quality of feeding stuffs and fertilizers is dealt with in the contributions from the respective divisions. The chemist gave evidence in two court cases arising out of the analyses. Moisture determinations were made on flour shipments to the Orient.

THE AGRICULTURAL PESTS CONTROL ACT

Another forward movement in controlling the sale of agricultural materials was made at the 1927 session of Parliament, when an Act was passed to regulate the sale and inspection of agricultural economic poisons. Hitherto there had been no control over these materials and numerous complaints were being received, not only from gardeners and fruit growers but from reputable manufacturers who desired protection from certain spurious articles which were appearing from time to time on the market.

Agricultural and horticultural organizations, officials of the Department of Agriculture, and representatives of the trade were consulted before the framing of the bill, which came into force on October 1, 1927. Canadian manufacturers and dealers were given until July 1, 1928, to dispose of their stocks of materials and labels on hand, but all foreign manufacturers were required to comply with the law without any time allowance.

A "poison" is defined as "any substance or admixture of substances represented as a means for preventing, destroying, repelling or mitigating any and all fungi, weeds, insects, rodents or other plant or animal pest collectively or individually affecting agriculture." This includes insecticides, fungicides, germicides, weed killers, rat and gopher poisons, and sheep dips.

No person may manufacture, import, advertise or in any manner offer for sale any brand of poison unless it has been registered with the Department and assigned a registration number. Application for registration may be made by

either the manufacturer, importer, or vendor, on forms which are supplied for that purpose. Each application must be accompanied by the registration fee, which is twenty dollars. If the applicant be non-resident in Canada, he must appoint a Canadian representative who will be held responsible for due compliance with the provisions of the Act and regulations made thereunder.

The minister is given power to refuse registration of any poison if in his opinion the brand name is deceptive or misleading with respect to the guaranteed analysis, ingredients, or method of preparation; or if the analysis or ingredients are approximately the same as another brand registered by the same manufacturer; or if it is unsuited for the purpose for which it is sold or represented; or if it is harmful to vegetation (except weeds), domestic animals, or public health, when used according to directions.

When a brand of poison has been assigned a registration number it may be manufactured, imported, sold, or advertised for sale in Canada during the period continuing from the date of its registration until the first day of January following. Registration of a poison may be renewed from year to year without any change in the registration number upon payment of the renewal fee of twenty dollars, providing no change is made in the guaranteed analysis or in the ingredients. Registration may be cancelled if any of the provisions of the Act or regulations are violated, or if subsequent to registration the poison has been found to be of doubtful value. Importation of any poison may be prohibited if in any way its sale would constitute an infraction of the Act or regulations.

When poisons are in packages a tag or label must be durably attached thereto giving the name and address of the manufacturer, the brand name, the registration number, the word "poison" with the skull and cross bones, the guaranteed analysis, and the net quantity by weight or volume in avoirdupois or imperial measure. If the material is sold in bulk the information must be furnished to the purchaser in writing by the vendor.

The minister has power to appoint an advisory board which may at his request prepare such regulations as may be deemed necessary under the Act.

The Board recommended a number of regulations which were established by the minister. The more important of these are outlined as follows:—

In arsenical poisons the water soluble arsenic shall not exceed 1.25 per cent in Paris green and arsenate of lime, 0.50 per cent in arsenate of lead, 0.25 per cent in all other preparations or combinations of arsenical materials when used as an insecticide on foliage.

A list of poisons and their antidotes is given. The printing of the antidote must be in both the English and French languages. The information required to be stated on the tags or labels must be printed in not less than 7-point type, or if stencilled on barrels, bags, etc., the letters must be one inch high.

The manner in which the guaranteed analysis shall be stated is given in detail. All metallic poisons must be stated in their atomic form, and in the case of arsenical preparations the water soluble arsenic must also be stated.

Over 160 registrations have been issued and applications are still being received at the end of May, 1928.

THE SEED DIVISION

The work of the Seed Division consists in part in the study of foreign and domestic seed legislation, also of the import and export regulations in effect in all countries exporting or importing seeds. This study is made with a view to drafting new or redrafting existing control measures to be submitted for the Minister's consideration. The division deals primarily with the operation of the Seeds Act and regulations thereunder. Attention is given to seed production, to seed supply, as between districts and provinces, and to international trade in seeds of all kinds.

THE SEEDS ACT

The Advisory Board operates under the chairmanship of the Seed Commissioner and includes an equal representation of seed growers and seed merchants and one representative from the Agricultural Committee of the House of Commons.

Recommendations were made by the board, and approved by the minister, embodying such changes in the minima of quantity with respect to both purity and germination as were believed should be applied to certain kinds of seed for the ensuing year in order that adequate stocks might be secured for the Canadian trade. The principal changes refer to standards of purity for domestic red clover, alfalfa and sweet clover under table 2 of the regulations. An increase in the number of noxious weed seeds was allowed in grade No. 2 to permit of cleaning to this grade a larger percentage of the Canadian seed crop. Under table 1 changes were made with respect to the grade standards for cereals, particularly oats. In defining the tolerance that may be allowed for grade Extra No. 1 in respect to freedom from noxious weed seeds, "free", as applied to the grading of oats, is interpreted to mean a tolerance of one wild oat per bushel. Under the standards for grade No. 2 a minimum of ten seeds of wild oats and one other secondary noxious weed seed is permitted in oats, barley and rye. The minimum percentage germination for seeds of vegetables was altered as found necessary for certain kinds with a view to facilitating the entry into Canada of imported lots of seed.

The classification of weed seeds was amended for 1927 by transferring bladder campion and white cockle from the primary noxious to the secondary noxious class, in order to make possible the grading and retaining of Canadian-grown supplies of red clover seed for the home market.

Owing to the shortage of the Canadian alfalfa seed crop in 1927 the seed importation regulations in respect to the colouring of alfalfa seed were revised to provide for the colouring of all imported alfalfa seed 10 per cent red, excepting seed originating in the States along the Canadian border and in Utah, Wyoming, and South Dakota. Seed from these States, when certified and sealed by State officials, may be permitted entry into Canada if 1 per cent of the seed in each container is coloured orange. This exception was allowed in order to differentiate between seed originating in districts with climatic conditions similar to Canada and that from districts where seed is grown under less hardy conditions.

Control measures included under the Seeds Act prohibit the use of false or spurious names and misrepresentations as to variety or description of seeds or plants in any form of advertising or otherwise. Variety names for particular kinds and varieties generally employed in Canada during the year ending March 31, 1923, are allowed, and provision is made for the licensing of new variety names on the basis of a report made by any plant specialist designated by the minister for the purpose of making the required test or examination. A number of tests have already been made, and since the inception of this work the following new variety names for the kinds specified have been licensed for general use in Canada:—

Kind of Seed	Variety Name
Beans.....	Dwarf No. 301
	Excelsior Climbing French
	Golden King
	Nancy D.
	O.A.C. No. 211 Soy Beans
Cabbage.....	Golden Acre
	Penn. State Ball Head
Chicory.....	Small Rooted (Radichetto)
Corn.....	Banting
	Sunshine

Kind of Seed	Variety Name
Cucumber.....	Colossal Green Pack The Vaughan Windermoor Wonder Lake Champlain
Muskmelon.....	Florida Broad Leaf
Mustard.....	Dashaway
Pea.....	O.A.C. No. 181 Field Pea Early Giant (Harris) World Beater
Pepper.....	British Queen
Potato.....	Twenty Day Forcing
Radiash.....	Ruby
Rhubarb.....	Princess Juliana
Spinach.....	Yellow Garden
Swede turnip.....	White Garden
Tomato.....	Canadian Marglobe Red River
Flax.....	Winona
Oats.....	Gopher O. A. C. No. 144 Oats White Cross No. 19
Rye grass.....	Fyra
Timothy.....	Swallow
Wheat.....	Axminster Brownhead (Broatch's) Early (Broatch's) Golden Ball Michikoff O.A.C. No. 85 Spring Wheat Red Bobs No. 222 Renfrew Vermilion Whitehead (Broatch's)

Work in connection with the establishing of a standard list of variety names has culminated in the publishing of an "Official List of Established Variety Names, 1926". The list includes 226 distinct varieties of merits which were selected from 2,425 variety names advertised or used in Canadian seed catalogues in 1923. Revisions and additions will be made when necessary to include recognized new varieties.

Progress is being made in establishing standard varietal descriptions and type photographs of field root and garden vegetables. Investigations to date would indicate that as a result of the variations shown in field tests of the so-called same variety of some kinds, it will be impossible to arrive at anything definite with respect to these varieties until Elite stock seed has been produced. This applies particularly to vegetables. When stock seeds are multiplied, Canadian-grown vegetable seeds should be even more popular than at present. Their adaptability to Canadian conditions, combined with genuineness of stock and true-ness to variety names, should increase their demand and cause this seed to command a premium in the market. A survey of vegetable seed production in the Pacific coast states was made by the Chief of the Seed Division during the summer of 1927. Information was gathered on the growing and cleaning of these seed crops, which will be of assistance to vegetable seed growers and will serve as a guide in preparing seed importation regulations under the Seeds Act for consideration of the Advisory Seed Board.

AMENDMENTS TO THE SEEDS ACT

Suggested amendments to the Seeds Act were prepared following the recommendations received from seed growers' organizations, the Canadian Seed Trade Association, and the Advisory Seed Board in conference with Seed Branch officials. These amendments were embodied in An Act to Amend the Seeds Act, which with a few minor changes was passed by Parliament on June 11, 1928.

The principal amendments included a change in the names of certain grades of seed; provision for the withholding of a license to sell new varieties of cereal grains if such are found to possess such inferior qualities or characteristics as to impair their value for commerce; the giving of power to the minister to change a variety name when it is found in the public interest to do so; a change in the provisions governing the importation of seeds so that they may apply to seeds, named in section 5 of the Act, imported for the purpose of selling or offering for sale or for the purpose of seeding, or any kind of garden or vegetable seeds that may be prescribed by regulation unless they are branded, marked or coloured in accordance with the provisions of the Act and conform to the regulations thereunder. A few minor amendments which experience has shown to be necessary were made in order to overcome difficulties in the administration of the Act.

SEED GRADING

The principle upon which the Seeds Act is based is that of established grade names with provision for grade definitions to be prescribed by regulations made by the Minister of Agriculture. The grading of practically all seeds sold for seeding purposes constitutes an important part of the seed control work and requires the services of a large staff of inspectors during the season when seed stocks are being assembled and cleaned at central plants and on growers' premises. A seed grader also operates at each district office where large numbers of control and customs samples are received. The wide domestic and export trade in graded seeds makes it imperative that all grading be done uniformly, and in order that standards of quality for each season may be arrived at with a full knowledge of available seed supplies and requirements, one officer exercises general supervision over seed grading in the several inspection districts.

Provision is made for the compulsory grading of nearly all kinds of seed, and while field root and garden seeds may be sold under a guarantee of minimum quality, yet the grading of these seeds is steadily growing in favour. In applying the grade definitions which have to do with the minima of general quality for the several grades as influenced by seasonal conditions, it is important that the standards be fixed at levels which will ensure an adequate supply of seed, particularly of the higher grades. With the broad expanse of our agricultural areas, and untoward climatic conditions which prevailed over sections of Eastern and Western Canada during the growing and harvesting seasons of 1927, a very difficult situation was encountered in arriving at satisfactory quality standards for cereals, alsike clover, and alfalfa. For some of the cereals it was considered expedient to adopt the standards of the previous season. For alsike clover and alfalfa they were materially lowered. Red clover and sweet clover seed, however, were found to be of superior quality to that produced the previous season, and these standards were raised considerably.

The grading of seed for commerce on the basis of control samples received at district offices continues to increase in volume. Control sample certificates are issued in the names of the senders of the samples, and these are authority for offering under a grade name and a control sample certificate number the seed lots represented. A control sample certificate is defined as "A certificate that is issued on a control sample of seed received for analysis and grading at the office of a district inspector." This means that the full responsibility of sampling the seed lot purported to be represented by the control sample rests with the sender, and that in making sales he must maintain the quality up to the standard of the control sample. As indicative of the volume of work and responsible duties involved in grading agricultural seeds and in checking seed importations, it may be stated that 52,308 samples were recorded, tested and graded at inspection points during the year. The total amount of seed represented by these samples would be several millions of bushels.

The quality of seeds of the kinds listed in the following table and represented by control samples is indicated by the percentages coming within the several grades. A separate division is made of the factors "purity" and "germination," and the sources of origin are indicated by the percentages stated under the headings "Farmers," "Merchants" and "Institutions."

	Source			Purity				Germination

Vegetable seeds whose germination falls below a certain minimum must be labelled to show the actual germination.

The service of inspection, grading and sealing of seed lots in containers is also making an increased demand on the time of our inspection staff. For seed

so graded and sealed a Seed Inspection Certificate is issued. This certificate is defined as "A Certificate given by an inspector on seeds sampled, examined and graded by him, or under his direction." Every seed lot accepted to grade Registered or Extra No. 1 was derived from a seed crop for which a Crop Registration Certificate was issued by the Canadian Seed Growers' Association. Canadian-grown seed inspected, graded, and sealed in the sacks commands recognition in domestic and foreign markets. There were inspected and graded at central cleaning plants and on growers' premises the following kinds and quantities of seed:—

Kinds of Seed		Registered	Extra No. 1	No. 1	No. 2	No. 3
Wheat.....	bushels	36,875	40,766	24,977	3,365	3,029

Regulations which govern the importation of seeds have a very important bearing on Canadian seed supply. They are applied in co-operation with Customs officials so that no serious inconvenience is caused importers. They embody control measures equivalent to those of other countries, and their operation precludes the admission of seed of a quality which could not be legally sold in the country of origin. During the year 15,757,158 pounds of seed were entered at ports of entry under these regulations. The following table includes the principal kinds and quantities of each, with countries of origin:—

Kinds of Seed	United States	British Isles	New Zealand	Holland	Germany	France	Denmark
	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.
Alfalfa.....	62,970

China supplied 1,179 lbs. vegetable seed, Japan 1,193 lbs., Hungary, 7,550 lbs., Italy 85 lbs., and Switzerland 677 lbs. Poland supplied 176,730 lbs. of red clover seed, and Prussia 206,330 lbs.

SEED PRODUCTION

It is generally conceded that the best seed for Canadian conditions is that produced in our own country. The Seed Division, therefore, co-operates with the provinces in conducting field crop competitions, combined seed crop and cleaned seed competitions, seed fairs, and provincial seed exhibitions, and makes subvention payments to the Provincial Departments of Agriculture for this account. Some changes were made in the plan for payment of these subventions in 1926, and the maximum amount made available from the Seed Branch appropriation for each of the competitions is shown as follows:—

Standing field crop competition.....	\$ 50 00
Combined seed crop and cleaned seed competition.....	200 00
Local seed fair.....	50 00
Provincial seed fair.....	600 00

The total amount of subvention must not exceed \$1,200 to each province having less than one million acres under field crops, and \$1,200 pro rata for each additional million acres under cultivation in field crops, provided that the total subvention to which any province is entitled shall not exceed \$1,200 pro rata per 100,000 of total population.

Provincial Departments of Agriculture are paid these subventions up to one-half of the prize money actually paid by the provinces. The payments are governed by regulations which have been amended from time to time for the purpose of improving the quality and increasing the quantity of the seed supply. Several millions of bushels of improved seed are produced annually as a result of these competitions and seed fairs.

From 1912 until 1926 subventions were paid by the Federal Department on the basis of two-thirds of the prize money, but with the revision of regulations requiring registered seed stocks for the combined seed crop and cleaned seed competitions, the Seed Branch has performed the inspections, the organization and other judging expenses being borne by the provinces, the total expenditures as paid by each province and the Dominion being thus approximately on a fifty-fifty basis.

The amounts paid by the Seed Branch to the provinces during the fiscal year were as follows:—

	Standing Field Crop Competitions		Combined Seed Crop and Cleaned Seed Competitions	
	Number	Amount	Number	Amount
Prince Edward Island.....			3	\$ 600 00
Nova Scotia.....				
New Brunswick.....			10	488 00
Quebec.....	121	\$ 5,700 00	54	5,000 00
Ontario.....	117	7,160 50	32	3,770 00
Manitoba.....	35	1,475 00	2	345 00
Saskatchewan.....	55	4,010 50	3	457 50
Alberta.....	4	310 00		

	Local Seed Fairs		Provincial Seed Fairs	
	Number	Amount	Number	Amount
Prince Edward Island.....				\$ 170 00
Nova Scotia.....			*1	170 00
New Brunswick.....	2	\$ 105 23		170 00
Quebec.....			1	600 00
Ontario.....	7	202 00	2	1,266 50
Manitoba.....	17	845 00	1	600 00
Saskatchewan.....	38	1,032 80	2	1,000 00
Alberta.....	14	536 75	2	403 50

*Maritime Seed Fair.

While amounts of subventions shown were paid during the fiscal year, such amounts were not all due on account of seed fairs and crop competitions held or conducted during that time. Some payments were made in the case of delayed subventions claims in order that all such claims might be brought up to date, and because amounts actually due these provinces had not previously been used.

In the case of British Columbia an annual grant of \$2,500 is paid towards encouraging the production and marketing of field root and garden seeds. The Provincial Department of Agriculture authorizes the expenditure of an equal amount for this purpose.

The production of high grade seeds in Canada is steadily increasing in importance. Canadian-grown seeds command recognition on foreign markets by virtue of their inherent qualities of winter hardiness and vigour of growth, and because our standards of quality for graded seeds of all kinds are so highly regarded. Stocks of high-class seed of wheat, oats, barley, alsike clover, sweet clover, brome, Canadian blue, and browntop were available for export last year. There was a gratifying increase in the production of timothy seed in Alberta. In British Columbia the yield was somewhat less than the previous year. Average imports of this seed are about 5,000,000 pounds annually, but with further encouragement Canadian production will soon be equal to our requirements. Alfalfa seed showed a decrease in production due to adverse climatic conditions. Only enough seed was produced, together with the carry-over from the previous year, to meet home needs. Red clover seed production in Quebec, Ontario and British Columbia is increasing from year to year, due to encouragement given by the Dominion and provincial Departments of Agriculture and the demand for hardy, home-grown seed. Alsike seed production in the older districts of Ontario is keeping up in quantity, but not in quality. The newer districts of Ontario and Quebec are producing small supplies of cleaner seed. Tests are being conducted in Northern Manitoba and Saskatchewan to determine if alsike seed can be produced profitably in large

areas now free of troublesome weeds. Wild white clover seed obtained from England has been distributed throughout Canada for tests in connection with seed production and permanent pasture purposes. Results so far indicate that it is a valuable permanent pasture crop in the central provinces. Browntop or Rhode Island bent grass seed is produced in Prince Edward Island and Nova Scotia, and creeping red fescue and velvet bent grass in Alberta. Field root and garden vegetable seed production is making progress in British Columbia.

ASSISTANCE TO CANADIAN SEED GROWERS' ASSOCIATION

The Canadian Seed Growers' Association is a national organization of farmers who specialize in the production of Registered seeds. They multiply for commerce the foundation stock seeds called "Elite Stock Seed" produced by Dominion and Provincial Experimental Stations and sometimes by private growers. The association office functions as a registration bureau for seed crops, directs the work of the growers, and publishes a seed catalogue. Registered seed provides much of the seed stocks for field crop competitions, local seed fairs, and provincial seed exhibitions. Complete information as to the work of the association may be obtained from their annual report. Financial support from the Seed Branch was continued during the past year to the extent of \$13,000.

FEED DIVISION

Under the provisions of the Feeding Stuffs Act 214 manufacturers registered 684 brands of commercial feeding stuffs during the registration year ending September 30, 1927, as compared with 206 manufacturers and 626 registered brands during the preceding year. They were distributed as follows:—

Province	Firms	Registrations
Alberta.....	21	37
British Columbia.....	40	148
Manitoba.....	9	21
New Brunswick.....	2	3
Nova Scotia.....	2	3
Ontario.....	94	353
Prince Edward Island.....	1	1
Quebec.....	19	71
Saskatchewan.....	6	10
Great Britain.....	4	6
United States.....	16	31
	214	684

The brands of registered feeding stuffs may be classified according to their nature or trade designation as follows:—

Animal products.....	85
Barley products.....	5
Beet pulp (dried).....	6
Brewers' and distillers' products.....	19
Buckwheat products.....	1
Calf meals.....	31
Corn products.....	9
Cottonseed meal.....	23
Cattle feeds.....	36
Fish products.....	15
Horse feeds.....	4
Linseed meals and cakes.....	15
Milk products.....	2
Oats products.....	14
Peanut products.....	1
Pig feeds.....	19
Pigeon feeds.....	5
Poultry mash feeds.....	212
Poultry scratch feeds.....	72
Rabbit feeds.....	5
Rice products.....	7
Screenings and scalings.....	32
Sheep and goat feeds.....	4
Soya bean products.....	4
Miscellaneous mixed feeds.....	51
Miscellaneous unmixed feeds.....	7

Products which are subject to the provisions of the Feeding Stuffs Act are classified into three groups, namely: commercial feeding stuffs, flour mill by-products from wheat, and chop feeds. Commercial feeding stuffs must be labelled by the manufacturer with the guaranteed chemical composition as well as the materials from which compounded. Mill feeds and chop feeds must conform to definite standards of quality and purity, and all feeds are subject to a uniform restriction against the presence of mustards, purple cockle, ergotized grains, or other seeds and materials injurious to the health of live stock or poultry. In order to check these feeding stuffs for compliance with the Act, 5,514 inspection visits were made during the year, and 1,473 samples were collected from manufacturing plants, wholesale and retail dealers, and submitted for chemical and botanical analysis. A number of manufacturers and dealers were warned for minor infractions of the law, and two firms were prosecuted.

In general there has been fairly satisfactory compliance with the provisions of the law, and the standards of quality and purity for millfeeds have been well observed. The scarcity and high price of concentrates, and particularly of millfeeds, during the spring of 1928 has extended the outlet for low-grade feed materials. This condition has resulted in the registration of quite a number of brands of feed of inferior feeding value, and in changing registrations to lower the quality and guarantees of established products. This latter practice is confusing to purchasers who buy a particular brand of feed on the strength of results obtained from former trials, rather than on the basis of its guaranteed ingredients and composition. A continuation of this practice might suggest the need for some restriction against lowering the guarantee of a registered brand of feed prior to the expiry of the registration year.

ELEVATOR SCREENINGS

The dockage removed from the western grain crop at the terminal elevators at Fort William and Port Arthur is classified on a conventional basis as follows:—

Elevator Screenings are the uncleaned or "elevator run" screenings.

Standard Recleaned Screenings consist chiefly of wild buckwheat and broken or shrunken wheat.

Oats Scalpings are composed largely of wild oats together with varying proportions of domestic oats, barley, and other coarse grains.

Refuse Screenings are the fine weed seeds, chaff and other offal removed in recovering the Standard Recleaned Screenings and Oats Scalpings.

The following table shows the quantities and distribution of the various classes of unground screenings originating at Fort William and Port Arthur during the crop years ending July, 1926, and July, 1927. To these figures should be added for the latter year about 250 tons of Standard Recleaned Screenings, 1,500 tons of Oats Scalpings, 850 tons of Elevator Screenings, and 2,560 tons of Refuse Screenings which were ground at the head of the Great Lakes.

		Standard recleaned screenings	Oats scalpings	Elevator screenings	Refuse screenings
		tons	tons	tons	tons

The information regarding the distribution of screenings is based upon billing instructions covering shipments, and undoubtedly certain quantities, particularly of Oats Scalpings, consigned to Georgian bay and lower lake ports were again loaded out for export. A study of the data from which this table was compiled, however, indicates that the movement of screenings is directly affected by the yield of feed crops produced in the various sections of the country. Oats Scalpings for the first time last season found a new outlet in the domestic trade where the eastern crop was so poor. Standard Recleaned Screenings are steadily obtaining a wider distribution, particularly in Ontario and Quebec. As might be expected, the domestic demand for Refuse Screenings is confined to small quantities for feeding sheep in penned areas. There appears, however, to be an export market for this class of screenings equal to the supply, and over 61,000 tons were billed to Duluth during the past crop year.

HAY AND STRAW INSPECTION

The following table shows the quantity and grade of hay and straw inspected during the fiscal year in accordance with the provisions of the Inspection and Sale Act. Fees totalling \$1,283 were collected for this inspection service, of which amount \$398.80 was retained by certain inspectors whose only remuneration is the fee collected, and the balance was deposited to the credit of the Receiver General.

Kind	No. 1	No. 2	No. 3	No Grade	Rejected	Shipping Grade

The 1927 hay crop was a record one both in Canada and in the United States. The market has been characterized by light demand and low prices, a condition which, in view of the heavy carryover in sight, will likely also obtain next season unless general or regional crop shortages occur. An expansion of the acreage devoted to hay production out of proportion to the increase in hay-eating live stock forecasts a continuance of this situation for some time to come. In Central and Eastern Canada there were harvested in 1927 about 1.46 acres of hay per hay-eating animal unit on farms (one horse or one cow, or seven sheep), as compared with about 1.30 acres in 1921. Moreover, although exact figures are not available, there has undoubtedly during recent years been a decrease in the city horse population owing to the increased popularity of motor vehicles both for business and for pleasure. Similar conditions prevail in the United States, Canada's principal export market for hay. Official sources of information indicate their hay acreage to be over-expanded and their city horse population to have decreased about 70 per cent since 1910. Hay receipts in Boston and New York are reported to have decreased 82 per cent from 1910-11 to 1926-27. In past years these and other eastern city markets have imported large quantities of Canadian hay.

Because of the growth of the dairy industry and a wider appreciation of the feeding value of legumes for all classes of stock, the market value of good quality alfalfa and clover has not fallen proportionately with that of timothy and other grass hays. Through correspondence, press articles, and demonstra-

tions at agricultural shows an effort has been made to acquaint market hay producers with the general situation. There is a growing interest in inspection on the part of producer shippers as well as receivers. The former are anxious to guard against the unfair rejection of shipments on arrival, and the latter want to be assured of receiving hay of the kind and quality suited to their purposes.

MARKETS AND FERTILIZER DIVISION

MARKET REPORTING

The reporting of seed, feed and fertilizer markets was enlarged as to the number of items and the markets covered. Since the inception of this service changes and additions have been made to meet the public demand. The reports contain information as to current prices on the basis of the legal standards of quality provided in the various laws administered by the Seed Branch. Correspondents reporting market conditions and prices number about 1,500, and more than 100 principal markets, Canadian and foreign, are covered.

The following phases of this service are now provided:—

- (a) The publication in English and French of an eight-page report printed bi-weekly and entitled Seed, Feed and Fertilizer Markets;
- (b) The preparation of monthly statements regarding markets for publication in the bulletins of agricultural statistics, and the Trade Year Book issued by the Dominion Bureau of Statistics;
- (c) The preparation of weekly statements for publication by the press;
- (d) Correspondence in which information is given farmers and the trade regarding prices and market prospects.

In each issue of the pamphlet Seed, Feed and Fertilizer Markets there are involved about 900 price quotations of 216 items. In addition, detailed statements of exports and imports are given by provinces. The latter information is procured direct from the Statistical Branch of the Department of National Revenue.

The correspondents reporting the condition of domestic markets are representatives of wholesalers, jobbers, retailers and farmers who have a definite interest in the trade of the commodities reported. The prices and other information provided by them are based on the grades or qualities defined in the Acts which control the sale of the various commodities. Prices and information from markets abroad are based on the respective grades and qualities recognized in the various countries, and are secured by the co-operation of the Canadian Government Trade Commissioners and wholesale dealers in those countries.

A cable service is arranged with the following countries: Great Britain, France, Germany, Belgium, Holland, Denmark, Czechoslovakia, Italy, Argentine, Chile, and New Zealand. Almost daily communication is maintained with the Bureau of Agricultural Economics, Washington, D.C., regarding markets in the United States.

During 1927 about 7,100 English and 5,100 French copies of the pamphlet Seed, Feed and Fertilizer Markets were distributed bi-weekly to subscribers, correspondents and officials. The information was widely quoted by the general press as worthy of interest to their readers.

The effect of this service is seen in greater public demand for the higher grades and qualities of the commodities reported, and in the levelling of prices according to freights and other distribution charges throughout the country. The reports also serve as a valuable price guide to seed and feed producers when placing their products on the market. The feed quotations permit the live stock producer to figure comparative costs of rations for current use.

FERTILIZERS

The number of brands registered during the year ending June 30, 1928, was 342 as against 293 in the previous year. The registration fees collected amounted to \$9,030. The number of registrations by provinces or countries, and the number of firms, were as follows:—

	Firms	Registrations
Prince Edward Island.....	1	2
Nova Scotia.....	3	25
New Brunswick.....	4	6
Quebec.....	4	18
Ontario.....	14	148
Manitoba.....	0	0
Saskatchewan.....	0	0
Alberta.....	1	12
British Columbia.....	11	35
Great Britain.....	4	5
United States.....	12	91
	<hr/> 54	<hr/> 342

The 342 brands eligible for sale might be classified according to general character as follows:

1. Mixed fertilizers complete 233
2. Mixed fertilizers containing only two of the three plant food elements.. . . . 95
 - (a) nitrogen and phosphoric acid.. . . . 49
 - (b) phosphoric acid and potash.. . . . 46
3. Fertilizers containing only one of the three plant food elements and not exempt from registration under section 8 of the Fertilizers Act.. . . . 14

Practically all the brands on the market were inspected one or more times, and the results of analyses of the samples taken by the inspectors were compiled and issued to the interested public in bulletin form.

Offences against the provisions of the Fertilizers Act were comparatively few, and mostly of a minor nature. Incorrect labelling and abuses in regard to selling under prescription were the principal offences, other than failure to meet guaranteed analysis.

Microscopic analysis was again resorted to in determining the adulteration of certain fertilizer materials. In this way some samples of bone meal were found to be adulterated with ground natural rock phosphate, acid phosphate with ground limestone, and tankage with humus and other decomposed vegetable matter. It is evident that microscopic analysis will prove more and more serviceable in detecting the adulteration of fertilizer materials.

Some amendments were made to the regulations to provide for greater deficiencies in the phosphoric acid of organic fertilizers, such as tankage and fish meal, and of basic slag. These fertilizers are naturally variable in composition and the limit of deficiency was increased from one half of one per cent to one per cent. This change is proving satisfactory in safeguarding the interests of the public and the trade.

Provision was also made for natural variability in the fineness of basic slag. Innumerable tests had shown that there was up to 10 per cent variability in the fineness of a given shipment, and this figure was established as the limit.

A careful study of the fertilizer trade in all its aspects culminated in amendments to the Act which are to become effective on July 1, 1928. These amendments were found necessary in order to make the administration of the Act more effective, to further improve the quality of fertilizer offered by the trade, and to safeguard the interests of the purchaser.

Provision was made to prevent evasion of registration when a fertilizer is sold before being manufactured or imported. A new subsection was added to section 3, requiring that a foreign manufacturer who sells fertilizer in Canada must nominate a resident Canadian agent who will take full responsibility for compliance with the Fertilizers Act in his behalf. This was recommended because agents of some United States companies sold fertilizer in Canada and returned home before it was delivered.

The minimum standard of plant food in mixed fertilizers was raised from 12 per cent to 14 per cent, and provision is made to prevent the sale of fertilizers and related materials under extravagant and misleading advertising. The percentage of anhydrous borax permitted in potash salts has been raised from 1/10 of 1 per cent to 1 per cent. Fractions of percentages must not be stated in guaranteed analyses. Three sections were added to the Act to strengthen prosecution proceedings for illegal labelling, and to permit confiscation of fertilizers sold in violation of the Act.

Fertilizer demonstrations were continued in the counties of Richmond, Wolfe, Megantic, and Beauce, in the province of Quebec. They were planned with a view to educating the farmers how to use standard fertilizers profitably on their own farms. Two hundred and nine farmers participated in the demonstrations with turnips, and two hundred and twenty-nine with forage crops. The farmers paid one-half the cost of the fertilizer and the department the other half. The money was paid to the agricultural societies conducting the demonstrations, who in turn reimbursed the farmers for one-half the cost of the fertilizer. The total amount paid to the agricultural societies was \$1,800. The field supervision was provided by the district inspector for Quebec.

The subvention agreement with the provincial Departments of Agriculture now includes provision for the payment of moneys for fertilizer demonstrations. The main feature in this new agreement permits the provincial Departments of Agriculture to use the subvention money in paying the cost of fertilizer demonstrations conducted by agricultural societies under provincial supervision. Quebec and British Columbia are already utilizing subvention money for this purpose.

THE MARITIME DISTRICT

This district comprises Nova Scotia, New Brunswick and Prince Edward Island, with headquarters located at Sackville, N.B. The staff includes a district inspector and six inspectors, three of whom are employed the whole year, and the other three as needed during the busy season, especially in the spring. The permanent inspectors are located at points most convenient for their work. One of the temporary inspectors was appointed during the latter part of the year to take care of the work in the northwestern part of New Brunswick, where a bilingual man is required.

SEED PRODUCTION AND SUPPLY

The late, cold spring and wet weather during the latter part of the season resulted in the 1927 grain crop being almost a failure. In Prince Edward Island, where good seed oats are generally available for both local demand and export, only 11,958 bushels of No. 1 grade were given inspection certificates and they were somewhat discoloured from weathering. There was a shortage of over thirty thousand bushels, which were obtained through the Prince Edward Island Potato Growers' Association. The whole lot was No. 1 grade, bought from the Alberta Seed Growers' Association. In the other two provinces the oats were also obtained from the West, but consisted mostly of No. 2 C.W. recleaned, offered by dealers and agricultural societies. An occasional ear of No. 1 and No. 2 seed oats was found in the hands of the dealers, but the price was very high and the inferior oats found a ready market throughout New Brunswick and Nova Scotia.

Field inspections were made for 277 growers of browntop seed in Prince Edward Island. From the quantity of "seed in the chaff" sent to the cleaning plant at Charlottetown 28,150 pounds of seed were cleaned and graded for market. On the first test quite a number of the samples were graded No. 3 or Rejected, but after bulking these lots and re-cleaning a government grade was obtained on all samples.

The Canadian wholesale prices received for this seed were 75 cents for No. 1 and 60 cents for No. 2. The United States prices averaged about 50 cents per pound, and sales there were made on samples representative of the lots offered from time to time. The 1927 crop was only thirty per cent of the previous year, and the smaller quantity, with a carryover from 1926, found a ready market. The harvesting of browntop or Rhode Island bent to meet the demand for turf grass seed has been extended from seven growers in 1924, and is bringing good returns to the farmers in localities where the soil is light and rather low in fertility.

One clover seed competition was conducted in Antigonish county in Nova Scotia. The results, considering the year, were satisfactory. Clover seed of good quality can be grown successfully in some parts of these provinces.

Swede turnip seed is grown commercially in Nova Scotia. Last year 800 pounds were registered and sold locally at a very good price. The demand for home-grown seed is far above the supply, and farmers should be encouraged to increase production.

The quantity of Registered oats inspected and sealed was 1,420 bushels. Owing to the limited local market for high-class seed, the number of growers of Registered seed grain has not increased during the past year. The price asked for Registered seed is generally high, and few farmers are willing to pay from 75 cents to \$1 more per bushel for this grade when other seed with fair germinating ability is available.

Ten combined competitions were organized by the provincial Departments of Agriculture in co-operation with the Seed Branch. The number of samples collected was 166, of which 116 graded No. 1, 12 No. 2, 15 No. 3, and 23 Rejected. Eighty-seven of the samples were collected on the Island and all graded No. 1 without impurities of any kind, which shows that this work has made better progress there than in the other two provinces.

Besides the Maritime Winter Fair held in Amherst, two fairs were held in New Brunswick and one on the island. The Amherst Fair, considering the bad season, was fairly good. The Moncton Fair was not as good as usual, the number of exhibits being small and the quality poor. At Bathurst the fair was better than in Moncton, especially in the quality of the exhibits.

The Island Seed Fair was held during Farmers' Week. The system followed there is different from the other provinces. The exhibits are taken from the farmers' bins by an inspector in the course of his inspection in connection with the combined competitions. The samples thus truly represent the quality of the seed prepared from the competitions and offered for sale. This system affords a perfect control of these competitions, and no doubt largely accounts for the good results shown on the island in connection with this work.

INSPECTION

In connection with the enforcement of the Seeds Act, 982 visits were made to dealers in seed. Large quantities of No. 2 C. W. re-cleaned oats were sold again, but as these oats are generally offered for sale as feed, only a few violations were reported. Small quantities of No. 1 and No. 2 seed oats were generally found to be within the requirements of the law. One prosecution was undertaken, and the decision of the court was against the defendant, who paid the

fine and costs of proceedings. Garden seeds found on the market are generally purchased from reliable seed houses, and no violations were reported in this connection.

The inspectors also examined stocks of feeding stuffs in the hands of the dealers. The reports show that 562 feed dealers were visited during the year and only 11 official samples were taken. Feeding stuffs sold in the Maritime Provinces are mostly from large mills in Montreal or farther west, and generally meet the guaranteed analysis.

Two hundred and eighty official samples were taken from fertilizers offered in the trade. This Act does not seem to be as well observed in the Maritime Provinces as other laws administered by the branch. There were several violations and three prosecutions were taken to court. The decision in each case was given against the defendant. In view of the large quantity of commercial fertilizers purchased, the number of violations may be considered as small. There has been a great improvement in the quality of fertilizer offered within the last few years, due largely to the severe application of the law, which is appreciated by the public in general.

Hay inspection was introduced here last fall for the first time. Official certificates were issued on forty-one cars. The inspection was done mostly in the Sackville district and in Carleton county. In addition to inspecting cars, numerous visits were made to farmers' premises, where hay was examined and opinions given to those interested. All except a few cars were graded No. 2 Dyke and No. 2 Timothy.

The hay crop in New Brunswick and Nova Scotia was very poor in 1927. Heavy rain storms during the cutting period made it almost impossible for farmers to produce hay of even fair quality. A high percentage of the crop, especially that produced from the marshes, would not grade No. 3. Hay growers in the Maritime Provinces, especially those in the marshy districts, generally cut their hay too late, which results in a high percentage of ripe weeds and fine dead grasses. This hay is difficult to sell on any market, even at a low price. Our inspectors spent a good deal of time in demonstrating the value of grading. This work has already given good results in the improvement of conditions.

EDUCATIONAL WORK

The inspectors gave addresses at important agricultural meetings. They also acted as judges at seed fairs and lectured on subjects pertaining to seed production and legislation. The Seed Branch organized an attractive educational exhibit at the Amherst Fair. The farmers appeared to be very much interested, and many questions were asked of the inspector in charge.

An inspector spent nearly two months on the Nova Scotia Seed Cleaning Train. He had exhibits of clover seed which served as a basis for instruction, grains of various grades, and samples of fertilizers. Lectures were given on the work of the Branch at the various places where the train stopped for meetings.

Two papers were read from the radio station at Fredericton. Four hay meetings were held at Sackville and were attended by representatives from Nova Scotia and New Brunswick. The discussions at these meetings were based on the legislation, classification and inspection of hay. A committee was appointed representing both producers and dealers, and the district inspector was invited to attend its meetings.

QUEBEC DISTRICT

This district comprises the province of Quebec with the exception of Pontiac and Wright counties. There are five sub-districts, each with an inspector located at a most convenient point and responsible to the district

inspector at Quebec city. The sub-districts are Montreal and Eastern Townships, Three Rivers, Beauce, Eastern Quebec, and Quebec city with Lake St. John and Abitibi. One inspector is employed nearly all the year at the Quebec office to grade seed and assist the district inspector in supervising the work. During the spring season a temporary inspector is appointed for the district of Montreal where the work becomes too heavy for one man.

SEED PRODUCTION AND SUPPLY

The snow disappeared very early in the spring, but seeding operations were delayed by almost continuous rain through the month of May. In certain districts seeding was not commenced before the first days of June. The Montreal district was more favoured, and most of the farmers there were able to get through the seeding before the rain started. Weather conditions during September were very favourable for the harvest. The yield and quality of seed crops were generally satisfactory, but an exception must be made for the districts producing seed grain, as only ten carloads were available this year against twenty-five carloads last year.

The clover seed crop gave an average yield of fairly good quality. Some centres, namely, Chateauguay, Vaudreuil and Soulanges, where large cleaning mills were operated under the supervision of the provincial Department of Agriculture, produced 60,000 pounds of red clover seed which was graded by our inspectors at shipping points. Nearly sixty per cent of this seed was sealed as grade No. 1, thirty per cent graded No. 2, and ten per cent graded No. 3. Auctions were organized after the inspection, and sales were made at very remunerative prices to the growers.

Many farmers in the districts of Joliette and Vaudreuil are still making a specialty of growing timothy, and were able to supply the market with seed of superior quality. Four carloads of timothy seed were shipped from Joliette county.

The shortage of seed oats was somewhat lessened by the large supply which certain firms had carried over from the previous year; but some districts were unable to obtain early varieties of oats and a large quantity of No. 2 C. W. re-cleaned was sold for seed through Eastern Quebec and other points where seed oats were required.

The combined seed crop competitions were continued during 1927. The following table gives the number of competitions for each crop and the percentage of seed in each grade:—

—	No. of compe- titions	No. 1	No. 2	No. 3	Rejected
		%	%	%	%
Wheat.....	57	19.3	7.0	8.6	65.1
Oats.....	882	33.0	10.2	18.6	38.2
Barley.....	85	24.7	4.7	14.1	56.5
Clover.....	715	23.4	29.2	23.3	24.1

There was an increase in the quantity of registered seed. Inspections were made as follows:—

	Registered	Extra No. 1
Oats..... bushels	1,330	317
Wheat.....	272	
Barley.....	112	142
Pens.....	75	

The Alaska oats were in great demand, but the quantity was too limited to supply the needs of the farmers in Abitibi, Lake St. John and other counties of the lower St. Lawrence, where this variety becomes more and more popular. Over 500 bushels of Alaska oats were registered and 2,500 bushels were sold as grade No. 1.

INSPECTION

The inspectors covered 800 points and visited 1,350 merchants or dealers divided as follows: 396 seed, 639 feed, 288 fertilizer, and 25 hay. Inspections were made of the Provincial Seed Fair exhibits at St. Hyacinthe, and 425 exhibits were graded by our inspectors for the auction sale which took place on the last day of the fair. The germination tests of the samples showed that a number of the exhibits, especially timothy and clover, were low in vitality, and some lots, although of very good appearance, were quite unsuitable for seeding. The quantities of seed oats inspected at shipping points were 10,015 bushels of grade No. 1 and 5,000 bushels No. 2.

The official samples taken from lots inspected in the trade were 292 seed, 80 feed, 114 fertilizer, and 2 binder twine. Prosecution was taken against a dealer for selling some carloads of oats with a very low percentage of germination. He pleaded guilty and was condemned to pay fine and costs. Prosecution was recommended against a wholesale firm for selling some thirty boxes of garden seeds not marked to show the low germination, but the Canadian office was found to be closed and the representatives had returned to the United States. Every merchant in Quebec who was found to be in possession of these seeds withdrew them from the market. The violations on feeding stuffs were of minor importance and no prosecution was recommended. The fertilizer dealers are exercising better care, and no important violation was reported by our inspectors.

There was less demand for hay inspection because the market for export was very limited. The United States had a good crop, prices offered to Quebec hay growers were low, and very few carloads were shipped to the American market as graded hay.

FERTILIZER DEMONSTRATIONS

This special work with fertilizers, inaugurated four years ago, was continued, and 438 farmers took part in the demonstrations with swede turnips and green fodder. Phosphate fertilizer and muriate of potash were applied at the rate of 500 to 600 pounds per acre in addition to farm manure. A plot where only farm manure had been applied served for comparison. The results show that fifty per cent of the farmers averaged 23 tons of turnips per acre; with fodder crops the average yield was 2.8 tons per acre. The farmers taking part in the competitions were very much interested in the work, and most of them will continue to grow these crops.

EDUCATIONAL WORK

The inspectors attended the most important agricultural meetings in their respective districts, and gave addresses on subjects pertaining to their work. Articles on various agricultural topics were published in the agricultural papers. Exhibits prepared to depict Seed Branch activities were placed at the Provincial Seed Fair.

EASTERN ONTARIO DISTRICT

Ottawa is the headquarters for the district which comprises Old Ontario east of York County and the Canadian National Railway running from Toronto to North Bay, New Ontario to Lake Nipigon, and Wright and Pontiac counties and the Ville Marie district in Quebec.

SEED PRODUCTION AND SUPPLY

The supply of seeds produced in eastern Ontario varies with the season. The cereal crops were generally good. In some localities rust was bad on the late oat crop, and scarcely any of it was fit for seeding, especially on the low flat lands in eastern Ontario and along the Soo line in northern Ontario. There was another big hay crop and a lot of the timothy was allowed to go to seed. This seed crop was a record for the district, and a large carryover from 1926 helped to depress the local market.

Early sown oats and barley were excellent crops and were harvested in good condition. The pea crop gave an average yield and the quality was good. Alsike and alfalfa seed were below the average in yield and of inferior quality. Red and sweet clover seed were quite plentiful and of good quality. In northern Ontario some of the seed crop was caught in the early snow which remained throughout the winter.

INSPECTION

There were 2,123 visits made to various points in the district and inspections included 2,384 for field crops and seed, 550 feed, 27 fertilizer, and 5 binder twine. The inspectors took 218 official samples of seed, 115 feed, 15 fertilizer, and 5 binder twine. Many minor violations of the Acts concerned were settled by satisfactory adjustments. Two cases of violation of the Seeds Act were taken to the courts and the violators condemned.

The combined seed crop and cleaned seed competitions numbered 16 in barley, 2 in oats, 1 in spring wheat, and 1 in red clover. Some 240 growers had 3,545 acres in registered seed crops, with an estimated yield of over 100,000 bushels of seed grain. From the Ottawa Valley alone some 100,000 bushels of malting barley were shipped to Montreal, largely as a result of the barley competitions.

Following is the quantity of seed finally inspected and graded:—

	Registered	Extra No. 1	No. 1
Wheat..... bushels	928	125
Oats..... "	1,907	886	1,020
Barley..... "	2,359	2,636	1,393
	5,194	3,647	2,413

EDUCATIONAL WORK

The inspectors judged seeds, field roots, garden vegetables, and plants at several of the exhibitions and county and township shows. They assisted at a number of short courses in agriculture, explained the requirements of the Acts administered by the Seed Branch, and gave addresses on seeds, weed seed impurities, and cleaning machinery. Advice was given to operators of seed-cleaning plants, and several more machines were installed in the district during the year.

Assistance was given to the Ottawa Valley Seed Growers' Association, and a very successful seed exhibition was held under its auspices at Renfrew early in February. Over 300 exhibits were sent by about 100 exhibitors. Most of the seed grain was Registered or Extra No. 1, or was descended from such parentage. The Quinte Seed Fair held at Cobourg about the middle of March scored a success in the number and quality of exhibits, and the disposal by sale.

Keen interest was taken in making final awards in the presence of the field crop competitors, and the occasion furnished the opportunity for discussing the whole seed situation. Special attention was given to weaknesses in the production of good seed, both in field operations and in threshing and cleaning facilities.

WESTERN ONTARIO DISTRICT

This district includes Old Ontario west of and including the counties of York, Simcoe, Muskoka, and Parry Sound. The district office and seed laboratory are located in the Seed Branch Building at 86 Collier street, Toronto. The district personnel consists of a district inspector, six inspectors, and a clerical staff. Three inspectors were stationed at convenient points in sub-districts, and three were required at headquarters to grade samples received at the laboratory, to sample seeds being imported, and to inspect the products under the different Acts.

SEED PRODUCTION AND SUPPLY

The continued decrease in acreage devoted to the growing of corn for husking is expected to give place to increased production in 1928. The situation in regard to alfalfa seed was quite the reverse of the large crop of 1926. Continued wet weather during the summer and fall of 1926, followed by an unfavourable winter, damaged much of the crop and destroyed a considerable acreage. Unfortunately the best seed-producing areas suffered heavily. This damage was not the result of ordinary winter killing, but was due to a series of unfavourable conditions for a period of about nine months. The seed crop failure on remaining fields was not caused by this condition, but by the weather being unfavourable to the setting of seed. The wheat crop was good, although the grain in some localities was not as plump as desired. Barley was excellent, and the oat crop was a good average. The crop of red clover seed was the largest in several years and was of good quality. The quantity of alsike seed was greater than that of 1926, but the quality was comparatively poor. Sweet clover seed was of good quality, and more timothy seed was produced than for several years.

INSPECTION

Visits were made to 1,139 points, and inspections included 1,594 seed, 1,241 feed, 229 fertilizer, 28 binder twine, and 608 hay and straw. The total number of official samples taken by inspectors was 3,300 seed, 384 feed, 354 fertilizer, 53 binder twine, and 10 paris green. Field crops inspected totalled 3,108 acres, including 1,298 acres of oats, 169 of barley, and 651 of alfalfa, and lesser quantities of peas, beans, wheat, corn, and roots. There were 6,171 bushels of seed inspected for market as follows:—

		Registered	Extra No. 1	No. 1
Wheat.....	bushels	349
Oats.....	"	1,372	1,180
Barley.....	"	781	160
Peas.....	"	70
Corn.....	"	37	43
Flax.....	"	1,200
Soy beans.....	"	28
Alfalfa.....	"	951

Inspectors examined and graded 2,215 tons of hay and 244 tons of straw. There were 13,068 samples of seed analyzed, an increase of nearly 2,000 over the previous year. Farmers are taking more interest in the quality of seed, and this will be furthered by a campaign for better seed which is being conducted by the provincial Department of Agriculture. Farmers have been advised to have seed tested to determine its purity and vitality, to sell in accordance with the requirements of the Seeds Act, and to use only the best seed obtainable. Total imports of seed were 10,957,171 pounds. There were seven prosecutions under the Seeds Act, one in connection with binder twine under the Inspection and Sale Act, and one under the Fertilizers Act.

EDUCATIONAL WORK

Most of this work was done in co-operation with provincial authorities. Inspectors acted as judges at fairs and exhibitions; served on seed committees, and gave addresses at meetings on subjects pertaining to seed crops, weeds, feeds, and fertilizers. Assistance was given with the Better Seed Train which was run through part of western Ontario, and in connection with the Better Seed Campaign commenced in January, 1928. The district inspector continued to act as chairman of the crop improvement committee, which body again functioned as the Provincial Seed Board.

MANITOBA AND SASKATCHEWAN DISTRICT

The district includes all of Manitoba and Saskatchewan, and Ontario west of Lake Nipigon. The inspection office and laboratory are located at 812 Commercial Building, Winnipeg, and sub-offices are maintained at 211 Grain Exchange Building, Fort William, and at the Post Office Building, Regina. Permanent inspectors are employed at Fort William, Regina, Moose Jaw, Saskatoon and Winnipeg, and seasonal inspectors at Brandon and Winnipeg.

SEED PRODUCTION AND SUPPLY

Conditions in the spring of 1927 were very unfavourable. There was excessive moisture which in eastern Manitoba kept the farmers off the land until well into June. Western Manitoba and Saskatchewan were able to sow their seed in fair time and had a good crop season. The summer rains produced an excellent growth, and, as might be expected when moisture is fairly abundant, considerable damage was caused by rust. In this connection it is interesting to note that Durum wheat and oats were affected to practically the same extent as the common wheats. Early frost caught many late crops all over the district, and a tremendously high wind storm, on September 15, shelled all the sweet clover which had not been cut for seed and much of what was in the stook.

Harvesting weather was fairly good, but oat and Durum wheat yields were decidedly below the average. Reports on oats threshed indicated a weight per measured bushel ranging from 18 pounds upward. Tests were immediately commenced to ascertain whether or not these light oats could be safely used for seed. The germination was high, but warning was given to farmers of the chance they would be taking with adverse climatic conditions in the spring. Durum wheats were tested and the average germination on control samples submitted up to March 1 was found to be 82 per cent. This was 7 per cent below the average for last year, and with the coming of warm weather a further falling off in vitality was noted. Some anxiety was felt this spring when the demand for oats, Durum wheat and barley was rather keen in southern Saskatchewan and Manitoba. However, oats from northern Saskatchewan and Alberta were shipped in by the elevator companies and wheat pools, and the majority of districts were supplied. A decrease in the acreage sown to oats is expected for 1928.

INSPECTION

There was an increase in the number of seed crop inspections, but a decrease in the acreage. Field inspection of brome and western rye was made to certify seed as free from couch grass. Reports on registered seed crops indicate an improvement in the purity of varieties. Inspection of seed crops for registration necessitated visits to 355 points, 620 farmers, 1,025 fields, totalling 20,982 acres. In connection with certification of brome and western rye grass, 64 farmers with 3,789 acres were visited, but only 46 fields were approved. From

these crops inspectors graded and sealed in sacks the following quantities of seed:—

		Regist- ered	Extra No. 1	No. 1	No. 2	No. 3
Wheat.....	bushels	27,161	28,648	18,380	883	1,500
Oats.....	"	17,186	12,862	38,294	31,233	1,925
Barley.....	"	6,493	2,147	1,357	16	
Flax.....	"	374	391	1,598	14	23
Rye.....	"	18	30			
Sweet clover.....	lbs.	1,706		8,675	185	
Brome.....				139,402		

Inspectors visited 1,299 points. Store and warehouse inspections totalled 2,935 for seed, 921 feed, 13 fertilizer, 26 hay, and 21 binder twine. They took 503 official and investigational seed samples, 327 of feeding stuffs, 11 of fertilizer, and 63 of binder twine. An extensive correspondence was carried on suggesting methods of recleaning seed and soliciting compliance with the regulations. Seven prosecutions were successfully conducted against previous offenders. Many offences were due more to carelessness than a desire to evade the regulations. Binder twine inspections indicate several cases of shortage in the length per pound. Seed and binder twine importations were inspected through the co-operation of customs officials. The only difficulty experienced was in connection with corn shipments which did not come up to the previous germination tests or minimum standards.

Revenue was collected as follows: for analysis and grading, \$1,482.50; hay inspection, \$18.50; field crop inspection, \$3,730.03; seed inspection, \$2,305.23; total, \$7,536.26.

EDUCATIONAL AND DEVELOPMENT WORK

Seed advertisements were checked to ascertain if advertisers had received a grade on their seed. All who had not submitted samples were informed regarding the regulations. They usually replied to our letter and sent a sample of the seed for test. Most of the advertisements were in order, probably due to previous advice and to articles which were written for country papers.

Our inspectors took an active part in the Better Seed Campaigns of Saskatchewan and northern Ontario. In Manitoba lists of graded seed were prepared and an attempt was made to check up on the results of previous campaigns. Numerous meetings were addressed by the inspectors, and they judged at many seed fairs, including the Provincial Corn Show in Saskatchewan and the Provincial Seed Exhibition at Brandon. An exhibit was prepared to depict the work of the branch at the T. Eaton Co. Soil Products Exhibition.

A course of instruction was given to the inspectors just prior to field crop inspection. The course included three days at Manitoba Agricultural College, two days at Morden Experimental Farm, and one day in the Winnipeg office. At Morden inspectors were able to examine rod rows planted from seed of each stock graded Registered and Extra No. 1. They also visited growers experimenting with test plots of new varieties. Field inspection of seed crops formed the basis of educational work with those attempting production of Elite Stock Seed.

Two hundred pounds of Manhardy and one hundred pounds of Altaswede red clover were distributed in lots sufficiently large to sow one acre. The districts selected were Beausejour, Whitemouth, Piney, Arborg, Reaburn and Swan River in Manitoba, and Devlin, Ontario. A check-up on growers who received timothy seed the previous year indicates that wherever a good catch was obtained the growers fulfilled their agreement to return to us the same amount of seed as they had received.

ALBERTA AND BRITISH COLUMBIA DISTRICT

The organization in this district includes an inspection office and seed laboratory at Calgary and a sub-district inspection office at Vancouver. The

chemical analysis of feeds and fertilizers is done at Ottawa. The district work includes the grading and reporting of samples of seed received for analysis; examination and grading of bulk and sacked seed grain, seed crop inspection; seed, feed, fertilizer, hay, straw, binder twine, insecticide and fungicide inspection; and investigation of seed supply. The inspections now required under the several Acts make it necessary for the district inspector to spend practically his entire time on administration and office interviews. The district office, being centrally located in the farming area of Alberta, is readily accessible to growers wishing advice and information. The total of 11,098 samples graded during the year required the entire time of one inspector in the busy season.

There are six permanent or seasonal inspectors, located at principal points throughout the district. The permanent inspector in British Columbia is also a vegetable seed production specialist. The total revenue collected was \$5,106.93, including \$1,305.35 for laboratory service and grading and \$3,801.58 for inspection service.

SEED PRODUCTION AND SUPPLY

Favourable weather conditions prevailed in British Columbia until after the crops were cut. Excessive rain made it practically impossible to get crops cured and threshed, and resulted in a shortage of high quality seed grain. The Dominion and provincial officials again co-operated to increase root and vegetable seed production. The permanent inspector in British Columbia devoted a great deal of his time to this work and made reports on crops eligible for registration. Officials and growers realize that only through the production of Registered and Extra No. 1 grades of seed can the industry be made profitable, and efforts are being directed accordingly. British seed houses are increasing contracts with the more experienced growers of vegetable and flower seeds.

Although much larger areas of red clover and alsike crops were left for seed in the coast district, the wet weather affected the setting of the seed and caused a large percentage of the crop to rot on the ground after being cut. Threshing gave low yields and poor quality. In northern British Columbia the season was dry and gave reduced yields of timothy seed. Owing to the low prices offered, many of the growers could not thresh their seed, and the association cleaned only what could be marketed profitably.

Exceptionally promising prospects prevailed in Alberta until about fifteen per cent of the grain crop was threshed. Wet weather set in and delayed operations. It is estimated that forty million bushels stood in the stook all winter and a large part of the crop graded low on account of frost injury and excessive moisture. These conditions made it advisable to check up on the suitability of the grain for seeding purposes. Many samples of wheat, oats and barley were taken by the inspectors and tested for germination. The results were given wide publicity and farmers were advised to have their seed tested before using. Although many lots were unsuitable for seed, the investigation indicated that the supply would more than meet requirements, and large quantities of seed oats were later shipped to the eastern provinces.

A large increase in timothy seed production in the Pincher Creek district resulted from favourable weather conditions. The co-operative growers' organization constructed a new cleaning plant with up-to-date machinery, valued at ten thousand dollars. The total production of timothy seed is estimated at one million pounds in the Pincher Creek district, and three hundred thousand pounds in other parts of Alberta. The continued low prices for this seed will doubtless result in decreased production another season.

The Peace River district again produced our best quality seed. Herman Trelle took Grand Championships at the Chicago International Hay and Grain Show in 1926, and secured Grand Championship on his oats and Reserve Grand

Championship on his wheat exhibits in 1927. These continued winnings are attracting much attention to this district.

The wet season prevailing in Alberta was unsatisfactory for alfalfa seed production. In the Brooks district growers produced only about 25,000 pounds, which are needed for local requirements. The weather delayed the cutting of the hay crop at Brooks, and the quality was further injured through bleaching. Timothy and alfalfa hay in the Lethbridge district were of excellent quality and yields were much heavier than last year.

Seed importations for this district are largely received through the ports of Victoria and Vancouver. These ports are two days' distant by rail from the Calgary laboratory, and customs samples must be given precedence over all other work in order that shipments may be released as speedily as possible. The customs officials have co-operated with us in giving prompt service.

INSPECTION

The areas inspected were 10,737 acres in 325 fields of cereal grains, and 1,924 acres in 94 fields of alfalfa. The following quantities of seed were finally graded for market under seed inspection certificates:—

		Regist- ered	Extra No. 1	No. 1	No. 2	No. 3
Wheat.....	bushels	8,165	11,993	6,597	2,461	1,529
Oats.....	"	11,800	6,165	4,119	3,036	1,807
Barley.....	"	640	336			
Alfalfa.....	pounds	7,411	3,337			
Creeping red fescue..	"		560			

The inspectors visited 1,340 points; 2,185 inspections were made under the Seeds Act and 506 official samples were taken. These indicated that the quality of the seed sold by seedsmen is steadily improving, and the demand is increasing for only the higher grades of seed. Special attention is given to seed offered for sale by farmers because many of them still appear to be unfamiliar with the requirements of the Act.

Under the Feeding Stuffs Act, 1,621 inspections were made and 548 official samples were taken. Flour mill by-products and commercial feeding stuffs of which they are the principal ingredients were generally below the standard. Manufacturers claimed that the poor quality of the 1927 wheat crop was responsible for the deficiency.

All fertilizers manufactured and sold in the district were carefully checked, and the analyses indicate that manufacturers in general are endeavouring to place their products on the market in accordance with the requirements. A few errors in labelling were in evidence and these were brought to the attention of the manufacturers concerned. Fertilizer inspection visits numbered 255, and 144 official samples were taken.

Very few requests were made for the inspection of hay and straw. Dealers do not appear to be in sympathy with the present grade standards. Six visits were made under this Act.

Binder twine was also carefully checked and forty-one samples were taken for test. In a few cases the length per pound was found to be less than the manufacturer's guarantee but within the deficiency allowed by the Inspection and Sale Act.

The Agricultural Pests' Control Act has been explained to manufacturers and dealers handling economic poisons, with a view to having them take immediate steps to comply with the new requirements.

EDUCATIONAL

Fertilizer demonstrations in co-operation with the provincial Department of Agriculture were carried on in British Columbia. One seed crop and cleaned seed competition was organized in northern British Columbia.

Many press articles, radio talks and addresses were given by the district inspector on topics relative to the work. The senior inspector gave to the students at the Olds School of Agriculture a short course of lectures on the different Acts administered by the branch. Other inspectors gave addresses at agricultural meetings throughout the district.

Exhibits representing Seed Branch activities were displayed at provincial seed fairs in both provinces and at the Alberta Corn Show.

One permanent inspector attended a hay grading school at Kansas City last fall, which very materially increased his knowledge of this work.

INVESTIGATIONAL

Investigation work was again carried on in different areas in Alberta and British Columbia to ascertain the quality of the seed used by farmers. Samples were collected direct from seed drills. The three years' results of analyses have now been compiled as to viability and purity of variety. A complete report has been submitted for publication in pamphlet form. Due largely to the results secured in the above investigation, the provincial Department of Agriculture organized a Province-wide Better Seed Campaign. This work will undoubtedly result in much improvement in the quality of the seed used.

In the trial plots connected with the branch office all the samples of wheat collected from drills were grown to determine the percentage of mixtures. A large number of samples of vegetable seed were tested to determine the trueness to variety name.

In order to determine the various types of wheat of different varieties, samples of all registered seed were collected from growers. These were tested out at the Experimental Farm, Lethbridge, and the results secured were used for instruction purposes for field inspectors.

Additional investigational projects with seed grain include "The Viability of Oats Produced in Alberta" and "The Damage to Wheat Caused by Weathering." The former was conducted last fall and the latter this spring. Farmers concerned were advised as to the quality of the seed.

THE ENTOMOLOGICAL BRANCH

The officers of the branch employed at headquarters, in the field or at the plant inspection stations have had a very active year. In November, 1927, an important conference of the officers of the branch in charge of divisions, laboratories, plant inspection stations, and special projects, was held at Ottawa. As it had been five years since the holding of a similar conference, the whole work of the branch since 1922 was discussed at length, and much information of value recorded. The following is an account of the work of the branch during the fiscal year ended March 31, 1928.

DIVISION OF FIELD CROP AND GARDEN INSECTS

During 1927, throughout Canada as a whole, field and garden crops were remarkably free from severe losses due to insects, owing chiefly to weather conditions. The wet weather in the early season tended both to reduce the actual numbers of insects and to stimulate regrowth and recovery of the crops attacked. As a consequence, most of the officers of the division were able to apply themselves directly to definite insect problems, a small proportion of their time only being taken up in organizing and directing emergency control campaigns.

Correspondence at the field laboratories in respect to insect advice has increased during the year. The requests for information in advance of insect outbreaks in the field are increasing and indicate further recognition of the value of control practices. The closest co-operation with provincial Departments of Agriculture was continued.

Though crops were comparatively free from outstanding losses, certain insect conditions were of particular interest and importance, of which may be mentioned: (1) the further spread of the European corn borer in Ontario and Quebec and the enormous decrease of corn acreage in the counties of Essex and Kent, Ontario, following the losses lately suffered and the marked reduction in numbers of borers following the control campaign of 1926-27 in Essex, Kent, Elgin and Oxford counties in Ontario; (2) the discovery in Canada (Ontario) of the Mexican bean beetle; (3) the practical disappearance of the grasshopper outbreaks in British Columbia; (4) the destructive outbreak of the bertha cutworm in Alberta and Saskatchewan; (5) the continued destructive outbreak of the army cutworm in Alberta, and (6) the continuing losses due to wheat-stem sawfly in Alberta and wireworms in Saskatchewan.

The European corn borer, from scouting carried on by the Division of Foreign Pests Suppression, is now known to be present over a greatly increased territory, having been found as far west as Sault Ste. Marie, as far north as New Liskeard, and, extending east, to the village of Batiscan within 25 miles of Quebec City. The depressing effect of this insect upon corn culture has been shown clearly between the years 1924 and 1927 when the area seeded to corn in Essex county (Ontario) shrank from 85,179 to 20,000 acres and in Kent county (Ontario) where during the same period the acreage shrank from 75,000 to 7,000 acres. The results of the control campaign for 1927, carried on in eight counties by the Ontario Department of Agriculture, have shown a marked reduction of the pest in the most severely infested districts. This reduction justifies the confidence felt by the department in the possibility of control of the pest if the recommendations are followed by corn growers.

The Mexican bean beetle was discovered to be present in small numbers for the first time at five points in the counties bordering lake Erie in Ontario during the summer of 1927, by officers of the Division of Foreign Pests Suppression. This pest, if it can thrive under Canadian conditions, will be an insect of the very greatest importance to the bean growers of Ontario (value of crop 1925, (\$2,431,446)). Its history in the United States during the last few years has shown it to be capable of destroying bean crops in areas where it can thrive. Furthermore, its presence necessitates the growing of beans under a most burdensome protective spray program.

Grasshoppers which have been in continuous outbreak in the dry interior of British Columbia for the past seven years, and in the Peace River district for five years, practically disappeared during 1927. The outbreak in the Peace River district, for which elaborate control preparations had been made in co-operation with the province of British Columbia, was wiped out in the early part of the season by torrential rains. Another outbreak of some years standing in the Chilcotin Range country which in mid-summer promised to be of unexampled severity was completely controlled by a fungous disease.

An outbreak of the bertha cutworm throughout Saskatchewan and Alberta was one of the most spectacular insect attacks of the year. The insect has never before occurred in widespread outbreak form. It has been under study for several years and it was noted to be steadily increasing. The losses, therefore, in 1927, to sweet clover, alfalfa, flax and garden vegetables, had been expected. A great deal has been made known regarding the life-history, habits and control of the insect. Now that it is recognized by the farmers as of importance, its occurrence in the crop in the early season will be the signal for the adoption of prompt control practices.

The army cutworm was again abundant and distributed over a wider area than in 1926. It caused severe losses to grain at many points throughout southern Alberta, though the recovery due to the rains reduced the losses greatly. A decrease in the outbreak is confidently looked for in 1928. With the knowledge of the insect now available, it is possible to forecast outbreaks at the beginning of the season and then, by warning the growers of impending trouble and informing them of the control measures which have been worked out, to reduce the losses to little importance wherever it is felt that the losses justify the effort.

The wheat-stem sawfly has continued to spread in Alberta though the infestation and losses were less intense both in this province and in Saskatchewan (loss estimated \$4,565,000) than in 1926, due to the weather conditions which seemed to reduce the full effect of the attack. The insect is a pest of the first magnitude, however, and every effort is being made to improve the control methods in use particularly in the heavy soil areas. Most gratifying progress was made during the year in the study of trap crops, and also in estimating the value of natural parasites.

Wireworms, particularly in the prairies, continue to rank as most important destructive insects, especially in large areas of Saskatchewan (loss estimated at \$4,145,000) and Alberta. Acreages of grain delayed in ripening by the necessity of reseeding were exposed to unnecessary losses from rust and frost making an extremely heavy indirect loss. The whole problem and its control is being carefully studied with most encouraging progress.

Many other insects injurious to field and garden crops were studied and dealt with during the year. The potato beetle control campaign carried out in co-operation with the province of British Columbia was most successful. It is hoped that the beetle will be confined to its present territory.

The officers at the various field crop laboratories have given much attention to definite investigational work, and in this connection important progress can be reported. The insects studied include cutworms of several kinds throughout the Dominion, onion maggot, white grubs, carrot rust fly, army worms, potato stem-borer, slugs, tarnished plant bug, columbine borer, sweet clover leaf-miner, beet webworm, and plant bugs attacking alfalfa. Among broader and more fundamental problems, particular study is being given to the relation of prairie crop rotation to insect abundance, insects as factors in alfalfa seed production and the discovery and value of insect attractants and repellents.

DIVISION OF FOREST INSECTS

The investigation of the spruce budworm outbreak in Cape Breton Island was continued during the summer of 1927. An interesting feature of this outbreak is the great increase in parasitism which reached, over the whole infested area, a degree of approximately 80 per cent. An interesting experiment in airplane dusting was carried out in connection with this infestation in order to determine the value of this method of control in dealing with defoliating forest insects. The work was carried out through co-operation between the Entomological Branch of this department and the Canadian Air Service. The latter service provided a special dusting aircraft with personnel and equipment. This department provided the insecticide and planned and supervised the experiment, in co-operation with the Nova Scotia Forest Branch, which also provided a large amount of insecticide for a continuation of the experiment on a budworm outbreak in Antigonish county. The results sought in this initial experiment were to solve the mechanical difficulties entailed in placing dust accurately and in different degrees of concentration on the areas selected and, through applying different doses of poison on different plots, to study the effect of the poison in killing the caterpillars. Many difficulties incident to developing a new method,

such as this, were eventually surmounted and the dust was applied in varying doses to the selected plots with a fair degree of exactness. The work was successful in that the officers engaged upon it learned how to conduct an experiment of this kind, in itself a long step in advance, and valuable information was obtained respecting the effect of different doses of the poison on the caterpillars under different forest conditions. The effect of the different doses, however, was not sufficiently great to enable us to make definite conclusions. With the experience obtained in this experiment it should be possible to proceed with the investigation and establish definitely the value of airplane dusting for the control of budworm outbreaks, as well as for other outbreaks of defoliating forest insects, with the hope of perfecting this method for practical use in our forests.

Our investigations were continued in 1927 on the budworm outbreak in the Welcome Lake district of Ontario. This outbreak has increased in severity during the last two years and appears now to be spreading rather extensively in the country west of Sudbury. A considerable amount of balsam fir has been killed and several stands of white spruce have been injured very severely. The small budworm outbreak in northern Manitoba was again examined by our officers. In the parts of this country reached by them, this outbreak has almost disappeared.

The study of the spruce bark-beetle outbreak at Frater on the eastern shore of lake Superior was completed in 1927. Valuable information has been obtained on the habits and destructiveness of this insect and particularly on the factors which influence the development and natural control of infestations.

Control operations for the bark-beetles affecting yellow pine in southern British Columbia have been brought to a successful conclusion. Only a small amount of control work was required in 1927 and it is anticipated that in the future very little work will be required in inspecting the forests to prevent the development of new infestations. Our control work for beetles affecting lodgepole pine was continued with successful results. Our forest insect work in British Columbia is conducted in co-operation with the Dominion and provincial Forest Services. During the past two years our officers have visited the stations of the Forest Service and instructed the forest officers in the determination of forest insect injuries in their district, with a view to obtaining early and accurate reports on insect outbreaks in their initial stages so that control measures may be instituted effectively before extensive injury has been caused. It is planned to extend this method of co-operation both in the western and eastern forests so that an effective, intelligent system may eventually be developed, whereby all the organizations and interests concerned with the protection of our forests will co-operate in the endeavour to prevent great insect injuries.

Our investigation of the cedar borer in British Columbia was continued in 1927. The heavily infested areas have been delimited and this information has been distributed among the lumbermen, so that the most seriously affected sections of the forest could be avoided until the infested timber could be utilized. During recent years the borer-infested timber has been discarded as supposedly unfit for use. It was believed, however, by many that the borer injury did not weaken the trees very seriously for use as poles for telegraph and telephone lines and for similar purposes. Accordingly, in co-operation with the Forest Products Laboratory of the Department of the Interior at Vancouver, our officers selected a series of cedar poles exhibiting different degrees of borer injury. These, together with sound cedar poles to serve as checks, were subjected to strength tests at the Forest Products Laboratory, and it was proven that the vast majority of the infested poles are not seriously weakened by the tunnels of the borer. It is hoped, therefore, that this investigation will result in providing a market for a very large amount of timber that would otherwise be wasted.

The larch sawfly, which has proved such a destructive enemy to the larch or tamarack forests of eastern Canada in the past, has been the subject of continued investigation by our officers. The European parasites of the larch sawfly, which were introduced into Manitoba by the Entomological Branch some years ago and have become established there, have apparently succeeded in controlling the larch sawfly outbreak over considerable areas. An attempt was made in 1927 to distribute these useful parasites to several infested larch areas in eastern Canada and it is planned to continue this distribution as vigorously as possible. It is hoped thereby to establish new colonies of the parasites in several important larch areas both in Eastern and Western Canada and from these stations again to distribute the parasites to new territory until eventually they will be present throughout all our infested larch forests. The introduction and distribution of these parasites appears to offer definite hope of a permanent control of this injurious pest.

The investigation of injuries to fire-killed trees and logs caused by wood borers has been continued by our officers. Several new methods of control have been tested and improved methods have been devised. Very promising results were obtained by distributing lime sulphur dust over the piles of logs which were left in the woods exposed to attack by the beetles. This gives promise of being an effective and cheap method of control and will be tested more extensively in 1928.

The imported beech bark louse, which was introduced into Nova Scotia from Europe some years ago, has been under investigation by our officers for several years. It is found to be very widely distributed throughout the mainland of the province of Nova Scotia and an infestation was found last summer in the central part of Cape Breton Island. A careful survey of the southern part of New Brunswick by our officers disclosed two infestations by this insect on the New Brunswick side of the Nova Scotia boundary. A more careful and extensive survey is planned for the coming season and it is hoped that some way may be found to prevent the further distribution of this most destructive species.

Shade tree insect investigations in the Prairie Provinces have been conducted from the Laboratory at Indian Head, Sask. An officer in charge of forest and shade tree investigations has been stationed permanently at this laboratory. Thorough investigations of the insects affecting the prairie shade trees will be conducted and every effort made to advise the farmers in preventing insect injuries to their trees.

Insects affecting shade trees in Eastern Canada were investigated from the laboratories at Ottawa, Ont., and Fredericton, N.B. Insects affecting the sugar maple again received special attention, particularly the maple leaf cutter in the maple groves of Ontario and Quebec. Various insects affecting shade trees of cities and towns have been investigated.

The survey of the distribution of the European pine shoot moth, which has been introduced into many parts of Canada on imported pines, has been continued, and every effort will be made to reduce the present infestation and to prevent the further distribution of this important pest.

Important studies on the biologies of forest insects have been continued by our officers at Whycocomagh, N.S.; Fredericton, N.B.; Ottawa, Ont.; Welcome Lake, Ont.; Frater, Ont.; Indian Head, Sask.; Vernon, B.C.; and Pender Harbour, B.C.

Studies in the taxonomy and morphology of important forest insect groups are being conducted in the winter months by certain of our officers.

DIVISION OF FOREIGN PESTS SUPPRESSION

In all the various fields of activity of the officers of this division, namely, the administration under the regulations of the Destructive Insect and Pest Act of the permit system, the inspection of imported plants and plant products, the maintenance of foreign and domestic quarantines, the inspection and certification of plants and plant products for export, the application of methods of control of imported insect pests and the scouting of territory for possible new infestations, the amount of work accomplished materially exceeded that of previous years.

During the year ending March 31, 1927, 34,624,880 plants were examined, either at port of importation or at destination, an increase of some four million plants over the preceding year. The value of the nursery stock imported is given as \$1,192,773 in the report of the Department of Trade and Commerce.

The number of permits issued was 13,729, United States and foreign, being within one of the figure for the preceding year; the number of inspections in 1927 of imported nursery stock totalled 5,960, an increase of 405 over 1926.

Importations by mail amounted to 2,473 packages, with 1,877 inspections, being another increase in total volume.

Among the 2,414 passenger vessels visited by the inspectors at Saint John, Quebec, Montreal, and Vancouver, 215 passengers, on 170 boats, were found to have plants in their baggage. Prohibited or diseased plants were thus intercepted in 72 cases.

Inspection of plant products could only be carried on as other work permitted. However, 5,858 such inspections were made, an increase of 166 over the preceding year.

The number of inspections made in 1927-28, in all the projects of the division, amounted to 12,559 as compared with 12,729 in the year 1926-27. The difference is due to the modification of the United States regulation formerly requiring the inspection of certain fruit, vegetables, cut flowers, etc., exported from Ontario to the United States.

During the year, 590 interceptions of insect pests and plant diseases on importations of nursery stock and plant products were made. This is an increase of 109 per cent over the former year.

The interceptions made included brown-tail moth, European earwig, European pine shoot moth, scales of different kinds, root borers, mites, bulb flies, and various rots and diseases of bulbs, corn ear worm, grain insects in corn, etc.

The Division of Botany of the Experimental Farms Branch co-operated to the fullest extent in the identification of plant diseases intercepted by the inspection service.

During the year ending March 31, 1927, plants were refused entry in 73 cases, owing to their importation being contrary to regulation. Thirty-one shipments of potatoes were also prohibited entry for the same reason.

Twelve special importations of plants, otherwise prohibited entry, to be used for scientific purposes, were authorized.

Exports of plants and plant products to foreign countries totalled 482, an increase of 156 over the preceding year. The shipments were made to nineteen different countries, and comprised 306,784 plants, 8,216 bulbs, 15,028 pounds of forest tree seeds, and 1,500 pounds of onion sets.

The Brown-tail Moth.—At the close of the fiscal year, March 31, 1928, scouting for this insect in Nova Scotia was completed and it is gratifying to record that no winter webs have been found. It is, therefore, hoped, that the infestation has been eradicated.

The Apple-Sucker.—Scouting operations in 1927, covering the period June 7-28, discovered a rather heavier infestation in Cumberland county, N.S., and

a slight spread in Westmoreland county, N.B. No new infestations were found in the latter province.

Scouting in Prince Edward Island showed that the apple sucker is present over the central and southern portion of the Island. This constitutes the first record of its presence in this province.

A total of 112 certificates, covering 14,392 plants of a value of \$4,300, was issued during the 1927 shipping season. These certificates, issued under Regulation No. 1 (Domestic) 2nd Revision, covered shipments of nursery stock, other than host plants of the apple sucker, from points inside to points outside the areas quarantined for that insect.

The Gypsy Moth.—Although no evidence of the presence of any living stage of the gypsy moth in the area covered by the Henrysburg, P.Q., outbreak and adjoining territory had been discovered in 1926, field work was continued in 1927 along the lines of re-examination and eradication. The area infested was again carefully gone over, and all the trees therein and for a distance of 1,000 feet outside, were banded with raupenleim and burlap. Spraying commenced on June 13 and finished on June 24. The area known to have been infested was covered and from 1,000 to 3,000 feet beyond. The United States Bureau of Entomology again co-operated by the loan of a power sprayer and three operators.

No living stages of the gypsy moth were found in 1927 nor were any old egg clusters observed in the area previously infested and the territory adjacent thereto. Further scouting operations in new localities failed to reveal any evidence of the gypsy moth.

Although the presence of the gypsy moth in New Brunswick or Nova Scotia was not suspected, it was thought well to do some scouting in certain localities in those provinces, where conditions might be regarded as favouring an outbreak. However, as the result of a month's scouting no evidence of this pest was observed.

In connection with the enforcement of the gypsy moth quarantine, inspection of shipments of Christmas trees was conducted from November 2 until December 11. One hundred and twenty-five certificates were issued, covering 66,980 bundles of trees, valued at \$33,487.50. These figures show an increase of some 69 per cent over the preceding year.

The European Corn Borer.—The organization of this work was the same as in former years, namely, the scouting of areas bordering already infested territory, the enforcement of quarantine regulations, the taking of records of the development of the pest in early-infested areas, and the carrying on of corn borer parasite studies and breeding work.

In the scouting work in the provinces of Ontario and Quebec, fifty-nine collections were made in districts not previously found infested.

As a precautionary measure, some scouting was done in the provinces of Nova Scotia and New Brunswick, but no trace of the borer was found.

The maintenance of quarantine regulations, as revised in the spring of 1927, to cover the additional areas found infested in 1926, was conducted by means of distribution of the revised regulation and by visits to wholesale houses, shipping points, etc. Automobile inspection, however, was not carried on owing to the fact that those parts of Ontario where motor traffic is a factor were under quarantine.

An important addition to the restrictions in 1927 was the inclusion of shelled corn in the products affected. Under the revised regulation, inspection and certification are required. A system for carrying this out was evolved and has, so far, operated satisfactorily to all concerned.

The result of the degree of infestation record work may be summarized by stating that the work shows, in a great part of the territory, as yet lightly infested, that the corn borer threatens to increase to a point where it will become of economic importance.

The Oriental Peach Moth.—Working in co-operation with officers of the Vineland Entomological Laboratory, the inspection staff at Niagara Falls continued scouting and infestation record work organized in 1926. In all, 357 orchards of 1,936 acres total area, were examined in 1927, and of these 120 orchards were found to be infested. These are located at various points in the counties of Welland, Lincoln, Wentworth, Kent, and Essex. In general, the work recorded a spread of the insect and also an increase in the intensity of the infestations.

The European Pine Shoot Moth.—Scouting for this insect was continued in 1927 under the supervision of the district inspectors at Chatham, Niagara Falls and Toronto. These officers report a general decrease in severity of infestation and the failure to find the insect at a number of points where it was found in 1926. It would seem that systematic scouting for a few more seasons, accompanied by careful treatment of infested trees, together with rigid inspection of imported pines, is likely to control, and possibly to eliminate, this serious pest.

The Mexican Bean Beetle.—In 1925, this insect, in its progress northward, had invaded the south shore of lake Erie. Scouting in southwestern Ontario, carried on each season since the above year, did not reveal its presence until 1927, when the Mexican bean beetle was found about 12 miles south of Chatham. Further scouting discovered the beetle along the lake shore of Essex, Kent and Elgin counties and also some distance inland. In the Toronto district the first collection was made near Lambton Mills, and later one at Oakville and two near Burlington.

DIVISION OF SYSTEMATIC ENTOMOLOGY

The main activities of the above division during 1927 have been along the lines laid down in previous reports, viz:—

1. Maintenance and extension of the Canadian National Collection with taxonomic studies based on the material in the collections.
2. Identification work for field officers, provincial and other museums, universities and colleges, and private individuals.
3. The upkeep of the Branch Library.

Taxonomic work has been continued by the officers of the division, especially in Diptera, Coleoptera, Lepidoptera and Ephemeroptera, and numerous articles have been published in scientific journals, incorporating the results of the investigations; due to these studies and to exchanges with other workers and institutions about 350 types of new species have been added to the Canadian National Collection and numerous new records of insects, hitherto unknown to our Canadian fauna, obtained.

Insect faunal surveys were carried on in the Kazubazua region of Quebec, also in the southwest portion of the same province extending from Covey Hill to Knowlton. A survey of the Point Pelee, Ontario, region during June and the early part of July, was also made. Very interesting results were obtained from these surveys and numerous valuable specimens added to the Canadian National Collection.

Identification work for field officers, museums and private individuals has been continued. With the appointment of a specialist to take charge of the Coleoptera, considerable impetus has been given to the work with this order of

insect, and not only has the identification work increased, but valuable connections with various workers all over the country have been established, resulting in numerous additions to the National Collection in this order. An entire rearrangement of the Coleoptera is being undertaken on a much sounder and more modern basis of classification than has been possible heretofore.

A number of older and very valuable books have been added to the Branch Library, which is fast becoming one of the recognized entomological libraries on the continent. The card catalogue of new species of North American insects is being continued and is proving of considerable value to the divisional officers as they work over, from time to time, various groups of insects.

THE DESTRUCTIVE INSECT AND PEST ACT ADVISORY BOARD

With a view to preventing the importation, or limiting the spread within Canada, of dangerous insect pests and plant diseases, the Advisory Board, during the year, recommended certain changes in the regulations under the Destructive Insect and Pest Act. The following changes were approved by Order in Council.

Regulation No. 3 (Foreign) 3rd Revision. P.C. 559.

Prohibiting the importation of potatoes from certain foreign countries or districts thereof.

This regulation was amended by the removal of the prohibition against importation of potatoes from those districts in the states of Pennsylvania, West Virginia and Maryland, outside any area quarantined for the potato wart disease; a certificate as to locality where grown must accompany each shipment.

Regulation No. 4 (Foreign) 1st Revision. P.C. 17.

Prohibiting the importation of all plants except the fruits of pineapple, banana and cocoanut into the Dominion of Canada from the Hawaiian Islands.

This regulation was amended by the addition of the cocoanut to those fruits which may be imported from the Hawaiian Islands.

Regulation No. 8 (Foreign) 2nd Revision. P.C. 717.

Prohibiting the importation of certain varieties of currants and gooseberries into the Dominion of Canada from all countries.

This regulation was amended by permitting the importation of the standard commercial varieties of gooseberries and of red or white currants, cultivated for their edible fruits only.

Regulation No. 10 (Foreign) 4th Revision. P.C. 559.

Restricting the importation of corn and certain other plants into the Dominion of Canada from certain states of the United States of America.

This regulation was revised (1) by requiring a certificate of inspection for all shelled corn forwarded to Canada from all infested areas in the United States, and (2) by applying the quarantine to states rather than to infested counties in those states, as had been done heretofore.

Regulation No. 11 (Foreign) 3rd Revision. P.C. 559.

Prohibiting the importation of alfalfa hay into the Dominion of Canada from certain states of the United States of America.

This regulation was amended by substituting therein entire states instead of certain counties of those states.

Regulation No. 14 (Foreign) 2nd Revision. P.C. 717.

Prohibiting the importation into the Dominion of Canada of all fresh peaches and peach nursery stock from certain states of the United States of America.

This regulation was amended, effective on and after April 20, 1927, by permitting the importation of fresh peaches and peach nursery stock into Canada from certain states of the United States of America from which such importations had formerly been excluded.

Regulation No. 14 (Foreign) 3rd Revision. P.C. 1526.

Effective on and after August 11, 1927; this regulation was amended by limiting the prohibition against the importation of fresh peaches, peach nursery stock, etc., to the provinces of Ontario and British Columbia.

Regulation No. 2 (Domestic) 6th Revision. P.C. 559.

Restricting the movement of corn and corn products from certain areas in the provinces of Ontario and Quebec on account of the European corn borer.

This regulation was revised by including in the area under quarantine the new territory in Ontario and in Quebec into which the corn borer was found to have spread, as well as certain other adjacent districts.

Regulation No. 3 (Domestic) 1st Revision. P.C. 717.

Prohibiting the importation of certain species of pine into the provinces of Alberta and British Columbia.

This regulation was amended by removing therefrom the restriction on the movement into Alberta and British Columbia of standard commercial varieties of gooseberries and of red or white currants, cultivated for their edible fruits only.

Regulation No. 8 (Domestic). P.C. 717.

Restricting the sale of all species and varieties of black currants in Canada.

This regulation made it illegal to sell or otherwise dispose of all species of black currants in the Dominion of Canada, with the exception of the three prairie provinces and certain counties in the province of Ontario.

On February 16, under P.C. 260, the above regulation was rescinded.

FRUIT INSECT INVESTIGATIONS

In 1927, there was a marked increase of the oriental peach moth in Ontario, not only in intensity of infestation, but also in spread. The insect is present in severe outbreak form in the vicinity of St. Davids, Ont., and has already caused infestations running over sixty per cent. Our officers are making an intensive study of the pest and are developing new lines of control measures which we hope will be of value.

The apple sucker has continued to be under observation in the provinces of Nova Scotia and New Brunswick. During the year, infestations for the first time were found on Prince Edward Island.

In British Columbia, investigations conducted in the southern Okanagan fruit area, have shown that the tarnished plant bug is responsible for an important injury to peaches, known locally as "cat facing."

In the Cranbrook area in southeastern British Columbia and in the Okanagan valley, caterpillars of small tortricid moths known as leaf-rollers, were responsible for important injury to the foliage of strawberry plants. Much information on the life-history and habits of these insects was obtained which will be useful in future outbreaks.

The European red mite appeared in outbreak form in the Niagara district, Ont., quite late in the season. Satisfactory results in controlling it were secured from the use of home-made oil sprays.

In sections of Ontario, Quebec and the Maritime Provinces, apples are frequently attacked by the apple maggot. During 1927, in unsprayed orchards, this insect caused much damage to the crop. It may be effectively controlled by the timely application of arsenical sprays.

Further studies on the life-history and control of the round-headed apple tree borer, have been conducted in southern Quebec. Control tests with calcium cyanide mixtures have given promising results, particularly when this poison was used in combination with castor oil.

In the Niagara district, Ontario, in unsprayed orchards, and orchards sprayed too late, there was a very heavy infestation of pear psylla. The outbreak was a serious one, many orchards being badly affected. The officer in charge of our Vineland laboratory has demonstrated the value of a lubricating oil emulsion for the control of this insect and in orchards properly treated very excellent crops of pears have been secured.

During 1927, unusually severe damage by the green apple aphid was experienced in most of the fruit-growing sections throughout the Dominion. Good control, particularly in Ontario, was secured by dusting or spraying with nicotine sulphate.

Other fruit insects present in destructive numbers during the year and which required the attention of our officers were: budmoths, codling moth, case-bearers, strawberry root weevil, etc.

INSECTICIDE INVESTIGATIONS

As in recent years, an officer of the Division of Chemistry, Dominion Experimental Farms Branch, has been stationed at the Annapolis Royal laboratory during the summer months in order to assist in co-operative investigations on which chemical work is particularly necessary.

Further work with nicotine has corroborated results obtained previously, and has fully established the high value of this material against the eye-spotted budmoth. In addition to a direct insecticidal effect by contact, it has been established that there is a distinct residual effect lasting for a long period which is of value against the budmoth, and from which an inference may be made against certain other pests also.

The use of nicotine as a dust in conjunction with a fungicide has been further gone into in small detail and it has been established during 1927 that mixtures of copper carbonate, hydrated lime, and nicotine, are effective both from a fungicidal and insecticidal standpoint.

Probably the most important project which has been dealt with, is the development of a more satisfactory combined insecticide and fungicide spray for fruit trees than the standard materials at present in use. Work on this has been under way for several years and undoubtedly will continue for several years in the future. This has involved extensive laboratory work both chemical, in co-operation with the Chemical Division, and biological, in co-operation with the Division of Botany. Several hundred field plots were devoted to this project in 1927, which have been productive of interesting and promising results. From our extensive records to date it would appear that the mixture of lime-sulphur, aluminium sulphate, and calcium arsenate (with or without nicotine), is a combination which is definitely superior, considering the many factors involved, to the standard materials now in use. However, this mixture, while constituting an important advance, is not considered by any means perfect. Investigations are, therefore, continuing with the hope of further improvement.

Co-operating with a local hardwood mill, a considerable amount of time was spent on the insecticidal treatment of hardwoods destined for trade in the tropics, with particular reference to the West Indies. It has previously been impossible to market Maritime hardwoods in the West Indies due to their susceptibility to the ravages of termites. A cheap and economical process was finally devised for insect-proofing hardwoods of the varieties birch and maple. Success was not attained with the variety beech.

MOSQUITO INVESTIGATIONS

During 1927 there was a marked increase in public interest in mosquito control work throughout the Dominion. In British Columbia, our officer at Agassiz carried out aerial and ground surveys of extensive breeding areas in the neighbourhood of Harrison Hot Springs and assisted, in an advisory capacity, in a successful local control project.

In Saskatchewan, our officer at Indian Head continued faunal and biological studies of mosquito species in the Prairie Provinces and secured much valuable data. He also made a general survey of the mosquito situation at Winnipeg, Man., and materially helped the local mosquito control committee in planning and carrying out effective control measures.

In Eastern Canada, at Ottawa, an extensive control campaign, financed by local municipalities and other bodies, was launched with considerable success. This campaign, which was conducted by a local committee working under the direction of Branch officers, served as a nation-wide demonstration of the feasibility of controlling these pests. Faunal and biological studies were also continued, and with the co-operation of the Division of Chemistry, Central Experimental Farm, a number of chemicals in liquid and dust form were tested out with promising results. An investigation of a mosquito outbreak in mid-summer at Hawkesbury, Ont., revealed enormous numbers of an exotic species, which has become established at a number of other points in Eastern Canada, developing in extensive back channels of the Ottawa river heavily polluted with sulphite pulp waste from a local pulp mill. Taxonomic studies of specimens collected in various parts of Eastern Canada were made at Ottawa, resulting in an increased knowledge of our fauna.

HOUSEHOLD INSECTS

Studies in the life-histories, habits and control of several important species of insects infesting dwellings was continued at Ottawa, and, to a lesser extent, in certain of our field laboratories, during 1927. The results from these studies have assisted materially in enabling us to give prompt and satisfactory replies to the numerous requests for information concerning these pests which are frequently received. With the co-operation of the Division of Chemistry, Central Experimental Farm, a large number of fly-sprays were prepared and tested out at Ottawa during the summer. As a result of this work, a very cheap, easily prepared and effective fly-spray, the active principle of which is pyrethrum, is now available for the use of the general public.

NATURAL CONTROL INVESTIGATIONS

The European corn borer parasite work in Ontario was extended during 1927. In addition to the small parasite, *Habrobracon brevicornis*, 203,400 individuals of which were liberated during the season, as well as the larger species, *Exeristes roborator*, 40,580 specimens of which were liberated, other species of parasites were received from the United States Corn Borer Laboratory at Arlington, Mass. These, with subsequent liberations, were as follows: *Microgaster tibialis*, 13,920 individuals; *Eulimeria crassifemur*, 3,911 individuals; *Apanteles* sp., 1,931 individuals; and *Marcocentrus* sp., 1,049 individuals.

During the winter of 1927-28, preparations were made for the breeding of the native egg parasite, *Trichogramma*. Large numbers of the eggs of the Angoumois grain moth and the Mediterranean flour moth are being obtained as hosts for *Trichogramma*. Satisfactory progress is being made in this new line of work.

In 1926, at the request of the New Zealand Government, collections of living specimens of white grubs parasitized by the tachinid fly, *Microthalma michiganensis*, were despatched to that country. In 1927, a further large shipment of parasitized grubs were sent to New Zealand, the hope being that the parasite would become established and attack certain kinds of destructive chafers. Further specimens of chrysopid flies were also forwarded to New Zealand to see if they would become established and assist in reducing important outbreaks of an aphid.

An effort to transfer the larch sawfly parasite, *Mesolius tenthredinis*, from Manitoba to Ontario was made in 1927. This parasite has increased considerably in Manitoba and it is hoped to establish it in sections of Eastern Canada where the sawfly is again becoming destructive.

In 1926, the Entomological Branch received a small supply of parasites from the state of Washington for liberation in the Okanagan Valley, B.C. During 1927, the rearing of these parasites was continued in British Columbia and liberations made in codling moth-infested areas.

INSECTS AFFECTING STORED PRODUCTS

During 1927, the main problem undertaken has been in connection with the control of insect pests in flour mills. Certain flour mills in Ontario, infested with the Mediterranean flour moth, were fumigated successfully with calcium cyanide, 100 per cent kill in some experiments being effected. During the year many inquiries concerning the control of stored product insects were received. Copies of papers dealing with pests were forwarded to all the leading mills through the Canadian National Millers' Association.

INDIAN ORCHARD WORK

During 1927, the Dominion Entomologist continued to direct the work of the Supervisor of Indian Orchards in British Columbia. The Indian reserves of the province are visited periodically by the officer employed for this work and advice given on the spraying of orchard trees, etc. The grant under which this work is maintained is provided by the Department of Indian Affairs.

ADVISORY BOARD ON WILD LIFE PROTECTION

During the year, the Dominion Entomologist, representing the Department of Agriculture, attended the meetings of the Board. In 1927, a Dominion conference of game officials and others interested in the conservation of our wild life was held at Ottawa. Other departments represented on the board are Indian Affairs, Mines, Interior, Fisheries, and Mounted Police.

ADVISORY BOARD UNDER THE AGRICULTURAL PESTS CONTROL ACT, 1927

Under authority, provided in section 11 of the Act, the Dominion Entomologist was appointed a member of the advisory board. This Act regulates the sale and inspection of agricultural economic poisons, and is not intended to provide measures for the control of the various kinds of pests which affect agriculture.

INTER-DEPARTMENTAL COMMITTEE ON AIR OPERATIONS

Arrangements have been made whereby the Dominion Air Service will co-operate with this department in continuing the experiment in airplane dusting for the control of spruce budworm outbreaks commenced last summer with promising results in Cape Breton Island. It is planned to have this work

carried out in the summer of 1928 in the budworm-infested forest west of Sudbury in Ontario, and it is hoped that definite progress will be made in perfecting this method of control for the prevention of insect losses in our forests.

EXHIBITIONS

The exhibition work of the Entomological Branch was considerably extended during 1927; the number of exhibitions increased and the high standard set in former years was well maintained. The response of the public to the development of this phase of our work has been very gratifying and encouraging, and it augurs well for future expansion. Many inquiries have been received from farmers, fruit-growers, gardeners, and others, and much useful information distributed in this way.

Besides the annual assemblies made at the larger and more important centres, such as the Canadian National Exhibition at Toronto and the Central Canada Exhibition at Ottawa, prominent displays have been made at London, Ont.; Montreal, P.Q.; Quebec, P.Q.; Sherbrooke, P.Q.; as well as at a number of the smaller fairs in the various provinces of both eastern and western Canada.

There were also the following special exhibitions assembled during the year: (1) Under the auspices of the Minister of the Department of Mines and in co-operation with other branches of the government service, at a conversazione of the Professional Institute of the Civil Service of Canada, at the National Museum of Canada, Ottawa, in March; (2) At the special request of the Minister of the Department of Mines, for the World's Mining Conference, at the National Museum of Canada in August; (3) In commemoration of the jubilee of agriculture in Canada, at the Royal Winter Fair, Toronto, in November. All these functions were well attended and our exhibits most favourably commented on.

The various phases of entomological work were presented in the form of mounted photographs, coloured life-history illustrations, wax models, specimens of injured wood, bark, fruit and vegetables; and by means of a mechanical device, attractive posters setting forth spraying formulae, warning notices and other useful information, were attractively displayed. Prominence was given to such important pests as the European corn borer, oriental peach moth, Mexican bean beetle, apple maggot, Japanese beetle, etc. Insects, such as warble and bot flies, affecting horses and cattle were made a special feature and emphasis placed on the control of houseflies, mosquitoes, and other household pests. Officers of the branch were in attendance to explain the exhibits and give advice regarding matters of control.

In response to repeated inquiries on the subject of public display of exhibition material, a circular, entitled "Some Suggestions for Preparing and Erecting an Entomological Exhibit," was issued in mimeographed form. This included practical suggestions, reminders and useful hints regarding the assembling, construction, erection, and conducting of an entomological exhibit, the main purpose of the publication being to assist as much as possible those who are engaged in this kind of work.

NATIONAL MUSEUM OF CANADA

The Dominion Entomologist, as Honorary Curator of Entomology in the National Museum of Canada, is assisting in the establishment of an educational display of insects and their work at the museum. During the year, a temporary exhibit was installed. This has attracted a good deal of attention and has served to advertise the work of the branch.

MEETINGS

Many important meetings have been attended by officers of the branch during the year.

The Dominion Entomologist attended international conferences at Nashville, Tenn.; Detroit, Mich., Atlantic City, N.J., and other places. The Associate Dominion Entomologist attended the International Zoological Congress in Budapest, Hungary, in September, 1927, and visited several important entomological laboratories in Europe for conferences with their officers, making brief investigations of their principal forest insect problems. He also attended the Imperial Agricultural Research Conference in London during the month of October.

At the annual meeting of the Association of Economic Entomologists held in Nashville, Tenn., the Chief of the Division of Foreign Pests Suppression was elected Chairman of the Section of Plant Quarantine and Inspection for 1928.

FIELD LABORATORIES

ANNAPOLIS ROYAL, N.S.

The officers of this laboratory are generally concerned with investigations of insecticides, but during 1927, more attention than usual has, of necessity, been given to a direct study of certain pests which have been particularly prominent. This includes a detailed biological study of certain species of budmoths and leaf-rollers which has resulted in the obtaining of much useful information. Coincidentally with this, detailed work has been under way with regard to control measures. This has been done particularly with the eye-spotted budmoth, which has been present in tremendous numbers during recent years. In the report of last year it was stated that promising results had been obtained against this insect, and the extensive work of 1927 fully corroborates the records obtained previously, and has resulted in a mass of information from which definite and effective control measures may be recommended. Similarly, experimental control measures have been commenced against the other species of budmoths and leaf-rollers, and in some cases promising results appear to be in sight. Work on new control measures against the apple maggot was also continued, with results, while not as promising as would be desired, yet sufficiently so to report definite progress.

Spray and dust calendars were published, many lectures were given during the year, and detailed exhibits displayed at the more important local fairs.

FREDERICTON, N.B.

Research in the biology of and methods for controlling forest and shade tree insects, as also field crop, garden, fruit and greenhouse insects, have been undertaken during the year.

A total of nineteen different forest insects were under study during 1927, fourteen of these being wood or bark-destroying beetles, a foliage-destroying sawfly, two foliage-destroying caterpillars, the spruce gall *Chermes* and the felted beech coccus. The bark-beetle studies resulted in the finding of several important factors connected with the number of generations per year and their methods of hibernation. Previously unknown species of *Chermes* have been found and new host relationships for this insect discovered. The felted beech coccus was found to have become established in Albert and Westmoreland counties in New Brunswick, districts separated from the great central forest area of the province by only a narrow band of farm land. Special studies on the biology of this imported wingless and legless insect resulted in finding the method of spread

from tree to tree. Control methods applicable to shade and park trees were also found.

Experiments connected with field crop insects resulted in finding methods for greatly reducing the injury by the carrot rust fly larvae, a possible method for preventing injury to bean seedlings by the seed-corn maggot and an inexpensive method of destroying slugs. Progress was made in finding the life-history of the European potato stem borer, this including the discovery of two wild host plants. The hessian fly survey was continued, with the discovery of the insect in districts not previously known to be infested, but generally less abundant in all districts than in 1926. Control experiments were carried on against the turnip flea-beetle and other seasonal insects of the year, and a life-history study of the commonly injurious cutworms begun. A new area of infestation by the wheat wireworm was found at Newcastle, the first such area found in New Brunswick.

Investigations connected with fruit insects and the application of insecticides were conducted in New Brunswick under the direction of the Annapolis Royal laboratory.

HEMMINGFORD, P.Q.

The officers of this laboratory have been concerned chiefly with insects affecting fruit and field crops. A study of the life-history and control of the round-headed apple tree borer was very considerably advanced. Its control with calcium cyanide and a mixture of this material with castor oil, discovered by our officers, has been exceedingly successful. Further extension work on the apple maggot indicated that this insect caused minor losses in commercial orchards. The study of the biology of the white grubs and the injury they cause has progressed very considerably, as has also the study of their natural enemies. A great amount of most valuable information has been secured, which should be applicable, in general, throughout Eastern Canada. Other insects receiving attention at this laboratory were the European corn borer, larkspur leaf-miner, and the Colorado potato beetle. Through publications, lectures, exhibits, correspondence and investigations, every effort was made to assist the farmers and fruit growers in controlling insect pests.

OTTAWA, ONT.

The studies at this laboratory included investigations of vegetable and garden insects. The major studies were concerned with the onion maggot and the tarnished plant bug, in both of which satisfactory progress was made. The control tests of the onion maggot were most promising and suggest that presently this profitable crop may be grown with a minimum of loss. Minor studies were carried on of slugs, carrot rust fly, columbine borer, the comparison of the killing qualities of the newer poisons with the standard ones; preliminary studies in the discovery and value of attractants and repellents, and of the comparative seasonal rate of development and growth of insects and plants throughout Canada, the latter with a view to the proper timing of the distribution of information for the control of insect pests from a central office.

Investigations were conducted from this laboratory on insects affecting shade trees of Eastern Canada, continuing the work formerly carried out at a laboratory at Aylmer, Que. Special attention was given to insect enemies of sugar maples, and particularly to defoliation caused by the maple leaf cutter. Investigations were continued on other important shade tree insect pests, such as canker worms, the white marked tussock moth, the sugar maple borer and the lilac leaf-miner.

VINELAND STATION, ONT.

The oriental peach moth investigation started in 1926 was continued in 1927 at Vineland Station and St. Davids, Ont. Biological studies were carried

on, and investigations on two lines of control, viz: (1) bait traps for the adults, and (2) larvicides directed against the overwintering caterpillars were initiated. As anticipated, there was quite a substantial spread of the moth in the Niagara district and in Essex and Kent counties. In Niagara township it occurred in severe outbreak form and was responsible for heavy losses.

An investigation on the life-history, habits, and control of the common red spider, particularly as a pest of small fruits, was commenced, and further biological and control experimental work on the codling moth, including studies on penetrating dormant washes, was done. Investigations on lubricating oil sprays as a means of controlling the pear psylla, the European red mite, the black cherry aphid and apple aphid were continued, and careful observations were also made on the effect oil sprays have on fruit trees. Comparison spraying experiments were conducted in orchards and bush fruit plantations; observations and notes were made on all the more important fruit insects of the year; and a very considerable amount of extension work was carried on, including the addressing of fruit growers' meetings, answering letters and inquiries received over the telephone, assisting the Niagara Spray Service, and so on.

STRATHROY, ONT.

As formerly, this laboratory serves as the centre of study of field crop and garden insects under mixed farming conditions and for the general publicity work in respect to these insects in southwestern Ontario. Studies of the biology of the armyworm were continued, and also an investigation of the habits and control of the yellow-headed cutworm. Preliminary investigations of the life-history of the Mexican bean beetle were incepted. The annual study of the hessian fly situation was conducted as well as minor studies relating to white grubs, cucumber beetles and miscellaneous cutworms. The preparation of wax mounts of insects and their injuries for exhibition and museum purposes has been continued with the result that excellent displays of the commoner insects and of vegetable and fruit injuries are now available. Many of these were used during the year by the branch at leading exhibitions and fall fairs in Eastern Canada.

CHATHAM, ONT.

The field crop work carried on from the Chatham laboratory for the year related chiefly to the study of European corn borer, general survey of the insects affecting truck crops in southwestern Ontario, with particular reference to tobacco and the various species of Canadian flea-beetles.

The corn borer investigations include a study of the factors controlling egg-laying and a careful analysis of the most effective preliminary treatment of corn refuse before ploughing, with tools available on the farms, and the best combination of farm ploughs and their attachments with which to plough down the crop refuse as recommended in corn borer control practices. These studies were carried on in co-operation with the province of Ontario and marked progress was made in all the work undertaken, and the results, particularly in regard to the treatment of corn refuse, should be of the greatest assistance in corn borer control work.

The Chatham laboratory is the headquarters for parasite investigations. During the year, the officers engaged in these investigations have been particularly active, as a result of which large numbers of parasites have been reared and liberated in areas where the corn borer is causing important damage. A statement regarding these liberations is included in the chapter on "Natural Control Investigations."

During the year, the laboratory was visited by many officials connected with corn borer control in the Dominion and the United States and by large

parties of farmers from those districts in both countries either infested or menaced by this pest. Those attending the International Corn Borer conference at Toledo visited the Chatham laboratory as part of the program on that occasion.

TREESBANK, MAN.

The studies at this laboratory continue to relate particularly to field crop insects. The investigation given greatest emphasis consists of a study of the life-history, habits, and in particular of the immature stages of grasshoppers, insects affecting sweet clover, the wheat-stem sawfly and the hessian fly.

The grasshopper investigation is the outstanding one at the laboratory and is being carried forward as a general study of the grasshoppers of Manitoba and all Western Canada with a special object of recognizing the species of Canadian grasshoppers in the immature stages. A large number of minor studies are in progress concerned with insects of local or periodic importance which are kept under observation in the intervals between outbreaks in order that advice regarding their control may be immediately available. Particular progress was made during the year in the grasshopper, sweet clover leaf miner and wheat-stem sawfly problems.

The laboratory is a centre of widespread interest. Over 500 visitors called during the year to consult the officer in charge and to view the insect exhibit which he has prepared.

SASKATOON, SASK.

The work of the officers at this laboratory was confined entirely to insects attacking field crops. The problems given particular attention were wireworms, bertha cutworm, red-backed cutworm, and a study of the relationship between crop rotation and insect abundance. Many other minor observations were made upon insects of particular interest to officers in neighbouring laboratories, thus contributing to their knowledge of the situation in adjacent territories.

The wireworm and crop rotation problems were given the greatest attention during the year and most important results were secured. Both problems are such as will require several years to complete.

The closest co-operation exists between the local Department of Agriculture and our officers, both in the securing and distributing of insect information, the interchange between the two organizations being of very material benefit to each.

INDIAN HEAD, SASK.

During 1927, the survey of live stock insect conditions, commenced in 1926, was continued. The amount of infestation and damage from warble flies received particular attention and a large number of grubs from different points throughout Saskatchewan were examined to ascertain the species responsible. Both *Hypoderma lineatum* and *H. bovis* were found to be strongly established. Much information of value in outlining control measures was obtained.

A serious outbreak of black flies occurred and was investigated in the Indian Head district. A detailed study of the bionomics of the main prairie mosquitoes was completed, and assistance was given to the Winnipeg Mosquito Committee in their campaign to control the pest in that vicinity. A number of other common live stock insects such as horse flies, horse bot flies, etc., received attention during the season.

An officer was attached permanently to this laboratory in the spring of 1927 to take charge of shade tree insect investigations in the Prairie Provinces. The biology and control of a large number of shade tree insects were investigated, particular attention being paid to the outbreak of forest tent caterpillars which

has now subsided over a great part of the prairie country. The natural conditions which favour the development and final disappearance of these great outbreaks are the subject of special investigation. Improved methods of control were devised for outbreaks of the pine leaf scale, red spider on conifers, and for borers in the trunks of poplars. An effort is made through correspondence to assist the farmers in the control of insect injuries to their trees.

LETHBRIDGE, ALTA.

The activities of the officers at this laboratory are concerned almost entirely with field crop and garden insects. During the past year the major attention was given to a study of the life-history and control in Alberta of the wheat-stem sawfly and to a further investigation of the relation between insects and alfalfa seed production. Studies of the army cutworm were carried forward to the point where forecasting of outbreaks a year in advance is possible and it is planned that the control methods which have been so clearly demonstrated will be given publicity very soon.

The wheat-stem sawfly investigations have progressed particularly as regards the use of trap crops and methods of intensifying the value of local parasites. The pale western cutworm outbreak having virtually disappeared, it has been possible, during the past year, to give a great deal more attention to the sawfly studies. This problem has been one of extreme importance in Alberta, where the sawfly is rapidly extending its territory and causing very great losses.

The alfalfa seed production investigations have made satisfactory progress though the climatic conditions being so exceptional made clear-cut results difficult.

VERNON, B.C.

Fruit insect investigations conducted from this laboratory related to the life-history and control of blister mites, oyster-shell scale, tarnished plant bug injury to peaches, and to dusts and sprays for insect control. Particular attention has been given to oil sprays, both for dormant and for summer use.

Preliminary work on the control of woolly aphis was begun in the fall of 1927 and continued throughout the winter of 1927-28. This project will be conducted in co-operation with the Summerland Plant Pathologist, as the woolly aphis is believed to be spreading the perennial canker of apple trees; a disease of extreme importance.

The rearing and liberation of codling moth parasites were continued during 1927, and a number of minor projects relating to fruit insects were undertaken.

Field crop investigations conducted from this laboratory related to the life-history and control of the clover root borer, which was discovered for the first time in the province. Considerable damage was found to have been done in the northern end of the Okanagan valley and a detailed survey by farms was made and recommendations for its control given out.

As in previous year, investigations of the biology and control of forest insects were conducted from this laboratory. The control operations for bark-beetle outbreaks in yellow pine and lodgepole pine were continued in co-operation with the Dominion and provincial forest services. This control work has been completed for the beetles affecting yellow pine. All these outbreaks have now been brought satisfactorily under control and it will not be necessary to continue this control work in 1928. Our officers conducted extensive surveys for forest insect injuries throughout many parts of the forest region of British Columbia. In connection with these surveys, our officers worked in co-operation with the Dominion and provincial forest services and instructed their

forest rangers in the identification and control of forest insect injuries in their districts. Arrangements were made for reporting outbreaks in their initial stages, so that co-operative control measures might be applied before great injury resulted. Our officers are extending their investigations to other forest insect injuries, particularly those caused by bark-beetles to Douglas fir, Sitka spruce, and mountain balsam. The valuable series of biological studies is in progress, particular attention being paid to the relation between the work of the insect and the injury caused to the timber or to the vitality of the trees.

CRANBROOK, B.C.

A temporary field station was again maintained at Cranbrook, in the Kootenays, where a vigorous control campaign against the Colorado potato beetle was continued by the officer assigned to this project. The provincial Department of Agriculture co-operated by supplying a man and car, and also the dust and dusting machines needed. Very excellent results were obtained and the work will be continued in 1928 with increased dust and dusters at our disposal.

The control of strawberry leaf rollers, cherry fruit-fly, and white grubs was given considerable attention in the Kootenays with excellent results except in the case of white grubs. During the past winter a large number of experiments have, however, been carried on in the laboratory, and we believe we now have a control for the white grubs attacking orchard trees, raspberries, and strawberries. Field tests in control will be made in 1928.

ROLLA, B.C.

A temporary field station was maintained at Rolla, in the British Columbia Peace River Block, to look after the grasshopper campaign in that district. Although enormous numbers of grasshoppers hatched out in several parts of the province, and in some sections became adults, very little damage was done and nearly all died without depositing eggs due to the attack of a fungous disease. No serious grasshopper trouble is expected in British Columbia during 1928.

AGASSIZ, B.C.

Further studies were conducted on the life-history and control of the hop-plum aphid, and the development of the automatic delivery type of spray machine has demonstrated a great saving in cost to the growers. Experiments with nicotine dust were carried out and the possibilities of this method of control have been demonstrated.

Life-history studies on the red spider on hops were made and control measures, based on these findings, have now been formulated.

Direction of mosquito control work at Harrison Hot Springs resulted in a great decrease in the numbers of this serious pest at this health resort.

Observations on the life-history of the clover seed midge were made, and advice tendered to the provincial authorities enabled them to harvest the red clover seed crop on the Sumas reclamation area, free from midge injury.

Assistance was given to the city of Vancouver and adjacent municipalities on matters of earwig and lecanium scale control.

VANCOUVER, B.C.

In the spring of 1927, an officer was assigned to continue a special study of the injuries caused by the western cedar borer. Through the co-operation of the Dominion Forest Branch of the Department of the Interior, an office was provided for our officer in the Forest Products Laboratory at Vancouver and his

work has been carried on in co-operation with the Dominion and provincial forest services. A thorough test of the strength of infested cedar poles was conducted at the Forest Products Laboratory and it was proven that the great majority of borer infested poles are not seriously weakened, for purposes of telegraph and telephone poles, for which this timber is largely used. It is hoped that these investigations will result in providing a market for a large amount of cedar poles that would otherwise be entirely wasted. The results of our investigations are now being published and will shortly be available for distribution.

VICTORIA, B.C.

By request of the Provincial Department of Agriculture, the survey for currant bud mite was continued and completed. Infested bushes were found in the Duncan district and destroyed. In the course of the entire campaign against bud mite, a total of 351 bushes were destroyed. The district is now thought to be free of the pest but one or two plantations are being kept under observation in case any reinfestation develops.

The control operations against the European earwig were continued in the city of Victoria and neighbouring municipalities. A small increase in the infested areas was found in the city and three new localities in the municipality of Oak Bay. Control operations by the city and municipal authorities were supervised and an excellent kill was obtained. Extensive experiments with a view to improving the bait were made this year and an improved bait in which meat meal is included has been devised. This bait gives rather better control and is more attractive to the adult earwigs than the old formula. In consequence of this, control operations can be carried out over a longer period.

The infestation of cherries by larvae of the lesser apple worm on the Saanich peninsula was investigated and the life-history partly worked out, but this study will not be completed until 1928. Several new facts in connection with the habits of this insect were brought to light.

Experiments with poisoned baits for strawberry root weevil were continued this year and a new bait, having all the effectiveness of those previously used, was devised. The bait employing apple waste hitherto used by the growers was a patented formula and was rather expensive. The new bait is composed of shorts and waste raisins and is considerably cheaper. With this bait, using sodium fluosilicate as the poison, a control of 93 per cent was obtained in field trials. It is expected that this formula will be used by the growers in the near future and a saving of many hundreds of dollars will be effected.

Other investigations carried out included control of the narcissus fly, control of ants in houses, comparative trials of dusting and spraying for control of pea aphids, and control of *Aphodius* larvae in lawns at Powell river.

PUBLICATIONS

The following publications have been issued by the Entomological Branch during the year:—

CIRCULARS

27. "The Plum Curculio and Its Control in Quebec," revised edition—by C. E. Petch.
62. "Mosquito Control in Canada"—by E. Hearle and C. R. Twinn.

PAMPHLETS

30. "The Hessian Fly in the Prairie Provinces"—reprint—by Norman Criddle.
80. "The Cabbage Flea-Beetle and Its Control in British Columbia"—by R. Glendenning. Two editions.

In addition to the above, officers of the Entomological Branch have published important papers in technical journals, transactions of the Royal Society of Canada and other organizations.

THE FRUIT BRANCH

The commercial apple crop for 1927 is estimated at 2,810,600 barrels as compared with 2,954,370 barrels in 1926, or 90 per cent of the five-year average.

POTATO AND ONION PRODUCTION

The total potato production for Canada last year amounted to 46,458,000 cwt. as compared with 46,937,000 cwt. in 1926.

The following table shows the acreage and yield by provinces for 1927.

	Area	Total yield	Merch- ant- able yield
	Acres	cwt.	cwt.
Prince Edward Island.....	48,800	4,418,000	3,358,000

THE INSPECTION SERVICE

The administration of the Fruit Act including the Fruit Export Regulations and the Standard Package Regulations, and the Root Vegetables Act has been given careful attention. Inspectors were stationed at producing and shipping centres and also made a systematic inspection of factories manufacturing fruit packages. The Requested Inspection Service has again received satisfactory support and is showing creditable expansion.

The following table shows the number and kind of inspections made, by provinces, during the year ending March 31st, 1928.

Province	Grading and marking, etc., regulations	Administration			Requested inspection service	Total inspections
		Fruit export regulations		Standard package regulations		
		Reports	Permits			
British Columbia.....	3,768	941	62	33	4,475	9,279
Prairies.....	828	1			614	1,443
Western Ontario.....	4,909	130	67	155	1,002	6,263
Eastern Ontario and Quebec	2,744	438	109	44	706	4,041
Nova Scotia.....	3,070		23	701	152	3,946
New Brunswick.....	591		428	20	3,086	4,125
Prince Edward Island.....	78				2,568	2,646
Total.....	15,988	1,510	629	953	12,603	31,743

The total number of inspections made during the year under review as compared with the two previous years are shown in the following table:—

Inspection	1925-26	1926-27	1927-28
Administrative purposes.....	25,922	19,513	19,140
Requested inspection service.....	4,060	9,044	12,603
Total.....	29,982	28,557	31,743

The instructing and training of Inspectors have again been important features and meetings were held in all districts from the Maritime Provinces to British Columbia at the following centres, Middleton, N.S., Perth, N.B., Cobourg, Ont., Winnipeg, Man., Calgary, Alta., Vernon and Kelowna, B.C. In British Columbia the Fruit-Packing-House-Foremen were invited to attend a session of the meeting, the invitation being readily accepted to the benefit of all concerned.

By arrangement with the Secretary of the Ontario Fruit Growers' Association, a display of Ontario barreled apples was made at the association's annual convention at Hamilton. The apples were selected at random from stock offered for sale on the Toronto market. They were inspected and score-cards, stating the defects and whether or not the fruit complied with the requirements of the grade marked upon the barrel, were displayed alongside the fruit. This display gave the members an excellent opportunity to view Ontario apples exactly as offered for sale to the consumer, and indicated where certain packers were failing to comply with the requirements of the Fruit Act.

REQUESTED INSPECTIONS

The Requested Inspection Service is a growing and very important feature of the work undertaken by the branch and gradually spreading over the whole

Dominion. The year ending March 31, 1928, shows an increase of approximately 39 per cent in the number of inspections made as compared with the year 1926-27. British Columbia shows a decrease of slightly over 2 per cent as compared with last year, which is due to a slightly smaller total crop shipped. The Prairie Provinces show a reduction of 9 per cent which is due to the fact that practically all requested inspections are for the purpose of determining the condition of fruits and vegetable products upon arrival, and indicates an improvement in the general condition. Western Ontario shows a rather large reduction of 45 per cent, while eastern Ontario and Quebec show an increase of 10 per cent. The Maritime Provinces show an increase of 300 per cent mostly due to the Service being extended on a large scale to the Province of New Brunswick.

The total inspection certificates issued and revenue received since the inauguration of this Service are as follows:—

Year	Reports issued	Revenue
		\$ cts.
1924-25.....	2,839	14,190 00
1925-26.....	4,060	19,819 50
1926-27.....	9,044	43,471 00
1927-28.....	12,603	61,449 00

The total number of requested inspection certificates issued by Provinces since the commencement of this Service is shown in the following table.

District	1924-25	1925-26	1926-27	1927-28
British Columbia.....	2,665	907	4,580	4,475
Prairies.....	72	746	678	614
Western Ontario.....	63	1,573	1,859	1,002
Eastern Ontario and Quebec.....	39	663	604	706
New Brunswick.....			230	3,086
Nova Scotia.....		171	176	152
Prince Edward Island.....			1,070	2,568
Total.....	2,839	4,060	9,044	12,603

Prince Edward Island again requested inspection to cover practically 100 per cent of shipments of table stock potatoes and New Brunswick adopted the policy set by her sister province and requested shipping point inspection of a large percentage of shipments from the principal potato growing counties. Due to marketing conditions the export of New Brunswick potatoes to Cuba has been considerably reduced as compared with that of the season 1926-27 and consequently inspection has been reduced likewise, but all shipments have been inspected before leaving the port of export. Also, all export shipments from Prince Edward Island to the Cuban market have been inspected under this service.

FRUIT ACT

The administration of this Act covered a much wider scope than in previous years. The Order in Council P.C. 2193 dated January 5, 1927, providing grades for tender fruits including cantaloupes, apples in crates, plums and fresh prunes, pears, peaches, field tomatoes, and grapes was put into effect, and inspections made thereunder. In accordance with recommendations by the industry, this Order in Council was amended and a section added which provided that when fruits, the grades for which are provided under this Order in

Council, are packed in bushel, half-bushel, 20-quart, 11-quart, 6-quart or 2-quart baskets with leno or patent covers without a grade designation, the container shall be stamped with the word "ungraded". At a later date, a further amendment was made which provided that apples when packed in baskets must be of at least the minimum size for the No. 3 grade and no culls, and the minimum size for each variety was published in circular form and distributed to the industry.

Regulations providing for the inspection and the issuing of certificates stating the grade and condition of certain fruits intended for export out of Canada, were established by Order in Council P.C. 1609 dated August 27, 1927. These regulations were put into effect in all provinces except Nova Scotia, as provided by the Order in Council.

The following table shows the number of packages of various kinds of fruit inspected during the year ending March 31, 1928:—

Product	No. of packages in lot	No. of packages inspected	Bulk shipments inspected
Apples (barrels).....	504,327	54,744	
Apples (boxes).....	2,518,609	170,245	
Apples (baskets).....	72,503	8,548	
Apples (bulk).....			17
Peaches.....	109,745	8,743	
Pears.....	71,200	6,764	
Plums.....	72,646	6,005	
Tomatoes.....	215,325	20,665	
Small fruits.....	405,073	51,062	
Frozen raspberries (barrels).....	2,372	402	
Grapes (baskets).....	269,082	24,583	
Grapes (barrels).....	380	19	
Mixed fruits and vegetables.....	1,204,244	98,353	
Total.....	5,445,486	450,093	17

The following table shows the total number of inspections of various fruit products during the year ending March 31, 1928, as compared with the year ending March 31, 1927:—

Product	No. of inspections	
	1926-27	1927-28
Apples.....	10,822	10,909
Peaches.....	827	571
Pears.....	440	389
Plums.....	495	444
Tomatoes.....	1,062	1,662
Small fruits.....	3,156	2,813
Grapes.....	325	292
Mixed fruits.....	1,862	1,356
Fruits and vegetables.....		756
Miscellaneous.....	268	314
Total.....	21,435	19,506

All violations of the Fruit Act and regulations thereunder have been carefully investigated by the District Inspector for the district in which the offender resides. The number of violations reported and the number of prosecutions during 1927-28 as compared with 1926-27 are as follows:—

Year	Number of violations	Prosecutions	
		Domestic fruit regulation	Imported fruit regulation
1926-27.....	732	18	8
1927-28.....	1,257	10	4

THE ROOT VEGETABLES ACT

The following table shows the number of packages of various vegetables inspected during the year ending March 31, 1928:—

Product	No. of packages in lot	No. of packages inspected	Bulk shipments inspected
Potatoes (bags).....	2,017,942	121,480
Potatoes (barrels).....	376,483	36,847
Potatoes (bulk).....	1,981
Onions (bags).....	168,357	9,699
Onions (crates).....	21,602	1,621
Other vegetables.....	186
Total.....	2,584,384	169,833	1,981

The total number of inspections made during the year under review as compared with the previous year are as follows:—

Product	No. of inspections made	
	1926-27	1927-28
Potatoes.....	5,538	9,447
Onions.....	745	885
Other vegetables.....	223	263
Total.....	6,506	10,595

The number of violations reported under this Act and the number of prosecutions during 1927-28 as compared with 1926-27 are as follows:—

Year	No. of violations	Prosecutions
1926-27.....	727	2
1927-28.....	511	1

FRUIT EXPORT REGULATIONS

The Export Fruit Regulations provided by an amendment to the Fruit Act introduced during the previous Session of Parliament were enacted by Order in Council which provided that all apples, pears and plums intended for export

out of Canada shall be inspected and an export certificate issued stating that the fruit complies with the requirements of the Fruit Act and is of the grade designated. It will be noted that the regulations were not applicable to exports from Nova Scotia.

Under these regulations 1,510 shipments were inspected and certificates issued and in addition 689 permits for export were issued which permits covered mostly single package gift shipments, the inspection of which could not be made.

The following table shows the number of packages exported, the province or origin and the country to which exported:—

—	Que.			Ont.		B.C.	N.B.		P.E.I.	Prairies	Other fruits	
											B.C.-Ont.

Prince Edward Island.....			
Total.....	1,510	689	6,890 40

STANDARD PACKAGE REGULATIONS

Under these regulations barrels, boxes, baskets, crates, berry boxes and other fruit containers were inspected. The following table shows the number of lots examined during 1927-28 as compared with the two previous seasons:—

Year	1925-6	1926-7	1927-8
Lots inspected.....	637	773	943

ONION WAREHOUSE

For the purpose of showing the value of proper storage facilities in standardizing the marketing of the onion crop, a frost-proof storage warehouse was built in 1926 at Leamington, Ont., and has since been operated by this department under the immediate supervision of the Fruit Branch.

The storage warehouse in 1926 was used to capacity and was the means of creating an improved system of distributing, resulting in a more satisfactory levelling of the market. With the small crop of onions in 1927, there was not the same necessity for storage and only a few cars were held, the total number of crates received for storage in 1927 amounting to 5,572 as compared with 24,773 in 1926.

VISIT OF FRUIT COMMISSIONER TO GREAT BRITAIN

The Dominion Fruit Commissioner, on invitation of the Empire Marketing Board, spent several weeks in the British Isles, studying conditions and marketing possibilities for Canadian fruits and vegetables.

In the course of this visit, it was his privilege to interview the chief importers, brokers, private treaty salesmen, wholesalers, and retailers in London, Liverpool, Manchester, Birmingham, Bristol, Cardiff, Southampton, Edinburgh, Glasgow, Dublin, Belfast and several of the smaller distributing centres. Handling conditions at the principal docks, warehouses, and cold stores, as well as methods of classification of packs also received attention. Research stations at East Malling, Cambridge, Long Ashton and Campden were visited, and meetings of the subcommittees on Wastage and Fruit Intelligence and of the Fruit Committee of the Empire Marketing Board were attended, also meetings of the British growers and of the retail and wholesale and brokers' organizations.

For comparative purposes some attention was given to production conditions, and several producers' markets, where direct sale is made to the wholesale and retail distributors, were visited.

MARKETS DIVISION

The Markets Extension Division of the Fruit Branch maintains a service of information to the fruit and vegetable industries in disseminating crop and market news relating to domestic, import and export conditions. The crop information during the past season was compiled in co-operation with the Dominion Bureau of Statistics and issued in the Fruit and Vegetable Crop Report from June to November inclusive. These reports contained estimates and conditions of the leading commercial fruits and vegetables produced in Canada, as well as those in foreign countries that offered competition to our own products. In order that the reports would reach their readers at the earliest possible date after compilation a new departure was followed (during the past season) in having them mimeographed instead of printed. Six to eight days were thus saved and judging by the comments received from members of the industry the system appears to be proving more satisfactory than the old method. Market prices were published

in the Telegraphic Market Newsletter weekly from January to July inclusive and twice weekly during the balance of the year. In addition the summary of market conditions was broadcasted by radio twice weekly through the Stations at Ottawa, Montreal, Quebec and Moncton and towards the end of the year also by the station at Toronto.

The fruit crop throughout the Dominion proved generally satisfactory to the growers financially. This is shown in the estimated total shipping point value of commercial fruits in Canada during 1927, which is placed at \$17,605,995 as compared with \$15,224,570 in 1926. Apples were a light crop in the eastern provinces, while in British Columbia an average crop was harvested. Prices for both barrelled and boxed apples were very satisfactory on both domestic and export markets. The quality of the fruit was only fair, due to the prevalence of scab in all provinces, including some sections in British Columbia. Ontario also suffered considerable loss through aphid injury. Owing to the light crop in both Canada and the United States the trans-Atlantic shipments were considerably reduced compared with the previous season. The shortage of Virginia barrelled apples stimulated the market for Canadian stock with the result that Nova Scotia greatly benefitted from the higher price level. Other fruit, such as pears, peaches, cherries, strawberries, raspberries and grapes, produced heavy crops and obtained slightly firmer prices compared with 1926. On the other hand plums, apricots and berries were lighter.

The following table is a final estimate of the production and shipping point value of fruit in 1927 as compared with 1926:—

Description	Year	Total Quantity	Average Price		Total Value
		(bbls.)	\$	cts.	\$
Apples.....	1926	2,954,370	3	28	9,688,162
	1927	2,810,600	3	70	10,411,035
Pears.....	1926	266,440 (bush.)	1	79	475,698
	1927	332,200	2	00	663,730
Plums and prunes.....	1926	346,800	1	30	450,840
	1927	263,200	1	80	473,780
Peaches.....	1926	237,950	2	54	603,658
	1927	347,580	3	03	1,051,765
Apricots.....	1926	56,650	2	25	127,462
	1927	18,000	3	74	67,250
Cherries.....	1926	201,640	2	86	577,040
	1927	216,800	3	62	784,470
Strawberries.....	1926	9,739,000 (qts.)	0	14	1,402,830
	1927	10,946,200	0	14	1,516,145
Raspberries.....	1926	4,744,500	0	15	702,330
	1927	5,232,700	0	15	784,000
Other berries.....	1926	4,195,000	0	11	476,550
	1927	3,727,000 (lbs.)	0	13	471,420
Grapes.....	1926	24,000,000	0	03	720,000
	1927	34,560,000	0	04	1,382,400

Vegetable growers experienced a varied yield, especially with potatoes and cabbage. The potato crop was a normal yield, amounting to approximately 48,000,000 cwt. Prices from the beginning of the season until January ranged from \$1.35 to \$2 per cwt. Canada A Grade wholesale to the retail trade, but seriously declined from January until the completion of the season when they reached as low as 75 cents per cwt. for the same grade. The low prices were principally brought about owing to the revision of the tariff upwards in Cuba which went into effect from December to June and the poor demand in the United States, both conditions causing heavy supplies being thrown on the domestic markets. Cabbage reached the low price of \$6 to \$9 per ton, causing many growers to refuse to

sell, preferring to feed to stock. Onion growers experienced a good year for their product, obtaining satisfactory prices, although British Columbia growers experienced a set back in losing a large portion of their crop through weather conditions and the poor keeping quality that followed.

During the year further investigational work was conducted in endeavouring to develop export trade in close co-operation with the Transportation Division of this branch and the Trade Commissioners of the Department of Trade and Commerce. Trial shipments of apples were sent to Argentina, Straits Settlements, India and Peru and a shipment of seed potatoes to South Africa. In addition to opening up new markets, one of the objects of these trial shipments was to work out the best shipping routes and to ascertain the carrying qualities of our fruit and its suitability for foreign markets. Delicious, Winesap, Rome Beauty and Ben Davis proved very acceptable in South America, Winesap and Newtown Pippin in Straits Settlements and India, a preference being shown for Newtown in the latter country. There is an opportunity in developing trade with all these countries, providing Canadian exporters are in a position to quote prices equal to our competitors and maintain continuity of supplies.

Exhibition work was continued during the past year, exhibits being placed at all the Class A Fairs in the Prairie Provinces, including Brandon, Calgary, Edmonton, Saskatoon and Regina and at the Canadian National Exhibition and Royal Agricultural Show at Toronto and the exhibitions at Ottawa and Sherbrooke, as well as the Montreal Apple Show. The object of placing the exhibit at these exhibitions was to advertise Canadian grown fruits and vegetables and to bring their uses prominently before the public. In addition to the above exhibitions, an exhibit was also placed at the Imperial Fruit Show, Manchester, supervised by the Canadian Fruit Trade Commissioner in co-operation with the Empire Marketing Board. Apples such as McIntosh, Gravenstein and Delicious were secured in the various provinces and sent over for display purposes as well as for free distribution to the visitors at the show. The distribution apples were financed by the Empire Marketing Board, a sample being handed out to over five thousand visitors. The Empire Section was eliminated from the competitive classes at this show but the Overseas Section, allowing competition between the provinces, was continued. In the Overseas Section there were seventy-six entries from Canada as compared with twenty-nine in 1926 and twenty-eight in 1925. The Agents General's Cup was won by Nova Scotia.

TRANSPORTATION DIVISION

The Transportation Division of the Fruit Branch affords service of practical assistance in all questions of rates and conditions of carriage for the transportation of fruits and vegetables. Through close co-operation with the Markets Extension Division, and by constant contact with growers and shippers, the trade, the carriers and the traffic, this division seeks correction of practices, improvement of facilities and adjustment of rates wherever any of these are found to be inimical to satisfactory carriage or marketing.

While its interest is naturally benevolent to the industry as a whole, with the producer its first concern and the consumer next, the Transportation Division is in amiable contact with the trade and the carriers, enjoying the hearty co-operation of the carriers in practical tests looking to betterments in loading practices or of their equipment or facilities for temperature control, and it is assumed they appreciate that complaints launched through our hands are toned, where necessary, to reasonableness, and aim at adjustments designed to help the industry and to create or stimulate traffic.

The function of the Transportation Division is to no small extent that of a traffic department for the fruit and vegetable growers and shippers of Canada,

which body, although including several large commercial organizations, includes as well those grower-shippers and buyer-shippers unacquainted with other than purely local transportation questions. From these and the Provincial Fruit Growers' Associations requests are received for information, and for investigations, and complaints are examined and advanced according to the merit we find in them. The service had its origin in a request from the provincial associations for what they themselves and the individual shippers found quite incapable of maintaining to their own best interests.

Current activities include a number of investigational subjects of possible far-reaching import. Looking to the future of fruit transportation as well as to the correction of many of its present ills, it is apparently essential that equipment be developed for transit readings of inside temperatures in all temperature-controlled carlot traffic, in order that the progressive temperature of the product rather than outside conditions shall govern transit application of refrigeration, heat or ventilation. It is our hope that out of the continued improvement of resistance and thermo-couple thermometers for distant readings there will result portable, sturdy and inexpensive apparatus capable of adoption for such a refinement in temperature-controlled traffic.

Pre-cooling, or lowering the temperature of fruit to an optimum temperature for satisfactory carriage before loading into cars, appears to be somewhat prejudiced by its cost, although admitted to have increased the radius of safe carriage quite considerably. Recognizing that in some districts this cost is considered an avoidable marketing expense or possible economy, we have considered it worth while to attract attention to its offset, or possible offset, of another item of expense, transit re-icing, which for a four-day or five-day trip of a car loaded with field-warm fruit may exceed the expense of initial icing. An investigation now under way aims to determine a reasonable radius for a pre-cooled car and load, initially iced but not re-iced in transit, and, by comparing this total expense at shipping point with that for initial icing and transit re-icing of field-warm loads, to approximate the net cost of pre-cooling. We are already convinced that less than one-half of the pre-cooling charge is a net outlay for safer transportation.

An investigation is under way into the respective merits of brine tank vs. the newest bunker type refrigerator cars, for fresh fruits and vegetables and for other products of agriculture. Brine tank cars have been considered essential for transportation of dressed meats and some other perishable goods, and while on its introduction this car was found less satisfactory for fruits and vegetables this branche has co-operated with the carriers for its improvement for this traffic, being conscious of its possibilities and urging reasonableness in the policy of the railways that if the greater volume of refrigerated traffic can be served best with this type of car it should be adopted, if at all possible, for general utility. Their situation has been quite different to that of the carriers in the United States, where the packing concerns own their own refrigerator cars, heretofore all brine tanks, leaving the carriers free to equip themselves with cars of type best suited to the only other traffic of comparable volume, fruits and vegetables. But on introduction of an improved bunker type car with divided wire basket bunkers, evidently capable of handling dressed meats, it was thought that the question of a general utility refrigerator car for Canada may now be reopened, and arrangements have been made with the two large Canadian carriers to co-operatively match this new bunker type car against their brine tanks, with various kinds of traffic. This investigation is likely to spread over at least two seasons.

New Brunswick potatoes are shipped extensively in bulk in refrigerator cars for winter movement under heater protection, often with some frost damage

where the load is in contact with the lower walls. On complaint of these shippers to the Railway Board, contending an obligation on the carriers to provide special features for greater safety of this traffic, the board required the railways to specially equip fifty refrigerator cars each for trial during the past winter, but with specifications still not entirely satisfactory to the shippers, whereupon we made an inquiry and practical test and offered the Railway Board certain suggestions for their consideration in deciding what may be required of the railways for the future.

Methods of loading cars to facilitate refrigeration, ventilation or heater protection, and in prevention of load shifting and damage, are questions of constant experiment and instruction by this division. While time and material economies have their appeal, thoughtful shippers usually need no more than a clear explanation of what experience would ultimately teach, that the care exercised in producing and preparation for market can profitably be continued in car loading, the marketing success of the shipment being dependent upon both.

Among traffic matters engaging the attention of the division during the past season were the following of more than local interest:—

Carriers' Protective Service as heretofore applying on fruit and vegetable carlots from British Columbia to the Prairie Provinces will apply on like traffic to Eastern Canada from the autumn of 1928, on an agreed extension of tolls;

Some further reduction in express carlot rates on fruit and vegetables from British Columbia to the marketing centres of Eastern Canada, in aid of competition with like products from the Pacific coast farther south;

Elimination of switching charge heretofore applying on express carloads from a number of pre-cooling and packing plants located on private sidings in British Columbia, but reasonably convenient to the main track;

Lower assembly rates for apples in freight carloads for dehydration in the Okanagan valley of British Columbia;

Special rating for plums in straight or mixed freight carlots from Ontario points to Montreal for export;

A complaint was brought before the Railway Board by the Nova Scotia Shippers' Association, just before the Maritime Freight Rates Act took effect,* but with its grounds unsubstantiated and the rates of themselves not proven unjust or unreasonable the complaint was dismissed.

On the whole there is every indication that the balance of interest among the shippers and the trade is turning from questions of line-haul rates to the services and their tolls for temperature control and safest possible carriage of this highly perishable traffic.

CANADIAN HORTICULTURAL COUNCIL

The Canadian Horticultural Council, which was organized in March, 1922, with the object of advancing all matters tending toward the improvement of the horticultural and allied industries, continued to function during the past year in a manner beneficial to the industry. Its organization includes a plant registration bureau, and full information with respect to its activities may be obtained from the annual report of the council. Financial support through the Fruit Branch was continued during the year to the extent of a grant of eight thousand dollars.

* Against their rates on apples to Halifax for export, since this Act took effect no further general complaint from the Maritime Provinces has been brought to our attention.

THE PUBLICATIONS BRANCH

The Publications Branch has two main functions, viz., distribution and publicity. By means of the distribution of literature prepared by the different branches of the department, the Publications Branch acts as the connection between the department and those interested in the work of the department—farmers, live stock breeders, dairymen, fruit growers, gardeners, etc. Through the publicity prepared and distributed by the Publications Branch these many and varied agricultural interests are made aware, through the medium of the press, of the regular encyclopædia of literature the department has available for distribution. This work of publicity is perhaps the more important, because without it the farmers, breeders, and growers would miss the very essential point of contact made through the agricultural weekly and semi-weekly press. It may not be out of place to take this opportunity of thanking the press for the whole-hearted co-operation it has always given in this connection.

The literature distributed by this branch consists of reports, bulletins, pamphlets, and circulars covering every branch of agricultural endeavour. The total listed is 438, and additions are being made to this list every week. It includes "Seasonable Hints", issued three times a year by the Experimental Farms Branch, and market reports, news letters, crop reports, and press notices. During the past fiscal year 1,281,290 copies of the three issues of "Seasonable Hints" have been distributed. The mailing list contains 374,316 names, and in addition the banks, elevator companies, etc., receive small bulk lots for the use of their farmer patrons.

Special mention may be made of the demand for market reports, a service which is placing the producer on an equality plane with the middleman to whom he sells his produce. These comprise the following: (Daily) "Egg and Poultry Market Report". (Weekly) "Dairy Market Report"; "Egg and Poultry Market Report"; "Telegraphic Fruit Crop Report"; "Live Stock Market Intelligence". (Bi-monthly) "Seed, Feed, and Fertilizer Markets Reports". (Monthly) "Cold Storage News Letter"; "Dairy News Letter"; "Fruit Crop Report" (May-October).

During 1926-27, 914,130 copies of these market reports were distributed. This year 1,186,874 copies were sent out, showing an increase of 29 per cent.

During the year 1927-28 the number of new and revised reports, bulletins, pamphlets, and circulars of the regular departmental series received from originating branches numbered 134, and of these 630,802 copies were distributed.

In response to direct applications by letter and cards 1,090,255 copies of publications were mailed.

In all a total of 3,991,706 copies of all publications, reports, etc., was distributed during the year, compared with 3,691,000 last year, an increase of 8.1 per cent. These by classes were as follows:—

Seasonable Hints.....	1,281,290
Market Reports, etc.....	1,333,004
Press Notices, etc.....	287,147
Publications, New.....	630,802
Publications, Old.....	459,463
Total.....	3,991,706

NEWS SERVICE

A new feature in connection with the publicity of this branch has been provided for in the 1928-29 estimates. This is the addition to the editorial staff for the purpose of inaugurating a news service to make contact between the department and the daily press. It has been felt for some time that this field

for departmental publicity was almost entirely lost, except in so far as the representatives of the dailies were able to pick out occasional news for themselves. The appointment of an editor will enable the branch to keep in touch with the other branches and the administrative officers of the department, and gather departmental news for distribution to the daily press. As occasion arises up-to-the-minute news will be sent to the dailies through the Canadian press. The branch will then be making use of a most complete publicity service, which will embrace the daily and agricultural press, together with the weeklies, semi-weeklies and self prints.

MAILING LIST DIVISION

During the year this division handled the addressing of 2,814,660 envelopes, compared with 2,547,000 in 1926-27 and 2,047,000 in 1925-26. Automatic machinery is used for this work, and in maintaining the mailing lists over 57,607 new stencils were made for fresh applicants.

The main lists to be maintained, kept up to date, changes of address made, and envelopes addressed are the "Seasonable Hints" list of some 389,784 names; a special general list of 3,424 names to which all new publications are sent as soon as issued, covering the parliamentary officials, institutions, exchanges, etc.; twenty-five lists to which Experimental Farm and Station Reports are sent; and nine lists for market reports and news letters. The total number of mailing lists maintained is 108. A complete classification is not necessary. It is interesting to note, however, that the names and addresses on these mailing lists represent the cutting by automatic machinery of 461,792 plates, compared with 431,472 for last year. The changes in these lists have been less than for the previous year, 24,355 names being removed and 2,129 changes made in addresses, compared with 43,343 removals and 2,764 changes in addresses for the previous year.

To the branch lists the Canadian Horticultural Council has added an "E" list made up of members of the Ontario Fruit Growers containing 780 names, and a newspaper list of 140 names. Four lists have been revised, ninety-four have been active, five cancelled, and ten have not been used. The five cancelled were lists of drovers to the Toronto, Montreal, Edmonton, Calgary, and Winnipeg Stock Yards, a total of 3,200 names.

ENVELOPES AND SLIP LISTS ADDRESSED

	1926-27	1927-28	Increase	Decrease
Bulletins and other printed matter.....	1,250,785	1,266,245	15,460

Supervision of Race-track Betting

With the assistance and co-operation of the Royal Canadian Mounted Police, the Department arranged for the supervision of race-track betting on all race tracks in Canada at which pari-mutuel betting is permitted under the Criminal Code.

During the year, race meetings were held on 31 race tracks, a reduction of one in comparison with 1926, but on these race tracks 354 days' racing took place as compared with 322 in the previous year. This was due to the fact that on all Ontario race tracks the full 14 days' racing took place, while the number of days' racing in British Columbia was also increased. The total amount wagered on all tracks was \$47,915,828—an increase of over three and a half million dollars over 1926. The increase was most apparent in the provinces of Ontario and British Columbia, and in both cases was probably due to the greater number of days racing.

The total amounts retained by associations as their legal percentage of wagers was \$3,278,178.58 as compared with \$3,018,357.50 in 1926, while \$2,024,586 was paid as prize money for winning horses.

The following table gives by districts, Canadian race-track betting statistics for 1927:—

District	Number of Associations	Number of Days	Amounts Wagered	Amount Retained	Prize Money
Quebec.....	5	70	\$ 6,345,957	\$ 461,449 77	\$ 358,400 00
Ontario.....	10	140	30,372,960	2,001,896 06	1,164,600 00
Prairie Provinces.....	11	88	6,878,330	501,375 72	301,886 50
British Columbia.....	5	56	4,311,581	313,456 03	199,700 00
Canada.....	31	354	\$ 47,915,828	\$ 3,278,178 58	\$ 2,034,586 50

Respectfully submitted,

W. R. MOTHERWELL,

Minister of Agriculture.

Summary of results

The results of the study are summarized in Table 1. The data show that the majority of the subjects in each group achieved a high level of performance. The results are consistent across all groups, indicating that the study was well-controlled and the results are reliable. The data also show that the subjects in the control group performed significantly better than those in the experimental group, suggesting that the intervention had a negative effect on performance. The results are consistent with the hypothesis that the intervention would have a negative effect on performance. The data also show that the subjects in the control group performed significantly better than those in the experimental group, suggesting that the intervention had a negative effect on performance. The results are consistent with the hypothesis that the intervention would have a negative effect on performance.

1928

NATIONAL DEFENCE

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I., G.C.M.G.,
G.C.I.E., G.B.E., Governor General and Commander-in-Chief of the
Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the report of the Department of National Defence (Militia and Air Services), for the fiscal year ending March 31, 1928.

Respectfully submitted,

J. L. RALSTON,

Minister of National Defence.

DEPARTMENT OF NATIONAL DEFENCE,
OTTAWA, September 14, 1928.

OTTAWA, September 12, 1928.

The Honourable the Minister,
Department of National Defence,
Ottawa.

SIR,—I have the honour to submit for your consideration, to be laid on the Table of the House, this, the Annual Report of the Department of National Defence (Militia and Air Services), for the fiscal year 1927-28.

I have the honour to be, sir,

Your obedient servant,

G. J. DESBARATS.

Deputy Minister.

**REPORT OF THE
DEPARTMENT OF NATIONAL DEFENCE, CANADA
(Militia and Air Services)**

FOR THE FISCAL YEAR ENDING MARCH 31, 1928

REPORT OF THE CHIEF OF THE GENERAL STAFF

On June 1, 1927, the appointment of Chief of Staff, created on January 1, 1923, was abolished, and that of Chief of the General Staff recreated. The responsibilities of the Chief of the General Staff in connection with the Militia and Air Force are the same as those that were laid down for the Chief of Staff.

On July 1, 1927, Civil Aviation was removed entirely from the Military Branch and placed under the direct control of the Deputy Minister.

The reports of the several directorates and branches under the Chief of the General Staff are appended hereto as follows:—

(a) Militia Service

- (1) Military Operations and Intelligence.
- (2) Military Training and Staff Duties.
- (3) Artillery.
- (4) Signals.
- (5) Small Arms School.
- (6) Physical Training, and Cadet Services.
- (7) Historical Section.

(b) Royal Canadian Air Force

(1) Military Operations and Intelligence

Operations

Questions and problems relating to defence and military policy generally have been carefully studied under the direction of the Chief of the General Staff.

The attachment, early in 1928, of a senior General Staff Officer to the Canadian Advisory Office with the League of Nations at Geneva will help to keep this Directorate up to date with regard to the continuous discussions on Disarmament, and the attitude thereto of foreign countries.

Much of the Director's time has been occupied by duties resulting from his appointment, either in the capacity of chairman, member or secretary, to numerous departmental committees or sub-committees, viz: Joint Staff, Mobilization, Censorship, Senior Supply Officers', Battle Honours, Clothing and Library, etc.

Military Intelligence

The work of collecting, collating and disseminating Military Intelligence has been continued and steady progress has been maintained. In December the duties previously performed by the Staff Officer to the Inspector-General, which have been carried out by the Assistant Director of Military Intelligence since 1922, were transferred to the Directorate of Military Training.

General

The mutual liaison established between both the Operations and Intelligence Sections and other Government departments has been uninterrupted, with distinct advantage to all concerned.

General Staff and Departmental Library

Books presented.....	25
Books purchased.....	239
Total accessions.....	264

An additional fifty-six volumes were ordered but remained undelivered on March 31.

Subscriptions to eighty various weekly, monthly and quarterly periodicals and eleven daily newspapers were continued. The former are circulated throughout the department, and from the latter clippings of important items are distributed to certain branches.

The binding of eighty-seven volumes of magazines was put in hand, but remained uncompleted at the end of the year.

The number of books and other documents issued on loan continues to increase. Eighty-three volumes were lent to the R.C.A.F. detachments patrolling the Hudson Bay and Strait, and applications from Military Districts have been met as far as possible.

*Geographical Section, General Staff**General*

Control surveys were carried out in both Quebec and Ontario, the topography being confined to Ontario only, as the air photos of the Quebec sheets, Disraeli, St. Evariste and Armstrong were not available.

The annual Course of Instruction in Surveying commenced on January 3 and ended October 31, 1927.

The total area surveyed and mapped by the Geographical Section up to March 31, 1928, was as follows:—

Area surveyed and maps published.....	37,347 square miles
Area fully surveyed, not mapped.....	1,700 "
Area partly surveyed.....	3,769 "
Total.....	42,816 "

A modern offset proving and reversing press was received too late to be available for use during the year. It will, however, prove a valuable addition to the printing plant.

Air Photos for Survey

The method devised of plotting detail from photos based on traverse control has proved extremely accurate and has resulted in considerable improvement in the survey of topographic detail. Besides the use of this standard method considerable time was spent in experimental work on other methods applicable to areas with little traverse control, namely, the radial line method and the preparation of photographic mosaics. The results of this latter work will be judged after they are tested during the approaching season's field work.

It has become evident, in order to avoid serious interference with the survey work, that air photos should be carried out at least twelve months in advance of the immediate requirements for the season's work.

During the year the Royal Canadian Air Force photographed 1,870 square miles of country for the Geographical Section of the General Staff; 220 square miles of this covered parts of the Carleton Place and Arnprior sheets, 100 square miles of part of the Barrie and Alliston sheets. The remaining 1,550 square miles covered the Beaverton and Newmarket sheets and parts of the Lindsay, Scugog and Oshawa sheets. Owing to unforeseen circumstances it was impossible to photograph the area to be covered by the Valcartier, Disraeli and St. Evariste sheets in Quebec during the field survey period, but plans have been made to complete this work early in 1928.

Field Work

Control.—Special control traverses were required in Quebec for the proposed Valcartier Camp sheet, and some additional control for the St. Evariste sheet; the greater part of the work, however, having been carried out in Ontario in the Newmarket, Scugog, Oshawa and Lindsay sheets involving a total mileage of 1,390 miles of horizontal control and 1,370 miles of vertical control.

The use of more accurate survey instruments, namely, the Wild transit and Invar tape, has resulted in very greatly increased accuracy in the control survey, more than half of the closed circuits showing closing errors of 1 in 25,000 or better. This result is remarkable and very gratifying, especially as the amount of work carried out during the season was at least as large as in former years, with the same party. Azimuth observations were made on Polaris instead of on the sun as formerly, this, no doubt, has also added to the accuracy of the results.

Topography.—The time of the topographers was very fully occupied in the winter in plotting detail from air photos for next season's field work. As this work will probably increase considerably, and as the time of the five map draughtsmen is very fully occupied, it would seem that in the near future it will be necessary to increase the number of draughtsmen, both as understudies for the present map draughtsmen, and to carry out some, at least, of the plotting from air photos.

Topography was carried out in four new sheets, namely, Perth, Carleton Place, Arnprior and Barrie, and revision of part of the Lucan and Fort Erie sheets. Total new topography 1,333 square miles, and revision 114 square miles.

*Office Work**Printing:*

Eight new 1" and $\frac{1}{2}$ " maps were printed, namely, Westport, St. Mary's, Stratford, Thetford, Grand Bend, Mallorytown $\frac{1}{2}$ ", Halifax $\frac{1}{2}$ ", Kingston 2" (Training).	
Total maps.....	7,257
Eleven confidential maps, total.....	5,384
Reprints of 20 maps, total.....	11,016
One hundred and ninety-two diagrams for lecture purposes, total.....	41,362
Sixteen pro formas, total.....	2,235
Regimental badges of 20 corps, drawings and photographs, total.....	220
Regimental, etc. colours, total.....	1,526
Six miniature targets and score cards.....	352,134
Departmental cheques, total.....	206,134
Lantern slides, total.....	3,848

Besides the above, the following work was carried out for other Government Departments:

Geological Survey, 2 maps, total.....	6,650
Geodetic Survey, 44 sheets of the map of London, photographs and 169 photo-lith. prints prepared for their Department.	
Annual Report Civil Aviation, 3 maps, total.....	7,650
Defence Quarterly, 3 maps, total.....	13,500

Maps and Diagrams issued.—

1" and $\frac{1}{2}$ " topographic maps sold to the public.....	5,177
1" and $\frac{1}{2}$ " topographic maps issued free.....	12,235
Total.....	17,412

Staff

Early in December the Director proceeded to England to attend the 1928 Course at the College of Imperial Defence. The Assistant Director of Military Intelligence was appointed to succeed him as Director of Military Operations and Intelligence, and a graduate from the Staff College at Quetta, India, has been appointed as Assistant Director of Military Intelligence.

All ranks of this directorate have worked loyally and efficiently throughout the year.

(2) Military Training and Staff Duties

REMARKS

The increased allotment for 1927-28 for the Non-Permanent Active Militia made it possible to train more men than during the preceding year, but was not sufficient to extend the period of training.

With the money available it was considered that more effective training could be provided by adding to the personnel rather than by lengthening the period.

PERMANENT FORCE

With their present restricted strength effective training of Permanent Force units in their districts is very difficult. With a view to overcoming this it was decided to concentrate (as far as funds would permit) Permanent Force units at Central Camps for combined training as under:—

Petawawa Camp—1st to 31st August—

Royal Canadian Dragoons.

Royal Can. Regt. (less "A" Coy. from Halifax).

Royal 22nd Regt.

Sarcee Camp—8th to 31st August—

Lord Strathcona's Horse (R.C.).

P.P.C.L.I.

The first three weeks were devoted to Squadron, Company, Regimental and combined training which permitted Regimental and Battalion Commanders and leaders of smaller units to be exercised in their proper order.

Combined training for cavalry and infantry was carried out during the last week, and although it was necessary to resort to skeleton formations many valuable lessons were learned. The Royal Canadian Artillery at Petawawa participated in the combined exercises, in so far as their current duties of training the Non-Permanent Active Militia batteries in camp would permit.

In the case of units other than the above training was carried out locally under arrangements made by District Officers Commanding.

NON-PERMANENT ACTIVE MILITIA

Training was divided generally into unit training at local headquarters or in camp and individual training at schools and courses of instruction.

Detachments of Mobile Artillery were permitted 3 days' training at local headquarters, and 8 days at practice camp for firing detachments. The Coast Artillery was allowed 8 days at local headquarters and 4 days' practice at Forts.

In some cases camp schools not exceeding sixteen days' duration were held in lieu of unit training, the attendance being restricted principally to officers, warrant officers, non-commissioned officers, and specialists.

The following table shows the training completed by units of the Non-Permanent Active Militia during the year under review:—

NON-PERMANENT ACTIVE MILITIA TRAINING, 1927-28

SCHOOLS OF INSTRUCTION

Remarks.—An increase in the program for Schools of Instruction work was not possible with the funds available and, therefore, the instructional work for this year was based on that which obtained in 1926-27. The results obtained were as satisfactory as could be expected under the circumstances.

Warrant Officers and Non-Commissioned Officers of the Permanent Force maintained for the instruction of the Non-Permanent Active Militia again worked very hard and acquitted themselves with credit and with satisfactory results. Unfortunately the strength of this Cadre is too limited to meet adequately the heavy demands made upon it for instructional work.

Again this year resort was had to correspondence courses as a means of relieving the pressure on other forms of instruction and providing a means of partially qualifying for personnel of the Non-Permanent Active Militia, whose occupations prevented them from attending the regular courses.

Special Courses.—Courses for both Permanent and Non-Permanent Active Militia were held and attended as shown below.

COURSES ABROAD

Permanent Force—

Imperial Defence College

Colonel-on-Staff (Hon. Brig.-Gen.) A. G. L. McNaughton, C.M.G., D.S.O., General List, December, 1926, to December, 1927.

Colonel (Temp. Colonel-on-Staff) J. S. Brown, C.M.G., D.S.O., R.C.A., January, 1928, to January, 1929.

Staff College, Camberley

Major K. Stuart, D.S.O., M.C., R.C.E., January, 1926, to December, 1927.
Captain K. C. Burness, M.C., P.P.C.L.I., January, 1926, to December, 1927.
Captain F. C. Hanington, M.C., R.C.A., January, 1927, to December, 1928.
Major P. Earnshaw, D.S.O., M.C., R.C.C.S., January, 1927, to December, 1928.

Captain R. O. G. Morton, R.C.A., January, 1928, to December, 1929.

Lieut. (bvt. Captain) R. G. Whitelaw, R.C.R., January, 1928, to December, 1929.

Staff College, Quetta

Major F. R. Henshaw, M.C., R.C.E., February, 1926, to December, 1927.

Captain (bvt. Major) L. M. Hughes, R.C.A., February, 1927, to December, 1928.

Major E. L. M. Burns, M.C., R.C.E., February, 1928, to December, 1929.

Senior Officers' School

Major (bvt. Lt.-Col.) G. G. Bacon, R.C.A., May, 1927, to July, 1927.

Major (bvt. Lt.-Col.) P. de L. D. Passy, R.C.E., September, 1927, to December, 1927.

Major (bvt. Lt.-Col.) L. F. Page, D.S.O., L.S.H. (R.C.), January, 1928, to April, 1928.

R.A.F. Medical Board

Major R. M. Luton, M.C., R.C.A.M.C., November, 1926, to August, 1927.

Major G. W. Treleaven, D.S.O., M.C., R.C.A.M.C., November, 1927, to July, 1928.

Ordnance Officers' Course

Lieutenant H. S. Kirby, R.C.O.C., February, 1927, to December, 1927.

Gunnery Staff Course

Captain W. C. Thackray, R.C.A., September, 1926, to August, 1927.

Captain G. A. McCarter, R.C.A., September, 1926, to August, 1927.

Captain H. O. N. Brownfield, M.C., R.C.A., September, 1927, to August, 1928.

Captain D. R. Agnew, R.C.A., September, 1927, to August, 1928.

School of Military Engineering

Lieutenant W. E. Andrews, R.C.E., August, 1927, to March, 1929.

Lieutenant C. Vokes, R.C.E., August, 1927, to March, 1929.

Advanced Class, Military College of Science

Major J. H. MacQueen, R.C.O.C., November, 1925, to April, 1928.

Physical Training

Lieutenant (bvt. Captain) R. F. L. Keller, P.P.C.L.I., April, 1927, to June, 1928.

Small Arms School and Small Arms Technical Short Course

Captain G. W. De la P. Beresford, R.C.R., April, 1927, to October, 1927.

Junior Officers' Course, R.A.S.C. College

Lieutenant G. E. R. Smith, R.C.A.S.C., March, 1928, to April, 1930.

Chemical Warfare School

Lieutenant (bvt. Captain) R. M. Black, M.C., P.P.C.L.I., May, 1927, to August, 1927.

No. 12804, S.M.I. (W.O.I.), E. J. Simon, R.C.R., May, 1927, to August, 1927.

Attachments and Exchanges

Colonel-on-Staff (Hon. Brig.-General) A. G. L. McNaughton, C.M.G., D.S.O., General List, January, 1928, to April, 1928.

Captain (bvt. Major) L. C. Goodeve, D.S.O., R.C.A., April, 1927, to April, 1929.

Captain N. A. Gianelli, L.S.H. (R.C.), December, 1926, to November, 1928.

Captain C. R. S. Stein, R.C.E., October, 1926, to September, 1928.

Captain (bvt. Major) J. E. H. Tidswell, R.C.A.S.C., October, 1926, to September, 1928.

Lieut.-Colonel W. H. Robinson, O.B.E., R.C.A.S.C., April, 1927, to July, 1928.

Colonel Count H. R. V. de Bury and de Bocarme, C.B.E., R.C.O.C., June, 1927, to July, 1927.

Lieut.-Colonel (bvt. Colonel) J. T. Clarke, C.B.E., R.C.A.M.C., October, 1927, to April, 1928.

Major P. de L. D. Passy, R.C.E., August, 1927, to September, 1927.

Lieut.-Colonel W. K. Walker, D.S.O., M.C., C.S.A.S., December, 1927, 10 days.

Armament Artificers' Course

No. 34860, Armt. S/Sergt. E. Appleyard, R.C.O.C., October, 1926, to September, 1927.

COURSES IN CANADA

Staff College Preparatory Course

A course for officers preparing for the examinations for admission to the Staff Colleges at Camberley and Quetta was held at the Royal Military College, Kingston, from October 1, 1927, to February 28, 1928. This course was attended by five officers all of whom competed at the examination for the three vacancies allotted to Canada. In addition two officers of the Permanent Force attended as a Refresher Course, and one officer of the Royal Canadian Air Force attended for instruction until the end of December, 1927.

Long Course

The Long Course was held at the Royal Military College, Kingston, from February to June, 1928. This course, designed to qualify candidates for commissions in the Permanent Force, was attended by two candidates.

Refresher Course

In conjunction with the Long Course a Refresher Course was held for junior officers of the Permanent Force which was attended by two officers of the Royal Canadian Corps of Signals.

Artillery Staff Course

This course which commenced in October, 1926, concluded in November, 1927. It was attended by one officer and eight non-commissioned officers. For various reasons 4 N.C.Os. were recalled to regimental duty, of the remainder 1 officer and 2 N.C.Os. passed.

Master Gunners Course.

This course commenced in January, 1928, and concludes in May, 1928, and has an attendance of three non-commissioned officers.

The Royal Canadian School of Military Engineering

Courses for Field Works Instructors and Military Foremen of Works were held for personnel of the Royal Canadian Engineers. A total of 16 non-commissioned officers attended.

Signal and Small Arms Courses

See under "Signal Training" (page 30) and "Small Arms Training" (page 33) respectively.

Militia Staff Course

The Militia Staff Course is designed to train officers of the Non-Permanent Active Militia for employment in the more senior appointments on the Staff of Formations in the Field.

The number of officers and other ranks who obtained certificates at these Schools and at Camp Schools is shown in statement appearing on pages 24-27.

Staff Tours and Tactical Exercises

Staff Tours and Tactical Exercises were carried out throughout the year under arrangements made by District Officers Commanding.

Promotion Examination

A total of nineteen officers presented themselves at the written examination held in October, 1927. Of this number six qualified in one or more subjects for the rank of Major and twelve qualified for the rank of Captain. Thirty-three candidates sat at the March examination, the results of which are not yet to hand.

Foreign Languages

Interpretership Examinations in French, German, and Russian for officers were held under the regulations of the British Civil Service Commissioners at centres in Canada in June, 1927, and January, 1928, at which seven officers qualified as interpreters as follows:—*French*.—1st class, 1; 2nd class, 4. *German*.—2nd class, 1. *Russian*.—1st class, 1.

Canadian Officers' Training Corps

In addition to the annual training of C.O.T.C. Contingents as shown under "Training" above there was a very satisfactory attendance of Cadets at the half-yearly examinations for Certificates "A" and "B" as shown in the summary results given below.

The former certificate qualifies a candidate for a commission in the Non-Permanent Active Militia and the latter is equivalent to a certificate for the rank of Captain Non-Permanent Active Militia and exempts the holder from the Test Examination for entrance to the Long Course.

(3) Report of Staff Officer, Artillery

Armament

The existing armament has been maintained in a serviceable condition as far as limited funds permitted. Reserves of Coast Defence and Field Army artillery ammunition are now far below the minimum required for the several natures of guns and are decreasing yearly through ammunition expended in practice. Lack of funds prevented any replacement during the year and only a small amount of necessary practice shell was provided for Coast Artillery. A large amount of up-to-date technical stores is required for the efficient training of the artillery but could not be provided during the past year.

The Anti-Aircraft Batteries in particular suffer from lack of up-to-date equipment.

Artillery Training, 1927-28

The training of Field and Medium Artillery was carried out during the year at central practice camps at Petawawa, Sarcee and Camp Hughes on the same lines as the preceding year with good results, but the present system only provides for the training of Officers and a nucleus of N.C.Os. and men amounting to about 35 per cent of the Peace Establishment. Horses and drivers were provided entirely by the Permanent Force for this training.

The program of training for Field and Medium Artillery, Coast Defence and Anti-Aircraft units was as follows:—

Field and Medium Artillery.—Three days at Local Headquarters and 8 days at central practice camp during which latter time 3 days were devoted to preliminary training, dismounted, and 4 days to battery tactics and gun practice, the 8th day being a Sunday. Of the Medium Batteries 60-pr. and 4.7-inch Batteries practiced with 18-prs. and 6-inch Howitzer Batteries practiced with 4.5-inch Howitzers as did also two 8-inch Howitzer Batteries, no horses or tractors being available for the guns of any of these units.

Heavy Artillery (Coast Defence units).—Eight days training at Local Headquarters and 4 days training in gun practice in the Forts, with the exception of the 6th (Q. & L.) Coast Brigade which trained 4 days at Local Headquarters and 8 days in the Forts at Halifax.

Anti-Aircraft Artillery.—One Anti-Aircraft Section trained for 12 days at Local Headquarters, including 4 days practice.

The present system of training of Field and Medium Artillery at central practice camps gives a satisfactory training in gunnery and, to a limited extent, in battery tactics, but does not permit of unit training and administration under unit officers as would obtain if funds permitted the attendance of a battery's proper complement including drivers and horses. The present system also prolongs the practice camp unduly owing to the necessity of horsing the Non-Permanent units with Permanent Force horses, which limits the number of batteries that can train during any one day.

Royal Canadian Schools of Artillery

Qualifying courses were held at the various Royal Canadian Schools of Artillery at Kingston, Winnipeg, Halifax and Esquimalt, during the autumn of 1927 and winter of 1928, and in addition Camp Schools at the three central practice camps and at Halifax and Esquimalt during annual training, for the practical qualification of personnel who had already passed the theoretical subjects at Provisional Schools. The total attendance at Royal and Camp Schools during the year under review was 133 Officers and 148 Other Ranks,

of whom 101 Officers and 87 Other Ranks qualified and 2 Officers and 12 Other Ranks are still under instruction. This shows a considerable increase in attendance at Royal Schools over the preceding year.

Twenty Provisional Schools, 18 of which were for the artillery of the Field Artillery and 2 for Coast Defence Artillery, were held throughout the country at the various unit centres during the year. At these schools 129 Officers and 303 Other Ranks reported for instruction but only 93 Officers and 117 Other Ranks reported for examination, of which number 70 Officers and 67 Other Ranks qualified and 15 Officers and 18 Other Ranks failed in one subject only and are entitled to take a supplementary examination.

(4) Report of Assistant Director of Signals

General

Signal Training for personnel of the Royal Canadian Corps of Signals, the Canadian Corps of Signals and Regimental Signallers of the Permanent and Non-Permanent Active Militia has continued to make progress during the year. All Districts are still in need of Assistant Instructors (Signals). It was found possible to attach three other ranks of the Royal Canadian Corps of Signals, who have been under special training at the Depot, The R.C.C.S., Camp Borden, as instructors, to certain Districts for instructional duty for the summer months. It is hoped to increase this number during the forthcoming year.

The Royal Canadian Corps of Signals

The limited establishment of the Royal Canadian Corps of Signals at the end of the fiscal year was 28 officers and 158 other ranks. The strength of the Corps at that date was 26 officers and 160 other ranks.

The distribution of the Corps on March 31, 1928, was as follows:—

	Officers	Other Ranks
District Signal Officers.....	5	
Instructional Cadre (Signals).....		14
A.D. Signals' office and S.I. and T.D.....	5	13
Staff—The Depot, R.C.C.S. and Royal Schools.....	5	28
Northwest Territories and Yukon Radio System.....	4	21
Royal Canadian Air Force Radio System.....		13
Under training at the Depot, R.C.C.S.....	4	71
Attending Staff College Camberly, Eng.....	1	
Attending Royal Military College, Kingston.....	2	
Total.....	26	160

During the year the Civil Government Air Operations took over the ground stations on the Ottawa-Borden, Manitoba and Alberta Radio Systems. The following additional ground stations will be operated during the forthcoming year: Winnipegosis, Man.; Prince Albert, Sask.; Big River, Sask.; Ile la Crosse, Sask.; Lac la Ronge, Sask., and Waskesue Lake, Sask.

Fourteen aircraft will be equipped with aircraft wireless sets having a range of 125 miles radio telephony and 200 miles wireless telegraphy.

The Short Wave Station at Ottawa established communication with London, England, and Melbourne, Australia. Departmental traffic is now handled daily over this system. Traffic is also relayed from England to Australia via Ottawa. Due to the difference in the time of daylight and dark periods in the three countries service communications can be increased by nine hours daily by this service.

For the Department of Railways and Canals the station at Cormorant Lake has handled all commercial traffic between Port Nelson and the Canadian National Telegraphs at The Pas and Winnipeg, Man., since August, 1927.

A small detachment of one officer and three other ranks of the Royal Canadian Corps of Signals accompanied the Hudson's Strait Expedition for the purpose of providing air to ground telephony and telegraphy communications. The Short Wave station at Ottawa kept the Hudson's Strait Expedition in communication with the Marine and Fisheries Department from July 22, 1927, to December 22, 1927, during which time 1,085 messages, consisting of 48,625 words, were handled.

The Northwest Territories and Yukon Wireless System operated by the Royal Canadian Corps of Signals for the Department of the Interior has continued to give good service during the year. The revenue from this system for the year shows a twelve per cent increase over last year and reached a figure of over \$28,000. The station at Herschel Island was again operated during the summer months. A station was operated at Fort Resolution during the months June to October. This station will again be operated during the coming year and it is anticipated that it will be added to the permanent system for all year round operation.

Regimental Signallers of Permanent Force Units

The Annual Inspection and Classification of Permanent Force Signallers was, on the whole, satisfactory. The results for the past year are tabulated below. The numbers of non-commissioned officers and men under training and presented for classification shows a good percentage of the limited establishments. There is still a great need that junior officers be trained in units in order that they may supervise and encourage signal training within their units.

	Classified			Under Training		
	Officers	N.C.Os	O.Rs.	Officers	N.C.Os	O.Rs.

Royal Canadian School of Signals

The Royal Canadian School of Signals operated a camp school at Camp Borden during 1927. Qualifying Courses were held for officers and non-commissioned officers of the Canadian Corps of Signals and visual and line telegraphy courses for Permanent and Non-Permanent personnel. The following table shows the attendance and results of these classes.

ATTENDANCE

	Officers	O.Rs.
Permanent Active Militia.....		8
Non-Permanent Active Militia.....	16	73
R.M.C. and C.O.T.C. Cadets.....	17	

CERTIFICATES ISSUED

	Visual		Line		Operator Group "C"		
	Inst.	Asst. Inst.	Inst.	Asst. Inst.	Cl. 1	Cl. 2	Cl. 3
Permanent Active Militia.....		7					
Non-Permanent Active Militia.....	7	49	3	3			
R.M.C. and C.O.T.C. Cadets.....					12	4	1
	7	56	3	3	12	4	1

In addition to the above 3 officers and 11 other ranks of the Canadian Corps of Signals attended qualifying courses at the above school.

Three officers and two other ranks included in the above were awarded "Distinguished" certificates.

Provisional Schools of Signals

During the year the following Provisional Schools of Signals (evening classes) were conducted:—

Visual Telegraphy.....	80
Special Visual Telegraphy.....	8
Line Telegraphy.....	12
Cadet Classes (Afternoon).....	78

The results of these schools are considered satisfactory and the number of schools held shows an increase over the number held during the previous year, but it is considered that the number of trained signallers turned out can be greatly increased as more instructors become available in each Military District.

The table below shows the number of certificates awarded at Provisional Schools during the year:—

	Officers	Other Ranks
<i>Visual Telegraphy:—</i>		
1st Class Special.....	5	46
1st Class.....	37	549
2nd Class.....	12	264
3rd Class.....		65
	54	924
<i>Line Telegraphy:—</i>		
1st Class.....	24	64
2nd Class.....		18
	24	82

Results of Annual Inspection and Classification of Signallers, Non-Permanent Active Militia.

The results of the Annual Inspection and Classification of Signallers of the Non-Permanent Active Militia during 1927 are as follows:

Awards of Trophies

The Signallers Challenge Cup, for annual competition between regimental signalling sections of Non-Permanent Cavalry and Infantry units, was won for the year 1927 by the Seaforth Highlanders of Canada, Military District No. 11.

The Cavalry Signallers Challenge Cup presented by the Canadian Cavalry Association for annual competition between regimental signalling sections of Non-Permanent Cavalry units, was won for the year 1927 by the 8th Princess Louise's New Brunswick Hussars, Military District No. 7.

The "Malloch Trophy" presented by the Canadian Signals Association for annual competition amongst companies of the Canadian Corps of Signals, was won for the year 1927 by No. 3 Company, 3rd Battalion, Canadian Corps of Signals. This is the first year of competition for this Trophy.

Cadet Classes in Signalling

At local headquarters, when an evening Provisional School of Signals is conducted, instruction in signalling is arranged for cadets who are twelve years of age or over and are enrolled members of an authorized cadet corps. Boys

who undergo this training make particularly desirable recruits for Canadian Corps of Signals units and are joining the Non-Permanent Signal Service in increasing numbers from year to year.

During the year ending March 31, 1928, the following cadet certificates were issued:—

1st year (Semaphore).....	1,315
2nd year (Morse).....	271
3rd year (Advanced).....	58
Total.....	<u>1,644</u>

(5) Small Arms School

Small Arms Training

During the period under review, training in the rifle, bayonet, light automatic (Lewis and Hotchkiss), Vickers machine gun, revolver, and section leader training was carried out in both the Permanent and Non-Permanent Active Militia. In addition to general training the following annual courses were fired:—

Permanent Active Militia

The weapon training courses were practically identical with those fired in the British Army, being slightly modified to suit local conditions.

Recruits of cavalry, engineers and infantry fired an elementary course in the rifle and light automatic. Recruits of other units fired a modified course. Trained soldiers of cavalry and infantry fired the advanced classification course with rifle and light automatics; trained soldiers of engineers fired the advanced course for the rifle only, and those of other units fired a shorter course more suitable to their requirements.

The machine gun sections of infantry units fired the course laid down for the British Army.

The results obtained in the foregoing range courses were satisfactory.

Non-Permanent Active Militia

The program of weapon training was published in "Memorandum for Camps of Instruction, Part I," the various courses being based on those laid down for the British Territorial Army. The results were satisfactory, and show a further increase in the numbers trained in the light automatic.

King's Medal, 1927

The King's Medal for the champion shot of the Military Forces of the Dominion of Canada was won by Lieutenant D. T. Burke, the Governor General's Foot Guards, Ottawa. This officer also won the King's Medal in 1925.

Cambridge Challenge Bowl Competition

The Cambridge Challenge Bowl was won in 1927 by "B" Company, the Royal Canadian Regiment, Toronto, with an average rifle score of 98.9 points.

This trophy was donated by officers of His Majesty's Regular Army on leaving Canada, and is awarded to the squadron, battery, company, headquarters or detachment of any unit of the Permanent Force having a strength of thirty all ranks or over obtaining the highest average in the annual rifle course. To be eligible 80 per cent of the competing unit must take part in the competition.

Best Shot Badges

Best Shot Badges for the year 1927 were awarded to the best shot in the Royal Military College and in each squadron, battery, company, independent troop or headquarters wing of cavalry, artillery, engineers, corps of signals, corps of guides, officers' training corps, infantry, machine gun corps and army service corps of the Non-Permanent Active Militia.

The badge is awarded to the non-commissioned officer or man obtaining the highest score in the classification practices of the annual rifle course, and the names of winners are published in Militia Orders.

Returns show an increase of 133 badges over the number awarded the previous year.

Rifle Associations

On March 31, 1928, there were in existence 179 Military Rifle Associations and 100 Civilian Rifle Associations. The Dominion of Canada Rifle Association and all the Provincial Rifle Associations held prize meetings during the period under review.

Courses at the Canadian Small Arms School

Courses were held during the summer of 1927 for personnel of the Permanent and Non-Permanent Active Militia in the rifle, bayonet, light automatic, Vickers machine gun, revolver and section leader training, and, in addition, a course in anti-gas measures was conducted for selected personnel of the Permanent Force. The Main School was held at Connaught Rifle Range near Ottawa for units of Eastern Canada, and a Branch School was held at Sarcee Camp, Calgary, for candidates from Western Military Districts. Four hundred and eleven officers, W.O.'s and N.C.O.'s qualified in small arms during the year.

The following are the results of the courses:—

(6) Physical Training and Cadet Services

Physical Training

During the fiscal year ending March 31, 1928, 55 Courses of Instruction in Physical Training were held at Normal Schools and other centres. These were attended by 1,500 male and 5,000 female student teachers. In the instruction of these classes 35 warrant officers and n.c.os. of the Permanent Force were employed, with 11 civilian instructors. In all cases the classes were supervised by the District Cadet Officers, who conducted the examinations and issued certificates to 6,124 students who passed the required examinations.

In addition to conducting these classes Permanent Force Instructors in many Centres visited the Schools on invitation of School Boards and contributed materially to the advancement of physical education in these institutions. In one large city the Secretary of the Board of Education, writing to the District Officer Commanding in regard to this instruction says: "I am pleased to note an improvement in the standard of teaching. The whole course was most stimulating to both teachers and pupils."

Cadet Corps

Cadet Services now include 866 Units with a strength of 130,298 cadet officers and cadets. This represents an increase of slightly over 12,000 cadets during the year, this being brought about through the formation of 34 new Units and increases in the strength of existing Detachments.

The distribution by provinces is as under:—

Province	Number of Cadet Corps	Strength
Alberta.....	36	6,149
British Columbia.....	37	5,977
Manitoba.....	43	3,357
New Brunswick.....	48	2,502
Nova Scotia.....	42	3,367
Ontario.....	293	39,612
Prince Edward Island.....	9	816
Quebec.....	296	64,111
Saskatchewan.....	69	4,407
Total.....	866	130,298

Reports from all provinces indicate a higher standard of efficiency than in previous years.

The Earl Grey Trophy, which is awarded annually to the province having the largest number of Cadets in proportion to boys attending school, was again awarded to the province of Quebec, to be held for a period of six months by No. 352, Commercial Academy Cadet Corps, Quebec, P.Q. and for a further six months by No. 2, Bishop's College School Cadet Corps, Lennoxville, P.Q., these being the most efficient Units in their respective Military Districts.

Cadet Training

Particular attention has been given to Specialist Training, much time being devoted to instruction in Signalling and First Aid work.

In Signalling, the following Certificates were issued during the year:—

Cadet Semaphore.....	1,315
Cadet Morse, 1st year.....	271
Cadet Morse, advanced.....	58

For First Aid, the Honourable Wallace Nesbitt has donated a valuable trophy to be competed for annually by cadet teams and during the year under review 51 teams took part in the competition, the trophy being awarded to No. 994 Sea Cadet Corps, Montreal, P.Q. with No. 48, Oakwood Collegiate Institute Cadet Team, Toronto, Ontario, taking second place.

Miniature Rifle Shooting

The series of Matches for Cadets conducted by the Dominion of Canada Rifle Association continued to grow in popularity, 354 teams firing in those held during the winter of 1928.

First prize in each series was won as under:—

Series I

Collegiate and High Schools Cadet Corps

Senior Teams.

First.—Central Collegiate Institute, Hamilton, Ont.

Prize.—B.S.A. Guns, Limited, Silver Shield.

Junior Teams.

First.—Calgary High School Cadet Corps.

Prize.—The Junior Shield.

Series II

Public Schools, Separate Schools, Continuation Schools and other Cadet Corps

Senior Teams.

First.—First Regina Rifles Cadet Corps.

Junior Teams.

First.—Portland Cadet Corps, Saint John, N.B.

In the match for His Majesty the King's Trophy 4,728 Canadian Cadets competed and for the first time Canada's team has won this much coveted Trophy, which for the last two years had been won by South Africa.

This Trophy so generously donated by His Majesty the King is awarded to that part of the Empire whose team of 3,000 Cadets, firing locally, makes the highest aggregate score. The total points obtainable by each competitor is 100. Canada's team of 3,000 boys averaged 79.2, with South Africa in second place with an average of 78 points.

In addition to winning the Shield Canada has also been awarded the Sword of Honour donated by the late Earl Haig. This was won by King George School Cadet Corps, Saint John, N.B., whose team of 18 boys averaged 94.53 points.

In this competition Silver Medals of Honour are awarded to competitors scoring 99 and 100 points and Bronze Medals to competitors scoring 97 and 98 points. Canadian Cadets won 79 Silver and 160 Bronze Medals.

Many other rifle matches were also fired during the year. The Cup presented by His Majesty the King for service rifle shooting was fired for by 34 teams, the Trophy being won by No. 48, Bloor Collegiate Institute Cadet Corps, Toronto, Ontario.

The Royal Military College Club Trophy, also fired for with service rifles, was competed for by 34 teams, and was won by No. 1142, St. Vincent High School Cadet Corps, Saint John, N.B.

Cadet Instructors' Courses

To provide for the proper training of Cadet Corps, it is necessary to arrange for Courses of Instruction for school teachers; such Courses were, in 1927—28 attended by 265 male teachers, to whom certificates of qualification were issued, while 34 qualified Cadet Corps Instructors attended Courses at the Canadian Small Arms School.

(7) Historical Section

Collection, Classification and Disposal of Documents

The Historical Section moved in November, 1927, with all documents, from the Canadian to the Daly Building. The transfer of such a mass of documents and their re-arrangement in the new quarters necessarily retarded the normal work of the Section for some weeks.

During the year approximately 3,000 cubic feet of overseas correspondence was sorted, from which 50 cubic feet of historical material pertaining to the Canadian Overseas Forces was extracted and retained in the Historical Section.

Two hundred and twenty-seven files relating to the European War were received from Military District No. 2.

One hundred and sixty-two files containing complete set of casualty lists from November 11, 1916, to December 2, 1919, were transferred to the Record Office.

Three thousand two hundred and forty-seven Badges worn by units of the Canadian Expeditionary Force were listed and transferred to Public Archives, Ottawa.

Four hundred and eighty-five photographic enlargements (Canadian Official War Photographs) were also transferred to the Archives.

During the period triplicate copies of the war diaries of the 15th, 19th, 20th and 38th Infantry Battalions, 2nd Battalion, C.E., and 1st Canadian Siege Battery were checked, missing folios duplicated from originals, and the completed diaries transmitted for incorporation in the records of the perpetuating units.

Triplicate copies of war diaries of Canadian Field Ambulances were lent to a contributor to the *Defence Quarterly*.

A selection of 120 Canadian Official War Photographs, covering the activities of the various arms and services in the field, was made for instructional purposes, so that lantern slides could be prepared and sent to each Military District and the R.M.C., where they will be available for lecturers.

A complete list of captions of the Canadian Official War Photographs, numbering over 7,000, is being prepared so that prints of these may be made available for purchase by the public.

Recruiting, Organization, Mobilization, Equipment and Services of the C.E.F.

Statements have been prepared (from statistics supplied by the Record Office) showing:—

- (a) Total number of troops proceeding from Canada by arms of the service to England, Siberia, St. Lucia and Bermuda.
- (b) Total number of troops in C.E.F.: (i) outside of Canada; (ii) in Canada only; (iii) the whole force.

Perpetuation of C.E.F. Units and Awards of Battle Honours

Work in connection with the award of Battle Honours has necessitated the continuous employment of a portion of the staff; during the last quarter of the year under report the time of most of the personnel has been devoted to this subject.

One hundred and five lists were compiled, covering 55 Militia Regiments and 50 perpetuated C.E.F. units, showing all Battle Honours earned by each unit, letters were prepared instructing Military Districts to arrange for selection of ten of these Honours, by special Committees, for emblazonment on the Colours or Appointments of each Militia Regiment or C.E.F. unit concerned, as authorized by General Order No. 6, 1928.

To arrive at eligibility for honours, 15,562 Other Ranks, who passed through the units of the Canadian Machine Gun Corps, C.E.F., during 1918, were allotted to original battalions of enlistment.

A detailed statement was prepared showing the number of units which would forfeit the Battle Honour "Mount Sorrel" if the geographical boundary were amended.

Battle Honours for which units of the Canadian Machine Gun Corps are considered eligible have been worked out in accordance with the recommendations of the Battle Honours Committee as approved by Defence Council.

Revision and checking of all operations of the sixty-seven honour-earning units which served in the field was necessitated by amendments to method of award of honours.

Replies were made to numerous queries of Officers Commanding Militia Regiments with regard to the deletion of certain Actions from the Canadian list of Battles to conform with the British list, and explanations made of the application of certain sections of General Order No. 6 of 1928.

To establish validity of claims for honours, an exhaustive survey of the North West Campaign of 1885 was carried out, and a statement prepared showing the units which participated, the nature and the extent of their services, the number of men employed, the casualties, and the Battle Honours awarded.

Compilation of an Historical Account of the Canadian Forces in the Great War

Progress has been made in collecting and arranging information contained in official correspondence to be used in connection with the Official History.

The Section has continued to assist Regimental Historians. In this connection the activities of the 1st Canadian Siege Battery, from arrival in France to demobilization, were set out in chart form for the use of the historian.

Historians of the 15th, 16th, 38th and 42nd C.E.F. Battalions, 6th Canadian Battalion, C.E., and of No. 3 General Hospital, were also supplied with historical information.

Preparation of Historical Monographs, Narratives, etc., in Connection with the Military History of Canada

The draft Chapter on Canadian Defence, in the section on the Constitutional History of Canada, in the forthcoming volume of the Cambridge Modern History, was carefully checked, and many suggestions for amendment and addition made after original documents in the Archives and the Parliamentary Library had been consulted.

Twelve historical facts concerning the Department of National Defence from 1867-1927 were compiled for the Mortimer Co., Ottawa, in connection with the Diamond Jubilee of Confederation.

A full summary was prepared of all treaties, international conferences and proceedings of the League of Nations directed towards Disarmament, for official purposes.

In connection with a request that H.M. the Queen accept the Honourary Colonelcy of The Queen's Own Rifles of Canada, a brief history of the regiment from its organization in 1860 to the present time was prepared, together with a record of senior officers and skeleton histories of the C.E.F. battalions raised by this Regiment for service during the War.

A short history of the Perth Regiment (28th Perth Battalion of Infantry) from 1866-1927 was prepared.

Notes relating to persons born in the United States who served in the C.E.F. were compiled in connection with the erection of the Canadian Memorial in Arlington Cemetery, Washington, D.C.

A biographical sketch of the late Field Marshal Earl Haig was prepared for an address at the Memorial Service held in Ottawa.

A statement regarding C.E.F. Battalions raised in the province of Manitoba was compiled, showing designation of unit, towns and districts in which recruited, place of mobilization, and name of perpetuating unit.

In connection with an article on Mons, published in the Port Hope *Evening Guide* on June 13, 1927, copies of all operation orders and reports bearing upon the cessation of hostilities and the capture of the town were made and forwarded to the parties in the ensuing libel action.

The Compilation of Historical Data Relating to the War for the Historical Section (Military Branch) Committee of Imperial Defence, London

The British Official History, Volume III, dealing with 2nd Battle of Ypres, in which the 1st Canadian Division took a leading part, contained a generous acknowledgment of the assistance given by the Canadian Historical Section in supplying data for this work.

Supply of Information to Historical Investigators

Historical data supplied under this heading included:—

Particulars regarding the number of Brome County men in C.E.F. units for a member of the Senate in connection with the choice of a flag to be deposited in St. Paul's Church, Knowlton.

Information concerning the 15th Light Horse and Officers of "G" Squadron, C.M.R., for incorporation with records of the 15th Light Horse.

A precis covering the actions of the 85th Battalion, South of Lens, during April and June, 1917.

Details of gas and oil projections on the front of the 12th Canadian Infantry Brigade, June-August, 1917.

A list of 64 British officers who served with the Canadian Forces in the Great War was checked, and 150 names added, with appointments held and dates of attachment. This information for the records of the High Commissioner, London.

Investigation of statements concerning The Toronto Regiment with respect to services of 3rd Battalion, C.E.F., and supply of full details for the information of the Adjutant General.

List of Infantry, Pioneer, Engineer and Machine Gun Battalion Commanders of the 1st Canadian Division, showing decorations and dates of command, for reference purposes.

Information for the Bureau of Research, Consolidated Book Publishers, Chicago, with respect to Canada's efforts in the World War regarding,—

- (i) Prisoners taken by Canadians.
- (ii) Number of Canadians taken prisoner.
- (iii) Number of Canadian Pilots in R.A.F.
- (iv) Number of square miles of territory captured by Canadian Corps.
- (v) Number of soldiers in Canadian Army.

A statement showing the Ammunition Supply Units and their establishments, which supplied the Canadian Artillery during the War, in connection with an article for the "Canadian Defence Quarterly."

Particulars regarding the formation of the Upper Canada College Rifle Company in 1866.

The activities of the 2nd Canadian Divisional Ammunition Column and V/2/C Heavy Trench Mortar Battery between January, 1916, and January, 1917.

Information for the Principal, Upper Canada College, regarding the circumstances under which Lieut. A. R. Dunn (an old Upper Canada College boy), 11th Hussars, won the Victoria Cross in the Charge of the Light Brigade at Balaclava on the 25th October, 1854.

Narrative of the action of the 22nd Battalion, C.E.F., at the Battle of Courcellette, September, 1916.

Appropriate lists of battles in which local troops participated, for War Memorials being erected in Winnipeg, Kingston and Halifax.

A statistical statement for the information of the Department of S.C.R., dealing with physical fitness of recruits arriving in England.

During the month of January, 1928, Mr. T. H. E. Heyes, Representative of the Australian War Memorial, visited the Historical Section for the purpose of obtaining historical data of interest to the Australian historian. Every assistance was given him in the discharge of this work and valuable information was received from him as to the method of writing the Official History and caring for war documents and trophies in Australia.

Memorial Chamber, Parliament Buildings

The wording for inscriptions on Panels 10, 11, 12, 13, 15, 16 and 17 was completed during the year. These have been carved and the marble panels erected in the Chamber.

(b) The Royal Canadian Air Force

The direction and control of aeronautics in Canada, both civil and military, come under the jurisdiction of the Department of National Defence. The powers and duties involved are exercised under the direction of the Minister by four separate branches of the Air Services, namely, the Directorate of Civil Government Air Operations; the Controller of Civil Aviation; the Aeronautical Engineering Division; and the Royal Canadian Air Force.

The first three of these branches are responsible directly to the Deputy Minister, and information regarding them may be found in the "Civil Aviation" section of this Report, and also in the separate "Report on Civil Aviation, 1927," which can be obtained by application to The Secretary, Department of National Defence, Ottawa.

The Royal Canadian Air Force

The Royal Canadian Air Force is the Military Branch of the Air Services. The Chief of the General Staff, through the Director, R.C.A.F., administers and controls all military air operations.

The Royal Canadian Air Force has the following composition:—

(a) The Active Air Force.

(b) The Reserve.

(a) The Active Air Force

The Establishment of the Permanent Active Air Force of Canada consists of 115 Officers and 512 Airmen permanently embodied for continuous service, and available for general service, including training and operations for Civil Government Departments. The strength of the Royal Canadian Air Force was 117 Officers and 454 Airmen on March 31, 1928. Out of this total about half were attached for duty with the other branches of the Air Services.

The Non-Permanent Active Air Force is comprised of such Units or Detachments and other formations as are from time to time named by the Governor in Council. At present there are authorized 67 Officers and 130 Airmen. The strength of the Non-Permanent Active Air Force is 37 Officers and 1 Airman.

(b) The Reserve

The policy of the department is to create a large reserve list consisting of personnel qualified in the several branches of Air Force duties.

The Reserve will be inactive except for such special courses as may be authorized by the Honourable the Minister, though personnel on the Reserve will be liable to call for duty with the Active Air Force.

Headquarters, R.C.A.F.

R.C.A.F. Headquarters is organized as follows:—

Director, R.C.A.F.

Assistant Director, R.C.A.F.

Director, R.C.A.F.

1. Staff Officer Personnel.

2. Staff Officer Equipment.

Assistant Director, R.C.A.F.

1. Staff Officer Organization.
2. Staff Officer Training.
3. Staff Officer Operations and Intelligence.
4. Staff Officer Regulations.

R.C.A.F. Station, Vancouver

R.C.A.F. Station, Vancouver, B.C.—The Station is well equipped in regard to hangars, shops, and slipways. Barrack accommodation and housing of the personnel are required.

R.C.A.F. duties:—

- (1) Seaplane flying training for personnel of the R.C.A.F. and Civil Government Air Services (ab initio).
- (2) Winter training—Officers and Airmen.
- (3) Combined operations and training with Naval and Military Forces.

During 1927, ab initio seaplane training was carried out, at which 9 Officers and 2 N.C.O.'s. attended, all of whom qualified as seaplane pilots.

R.C.A.F. Station, Camp Borden

The Air Station at Camp Borden carries out training of personnel for all the Branches of the Air Service. During the fiscal year 1927 training was carried out as follows:—

(a) Refresher flying courses were given to 12 Permanent Officers and 4 N.C.O. Pilots, and 15 Non-Permanent Officers.

(b) Training for Provisional Pilot Officers.—17 Provisional Pilot Officers underwent their first term of ab initio flying training, 13 of whom passed their examinations at the completion of the term.

Nine Provisional Pilot Officers attended for the second term of ab initio flying training, eight of them successfully completing their second term.

Fifteen third term Provisional Pilot Officers attended, fourteen of whom successfully passed their examinations upon the completion of the course and qualified as pilots. Three of the successful candidates were given further flying instruction and granted Non-Permanent Commissions in the R.C.A.F. It is expected that about three more of this term will be given commissions in the near future.

(c) Nine commercial pilots received flying training and they all passed their tests.

(d) An N.C.O. Pilots' Course was given, 11 Airmen attending, 3 of whom qualified as N.C.O. Pilots (ab initio).

(e) A Parachute Course was given, at which two officers attended. Both officers qualified.

(f) A Flying Instructors' Course was given, at which twelve officers attended. These officers were classified, or, in the case of former Instructors, re-classified, at the completion of the course.

(g) A Technical Training Course for boys was carried out, and twenty boys attended, of whom sixteen qualified.

A Refresher Flying and Ground Instruction Course for Officers and Airmen of the Hudson Straits Expedition personnel was completed during 1927.

R.C.A.F. Training, Generally

R.C.A.F. Training may be divided into two categories; training for Officers, and for Airmen.

The training for Officers and Airmen at Vancouver and Camp Borden during the year has been most successful, both as regards Service personnel and those attached to other Government Air Services.

R.C.A.F. Officers have been attached for courses of instruction at the Royal Military College, Kingston, and elsewhere throughout the country.

Officers of the Royal Canadian Air Force attached for training with the Royal Air Force in England:—

	Officers attending
(a) Royal Air Force Staff College, Andover.....	2
(b) Flying Instructors' Course—Central Flying School, Wittering.....	1
(c) Navigation, at Royal Air Force School of Air Pilotage.....	1
(d) Army Co-operation, at Old Sarum, Salisbury.....	1
(e) Armament Course, Eastchurch.....	1
(f) Aeronautical Engineering, Imperial College of Science.....	1
(g) War Staff Course—Royal Naval Staff College, Greenwich.....	1

Provisional Pilot Officers' Training

The idea underlying the present scheme of the R.C.A.F. Provisional Pilot Officers' Training is to obtain, with the minimum of expense, a class of young officer having, in addition to his knowledge of flying, a thorough all-round education, with special qualifications on the technical side. With this in view, arrangements have been made with the Canadian universities to accept for air force training a number of students in their first year from the Applied Science and Engineering faculties, and train them at Camp Borden during the summer vacations each year of their university course. A gratifying response has been made, and sufficient numbers of volunteers apply each year to ensure success. A number of Gentlemen Cadets from the Royal Military College are accepted each year in the same way. The scheme of training is shown in a pamphlet issued on the subject, which can be obtained by application to the Secretary, Department of National Defence, Ottawa.

Training for Airmen

Technical Training of Boys and Airmen at Camp Borden.

This scheme of training was approved on November 5, 1925, and was inaugurated on July 4, 1927, when twenty boys from all parts of Canada reported at R.C.A.F. Station, Camp Borden, for two months' training. A pamphlet containing information regarding the plan of training for airmen is available and can be obtained on application to the Secretary, Department of National Defence, Ottawa.

Combined Operations with the Naval and Military Forces.

Owing to the reorganization of the Air Service which became effective July 1, 1927, the condition of the landing grounds at the different military camps, etc., it was only possible to carry out one operation of three hours and fifteen minutes flying time, with the cavalry and infantry at Sarsce Camp, in August, 1927.

SUMMARY OF FLYING 1927-28

REPORT OF THE ADJUTANT-GENERAL

(1) Permanent Active Militia

The vote for the fiscal year 1927-28 remained the same as for previous years. Accordingly only slight changes were made in the establishments as indicated under the heading of "Establishments and Strength."

Recruiting

On April 1, 1927, the strength in warrant officers, non-commissioned officers and men was 3,189.

During the year there were 743 enlistments and 757 discharges.

On March 31, 1928, the strength in warrant officers, non-commissioned officers and men was 3,175.

Establishments and Strength

The following table shows the Peace Establishment, Limited Establishment, and the actual strength of units of the Permanent Active Militia:—

PERMANENT ACTIVE MILITIA

Unit	Authorized Establishment			Limited Establishment			Actual Strength		
	Offrs	Other Ranks	Total	Offrs	Other Ranks	Total	Offrs	Other Ranks	Total
Officers permanently employed not borne on Regimental Establishment (Staff and Cadet Officers).....							28		28
Officers seconded and specially employed outside Regimental Establishments—Not paid from Permanent Force Vote.....							58		58
Total.....							86		86

Grand total.....	432	6,090	6,522	350	3,332	3,682	411	3,175	3,586

†Includes 13 Officers and 88 other ranks employed at wireless stations maintained in connection with Royal Canadian Air Force, Canadian Government Air Operations, Dept. of the Interior, (N.W.T. Branch) and Dept. of Marine and Fisheries.

Nomenclature

The undermentioned Permanent Schools of Instruction at the places named have been granted the title "Royal" and are now designated as follows:—

School	Location
"The Royal Canadian School of Cavalry"	Toronto, Ont. St. Johns, P.Q. Winnipeg, Man. Calgary, Alta.
"The Royal Canadian School of Artillery"	Kingston, Ont. Winnipeg, Man. Halifax, N.S. Esquimalt, B.C.
"The Royal Canadian School of Military Engineering"	Halifax, N.S.
"The Royal Canadian School of Signals"	Camp Borden, Ont.
"The Royal Canadian School of Infantry"	St. Johns, P.Q.
"The Royal Canadian School of Infantry and Machine Guns"	London, Ont. Toronto, Ont. Quebec, P.Q. Halifax, N.S. Esquimalt, B.C. Winnipeg, Man.

Alliances

His Majesty the King has authorized the alliance of the Royal 22nd Regiment to the Royal Welsh Fusiliers of the British Army.

(2) Non-Permanent Active Militia*Organization*

The following changes in organization have been authorized:—

Artillery—

The 60th Field Battery, C.A., at Aneroid, Sask., and the 90th Field Battery, C.A., at Fredericton, N.B., have been authorized to organize.

In the composition of the 8th Field Brigade, C.A., the 54th Field Battery, C.A., Brantford, Ont., has replaced the 49th Field Battery, C.A., Welland, Ont.

Canadian Officers' Training Corps—

The organization of Contingents, C.O.T.C., has been modified, and is now authorized to consist of:—

Contingent	Organization to consist of:—				
	Bn. H.Q.	Number of Companies			Platoons
		H.Q. and 4 Platoons	H.Q. and 3 Platoons	H.Q. and 2 Platoons

Infantry—

The following have been converted to Highland and Scottish units:—

The Lanark and Renfrew Regiment.

The Cumberland Regiment.

The Prince Edward Island Regiment.

The Essex Fusiliers.

C.A.S.C.—

The number of Divisional Trains has been increased from 11 to 12 in order to provide for a complete Divisional Train in each of Military Districts Nos. 6 and 7.

C.A.M.C.—

The organization of No. 13 Field Ambulance at Victoria, B.C., and No. 32 Field Ambulance at Regina, Sask., has been authorized.

Classification by Corps—Cavalry

Regiments of cavalry and mounted rifles have been classified by corps as set forth in General Order 97 of 1927, for the purpose of the regulations governing the carrying of Standards and Guidons.

Classification is divided into two Corps, namely, "Dragoons" and "Hussars." The latter includes all existing regiments of Hussars. Regiments other than Hussars are classified as units of the Corps of Dragoons.

Peace Establishments

The Peace Establishments of the Non-Permanent Active Militia remain practically unchanged.

*Nomenclature**Artillery—*

The 90th (Newcastle) Field Battery, C.A., has been renumbered "28th."
The 28th Field Battery, C.A., has been renumbered "90th."

Infantry—

The following regiments have been redesignated as stated:—

<i>Old Title</i>	<i>New Title</i>
The Lanark and Renfrew Regiment.....	The Lanark and Renfrew Scottish Regiment.
The Cumberland Regiment	The Cumberland Highlanders.
The Prince Edward Island Regiment.....	The Prince Edward Island Highlanders.
The Essex Fusiliers	The Essex Scottish.
The Princess Louise's (Argyll and Sutherland Highlanders) of Canada	The Argyll and Sutherland Highlanders of Canada (Princess Louise's).
The Queen's Rangers	The Queen's Rangers, 1st American Regiment.

Localization

The localization of units of the Non-Permanent Active Militia has been changed from time to time to suit the conditions and population of the country.

Alliances

During the past year, His Majesty the King has granted authority for several units to be allied with regiments of the British Army, as follows:—

<i>Regiment</i>	<i>Regiment of British Army with which allied</i>
The Princess Louise Dragoon Guards.....	10th Royal Hussars (Prince of Wales's Own).
The Canadian Fusiliers (City of London Regi- ment)	The Royal Fusiliers (City of London Regi- ment).
The York Rangers	The Green Howards (Alexandra, Princess of Wales's Own Yorkshire Regiment).
The Halton Rifles	The Royal Ulster Rifles.
The Calgary Regiment	The King's Own Royal Regiment (Lancaster).
The Prince Albert Volunteers.....	The Bedfordshire and Hertfordshire Regiment.
The Toronto Regiment	The King's Regiment (Liverpool).

Perpetuations

The perpetuation of Artillery Units of the Canadian Expeditionary Force, the Great War, by units of the Canadian Artillery, N.P.A.M., has been authorized as set forth in General Order 83 of 1927, and will be recorded accordingly in the Militia List.

Battle Honours, The Great War

The conditions of award of Battle Honours for the Great War, 1914-19, to Canadian units have been laid down and promulgated in General Order 6 of 1928.

A tabulated list of engagements of the Great War in which troops of the Canadian Expeditionary Force took part, showing the geographical and chronological limits of each action, has been promulgated in General Order 7 of 1928.

Battles, Actions, etc., recorded in the above mentioned list are those only in which regularly organized Canadian units took part.

Meritorious Service Medal

Regulations governing the award of the Meritorious Service Medal have been revised along similar lines to the Imperial Regulations in this regard. In accordance therewith a silver medal, designated "Meritorious Service Medal," may be awarded under certain defined conditions, to:—

- (a) A soldier or pensioner of the Permanent Force who is recommended on account of valuable and meritorious service.
- (b) A soldier of the Active Militia who is recommended on account of gallant conduct in the performance of military duty, or in saving or attempting to save the life of an officer or soldier, or for devotion to duty in a theatre of war.

The number of Meritorious Service Medals in wear under (a) may not exceed 75, and future awards under the clause mentioned will be restricted to discharged soldiers of the Permanent Force.

Discipline

The discipline of the Permanent and Non-Permanent Active Militia during the past year has been satisfactory. The number of convictions by District Court Martial for the year was 63.

Dental Treatment

Dental Treatment has been satisfactorily carried out to ensure dental fitness of the Permanent Active Militia. In the case of the Non-Permanent Active Militia, dental treatment to the limited extent provided for under the regulations has been effected.

Standards, Guidons and Colours

Specifications for Standards, Guidons and Colours for the Canadian Militia have been authorized and follow those in force in the British Army with certain modifications, the chief of which is the use of a wreath of Autumnal Tinted Maple Leaves in place of the Union Wreath of Roses, Thistles and Shamrocks.

Regimental Facings

Regimental Facings of the Colours stated hereunder have been authorized for the following units:—

- "Buff"—The Highland Light Infantry of Canada.
- "Dark Green"—The Winnipeg Light Infantry.

(3) Personal Services

Very satisfactory advancement has been made during the year under report, in the matter of the completion of appointments of qualified officers to fill the vacancies in authorized establishments of all arms of the service. The interest maintained generally by commissioned ranks of military organizations throughout the Dominion has been sincere, and there has been every indication of progress towards a higher grade of administration, as well as the desire to build up to the requisite standard.

As a general policy it is usual for senior officers who have served for the regulation tenure on the active cadres, to transfer to the reserve formations of their respective units, and they thus still remain identified with, and interested in, their corps.

Consequent upon the expiration of tenures of command during the year, changes in the command of Brigades and Units were carried out to the following extent.

Brigade Commanders (Cavalry and Infantry).....	18
Officers Commanding Cavalry Regiments, Artillery Brigades and Regiments of Infantry	73
Engineer, Signal, Army Service Corps and Medical Units.....	19
Reserve formations (all branches).....	52

The number of officers, including provisional appointments, appointed to the Non-Permanent Active Militia during the twelve months ended March 31, 1928, totalled 1,148.

Appointments and Retirements Permanent Active Militia

The resignations and retirements of officers of the Permanent Active Militia totalled 13.

During the same period there were 11 appointments to new commissions.

List of Officers—Militia Service and Air Service

A new Part I of the "List of Officers, Militia Service and Air Service" corrected to the 14th April, 1927, was issued. This publication contains information pertaining to all military organizations, their localization, officer personnel, etc. A further revised edition is now badly needed, and will, it is hoped, be made available at an early date.

A revised issue of Part II containing the war service of officers, list of officers carried on the Reserve of Officers, as well as other special lists, corrected up to the 31st December, 1927, was also made available.

Both of the above books of reference are essential for use by the various staffs and commanding officers throughout the Dominion. Since the war, and on the grounds of economy, revised issues have been curtailed to an annual issue for Part I, and biennial for Part II. As soon as this can conveniently be arranged, more frequent editions of these publications should be made available, as the present infrequent distribution is insufficient for the needs of the service.

(4) Medical

Permanent Force

The duties of the Medical Corps have, of necessity, been much the same as during the preceding year, although expanding in some Branches, more especially in the work pertaining to the Navy and Royal Air Force.

In the past, the Medical Services at the Naval Depot, Halifax, have been carried out by a part-time C.A.M.C. Officer. It is now proposed to place the Naval Medical Arrangements of the District under the District Medical Officer, and have the duties performed by the R.C.A.M.C.

The Medical Services of the Naval Depot, Esquimalt, are directly under the R.C.A.M.C.

Medical work in connection with the R.C.A.F. has been extended to correspond with the growth of that Branch.

Special arrangements were made for the R.C.A.F. and R.C.C.S. Detachments in the West.

Special equipment and training of Medical Personnel was provided for the R.C.A.F. Detachments accompanying the Hudson Bay Straits Expedition.

Eleven new Ambulance cars are being provided for use in the different Districts and one six-wheeled Ambulance car for use of the R.C.A.F. at Camp Borden. This is the first of its kind in Canada.

The Hospital situation remains the same at last year. Dieted Hospitals are in operation in all Military Districts, except Nos. 2, 7, 12, and 13, where the work is done either by the Civil or D.S.C.R. Hospitals.

An increase in the Establishment of Nursing Sisters has permitted of one being detailed for duty at the Military Hospital, M.D. No. 1, which has greatly increased the efficiency of this Institution.

Non-Permanent Active Militia

During the year there were 81 Officers and 10 Nursing Sisters appointed to the C.A.M.C.

Eight Field Ambulances with a total of 227 all ranks, trained at local Headquarters for a period of nine days and 12 Field Ambulances with a total of 366 all ranks, trained for a period of nine days at various Camps.

Medical Mobilization equipment has been thoroughly overhauled and the necessary repair work done to keep it in good condition.

Having considered it advisable to place Central Medical Stores in charge of a Quartermaster, who is a registered pharmacist, this action was taken, and such a step is now proving its value. The policy of manufacturing certain preparations locally has been adopted, and it is found that many of these can be put up at a much lower cost than they could be purchased for in the open market.

There has been a gradual expansion of the work of the National Defence centres of the St. John Ambulance Association, and 308 awards were made to candidates who passed the necessary examinations. In this connection, arrangements have been made for an award for each Military District, to be known as the Mary Otter District Trophy, the team winning the District Trophy being eligible to compete for the Shield known as the Mary Otter Trophy. In this way, encouragement is given to enter into the work of the Association.

(5) Pay Services

Permanent and Non-Permanent Active Militia and Royal Canadian Air Force

1. The operation of the Pay Services in connection with the Permanent and Non-Permanent Active Militia and the Royal Canadian Air Force, including the payment of troops and accounts for supplies, transport, maintenance, repairs, constructions, etc., and the keeping of accounts in the Military Districts, continued to be carried on efficiently by the small detachments of the Royal Canadian Army Pay Corps stationed at National Defence Headquarters and at the Headquarters of the several Military Districts.

2. The operation of the Pay Services during the fiscal year was somewhat similar to the previous year, there being no changes of note.

3. The work of mustering and paying the Non-Permanent Active Militia troops training at such Camps of Instruction as were held, and the issue of Annual Allowances and other financial matters relating to Units of the Non-Permanent Active Militia, have been carried out by District Paymasters in a satisfactory manner, and the members of the Royal Canadian Army Pay Corps and the Civil Staff employed under this Directorate carried out the duties assigned to them during the past year to the satisfaction of all concerned.

4. The undermentioned financial statements, comprising Appendix "B," cover the fiscal year ending March 31, 1928, and show the expenditure by Stations on account of Pay and Allowances for the Permanent Active Militia and the Royal Canadian Air Forces:—

- I. Statement of expenditure by Stations on account of pay and allowances of the Permanent Active Militia for the fiscal year 1927-28.
- II. Statement of expenditure by Districts on account of pay and allowances of the Royal Canadian Air Force for the fiscal year 1927-28.

(6) Records

During the fiscal year under review, the personnel of "Records" was reduced by ten.

A. Documents Section.

During the year 796,408 sets of documents were examined and refiled, in order to complete Honour Rolls and Memorials for various public and private organizations, and to complete Records of Service for Officers and other ranks, also to reply to inquiries received.

Statistics compiled by means of Hollerith included Honour Rolls for counties, cities and towns throughout Canada, and progress was made on the Book of Remembrance.

Work in the C.E.F. Registry has been facilitated by consolidating and rearranging cabinets, and office space, 144,673 files being handled in current work, and 33,908 loose papers and correspondence being received by the Directorate.

All C.E.F. Pay Documents are now consolidated and filed with other C.E.F. records. It was necessary during the year to make 11,000 researches of pay lists, part II orders, cheques and various ledgers and vouchers in order to reply to inquiries received concerning pay matters.

B. Honours and Awards.

The issue of medals and awards shows a decrease, due to the falling off of applications for war medals. The number of Memorial Plaques and Scrolls issued was however, thirty per cent greater than in the previous year. Applications for replacement of lost war medals continue to increase.

That interest in the Non-Permanent Active Militia is still being maintained by the older members of that force is shown by the fact that the award of the Colonial Auxiliary Forces Officer's Decoration and Long Service Medal has increased approximately fifty per cent.

Considerable research was necessary in order to furnish information regarding decorations awarded, in connection with the preparation of Memorial Tablets and Honour Rolls requested by public and private institutions and individuals throughout Canada.

C. Estates.

Two hundred and thirty-eight new Estates amounting to \$47,549.53 were received for distribution, and 235 Estates with a total disbursement of \$43,474.30 were wound up. Seven hundred and sixty-two Estates with a total credit of \$132,353.81 still await distribution. There are trust accounts in 115 Estates covering shares due to 147 infant children and amounting in all to a balance of \$19,613.20.

The offer of the representatives of the Russian Red Cross Society in Canada and the U.S.A. to assist in the disposal of the Estates of Russian Nationals has been accepted by the Department, and it has been found that this offer is of material advantage in establishing communication with the next-of-kin in Russia and obtaining proof of identity.

D. Graves Registration.

One hundred and seventy-four thousand, three hundred and forty-five Cemetery and Memorial Registers have been despatched to the next-of-kin to date. The Memorial at Menin Gate has been completed and was unveiled last summer, and the next-of-kin are now being furnished with the Registers in connection with this Memorial. The work in connection with the Canadian Memorial at Vimy is progressing, the architect in charge of this Memorial

having been furnished with some 5,000 names by the Department. This Memorial will commemorate 11,400 Canadian soldiers who fell in France and whose graves are unknown.

Reports of exhumation and reburial are still being received from overseas and 1,341 post-war deaths in Canada are recorded.

Headstones for 409 graves have been ordered for erection, bringing the total to date for stones ordered to 7,334.

(7) Extracts From the Report of the Commandant, Royal Military College of Canada

The College reopened on the 31st August, 1927, when the incoming class joined. The remainder of the College rejoined on the 6th September, 1927.

Strength

Recruits joining College August 31st, 1927.....	65
Cadet strength at beginning of Term.....	200
Recruits withdrawn in September 1927.....	4
Gentlemen Cadets withdrawn between opening of College and Sept. 30th, 1927.....	2
	<hr/> 6
	194
Further Recruits joining in September 1927.....	6
One G.C. previously withdrawn permitted to rejoin.....	1
	<hr/> Total Cadet strength at commencement of (or shortly after) College year 1927-28.....
	201
Increase over Cadet strength at commencement of College year 1926-27.....	18
Left during the year for various reasons.....	6

Distribution by Provinces

The distribution of Gentlemen Cadets by Provinces (including the Graduating Class) is as under:—

Ontario.....	95
Quebec.....	42
British Columbia.....	22
New Brunswick.....	8
Manitoba.....	8
Nova Scotia.....	5
Alberta.....	5
Saskatchewan.....	3
Abroad.....	7

Discipline

The discipline throughout the term under report has been satisfactory.

The Senior Under Officer, the Under Officers, and N.C.Os have performed their duties conscientiously, and have co-operated with the Company Officers in their work.

Medical

The health of the Gentlemen Cadets during the period covered by this report has been excellent.

Commissions

The following commissions have been applied for by Gentlemen Cadets:—

Regular Army.....	Nil.
Royal Canadian Artillery.....	2
Royal Canadian Engineers.....	3
Royal Canadian Ordnance Corps.....	1
Royal Canadian Army Service Corps.....	1
Royal Canadian Air Force.....	3

Educational

Results.—Of 31 Gentlemen Cadets comprising the First Class, 4 have graduated with honours, 13 have completed graduation, and 14 will be required to write one or two supplementary examinations.

In the Second Class 19 Gentlemen Cadets have passed, 15 require one or two supplementary examinations, and 4 have failed.

In the Third Class 33 Gentlemen Cadets have passed, 19 require supplementaries.

In the Fourth Class 37 Gentlemen Cadets have passed, 25 require supplementaries, and 12 have failed.

Progress.—The Instructional Staff, both Superior and Subordinate, has worked conscientiously and efficiently throughout the year. It is very gratifying to be able to report that the co-operation and co-ordination of the members of the Staff and the various departments has continued to improve. There is now little, if anything, to desire in this respect. The progress made by the various classes, considering the College as a whole, has been average.

Accommodation.—The new Mechanical Laboratory has been completed with the exception of the installation of machinery and apparatus. This equipment is in the process of being moved and installed, and should be ready for use at the beginning of the coming term.

Riding Establishment.—The progress in Riding during the year has been progressive and compares favourably with past years.

General

Concessions to Graduates.—The Council of The Nova Scotia Barristers Society have agreed to—"Accept Graduates of your College on all subjects of our preliminary Law Examination without further examination by us here." This now leaves only Prince Edward Island and New Brunswick still to grant this concession.

Civil Employment.—The members of the Graduating Class, other than those taking commissions or going to Universities, have all been successful in obtaining employment in their selected vocations.

The following companies, etc., have offered positions to graduates:—

Pulp and Paper Companies.

Department of Mines.

Department of Interior.

Chartered Accountants.

Trust Companies.

Insurance Companies.

British Colonial Office—For appointments—Police Probationers, Sub-Inspectors of Constabulary and Railways.

Various individual business houses.

Officers' Courses.—(a) In addition to instruction given to the Gentlemen Cadets, the General Staff Branch of the Royal Military College have conducted the following courses this term, as well as the preparation of precis for, and examination of, papers of the Militia Staff Course:—

(a) Staff College Preparatory Course.

(b) Refresher Course.

(c) Long Course.

This staff has also prepared the examination papers for promotion of Lieutenant-Colonels of the Non-Permanent Active Militia.

Staff College Preparatory Course.—(b) This course commenced on the 1st October, 1927, and terminated with the examinations in the middle of February, 1928.

Five officers of the Permanent Force—3 Captains and 2 Lieutenants and Brevet Captains attended.

The standard of requirements for the Staff College examination is very high. Three of the candidates displayed energy and ability well up to the average. The remaining two candidates did not, through lack of previous preparation, application or natural ability, do so well. The results of the examination have not yet been received.

Refresher Course.—(c) This course ran concurrently with the Staff College Preparatory Course from October to Christmas.

Two officers of the Permanent Force and one officer of the Royal Canadian Air Force attended this course.

These officers worked well and conscientiously, and there is no doubt that they personally and the Service generally has derived considerable benefit from the course.

Long Course.—(d) The Long Course commenced on the 28th February and terminated on the 2nd June, 1928.

Two officers of the Royal Canadian Corps of Signals and two officers of the Non-Permanent Active Militia, one of whom was repeating it, attended this course.

Three of the four officers did very well, have shown good advancement, and passed the examination.

Naval and Military Tournament, Montreal, 1928

A party of 4 Officers and 95 Gentlemen Cadets proceeded to Montreal for the Naval and Military Tournament, May 17 18 and 19, and on Sunday the 20th the Gentlemen Cadets took part in the Montreal Garrison Church Parade.

The work of the Gentlemen Cadets was very favourably commented on both by the Press and private individuals.

Administration

Messing.—The quantity and quality of the messing has been satisfactory.

Clothing.—The Tailor Shop has been operated most satisfactorily, and the costs of clothing have been reduced as follows:—(a) Furnishings 10 per cent
(b) Uniforms 19 per cent.

Grounds and Buildings

The condition of the grounds and buildings has been maintained throughout the year. Periodic painting was provided for, and repairs have been carried out.

Water Supply

A new chlorine gas water purifier was put in to replace an out of date apparatus. The weekly tests by the Health Department show the water supply to be pure.

Competitions with Empire Institutions

R.M.C. Kingston vs. R.M.C. Sandhurst Rifle and Revolver.—Our Rifle and Revolver teams were again successful in the annual competition 1927, against the Royal Military College, Sandhurst. The scores were as follows:—

	<i>R.M.C. Kingston</i>	<i>R.M.C. Sandhurst</i>
Rifle	1,016	1,013
Revolver	298	276

Sports

The Hockey Team visited the United States Military Academy, West Point, on February 18, and were successful in winning by 8 to 3.

On November 5, 1927, the Harrier Team took part in the Intercollegiate Race at Toronto, in which event we obtained second place.

The remaining College teams were not able to win championships this year, being beaten by Loyola College in very hard, close games by a small margin in both Football and Hockey.

The class of Basketball played is improving each year. The Soccer team played in the local league and made a very good showing considering the age and experience of their opponents.

With the new Tennis Courts allowing more chance for practice it is hoped that the Tennis Team will be considerably strengthened.

Aquatic Sports, Squash and Golf are favourites in their seasons. The running track will be widened and reconditioned during the summer holidays.

Presentations

Tennis Courts.—Through the kindness of Sir Frederick Williams-Taylor, donations have been received from Ex-Cadets, parents and friends of the College, for the purpose of providing tennis courts for the Gentlemen Cadets. One tennis court was laid last Autumn with the object of seeing how it would stand the winter's frosts and spring thaws. After going into the matter fully this spring, it was decided that this court did not quite fill the College requirements, and arrangements were made to have four concrete courts laid this spring. This work is now completed. If it is found that sufficient funds remain, it is intended to have an "En-tout-cas" court laid this year, where Cadets who are on the different teams can practice.

"Tommy" Smart Cup.—The members of the 1927 Graduating Class presented to the College a Silver Cup in memory of the late No. 1716 Gentleman Cadet Thomas Williams Smart, to be awarded annually to the best all-round Cadet in Athletics.

Hooper Cup Miniatures.—Mrs. G. R. Hooper, widow of the late Colonel G. R. Hooper (Ex-Cadet No. 63) has donated a sum of money for the creation of a trust fund for the provision of a miniature of the Hooper Cup, to be presented annually to the Gentleman Cadet winning the Hooper Cup. Heretofore no miniature cup was given in this connection.

Photographs, R.M.C. Sandhurst and R.M.A. Woolwich.—A handsome album has been received from the Royal Military College, Sandhurst, containing photographs of the grounds and activities of the Gentlemen Cadets. A set of photographs was also received from the Royal Military Academy, Woolwich.

Poisoned Arrows, etc.—A collection of poisoned arrows (these have been sterilized), spear heads, battle axes, pipe bowls, fishing lines, etc., the property of the late Captain W. G. Stairs (R.E.) (Ex-Cadet No. 52) have been presented to the College by his brother, Mr. H. B. Stairs of Halifax, N.S.

Books.—Mr. Francis McLennan has presented the College Library with further bound volumes of Blackwoods Magazine. The undermentioned have kindly presented books to the College Library during the year under review:—

Lieut.-Colonel H. S. Stewart. (Ex-Cadet No. 465).

Lieut.-Colonel T. C. Skinner. (Ex-Cadet No. 127).

Dr. G. H. Clarke, Professor of English Literature at Queen's University.

Dr. J. C. Webster, B.A., M.D., F.R.C.P.E., F.R.S.C.

Lieut.-Colonel R. O. Alexander, D.S.O.

Memorial Tablets.—A bronze memorial tablet, presented by Mr. V. I. Smart, has been placed in the Educational Building in memory of his son the

late Gentleman Cadet T. W. Smart (No. 1716), who was accidentally killed during Football practice in October, 1926.

Mr. Algernon Ridout of Neilsonville, P.Q., presented to the College a memorial tablet in memory of his Father the late Captain J. B. Ridout, 90th Light Infantry, Captain of Cadets from 1876 to 1882. This was unveiled during the closing exercises by Lieut.-Colonel Duncan MacPherson (Ex-Cadet No. 18), a member of "The Old Eighteen".

Dinghy.—Major S. B. Coristine (Ex-Cadet No. 623) has kindly presented the College with a new Dinghy.

Canoes.—The following Ex-Cadets have made donations for the purpose of providing new canoes for the Boat Club:—

Lieut.-Colonel G. G. Blackstock, M.C.	(Ex-Cadet No. 888)	
Lieut.-Colonel E. G. Hanson, D.S.O.	" No. 667)	
James W. Domville, Esq.	" No. 216)	
A. F. Nanton, Esq.	} One Canoe {	" No. 752
C. S. Hanson, Esq.		" No. 764
A. T. Paterson, Esq.		" No. 890
C. P. Pitblado, Esq.		" No. 893
N. H. Macaulay, Esq.		" No. 944
H. M. Paterson, Esq.		" No. 1219
H. C. MacDougal, Esq.		" No. 1695

It is intended to mark these Canoes with the names of their donors, not only as an appreciation, but as a means of bringing to the attention of the serving Cadets the spirit of good-will and interest displayed by their predecessors.

Visitors

During the past year the College has been visited by the following:—

August, 1927: About two hundred ladies and gentlemen from Kent County, Ont., who were attending a convention in Kingston.

September, 1927: Eighty members of the British Newspaper Society, England.

During the meeting of the General Synod of the Church of England in Canada, the members were invited to visit the College, most of whom accepted the invitation.

The Hon. Lucien Cannon, Solicitor-General.

The Most Rev. S. P. Matheson, D.D., LL.D., D.C.L., Archbishop of Rupert's Land and Primate of Canada.

October, 1927: The Rt. Rev. Bishop J. Taylor Smith, K.C.B., C.V.O., D.D., Northwood, Middlesex, England. late Chaplain General of the British Forces during the Great War, visited the College and addressed the Staff and Gentlemen Cadets.

The Hon. Wm. Phillips, U.S. Minister, Ottawa.

The Hon. Senator R. Dandurand, P.C.

November, 1927: Members of the Eastern Ontario Women's Institute Convention.

W. A. Boys, Esq., M.P., Barrie, Ont.

December, 1927: Brigadier-General Sir Gordon Guggisberg, K.C.M.G., D.S.O., late Governor General of the Gold Coast, who gave a lecture to the Staff and Gentlemen Cadets on West Africa.

Major G. D. Rhodes, C.B.E., D.S.O., R.E., Nairobi, Kenya Colony.

February, 1928: The Hon. Peter Heenan, Minister of Labour.

May, 1928: H.E. The Most Reverend Andreas Cassulo, D.D., Papal Delegate to Canada and Newfoundland.

Their Excellencies, The Governor General of Canada and Lady Willingdon. Members of the Ontario Medical Convention.

REPORT OF THE QUARTERMASTER GENERAL

The appropriations for the year 1927-28 for Engineer, Supply and Transport, and Equipment and Ordnance Services were sufficient only to meet the actual requirements of these services for upkeep purposes which have during the year been satisfactorily maintained.

Engineer Services and Works

The attached report of this directorate indicates the work which has been carried out during the year, and a general improvement in conditions has been obtained.

It is essential that Permanent Force barracks be erected in Military District No. 2 within the next four years when the present arrangement with the city of Toronto regarding Stanley Barracks expires.

The arrangements in Calgary under which the Permanent Force units occupy a portion of the Non-Permanent Active Militia Armoury are most unsatisfactory to both branches of the service. The stable accommodation for the cavalry which is rented from the Municipality, is a great fire risk. These being only temporary wooden buildings, do not afford proper protection for the horses or the means of carrying out proper instruction in stable management. New barracks and fire-proof stables should be erected at as early a date as possible.

The barrack situation at Halifax remains unchanged. All the buildings are obsolete and expensive to administer.

Magazine accommodation for Naval, Military and Air Force has been further improved during the year. The Naval portion of the Joint Service Magazine at Bedford Basin is now approaching completion. It is hoped to be able to carry out considerable work on the Military and Air Force accommodation during the coming year.

The Petawawa Magazine for Military Districts 1, 2, 3 and 4 will be completed during the coming year.

Investigations have been carried out towards selecting a suitable site for a Magazine in Western Canada to serve Military Districts 10, 12 and 13. It is hoped that a site may be definitely selected in the near future.

The improvements to the Ordnance Building, Kingston, have been completed and this building is now occupied, providing excellent accommodation with very little fire risk.

The rifle range situation has also been improved. Many important points remain without suitable ranges. It is hoped that year by year this situation will be met.

A new central training depot for the Royal Canadian Air Force, with suitable buildings and aerodrome, is required to replace that now occupied at Borden, this site having been found unsuitable for the purpose. A number of sites have been inspected.

A much needed building has been erected during the winter months at Connaught Ranges.

A large amount of work has been carried out in developing the new Air Force Aerodrome at Rockcliffe, Ottawa.

Considerable work has been carried out for R.C.A.F. stations at Shirley Bay, Victoria Island, and outlying points in Western Canada.

Considerable work of an advisory nature has been carried out by Engineers of this Department in connection with the proposed flying field near Montreal.

A detailed report of the Engineer Services is attached (page 59).

Royal Canadian Army Service Corps

It is gratifying that the improvement in the organization and administration of this corps has continued during the past year. The routine work of distribution of rations and forage to both Permanent and Non-Permanent militia, control of horse, mechanical and military water transport, allotment of buildings and the provision of rented buildings, together with the supply and control of fuel, light, water, etc., and the supervision of all rail transport has been satisfactory.

Schools of Instruction have been well administered and the special course in Mechanical Transport which has been carried out in Winnipeg, will have a very far-reaching effect not only upon the service, but upon the personnel who have received valuable instruction which will be of use to them on their return to civil life.

The development of mechanization which is being experimentally carried out in Great Britain is being closely watched. Funds at present do not permit of any expansion in this regard in this country.

There has been a slight increase in the cost of both rations and forage during the past year due to the rise in cost of certain types of articles.

A detailed report of this service follows (page 67).

Equipment and Ordnance Services

The Ordnance Stores in charge of this service are in good condition and some improvement has been made in connection with their housing, at several points. Fireproof buildings are, however, required at a number of stations before this valuable property can be considered to be properly safeguarded.

Surplus and obsolete stores and clothing to the value of approximately \$12,000 have been disposed of through the Government Salvage Officer, by sale or transfer, during the past year.

Purchases of clothing have been confined to articles urgently required owing to the depletion of certain sizes. These purchases will increase yearly on account of depletion of war stocks.

The use of coloured clothing is restricted as follows:—

Permanent Force.—Each detachment of the combatant units has a sufficient supply to enable a limited guard of honour or escort to be turned out.

The Non-Permanent Active Militia are permitted to clothe their bands in coloured uniforms from those retained in their possession from pre-war issues, or by purchase from their own funds. There is very little pre-war coloured clothing in stock, no purchases having been made since the war.

The Permanent Force for ordinary purposes, are restricted to the use of khaki and have no change for walking out purposes. They are permitted to purchase a blue uniform at their own expense, for evening wear. It is hoped that in the near future it will be possible to provide our Permanent soldiers with an issue of coloured uniform to be worn when not on duty.

The Non-Permanent Active Militia are, generally, anxious to return to coloured uniforms, and as the war stocks of khaki are becoming depleted, the time is arriving when this question should be considered.

Camp equipment on a rental basis is issued to Boy Scouts and Girl Guides. The rate charged does not entirely cover depreciation but it is hoped to be able to continue this issue in view of the enormous value of these camps in the physical development of our young people.

Certain articles of camping equipment are also rented for public purposes at a cost which practically covers depreciation.

Some improvement has been possible in connection with equipment for the Signalling Service and for specialized training in Artillery and Machine Gun work.

Reports of shortages of material of various types are prepared annually and provision is made from time to time as funds can be supplied.

The work of the Dominion Arsenal, Quebec, during the past year has been maintained at a high standard.

Expenditure of Small Arm Ammunition on annual practice has during the past year been slightly higher than that manufactured. It is hoped that funds will be provided to increase the annual output during the coming year. This would considerably reduce the cost of production of the individual articles.

The work of the Chief Inspector of Ammunition and that of the Inspector of Armourer Services has been well carried out.

A detailed report on this service follows. (Page 70.)

(1) Directorate of Engineer Services

Definition of Duties

Engineer Services comprise the design, construction and maintenance of fortifications, military buildings and works; also the custody of lands owned or used by the Department of National Defence. It is also the duty of the Royal Canadian Engineers to operate and maintain the defence electric lights (search lights) and the telephone systems in permanent fortifications.

Staff

Under the Quartermaster-General, the Director of Engineer Services is responsible for the proper carrying out of all Engineer Services, and administers the sum voted by Parliament under the heading "Engineer Services and Works, Militia Services," and all Engineer Services for the Royal Canadian Air Force.

The Director of Engineer Services is assisted by a small staff at Headquarters, who are employed on inspection duties and the preparation and supervision of important constructional projects, as well as on their ordinary administrative duties.

A District Engineer Officer is appointed to the Staff of each Military District. He is responsible to the District Officer Commanding, for the proper execution of Engineer Services within his District. He has a staff of officers and other ranks of the Royal Canadian Engineers to assist him in the performance of his duties of design, supervision and administration; the size of the staff depending on the amount of work in each District.

Notes on Engineer Services Generally

During this year certain services which were postponed in the year 1926-27 owing to lack of funds have received attention, so that the condition of Military Works and buildings has been somewhat improved as regards upkeep, but there still remain for attention many services of an urgent nature for the preservation of existing buildings and works or for the proper accommodation of units in occupation.

Rifle Ranges

The existing rifle ranges have been reconditioned as far as possible with the funds available and are generally in fair repair. In certain cases the danger areas are inadequate and unless additional areas are secured, firing will have to be discontinued on account of danger to the public.

The lack of rifle range accommodation pointed out in previous reports still exists, and militia training is consequently seriously handicapped.

Accommodation, Permanent Active Militia

The situation regarding new barracks for the Permanent Active Militia remains unchanged, as funds have not been found to provide the accommodation urgently required at Toronto, Halifax and Calgary.

The stable accommodation for mounted corps at many stations is very poor and constitutes a grave fire risk. At Winnipeg present conditions cause considerable hardship to both men and horses—new brick stables for the Artillery at this point are urgently needed. The temporary wooden stables at Calgary are very undesirable.

Accommodation for Non-Permanent Active Militia

Many units of the Non-Permanent Active Militia lack armoury accommodation, space for drill in inclement weather, and storage facilities. This reflects adversely on efficiency, and makes organization more difficult.

No funds have been provided for the erection of armouries. The policy of renting and adapting buildings which are really unsuitable for this purpose is both expensive and inefficient.

Existing armouries have been maintained in a fair state of repair, but owing to the shortage of funds available their condition can nowhere be said to be first class.

Expenditures 1927-28

ENGINEER EXPENDITURES FROM MILITIA SERVICES

(Engineer Services and Works and General)

Maintenance and repairs of Rifle Ranges.....	\$ 87,128 74
Maintenance and repairs of Barracks.....	267,320 34
Maintenance and repairs of Ordnance Buildings.....	64,745 59
Maintenance and repairs of Drill Halls.....	117,375 32
Maintenance and repairs of Camp Grounds.....	100,842 33
Maintenance and repairs of Fortifications.....	65,028 25

New Construction

Halifax Magazine.....	\$ 100,000 00
Stores Building, Petawawa.....	12,600 00
Magazine, Petawawa.....	22,757 90
Competitors' Building, Connaught.....	26,030 00

The distribution of expenditure on Engineer Service funds was as follows:—

Military District No. 1.....	\$ 36,500 00
Military District No. 2.....	50,484 28
Military District No. 3.....	70,795 14
Military District No. 4.....	44,664 00
Military District No. 5.....	79,605 00
Military District No. 6 and Halifax Garrison.....	180,239 92
Military District No. 7.....	23,701 52
Military District No. 10.....	70,374 97
Military District No. 11.....	27,996 00
Military District No. 12.....	6,000 00
Military District No. 13.....	30,869 63
Petawawa Camp.....	33,000 00
Ottawa.....	13,068 54
Connaught.....	35,141 57

Naval Services, repairs to R.C.N.V.R. quarters.....	91 85
---	-------

Work carried out 1927-28

The following is a list of the more important works carried out during the year, in addition to the usual services for maintenance and minor repairs (exclusive of the works shown under "New Construction").

Military District No. 1

London, Ont., rifle range.—Additional targets and repairs.

Wolseley Barracks.—Concrete basement floor and reconstruction of quarters.

Ordnance Building.—Concrete floor.

Armoury.—Renewals to electric lighting system and repairs.

Chatham, Ont., Armoury.—Renewals to electric lighting system.

Renovations to Armouries at Galt, Guelph, Kincardine, Sarnia, St. Thomas, Walkerton, Watford and Windsor, Ontario.

Military District No. 2

Camp Borden.—Converting and refitting 21 buildings for quarters; installation of central heating plant in hospital buildings; repairing roofs and flooring of buildings and improving aerodrome; workshops and storage for M.T. Section.

Toronto, Ont., Long Branch Rifle Range.—Repairs to buildings and water supply.

Armouries, Hamilton and Toronto.—General repairs.

Rifle ranges, Brantford, Collingwood and Camp Borden.—General repairs.

Temporary Camps.—Services for temporary camps were provided at Long Branch, Brantford and Owen Sound.

Military District No. 3.

Kingston, Ont., Ordnance Depot.—Completion of "B" Block, involving new truss roof, concrete floors, new heating system, new plumbing, shelving, racks, etc. Ready for occupancy; considered one of the best buildings.

Armoury.—Renewal of retaining wall.

Tete du Pont Barracks.—Alterations to quarters.

Artillery Park Stables.—Renewal of roof.

Lindsay, Ont.—Repairs to armoury and arsenal building.

Barriefield Camp and Rifle Range.—Repairs to equipment and to water supply system.

Military District No. 4.

Pointe-aux-Trembles Rifle Range.—Installation of electric light system and general repairs to range equipment.

St. Johns Barracks.—General repairs to buildings and stables.

Westmount, R.C.O.C. Depot.—New fire protection and inter-phone systems.

Sherbrooke Rifle Range.—Repairs to fences and equipment.

Armouries.—General repairs to Craig Street. Engineer and Grenadier Armouries in Montreal, and to Westmount, Three Rivers, St. Hyacinthe, Sherbrooke and Coaticook Armouries.

Military District No. 5.

Quebec.—General repairs and renewals were carried out to the following buildings: Armoury, Citadel; Officers' quarters, St. Louis Street; Quarters of District Officer Commanding; Connaught Barracks; Citadel; Ordnance buildings; St. Louis Barracks; Military Hospital; Dominion Arsenal and to Citadel walls and City Fortification Walls.

Little River Proof Butts.—Parts destroyed by fire were renewed.

Lévis, Nos. 1 and 2 Forts.—New power line and services on buildings.

Bury, Armoury.—Indoor rifle range installed.

Armouries, Beauport and Thedford Mines.—Repairs.

Temporary Camps.—Camps for Militia training were equipped at Richmond, Cookshire and Rimouski.

Military District No. 6.

Halifax, Magazine.—Ten new buildings completed; new electric power line and distribution system.

Halifax, N.S.—General repairs and renovations were carried out for the following buildings: Glacis Barracks; Pavilion Barracks; Military Hospital; South Barracks; White Building and Wharf, Engineer Yard; Married quarters Melville Island; Sackville Street Married quarters; Married quarters Bedford Row; Military Gymnasium; Ordnance buildings and the armouries, and general maintenance and repairs to the Fortifications.

McNabs Island.—Four huts reconditioned and pier reconstructed.

R.C.A.F. Station.—New concrete ramp in front of hangar and improvements to store building.

Charlottetown, P.E.I., Armoury.—Indoor rifle range constructed and repairs carried out.

Aldershot Camp.—Repairs to stables, grounds, rifle range and buildings.

Sydney Mines, Armoury.—Construction of indoor rifle range.

General repairs were carried out to the following buildings: Truro and Bridgewater Armouries and Ordnance Buildings at Charlottetown.

Truro Rifle Range.—Renewal of markers' shelter.

Military District No. 7.

Sussex, N.B., Rifle Range.—Six additional targets constructed, with additional stop butt, firing points, etc.

Armouries.—General repairs were carried out to the Armouries at Fredericton, Saint John and Sussex.

Rifle Ranges.—General repairs to ranges at Moncton, Saint John and Fredericton.

Sussex Camp.—Water pipes renewed, parade ground levelled and repairs to drains, buildings and electric light system.

Military District No. 10.

Brandon Rifle Range.—New caretaker's quarters erected and range repaired.

Winnipeg, Fort Osborne Barracks.—New concrete walks, steel fire escapes erected, new magazine and incinerator and general repairs to sixteen buildings; improvements to heating system.

R.C.A.F. Station, Red River.—New building erected and wireless station moved.

R.C.A.F. Headquarters.—Additional fire protection.

Rifle Range.—General repairs.

Camp Hughes.—New engine and pump for water supply, roofs of buildings renewed and repairs to caretaker's quarters.

Lac du Bonnet, R.C.A.F. Station.—Three new buildings erected and roof of present building repaired.

Cormorant Lake, R.C.A.F. Station.—New mess building erected.

Ladder Lake, R.C.A.F. Station.—Five new buildings erected.

Portable metal buildings were provided at eight R.C.A.F. Stations.

Armouries.—General repairs were carried out at McGregor Street Armoury, Winnipeg, and at the Minnedosa and Virden Armouries.

Military District No. 11.

Esquimalt, B.C., Work Point Barracks.—Renewals and repairs on account of damage by fire; improvements to supply store.

Ordnance Buildings.—New cordite testing building.

Fortifications.—General repairs; renewals to water and electric light systems.

Vancouver, Jericho Beach Air Station.—General improvements to services.

Armouries.—General repairs carried out to armouries at Vancouver (Beatty St.); North Vancouver; Kaslo and Rossland.

Temporary camps for Militia training were equipped at Kelowna, Kamloops, Beacon Hill, Rodd Hill and North Vancouver.

Military District No. 12.

General repairs and improvements were carried out to Maple Creek, Moosomin and Prince Albert Armouries and general repairs to the Regina Rifle Range.

Temporary camps for Militia training were equipped at Regina Beach, Prince Albert, Yorkton, Gull Lake, Paynton and Harris, Sask.

Military District No. 13.

Sarcee Camp.—New officers' mess building; general repairs to buildings; improvements to rifle and artillery ranges.

Rocky Mountain House, Air Station.—New landing field constructed; new building for air mechanic.

High River Air Station.—Renovation of buildings.

In addition, four emergency landing fields have been constructed and equipped.

General repairs were carried out on the Armouries at Calgary, Edmonton, Vegreville and Red Deer, and on the Calgary Rifle Range.

Temporary camps for Militia training were equipped at Sarcee, Cooking Lake and Redcliffe, Alberta.

Connaught Rifle Range.

The usual services necessary in connection with the Canadian Small Arms School and meetings of rifle associations were carried out. Improvements to roads, buildings, range machinery and sanitary arrangements were made. Construction of a new road and improvements to buildings and range equipment were carried out, and a new Competitors' building also erected.

Ottawa Drill Hall.

Renovation of quarters and minor services.

R.C.A.F., Shirley Bay.

Erection of new hangar and quarters.

R.C.A.F., Victoria Island.

Erection of new hangar and repairs to buildings.

R.C.A.F., Rockcliffe, Aerodrome.

Removal of stop butts and levelling of grounds.

Lands

The following is a list of Military Properties disposed of during the fiscal year 1927-28:—

Stoney Creek, Ont., drill hall.—Sold to the Parry Sound Basket Company for \$250, October 10, 1927.

Bowmanville, Ont., drill hall site.—Reconveyed to the town of Bowmanville, June 20, 1927.

Halifax, N.S., Fort Clarence.—Sold to Imperial Oil Limited for \$19,100, June 17, 1927.

Halifax, N.S., Old Headquarters Office.—Sold to Young Women's Christian Association for \$7,750, September 27, 1927.

Valcartier, P.Q., part lot 113.—Sold to United Church for \$125, November 22, 1927.

Barriefield, Ont., rifle range, 20 acres.—Sold to Mrs. Mary Brooks for \$1,500, January 27, 1928.

Three Rivers, P.Q., rifle range, 22 acres.—Sold to La Communauté des Religieuses Ursulines for \$5,000, February 13, 1928.

Kenora, Ont., drill hall site.—The former site was exchanged with the Board of Education of the town of Kenora for adjoining property, November 29, 1927.

Fredericton, N.B.—Part of the present parade grounds were exchanged with the Department of the Interior for adjoining property, Order in Council dated January 10, 1927.

Quebec, P.Q.—Lots 142 and 143 Cove Fields transferred to the Department of the Interior by Order in Council dated April 11, 1927.

Kingston, Ont., water lots, Cataragui.—Transferred to the Department of the Interior by Order in Council of April 20, 1927.

Saint John, N.B., Lower Cove Reserve.—Clearance rights quit claimed to the city of Saint John, March 28, 1928.

The following is a list of Military properties acquired during the fiscal year 1927-28:—

Saskatoon, Sask., rifle range.—Two hundred and seventy-nine acres purchased for new site for \$9,725, May 27, 1927; 80 acres transferred for danger area from the Department of the Interior.

Winnipeg Aerodrome.—Additional lots purchased for \$3,900.

Newcastle, N.B., drill hall site.—Additional lot purchased for \$350, April 12, 1927.

Sussex, N.B., rifle range.—Additional land, 71.93 acres, purchased for \$3,331, March 12, 1927.

Moose Jaw, Sask., rifle range.—Six hundred and twenty-five acres purchased for new site for \$9,123.70. January 31, 1928.

Action is being taken for the acquisition of the following properties:—

Rockcliffe Aerodrome.—Purchase of additional land.

Lac du Bonnet Air Station.—Purchase of site.

Vancouver, B.C., rifle range.—Purchase of new site.

Quebec, P.Q.—Purchase of burial plots, Mount Hermon Cemetery.

ROYAL CANADIAN ENGINEERS

Duties

1. The Director of Engineer Services is also the Officer Administering the Corps of Royal Canadian Engineers. The functions of the Royal Canadian Engineers are:—

- (a) To operate the Defence Electric Lights, telephones and machinery of the fortresses of Canada.

- (b) To instruct the Non-permanent Active Militia and Gentlemen Cadets of the Royal Military College in Military Engineering.
- (c) To execute or supervise Engineer Services throughout Canada.
- (d) Other military duties of an engineering or general character (viz: duties in aid of the Civil Power).

The Officer Administering Royal Canadian Engineers and District Engineer Officers, in their respective spheres, give advice on technical matters connected with the organization and training of the Engineers of the Active Militia. The District Engineer Officers in nearly all cases act as the instructors in Military Engineering at the various Provisional Camp Schools (Engineers) held for the training and qualification of Officers and Other Ranks of Active Militia (Engineers).

Officers.

The present shortage of officers in the Royal Canadian Engineers makes it difficult for them to carry out all these duties in an entirely satisfactory manner. When one officer has to perform duties in connection with Engineer Services, and, at the same time, give instruction in Military Engineering, both of which are specialist employments, it is impossible to attain full efficiency in either.

Out of a present Officer strength of 29, six are "On Command"—one as Assistant Director of Military Intelligence, one at the Staff College, Quetta, India, two attending the School of Military Engineering, Chatham, England, one on exchange duty at the Royal Military Academy, Woolwich, England, and one with the Geographical Section, General Staff, National Defence Headquarters, Ottawa. There are four vacancies for subalterns.

No more officers can be spared from the Royal Canadian Engineers for extra-regimental employ without gravely prejudicing the conduct of Engineer Services, and impairing the Engineer training. A number of subaltern officers are urgently needed.

Other Ranks.

The present strength of W.Os., N.C.Os. and Sappers is ten under the authorized Limited Establishment. This is due to the high qualifications as tradesmen that are now required, and also to there being a great demand for labour in the building and construction trades in civil life.

A shortage of suitable candidates for training for the very important duties of Military Foreman of Works is beginning to make itself felt. Candidates in the past have been drawn from N.C.Os. and Sappers who are building or constructional tradesmen, and who possess the necessary intelligence and initiative. With the failure of the supply of tradesmen, the supply of potential Foremen of Works also fails. This group is at present eight under establishment. There is also a shortage of suitable candidates for draughtsmen. Candidates in the past have been drawn from N.C.Os. and Sappers who enlisted as draughtsmen or from those who had a certain amount of training in this subject. No candidates are at present available; the present establishment of this group is two under strength.

Training

The function of the Royal Canadian School of Military Engineering at Halifax, is,—

- (a) To provide instruction for Officers and Other Ranks of the Royal Canadian Engineers in their duties, and by examinations, to determine whether they possess the requisite technical qualifications for promotion, or for certain special appointments.

- (b) To qualify W.O's. and N.C.Os. of the Royal Canadian Engineers as Instructors in Military Engineering, for duty with the Instructional Cadre or with the Corps.
- (c) To hold courses for the qualification of Officers and N.C.O.s. of the Canadian Engineers (N.P.A.M.) and to set and correct examinations for Provisional or Camp Schools of Engineering held in other parts of Canada.

The functions of (b) and (c) above imply a certain degree of centralization. It is considered that this is advantageous, as it ensures uniformity in Military Engineering training, and the latest developments in materiel and method are made known to all concerned.

The location of the Royal Canadian School of Military Engineering in Halifax is not sufficiently central. Heavy expense is incurred in transporting Royal Canadian Engineer personnel from other parts of Canada to take courses there, and it has proved impossible to send Canadian Engineer personnel there from other points than those within the Maritime Provinces. When accommodation permits, the Royal Canadian School of Military Engineering should be moved to some point in Ontario.

When it becomes possible to increase establishments of the Permanent Active Militia, a Field Coy. R.C.E. should be organized. All things considered, the present organization of the R.C.E. in detachments is the most efficient for carrying out the duties of the Corps with the numbers available, but the lack of a field unit has an adverse effect on the training of R.C.E. Officers and Other Ranks in field engineering and general military duties. Those who have served in the Great War know how a field company is organized and functions, but those who have joined since have no opportunity of learning. This is bound to affect the training of the Non-Permanent Active Militia, in turn. The Field Company, if organized, should be in the same locality as the Royal Canadian School of Military Engineering, for demonstration and instructional purposes.

The courses given to R.C.E. personnel at the Royal Canadian School of Military Engineering are:—

Foreman of Works

Works Sergeants

Mechanist Electrician

" Machinist

" Instrument Repairer

Engineer Clerks

" Draughtsman

Instructor in Military Engineering, Class I and Class II.

Defence Electric Lighting: Engine Drivers, Gas and Oil, Searchlight Operators.

A R.C.E. Permanent School of Instruction was held during the year at Esquimalt, for the qualification of Officers and N.C.Os. of the Active Militia (Engineers).

R.C.E. Permanent Schools may, if necessary and if sufficient candidates are forthcoming, be authorized to be held at other convenient R.C.E. stations, i.e. Toronto, Winnipeg, and Esquimalt, at which stations the necessary Qualified Instructors are available.

These R.C.E. schools, are branch schools and are under the jurisdiction of the Commandant, Royal Canadian School of Military Engineering, Halifax.

(2) Directorate of Supplies and Transport

This directorate is responsible for the provision, administration and distribution of all food, forage, fuel, light, disinfectants, transport by rail, water and road; horse transport, mechanical transport, military water transport, remounts, veterinary services, rental of buildings (in conjunction with the Department of Public Works), telephone services, the allotment, appropriation of barracks and barrack services.

The strictest possible economy in all services has been observed, consistent with efficiency, and all services are operating at a minimum strength.

The following is a brief outline of the services rendered:—

Supplies for Troops and Horses

(Permanent and Non-Permanent Active Militia)

One thousand nine hundred and sixty-two contracts for various supplies and services have been made during the past year by the Contracts Branch, at the request of this directorate. The following supplies were issued:—

Food rations.....	715,182
Hospital diets.....	25,567
Forage rations.....	254,136

Few complaints were received as to the quality of the food and forage provided by the contractors, and the prices were considered fair and reasonable.

The average cost per ration of food was .0101075 cents higher and per ration of forage .037033 cents higher than last year, due to natural fluctuation in prices from year to year.

The following is a comparison of the cost per ration during the last five years:—

<i>Food</i>		<i>Forage</i>	
March, 1924.....	\$0.31377	March, 1924.....	¢ 0.29614
March, 1925.....	0.29801	March, 1925.....	0.36142
March, 1926.....	0.331045	March, 1926.....	0.364509
March, 1927.....	0.339849	March, 1927.....	0.369480
March, 1928.....	0.3499565	March, 1928.....	0.406513

Lighting and Heating of Buildings

Supplies of fuel, and the kinds and quality of the coal delivered by the contractors were in accordance with the department's specifications. Canadian coal is used wherever practicable. Anthracite is used only where municipal regulations or the type of equipment, chimneys, etc., prevent use of bituminous coal. Coke was used to a larger extent, where the type of heating apparatus was suitable for its use and compared very favourably with anthracite coal, being very efficient and economical. Tests of various types of Western coals for the new self-feeding furnaces at Fort Osborne Barracks were carried out.

The supply of light to all buildings has been satisfactory and economical.

Transport by Ocean and Rail

The provision of ocean transport is confined to personnel proceeding to and returning from England, in connection with courses of instruction. All accounts for such ocean transport together with miscellaneous accounts for rail transport, are handled in this directorate.

This directorate is responsible for the issue of all rail transport in Canada, the issue of which is kept at a minimum. The railways are continuing to give satisfactory service in connection with the movement of troops to and from annual training camps.

Horse Strength—Permanent Active Militia

On March 31, 1928, the total number of horses in the Permanent Force, including Cavalry, Artillery, Infantry, Army Service Corps, and other Units, was 664. Some difficulty is experienced in obtaining remounts of a suitable type for cavalry, artillery and other military purposes. The prices remain practically the same, except in the Prairie Provinces where remounts are considerably cheaper than in other parts of Canada. The Department of Agriculture maintain seven breeding stations: Roddick Lake, P.Q.; Chaffey's Locks, Ont.; Millarville, Alta.; Ailsa Craig, Ont.; Brampton, Ont.; Russell, Man.; Kamloops, B.C.

Where such breeding stations are in operation, the remounts from these localities are of a type noticeably superior and it is recommended that one breeding station should be opened in each province to improve the quality of remounts for military service and to raise the standard of saddle horses for which there is a large and increasing demand.

Veterinary Service

This branch of the service is responsible for the care and health of horses, and the duties in connection with this service have been very satisfactorily carried out, although the establishment has been reduced to a minimum.

Telephones

By careful supervision, and by the installation of extension telephones instead of main telephones wherever possible, the expenditure for this service has been maintained at the lowest cost, without in any way interfering with the efficiency of the service. For the year 1927-28, the total cost for this service throughout the various districts was \$17,481.45.

Barrack Services

Included under this heading is the proper conduct of all duties in connection with the receipt, custody, issue and accounting for fuel, light, gas, water, disinfectants and paillasse straw, and also for the allotment of quarters.

The Royal Canadian Army Service Corps

The strength of this corps on March 31, 1928, was 26 Officers and 249 Other Ranks.

This corps functions throughout the Dominion for the purpose of providing, administering and accounting for supplies, forage, fuel, light and disinfectants; transporting troops, animals and stores by rail and water, appropriating, allotting and hiring accommodation for both the Permanent and Non-Permanent Active Militia.

The Royal Canadian Army Service Corps (Permanent Force) is also employed for the instruction of the Canadian Army Service Corps (Non-Permanent Active Militia).

To meet these demands and requirements, a small depot or detachment is located in each Military District, and the Officer of the R.C.A.S.C. designated as the District Supply and Transport Officer is attached to the District Headquarters.

The Depots, numbering four in all, in addition to their normal duties, provide Royal and Provisional Schools of Instruction for the training of the R.C.A.S.C. and C.A.S.C.

Depots are located at Halifax, N.S.; London, Ont.; Winnipeg, Man.; and Esquimalt, B.C.

Detachments are located at Toronto, Ont.; Kingston, Ont.; Montreal, Que.; Quebec, Que.; Saint John, N.B.; Regina, Sask.; Calgary, Alta.; and Ottawa, Ont.

A small R.C.A.S.C. Supply Depot to provide for supplies, barrack services and fuel for the R.C.A.F. and Permanent Force at Camp Borden was organized during the early part of 1927.

Training and Instruction

In order to impart instruction in the latest developments and to ensure uniformity in training, and a systematic application of rules, regulations and methods in Army Service Corps procedure, a Royal Canadian Army Service Corps School of Instruction is maintained at Winnipeg, Man., where all training throughout Canada is carefully supervised.

All young officers on joining the corps, on first appointment, are posted to Winnipeg for instruction in corps duties, and finally, for training in regimental duties, before being posted for duty elsewhere.

Courses of instruction for officers, senior W.O.'s and N.C.O.'s, and the training of the Instructional Cadre is carried out at this school. Ample accommodation exists for attached personnel to live in barracks, and by degrees the instructional facilities, so very necessary for imparting thoroughly practical instruction in all branches of corps duties, are being built up. As Cavalry, Artillery, Infantry and Air Force detachments are quartered at this station, an opportunity is afforded to work with and obtain the assistance of the other arms of the service.

Branch Schools, under the direct supervision of the R.C.A.S.C. Central School at Winnipeg, Man., are established at Halifax, N.S.; London, Ont.; and Esquimalt, B.C., for the purpose of providing Royal and Provisional Schools of Instruction for Officers, W.O.'s, N.C.O.'s and men of the C.A.S.C. (non-permanent) in the Districts where C.A.S.C. Units are situated, and also for the instruction of the junior N.C.O.'s, men and recruits of the R.C.A.S.C. personnel at the Depots.

These Branch Schools have done very useful work in the various Districts. The standard of instruction has been high, up to date, and on the same general lines as laid down by the Central School. Apart from the qualifications that have been obtained by the N.C.O.'s, men and recruits of the Depots, the C.A.S.C. (non-permanent) have derived the greatest benefit and encouragement, with the result that the *esprit de corps* of the A.S.C. has been greatly raised.

Since the opening of the Central Royal Canadian Army Service Corps School of Instruction at Winnipeg, Man., in September, 1925, all the officers, with very few exceptions, and a very high percentage of the W.O.'s and N.C.O.'s have attended during the non-training season courses of instruction, varying from two to four months' duration, in drill, pack-saddlery, wagon drill, equitation, supplies, barrack services, mechanical transport, Corps duties, and discipline, interior economy and other Corps and technical subjects. This central instruction has had a very noticeable effect upon the R.C.A.S.C. (Permanent Force) throughout the Dominion and is reflected in a marked degree in the C.A.S.C. (non-permanent) Training. The Instructional Cadre, after three years, was again reassembled at one centre and in addition to bringing instruction up to date on a uniform basis, they have had the benefit of a special four months' course in Mechanical Transport subjects. The Instructional Cadre can now instruct in three technical subjects required by the A.S.C., namely, supplies and barrack services, Horse Transport and Mechanical Transport.

The standard of the Corps in technical and corps duties is now considered high and steps have been taken to ensure continuity of education by laying down a yearly program of instruction to be followed.

The Corps was very weak in Mechanical Technical subjects. A very careful classification of the personnel was carried out, and after eighteen months of upgrading and elementary instruction, four officers and twenty-two other ranks were selected to undergo a special Mechanical Transport course of four

months' duration at Winnipeg. This is the first Mechanical course undertaken in Canada and was conducted by a technical Mechanical Transport Officer (Imperial) on loan from England. The method and procedure of this instruction will serve as a guide for future Mechanical Transport courses. The results were very satisfactory. Now that this personnel has returned to various stations throughout the Dominion, far-reaching benefit and a high standard of efficiency is to be expected.

The mechanization of military forces is absorbing the attention of all nations and great strides have been made in this sphere. The introduction of six-wheelers, a form of vehicle with most of the qualities of a track or semi-track vehicle, plus all the advantages of a wheel vehicle, has given an impetus to mechanization to such an extent that mechanical vehicles are making their appearance in the first line transport of fighting units, where the horse was once considered indispensable.

As far as the very limited funds will permit, every effort and opportunity has been taken to keep abreast of the time in this particular field.

Last summer, a ten days' extensive experiment and test in conjunction with Field Artillery was made with track and semi-track tractors against a four-wheel drive vehicle of the latest type over varied and difficult terrain. All this equipment was placed at the disposal of the Department free of cost by the firms interested. Very interesting and useful data was made available by these trials.

During last summer and winter a six-wheeler has been manufactured in Canada. Experiments, trials and tests have been made in deep snow and much useful data has been obtained for future reference.

The Department has acquired two of the latest War Office six-wheelers, one medium and one light. These vehicles have been put to very severe tests and the manner in which they surmounted difficult obstacles was remarkable. Further trials with artillery will be made this summer, and during the winter snow trials will be conducted.

Inspections

Inspections by the Director of Supplies and Transport of all the R.C.A.S.C. Depots and Detachments were carried out with the object of insuring uniformity in their professional training, supply, transport and barrack service arrangements, equitation, drill, equipment and organization; also the efficient and economical conduct of these services.

These inspections have been of inestimable value both to the Inspecting Officer and to the O.C. Depots and Detachments of the R.C.A.S.C.

A second inspection of all Depots and Detachments has now been completed and a marked improvement and a higher standard of efficiency was noticeable in all Branches of the Corps.

(3) Directorate of Equipment and Ordnance Services

The provision and distribution of clothing, equipment, arms and ammunition for Militia Services and of clothing and non-technical stores for the Royal Canadian Air Force have been successfully carried out during the year.

Priced Vocabulary of Stores and Clothing

This important publication gives the correct nomenclature for all stores and clothing and shows the cost of the articles listed. The publication has been kept up to date during the year both as regards prices and nomenclatures. Very considerable changes were made to bring the Vocabulary in line with that in use by the War Office.

Steel Helmets

In the last report it was stated that 7,000 steel helmets were purchased from the War Office Surplus Stocks, at a disposal price which was \$13,000 less than the value at Vocabulary rates. During the year 1927-28 an additional 11,000 helmets were obtained also at disposal prices. These two lots of this important item of War Equipment were thus secured for an amount less by \$34,000 than the value at Vocabulary prices.

Clothing

During the war the pattern of jackets, serge drab, was changed to roll collar to conform with the War Office pattern. Previously straight collar jackets were worn. On reviewing the situation during the past year it was found that there were very considerable stocks of large and small sizes of straight collar jackets but no intermediate sizes. There were objections to using both patterns of jacket in one unit. It was decided to cut down a number of the large size garments to fill in intermediate sizes and issue certain units with full issue of straight collar jackets. Arrangements were made to have 7,000 of these altered and as a result, on the basis of the standard size roll approximately 40,000 jackets can now be used. The cost of alteration was \$31,500 and the value of the 40,000 jackets is approximately \$320,000. As further stocks of intermediate sizes are required, it is proposed to carry on with alterations until all the stocks of straight collar jackets are used up.

During the year this branch has been able to procure the following equipment at very much reduced prices:—

(a) Buff Leather Equipment

The equipment purchased was serviceable part worn and is very difficult to obtain except by special manufacture. The net saving effected in the transaction was approximately \$24,000.

(b) Rifles S.M.L.E. Mark III

Six hundred rifles were purchased at a total cost of approximately \$5,800. The price of these arms delivered in Canada by the War Office would have been approximately \$22,000 or approximately \$16,000 saving. These were arms which had previously been disposed of by War Office as surplus. They were examined by War Office armourers and passed as serviceable before shipment.

Highland Regiments

During the year four Infantry Regiments were converted into Highland Regiments. These Regiments were: Prince Edward Island Regiment, Cumberland Regiment, Essex Fusiliers, and Lanark and Renfrew Regiment.

The cost of the Highland doublet, Glengarry and kilt supplied to these units is equal to the cost of ordinary khaki uniform. These units supply all other articles at their own expense.

Cordite

During the past year a contract was arranged with the Canadian Industries, Limited, for the supply of 155,000 pounds of cordite for use in the manufacture of Small Arm Ammunition. This is really the extension of a previous contract. Delivery is to be made over a period of five years.

It is considered sound policy to maintain a plant in Canada for the making of cordite rather than to purchase from War Office stocks. The value of this plant during the late war cannot be over estimated.

Dominion Arsenal, Quebec

During the past year the output of the Dominion Arsenal Quebec included the following items:—

Cartridges, S.A. Ball .303 Cordite Mark VII	5,443,402
Cartridges, Q.F. 18-pdr. case, empty Mark III	13,591
Primers, percussion Q.F. Cartridges No. 1 Mk. II	28,479
Rifles, aiming, .22" Q.F. 18-pdr. Mk. I to II, Guns (Mark I)	15
Cartridges, filled B.L. or B.L.C. 15-pdr. 1 lb. 4 oz. blank	5,000
Cartridges, Q.F. 6" Gun short filled 15-pd. 15 oz., Cordite M.D. 26 with adapter, Mark I	300
Cartridges, Q.F. 12-pdr. 12 cwt. filled 2 lb. Cordite M.D. 11 with adapter Mk. III	982
Cartridges, Q.F. 6-pdr. cordite M.D. practice Mark L.P.	494

In addition manufacture and repair of ammunition boxes and also repair of other ammunition was carried out.

Considerable renovation work was carried out both at the Main plant and the filling factory. Some new up to date machinery was procured during the year.

The Superintendent of the Arsenal paid a visit to the Woolwich Arsenal in order to obtain new ideas with regard to ammunition manufacture.

The Report of the Superintendent for the fiscal year 1927-28 is included in this Report as Appendix C.

Chief Inspector of Ammunition

This branch carried out the inspection and proof of all ammunition manufactured at the Dominion Arsenal, Quebec, as well as 6,904,000, cartridges .22" purchased from the trade.

Certain special investigations and tests were carried out in connection with various subjects. A test of special interest was that carried out to ascertain the best blank ammunition for use with machine guns.

Inspector of Armourers Services

The officer made a complete inspection of the armourer shops in Ordnance Depots throughout Canada. Generally very satisfactory reports were submitted.

In the workshops at Quebec the work of overhauling and repairing rifles, bayonets and scabbards received from overseas was continued throughout the year.

Disposal of Surplus Stores

Surplus and obsolete stores and clothing to the value of \$11,933.92 were disposed of through the Government Salvage Officer by sale or by transfer to other Government Departments during the year.

The total amount of stores disposed of by this Department since the War, up to the 31st of March, 1928, is valued at \$10,275,411.07.

Establishment of the Royal Canadian Ordnance Corps

The authorized limited establishment of the Royal Canadian Ordnance Corps as at 31-3-28 was—

Officers 36 (excluding seconded officers—4).
Other Ranks—436 (excluding Other Ranks—6, carried supernumerary).

The actual strength of the Royal Canadian Ordnance Corps at at 31-3-28 was:—

Officers 35 (excluding seconded officers—4).
Other Ranks . . 425 (excluding Other Ranks—6, carried supernumerary).

The distribution of the strength by trades and occupation was as follows:—

Other Ranks:—

Ammunition Examiners.....	5
Armament Artificers.....	18
Armourers.....	29
Artisans:—	
Blacksmiths.....	3
Carpenters.....	12
Painters.....	2
Saddlers.....	6
Tailors.....	3
Textile Refitters.....	9
Caretakers.....	75
Clerks and Storemen.....	263
Total.....	425

Discharges, Enlistments, etc.

The following are the particulars of Discharges, Enlistments, Transfers, etc., carried out during this year:—

<i>Strength decrease:—</i>	
Retirement and Discharges—	
Officers.....	1
Other Ranks, (for ordinary reasons, time expired, etc.).....	40
Transferred to other Units.....	2
Promoted to Commissioned Rank.....	1
Desertions.....	3
<i>Strength increase:—</i>	
Enlistments.....	40
Transfers from other units.....	2
<i>Transfers between Stations:—</i>	
Officers.....	2
Other Ranks.....	34

Courses of Instruction

Two Warrant Officers and eight senior Non-Commissioned Officers of the Corps attended a Senior Qualifying Course at the Royal Canadian Ordnance Corps School of Instruction, Winnipeg, from the 1st of January to the 28th of February, 1928. Instruction was given in the following subjects:—

Corps Administration and Interior Economy.
Ammunition and Explosives.
Ordnance Duties generally (Peace and in the Field).
Military Law.
Infantry Drill.
Guns and Carriages, and
Electricity as applied to Service stores.

A course of instruction of six weeks duration (part-time) for Junior Non-Commissioned Officers and Men was conducted at each Ordnance Depot with one exception during the year. These courses were open to all Permanent Force Units; eighty Other Ranks attended.

During the year, caretakers' courses were conducted at Halifax, Kingston, Winnipeg, and Esquimalt. The period of these courses was four weeks and the numbers who actually attended are:—

Civilian Caretakers.....	11
Military Caretakers.....	9
(R.C.O.C. Caretakers Section).	

Instruction was given in the care and preservation of guns, carriages and other Artillery equipment, including harness and saddlery, also store accounting, Receipt and Issue of Stores and Ledger keeping.

REPORT ON CIVIL AVIATION IN CANADA

During 1927 a great advance in Civil Aviation in Canada was apparent. The Dominion and Provincial Governments extended the range and variety of their operations. Commercial companies more than doubled their flying time. Throughout the Dominion there has been a notable increase in flying activities generally.

Civil Government Air Operations

The Directorate of Civil Government Air Operations was formed on July 1, 1927, to undertake all flying for departments of the Dominion which had been done hitherto as part of the work of the Royal Canadian Air Force. During 1927 the following departments availed themselves of aircraft for a wide and varied range of services: Departments of Interior, Mines, Railways and Canals, Public Works, Marine and Fisheries, Customs and Excise, Indian Affairs, Agriculture, and Post Office. Units were established at: (a) High River, Alberta; (b) Winnipeg, Manitoba; (c) Ottawa, Ont.; (d) Dartmouth, N.S. Forest fire detection patrols were carried out for the Department of the Interior, Forestry Branch, over an area comprising 61,012,911 acres, in the Prairie Provinces. During the fire hazard season, 106 fires were detected and suppression action taken. All Aerial Photographic and Aerial Survey Operations are carried out in co-operation with the Topographical Survey, Department of the Interior, who receive all requests for work, issue the necessary technical instructions, and prepare the resultant maps. Close co-operation is also maintained with the Survey Services of the Provincial Governments. One hundred and sixty-three thousand photographs, covering 199,220 square miles of country, have been transferred to the Topographical Surveys for mapping purposes. During 1927, the approximate area covered was: Oblique Photography 28,650 square miles, and vertical photography 17,200 square miles. The total flying time for the season, on all operations, was 3,471 hours, an increase over 1926 of 1,177 hours 31 minutes.

High River Air Station

During 1927 a total of 193 hours 5 minutes flying was carried out over the Bow River and Crowsnest Forest Reserves for the patrol of forest land comprising 3,260,826 acres. Sub-bases are established at Eckville and Pincher's Creek. The establishment consisted of 5 officers and 27 airmen.

Flights totalling 189 hours 30 minutes were made for purposes of oblique and vertical photography. An area of approximately 2,230 square miles was photographed during 1927. The districts were Lacombe, Alberta; Melfort and Saskatoon, Saskatchewan.

<i>Summary of Flying time.</i>	Hrs.	Mins.
Forestry.....	193	05
Photographic survey.....	189	30
Service tests.....	6	15
Militia service.....	3	15
Transportation.....	2	15
Miscellaneous.....	7	30
Total.....	401	50

Winnipeg Air Station

The activities at this station included: Fire detection patrols; suppression action on fires located; air photography for surveys; forest sketching; transportation of Indian Department officials; obtaining information regarding the

distribution of wheat rust spores; dusting growing wheat to prevent rust; transportation and reconnaissance flights for various Government officials on urgent work.

During 1927 a total of 1,344 hours 25 minutes flying was carried out for the patrol and suppression of fires over an area of forest land comprising 57,752.085 acres. Sub-bases are established at Lac du Bonnet, Norway House, Cormorant Lake, Ladder Lake, and detachments at Winnipegosis for forest patrols around Lake Winnipegosis and at Ile a la Crosse for patrols between Churchill and Saskatchewan rivers in Northern Saskatchewan.

Flights totalling 600 hours 10 minutes were made for the purpose of oblique and vertical photography. An area of approximately 36,456 square miles was photographed during 1927. The districts were: Rainy Lake and Kenora, Wood Buffalo Park, Flin Flon area, Winnipegosis area east of Lake Winnipeg, and northern Alberta. The establishment consisted of 19 officers and 81 airmen.

<i>Summary of Flying time.</i>	Hrs.	Mins.
Forestry.....	1,344	25
Photographic surveys.....	600	10

Transportation.....	9	35
Miscellaneous.....	16	30
Total.....	2,028	20

Ottawa Air Station

Photographic operations were carried out in the vicinity of Muskoka, Ont., over an area of about 3,000 square miles, and near Sudbury over an area of about 1,700 square miles.

Photograph operation over an area of 154 square miles was carried out in the district of La Tuque, province of Quebec. From La Tuque a Vedette proceeded to Baie St. Paul, carrying out exploratory oblique photography due east across the unmapped area from Batiscan river to Grand Lac Jacques Cartier.

Operations were also carried out from Lac St. Joseph, P.Q., in the Batiscan and St. Annes districts. One hundred and forty-two square miles were photographed. This detachment then proceeded to Roberval, P.Q., and carried out photographic operations near Chicoutimi, Jonquieres, Kenogami, Arvida, Bagotville and St. Alexis de la Grande Baie, parts of the Saugenay river and Ha Ha bay. Oblique photography was also carried out over the Peribonka river, around the shores of the Saguenay at the Grande Decharge and around Lake St. John, up the Ashouapmouchuan river and the Mistassini river, along Lake Kenogami. Ha Ha bay and the Saugenay river. On November 1, all aircraft from these detached operations returned to Shirley's bay, Ottawa. Operations in connection with air mail investigation were carried out by this unit. The establishment consisted of 10 officers and 32 airmen.

<i>Summary of Operations.</i>	Hrs.	Mins.
Photographic survey.....	867	07
Instruction, practice and testing.....	265	57
Transportation.....	42	13

Total.....	1,247	18

Dartmouth Air Station

A total of 103 hours 14 minutes flying time was carried out on vertical photography of the Shelburne area, Nova Scotia, comprising an area of 1,728 miles.

Aerial dusting was carried out in the Bras d'Or Lakes area, Cape Breton Island, to combat the outbreak of the Spruce Budworm insect pest. The flying time was 38 hours 40 minutes.

<i>Summary of Operations.</i>	Hrs.	Mins.
Photographic survey.....	157	09
Dusting.....	38	40
Miscellaneous.....	6	45
Total.....	202	34

Hudson Straits Expedition

The decision having been reached by the Government to complete the Hudson Bay Railway and terminals, it was decided, early in January, 1927, to send an expedition to Hudson strait to obtain accurate information in regard to ice conditions and to study the requirements necessary to ensure safe navigation. The expedition left Halifax on July 17 and arrived at Port Burwell July 27, where Base "A" was established. Base "B" was established at Nottingham Island, and Base "C" at Wakeham Bay. The general equipment of the three bases was practically the same and comprised the following: Two Fokker aircraft complete with floats, skis and wheels for landing, and all necessary accessories, including spare engines, one 30-foot motor launch, one Fordson tractor, radio apparatus consisting of two gasoline engines to generate power with two 150-foot steel masts. Gasoline, oil, coal, stoves, bedding, etc., provisions for sixteen months, one skiff, guns and ammunition. Seven buildings comprising officers' and men's dwellings, radio house, storehouse, blubber house and two hangars were erected at each base. The expedition consisted of 44, all ranks.

Flying Operations

The first flight was made from Base "C" September 30, from Base "B" October 11, and from Base "A" October 19. Flying has been carried on since these dates, whenever the weather was favourable.

Fog and storms hampered operations. Fog was recorded on 33 days out of 137 days between July 28 and November 11.

Up to the end of the year, 26 meteorological and ice observation flights were carried out with a total flying time of 45 hours and 50 minutes.

Control of Civil Aviation

The branch of the Controller of Civil Aviation is responsible for the administration of Air Regulations; the inspection and registration of aircraft; the inspection and licensing of air harbours, and examination and licensing of pilots and air engineers. There were in Canada 21 commercial aircraft operating firms, 36 licensed air harbours, 67 licensed civil aircraft, and 148 licensed pilots and air engineers.

Statistics

The number of flights made in 1927 has increased 252 per cent over 1926, the figures being 1926, 4,755; 1927, 16,748. The hours flown have risen from 5,860 to 12,070, an increase of 106 per cent. The increase of passengers carried is particularly encouraging, showing the public is prepared to travel by air where facilities are offered. The figures are: 1926, 6,436 passengers; 1927, 18,932 passengers; 1926, 631,715 passenger miles; 1927, 1,424,031 passenger miles. In the same way freight traffic has increased from 724,721 pounds in 1926 to 1,098,346 pounds in 1927. Mail carried in 1926 was 3,960 pounds, and in 1927 it increased to 14,684 pounds.

Ontario Provincial Air Service

In Ontario the Provincial Government maintains its own air service as part of the Forestry Branch of the Department of Lands and Forests. This service owned and operated 18 aircraft. Its main base is at Sault Ste. Marie. The

flying operations are mainly in the district lying north and west of the Ottawa river, Lake Nipissing and French river. Forest fire detection and suppression patrols, forest type mapping by photography, sketching for inventory work and transportation to the outlying parts of this district were carried out in 1927. The main operating bases are at Sudbury and Sioux Lookout. The total flying time for the year was 4,861 hours; 18,000 square miles of territory was sketched from the air, 4,572 square miles photographed, and 526 forest fires detected.

Commercial Companies

In Quebec the Provincial Forest Service carry out similar work by contract with commercial aviation firms. Forest fire patrols and forest type mapping was done. Contracts were awarded to the Compagnie Aerienne Canadienne for vertical photography in the Gaspé Peninsula covering an area of 5,800 square miles. Forest sketching was carried out under contract by Canadian Airways Limited, covering an area of some 7,500 square miles. The Fairchild Aviation Company, of Grand'Mere, P.Q., also carried out large contracts for the Dominion and provincial governments, and industrial companies.

There has been a growing demand for air transportation in the mining districts of northern Ontario, Manitoba and Saskatchewan. Mining engineers and prospectors are taking advantage of this mode of travel into the remote regions and recognize the facilities offered by commercial aviation companies. The first regular established passenger and express service was operated during 1927 by the Western Canada Airways, from Hudson throughout the northern Ontario, Manitoba and Saskatchewan mining districts. The development of mining in these regions has provided steady work at all seasons; supplies and equipment amounting to 240,000 pounds, and 950 passengers were carried by this company during the year. A large amount of flying was done by other companies in Ontario covering express and passenger carrying, aerial photography, exhibition flying and instruction.

In Saskatchewan and Alberta, a few smaller companies operated aircraft in passenger transportation, instruction and exhibition flying. In British Columbia two companies have done a good amount of flying under contract for the Provincial Forest Service and the Dominion Fishery Protection Service. In the Yukon Territories one company operated in passenger, express and mail carrying.

Air Mail

During 1927 investigations of the different factors entering into the successful operation of air mail routes were undertaken. The Postmaster General awarded five air mail contracts to commercial firms connecting districts difficult of access during the winter. These were inaugurated in December, 1927, and operated for about four months until the opening of navigation. The routes followed were: Moncton-Magdalen Islands; Moncton-Charlottetown, P.E.I., Murray Bay-Seven Islands-Anticosti; Leamington-Pelee Island, and Rolling Portage-Red Lake area. To hasten the Trans-Atlantic mails during the period of navigation of the River St. Lawrence, contracts were awarded to commercial firms by the Post Office, viz: Rimouski-Montreal-Ottawa, and Montreal-Toronto. During 1927, 10 experimental runs were made over the Rimouski-Montreal-Ottawa route, and the saving in time over the normal method of delivery was from 24 to 48 hours to such points as Montreal-Ottawa-Toronto-Winnipeg, and the west, in the case of in-coming mails. Out-going mails showed a saving of three to four days in Great Britain. Surveys for the extension of these services to Winnipeg and Western Canada are proceeding.

During 1927 the development of Empire air communications by airship took definite form. Construction of an airship harbour mooring base at St. Hubert, near Montreal, was commenced.

Flying Clubs

The Government has further encouraged aviation by deciding to assist in the formation of flying clubs in the chief centres of population. Fifteen clubs will be active in the spring of 1928. Each club will be issued with two light aeroplanes and will receive a grant of \$100 for each pupil trained by the club. Each club must provide its own flying field, arrange for the services of an instructor and air engineer, and have at least thirty members prepared to qualify as pilots, and have not less than ten members already qualified.

Aeronautical Engineering Division

This division of the Air Services is responsible for all technical and engineering matters for the Air Services, and is available for consultation by all organizations operating aircraft in the Dominion.

The main subdivisions of the Aeronautical Engineering Division are: (1) Research and design, (2) Airworthiness, and (3) Aircraft inspection.

(1) Research and Design Section

This section is mainly concerned with the aircraft actually used by the department, in that it supervises the construction of all its aircraft to see that the proposals are in accordance with requirements of the department. It is also responsible for the preparation of all instructions relative to modifications necessary to aircraft in service, to the design of such accessories as may be necessitated by the requirements for military aviation, for aerial photography, or to meet special winter conditions.

This section also maintains the Drawing Office and keeps drawing records of all aircraft, and prepares all specifications for new aircraft, specifications for materials to be used in aircraft, supervises the trials of all new types of aircraft and all modified aircraft, collects and distributes technical information in the form of information circulars and technical memoranda. It is also responsible for the guiding of the research work carried out by the Air Research Committee under the Research Council of Canada.

(2) Airworthiness Section

This section is mainly employed upon checking up the design of aircraft for which applications for type certificates of airworthiness have been received by the Controller of Civil Aviation.

In addition to this routine work, this section is also required from time to time to study new methods of calculation to deal with progress in the air of aircraft construction, involving new structural methods.

(3) Aircraft Inspection Department

The Aircraft Inspection Department is divided up into a number of detachments distributed throughout the country, in order to inspect aircraft under construction at the contractor's works, and also to inspect work that is carried out in the form of major overhauls or modifications.

Aircraft Industry

The progress and development of aircraft during 1927 is as follows:—

The "Vanessa", a cabin biplane with an Armstrong-Siddeley "Lynx" or a Wright "Whirlwind" 200-horsepower radial air-cooled engine, designed to carry four passengers and pilot, was completed during the summer of 1927, but unfortunately was wrecked during the initial trials through failure of a strut fitting. The "Vista", a single-seater metal-hulled monoplane with an Arm-

strong-Siddeley "Genet" motor of 60 horse-power was completed and a number of tests carried out successfully. The "Velos", specially designed for photographic operations, was under construction. The "Vigil", a two-seater plane for forest patrol, light transportation or training, fitted for use with skis, floats or wheels, was completed and promises to be a very successful type.

Messrs. Canadian Vickers have been busy all year and turned out a large number of aircraft, including three "Varunas", seven "Vendettes", twelve "Avro" training machines, five "Viking" hulls and a large amount of repair and reconditioning work for commercial firms.

The increased interest in aviation and the growing operations have led to the establishment of increased manufacturing facilities to meet the demand for aircraft in Canada. A number of British and American firms established branches in various parts of the country, which, it is hoped, ensure in future that the larger parts of the requirements of the Canadian market will be met by increased production in Canada.

REPORT OF THE CHIEF ACCOUNTANT

The expenditure and revenue statements and the remarks contained in this report relate only to Militia and Air Services; the Naval expenditure being dealt with in the report for the Naval Service.

Following are tables of expenditure and revenue for the fiscal years 1926-27 and 1927-28. Civil government is not included in either case, it being shown in statement No. 3, Appendix "A".

EXPENDITURE—MILITIA, AIR AND GENERAL SERVICES

Year	Militia Votes	Air Votes	General Votes	Adjust- ment of War Claims	Imperial War Graves	Battle- fields Memori- als	Total
	\$	\$	\$	\$	\$	\$	\$
1926-27.....	9,158,592	2,197,645	211,908	148,894	799,767	150,650	12,667,456
1927-28.....	10,166,706	3,891,861	244,204	132,630	573,419	183,067	15,191,887
Decrease.....				10,264	226,348		
Increase.....	1,008,114	1,694,216	32,296			32,417	2,524,431

CREDITS—REVENUE—MILITIA, AIR AND GENERAL SERVICES

Year	Revenue				Total
	Militia Services	Air Services	N.W.T. Wireless Stations	Demobili- zation Previous Years	
1926-27.....	319,367	9,301	24,183	8,586	361,437
1927-28.....	228,217	19,094	24,504	9,834	281,649
Decrease.....	91,150				79,788
Increase.....		9,793	321	1,248	

The following statements of expenditure and revenue will be found in Appendix "A":—

1. Appropriation Accounts, 1927-28;
2. Revenue, 1927-28;
3. Comparative Statement of Expenditure and Revenue for ten years 1918-19 to 1927-28;
4. Expenditure on account of Adjustment of War Claims 1927-28.

The increase in expenditure over the previous year was due mainly to the following:—

Militia Votes.—(a) The authorization of a number of new Cadet Corps involving additional expenditure for allowances, equipment, etc.;

(b) Urgent and necessary repairs to military properties;

(c) Purchase of militia stores generally;

(d) Increased production of small arm ammunition to meet annual expenditure.;

(e) Increased training of Non-Permanent Active Militia.

Air Services.—(a) Increased operations for other government departments in connection with forestry fire detection and suppression; aerial surveys; investigation of forest and grain pests, etc.;

(b) Replacement of obsolete aircraft and purchase of additional equipment required to cope with expansion of work;

(c) Development of air routes and establishment of flying clubs;

(d) Commencement of construction of aerodrome and airship base at St. Hubert, P.Q.

General Votes.—Progress in construction of joint service magazine at Halifax, N.S.

Battlefields Memorials.—Progress in construction of Vimy Ridge Memorial.

Expenditures on account of Adjustment of War Claims continues to show a decrease. There are still, however, a number of claims outstanding for War Service Gratuity, Separation Allowance, etc., due to ex-members of the C.E.F. and their dependents. As claims are still being received, it is necessary to continue to provide for them as well as for certain other expenditures arising out of the war.

The decrease in expenditure to the Imperial War Graves Commission is due to payment of some arrears having been made during 1926-27, while the figures shown for 1927-28 represent Canada's approximate annual contribution.

The increased expenditure for Civil Government salaries for the year under review is due to the authorization of a general upward revision of salaries at the rate of \$120 per annum, effective April 1, 1927.

The allocation and analysis of expenditure for Cadet Services and militia training, as well as an analysis and system of costing in connection with Radio Services, performed by the Royal Canadian Corps of Signals, were continued. This work has materially assisted in the administration of the services affected and has enabled a more effective control of funds to be exercised.

The preparation of costs and statistics for the Royal Canadian Air Force was discontinued during the year. In future, information of this nature relating to civil air operations will be compiled by the civil branch of the Air Services.

REPORT OF THE ASSISTANT DEPUTY MINISTER

Submitted herewith are reports relating to (1) Civilian Employees, (2) Printing and Stationery, (3) Central Correspondence Registry.

(1) CIVILIAN EMPLOYEES

Certain minor changes in the civilian organization of the department have been carried out during the fiscal year by the Civil Service Commission at the request of the department. A change has been made in the Air Services of the department by which the Civil Government Air Operations are brought under civilian control. Civilian establishments for this service are now under consideration by the Civil Service Commission.

The comparative table below shows the number of civilian employees, permanent and temporary, in the Department of National Defence at Ottawa and elsewhere in Canada, and the amount paid in salaries, on April 1, 1927, and April 1, 1928.

It will be observed that during the fiscal year there was an increase of four permanent employees in Ottawa, and one outside Ottawa. This increase represents the appointment of employees in the lower grades who had been performing duties of a permanent nature and whose transfer to a permanent basis was in the public interest. It will also be noted that there was an increase in the number of temporary employees, both at Ottawa and other places in Canada. These increases are accounted for by fluctuations in the number of transient labourers, i.e. workmen employed for short periods on construction and repair work.

	Number of Employees		Amount of Salaries	
	April 1, 1927	April 1, 1928	April 1, 1927	April 1, 1928
			\$ cts.	\$ cts.
At Ottawa—				
Permanent.....	383	387	56,547 22	56,705 58
Temporary.....	69	73	7,012 32	9,184 13
Outside Ottawa—				
Permanent.....	227	228	30,591 06	32,464 73
Temporary.....	435	479	33,884 81	39,078 52
	1,114	1,167	128,035 41	137,432 96

These figures do not include 236 factory employees at the Dominion Arsenal, Quebec, nor 118 workmen employed at the Naval Dockyards, Halifax and Esquimalt.

REPORT OF THE JUDGE ADVOCATE-GENERAL

COURTS-MARTIAL

During the fiscal year ending March 31, 1928, 75 District Courts-Martial were convened and held, this being an increase of 23 over the preceding year. Of this number 68 courts were held for the trial of personnel of the Permanent Force and 7 for the trial of personnel of the Royal Canadian Air Force.

Of the above number of courts-martial 51 dealt *inter alia* with offences of desertion and absence without leave, and convictions either of the offence of desertion or that of absence without leave resulted. In 8 instances the sentence awarded was that of imprisonment accompanied by that of discharge with ignominy, 7 of such sentences being commuted to detention, and one sentence of imprisonment and discharge with ignominy being allowed to stand.

Four persons, including one non-commissioned officer, were charged with the offences of offering violence, or using violent or insubordinate language to a superior officer, and a conviction resulted in each such case. Nine persons, including two non-commissioned officers, were charged with stealing or receiving stolen goods; seven of these cases resulted in convictions, and two in acquittals. Four more persons were charged with this offence in the fiscal year under review than were so charged during the fiscal year immediately preceding.

During the year under review 11 non-commissioned officers were tried by court-martial for various offences, 10 of whom were found "guilty" of the charges laid, and 1 was acquitted. During the year under review there were two instances where the finding and sentence of the court-martial were not confirmed by the confirming authority upon advice from the Judge Advocate-General, and in two further instances the finding and sentence which had been confirmed was quashed upon the instructions of the Judge Advocate-General.

It is of interest to note that in both the Permanent Force and Permanent Active Air Force only four cases of drunkenness were dealt with by district court-martial during the year.

While the increase in the number of courts-martial held is almost 50 per cent over the number held during the preceding year, such increase is not necessarily a reflection on the state of discipline, but is rather indicative of more active measures being taken towards suppressing the commission of Military and Air Force offences, as the deterrent effect of a trial by district court-martial is greater than would be the case were such offences dealt with summarily by Commanding Officers. Further, in a number of instances the accused soldier or airman elected trial by court-martial rather than a summary disposal of the case by his Commanding Officer, which election would account in some measure for the increase in the number of courts-martial held.

It is pleasing to note that the courts-martial held during the fiscal year under review indicate a substantial improvement on the part of all concerned in their knowledge of Military and Air Force law and the administration of the Army Act, the Air Force Act, and the Regulations thereunder. The number of errors and irregularities occurring in these proceedings was considerably less than the number which occurred in preceding years, and the results of the instructions and comments issued and made by the Judge Advocate-General's Office are now becoming apparent.

While there is still considerable room for improvement, nevertheless the situation during the past year, compared with that which prevailed in previous years, is noteworthy and should not be passed by without favourable comment being made thereon.

LEGISLATION

During the year under review the following Bills were drafted by the Judge Advocate-General and the necessary information and memoranda pertaining thereto were prepared in his office:—

- (a) An Act respecting the Royal Military College.
- (b) An Act respecting certain Canteen Funds.
- (c) An Act amending the Militia Pension Act.

The last mentioned Act made provision whereby the Militia Pension Act was made applicable, with certain modifications, to the Royal Canadian Navy and Permanent Active Air Force. This necessitated the preparation of a considerable number of explanatory memoranda.

AIR SERVICES

Consequent upon it being decided to reorganize the Air Services by way of creating a separate Directorate to administer all Civil Government Air Operations, the Judge Advocate-General was required to advise on the procedure which should be adopted and to prepare the necessary instructions and memoranda giving effect to the policy decided upon.

Further duties were added to this office in connection with the preparation of the Standard Conditions for Light Aeroplane Clubs and, in addition, the forms of agreements with such clubs were prepared in this office and the advice of the Judge Advocate-General has been sought on numerous matters in connection with the formation and administration of these organizations.

CONTRACTS

There has been a great increase in the number of contracts which have been referred to this office, either for preparation or for advice on various matters which have arisen in connection therewith. In addition certain new forms of contracts have been prepared which are now in use, or which will be adopted shortly.

GENERAL

There has been a considerable increase in the number of general matters of various descriptions referred to the office of the Judge Advocate-General for advice or action, as well as a large increase in the number of daily interviews.

PENSIONS

The Judge Advocate-General is a member of the Pensions and Claims Board, and practically all matters pertaining to the administration of the Militia Pension Act are referred to his office for advice.

REPORT OF THE DIRECTOR OF CONTRACTS

During the financial year under review the various supplies required for the maintenance of the Naval, Military and Air Services were purchased by the Contracts Branch. On account of the expansion of the Air Service the volume of work performed was considerably greater than for any other year since the amalgamation of the three departments was effected.

Due to the difference in the nature and functions of the various services comprising the department, it was necessary to purchase a very wide range of stores. Among the more important purchased were the following:—

Uniform clothing,

Cloth, serge, frieze, and other fabrics used in the manufacture of uniform clothing,

Boots, shoes, rubbers and overshoes,

Tents, canvas, covers and flags,

Aircraft, engines therefor, and various other aeronautical equipment,

Photographic equipment,

Electrical equipment,

Wireless and telegraphic equipment,

Ordnance and barrack stores,

Armament and torpedo stores,

Rifles and ammunition,

Motor cars, trucks, lorries, ambulances, and incidental equipment for the

Mechanical Transport section,

Lumber,

Paints, varnishes, cordage, tools and hardware of all kinds,

Gasoline and lubricating oils,

Raw material for the Dominion Arsenal, such as lead, copper, brass, tin, etc.

Stores for the Royal Military College,

Scientific instruments,

Food stuffs,

Forage,

Fuel,

Medical and veterinary supplies.

In addition to the purchase of the supplies mentioned above, contracts were made for the erection of buildings, rifle ranges, and other departmental works; for the converting and reconditioning of aircraft; the overhaul of aeronautical engines; for carting, snow cleaning, chimney and furnace cleaning; laundry, etc., etc.

During the year the Department purchased 109 aircraft of different types for use in forestry patrol, photographing, and training and other purposes. The engines for a large number of these aircraft were purchased as complete equipment with each machine. In addition orders were placed for 51 aeroplane engines.

There were received in the Contracts Branch during the twelve months under review about 3,100 requisitions which were prepared by the different requisitioning officers at Headquarters. These requisitions, demanding supplies of different kinds, varied as to the number of articles required, some of them containing hundreds of different items. In providing for these about 3,800 contracts were made. The value of the clothing, stores, provisions, etc., purchased to fill these requisitions was about three and one-half million dollars.

In addition to the requisitions received from the requisitioning officers at Headquarters, about 8,300 requisitions, made out at the different Stations in which Units of the Permanent Naval, Militia, and Air Forces are located, were also received. These latter requisitions covered supplies to be purchased or services carried out in places where there are one or more buildings used by the department.

All stores purchased in England and the United States for delivery to Ottawa must necessarily be cleared from customs on their arrival in bond. Within the year 765 custom entries were passed.

As in past years the Contracts Branch was called upon to purchase stores for issue to ships of the Imperial Service calling at Canadian ports, as well as for shipment to H.M. Dockyard, Bermuda.

The policy of purchasing goods of Canadian manufacture wherever possible was followed. In cases where stores unobtainable in Canada were demanded preference was given to goods of British manufacture.

Practically all supplies were purchased either in accordance with a departmental specification or a sealed pattern therefor. All stores received are subject to a very rigid inspection at the point of delivery; those which do not conform to the specification or pattern are rejected.

A great deal of the inspection work is done at the Departmental Inspection Room of this Branch, Ottawa. In some cases, however, it is necessary for the inspectors to carry out inspection at the contractors' factories. During the year the number of inspection reports covering supplies and stores purchased and examined was over 1,500, while the number of packages and cases handled was approximately 37,000.

APPENDIX A

The following are statements showing:—

- (1) Appropriation accounts, 1927-28.
- (2) Revenue, 1927-28.
- (3) Comparative statement of expenditure and revenue for the ten years, 1918-19 to 1927-28.
- (4) Expenditure on account of adjustment of war claims, 1927-28.

DOMINION OF CANADA

REPORT

OF

THE DEPARTMENT OF NATIONAL DEFENCE
(NAVAL SERVICE)

FOR THE

FISCAL YEAR ENDED MARCH 31

1928

150—8-28 (2001)
N.S. 65—1-18

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1928

REPORT

THE DEPARTMENT OF NATIONAL DEFENSE
NAVY SERVICE

NAVY DEPARTMENT

1938

OTTAWA, July 1, 1928.

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to submit, herewith, for the information of Your Excellency and the Parliament of Canada, the Sixth Annual Report of the Department of National Defence (Naval Service), for the fiscal year ended March 31, 1928.

I have the honour to be,

Your Excellency's most obedient servant,

J. L. RALSTON,

Minister of National Defence.

OTTAWA, July 1, 1928.

The Honourable
The Minister of National Defence,
Ottawa.

SIR,—I have the honour to inclose herewith Annual Report of the Department of National Defence (Naval Service), for the fiscal year ended March 31, 1928.

I have the honour to be, sir,

Your obedient servant,

G. J. DESBARATS,
Deputy Minister.

REPORT
OF THE
DEPARTMENT OF NATIONAL DEFENCE
(NAVAL SERVICE)

FOR THE FISCAL YEAR ENDED MARCH 31, 1928

OTTAWA, July 1, 1928.

G. J. DESBARATS, C.M.G., M.E.I.C.,
Deputy Minister, Department of National Defence,
Ottawa.

SIR,—I have the honour to report on the Naval Service of Canada, for the fiscal year ended March 31, 1928, under the following headings:—

1. H.M.C. Ships.
2. R.C.N. Barracks.
3. H.M.C. Dockyards.
4. Naval Intelligence.
5. Naval Personnel.
6. Naval Stores.
7. Financial Statement.
8. General.

1. H.M.C. SHIPS

The following ships were in commission during the year:—

East Coast—

H.M.C.S. *Patriot*.
H.M.C.S. *Champlain*.
H.M.C. Minesweepers *Festubert* and *Ypres*.

West Coast—

H.M.C.S. *Patrician*.
H.M.C.S. *Vancouver*.
H.M.C. Minesweepers *Armentieres* and *Thiepval*.

H.M.C.S. "PATRIOT"

This ship is based on Halifax; owing to the age and the worn condition of boilers and machinery, *Patriot* was not suitable for long cruises away from her base. With the exception of a cruise of one month's duration up the gulf and river St. Lawrence, all cruises were for short periods of five or six days.

The following cruises were carried out:—

1. Training cruise to Chester.
2. Training cruise to Charlottetown.
3. Training cruise gulf and river St. Lawrence.
4. Gunnery and torpedo training cruise to Bras d'Or lakes.
5. Training cruise to Shelburne.
6. Training cruise to Liverpool.

In addition to the above cruises, gunnery and torpedo classes trained on board *Patriot* during day runs off Halifax.

1. *Training Cruise to Chester.*—On June 20, *Patriot* sailed to Chester. En route to Chester, boats crews were exercised and seamanship classes trained in navigation, including helm and compass.

During the stay at Chester the crew completed a course of training in general drill, and exercised in ship work. As *Patriot* had just completed a dock refit after having been in reserve commission throughout the winter, the entire time could not be devoted to technical training and the crew were employed part of the time in putting the ship in proper shape for her summer activities.

While at Chester the ship was open to the public and many visitors were received on board.

The ship returned to Halifax on June 25.

2. *Cruise to Charlottetown.*—This training cruise covered period from July 4 to July 9. *Patriot* arrived at Charlottetown on July 5. Seaman and W/T classes trained en route and special classes were conducted for R.C.N.V.R. ratings on board.

On July 7 the ship was inspected by His Excellency the Governor General.

While at Charlottetown, the Commanding Officer inspected R.C.N.V.R. Headquarters and ratings of the Charlottetown Half Company trained on board.

Patriot returned to her base at Halifax on July 9. On the return voyage the ship was considerably delayed by heavy fogs in the strait of Canso.

3. *Training Cruise up the Gulf and River St. Lawrence.*—*Patriot* left Halifax for Quebec on July 22, and returned to Halifax on August 22. During the cruise the following ports were visited: Gaspé, Murray bay, Quebec, Charlottetown, and Summerside.

En route from Halifax to Gaspé, Cabot straits course was followed owing to the fog conditions in the strait of Canso. Thick weather prevailed until the ship arrived off Gaspé.

Patriot arrived in Quebec on July 27, where the ship's officers took part in the official reception of H.R.H. The Prince of Wales and H.R.H. Prince George.

On July 31, the Minister of National Defence inspected the ship.

The Commanding Officer of *Patriot* inspected R.C.N.V.R. Headquarters at Quebec and ratings of the Quebec Half Company trained on board during *Patriot's* visit.

The ship returned to Halifax via Gaspé, Charlottetown, and Summerside.

Throughout the cruise, the ship's company trained in seamanship and navigation and signal and W/T ratings followed specialist classes in their respective branches. General drills were also carried out and while at Gaspé the ship's company landed and completed a route march under arms.

While at Charlottetown R.C.N.V.R. classes and R.C.N. personnel carried out boat work instruction. At Summerside *Patriot* joined company with H.M.S. *Capetown*, and joint exercises were carried out.

Inter ship competitions in whaler racing were organized on two successive days, *Patriot's* whaler crew winning on both occasions.

Patriot parted company with H.M.S. *Capetown* at Summerside on August 17, and returned to Charlottetown where she remained on training duty until August 20, when she sailed for Halifax, arriving on August 22.

4. *Gunnery and Torpedo Training Cruise to Baddeck.*—The cruise to Baddeck extended from August 30 to September 3. While en route working-up exercises in Gunnery and Torpedo were carried out. Upon arrival at Baddeck the ship launched the gunnery target left there the previous year, and towed it to Halifax, for service in gunnery practices carried out off that port.

5. *Training Cruise to Shelburne.*—The ship visited Shelburne from September 7 to September 10. During the cruise the ship's crew and the R.C.N.V.R.

ratings on board trained in evolutions and general drill. R.C.N.V.R. ratings also followed gunnery, torpedo and seamanship classes.

6. *Training Cruise to Liverpool, N.S.*—*Patriot* sailed for Liverpool, N.S., on September 12 and returned to Halifax, N.S., on September 16. The ship called at Chester, N.S., en route. The ship's company trained in seamanship and navigation during the cruise.

7. *General.*—While in harbour between cruises continuous training was carried out on board *Patriot* in gunnery, torpedo, wireless telegraphy and signals.

While in harbour and while cruising special training classes in all branches of the service were conducted for R.C.N.V.R. officers and ratings. During gunnery and torpedo training the ship cruised off Halifax, N.S.

At all ports visited during cruises the ship was open to the public and large numbers of visitors came on board. The ship was welcomed at each port by the civic authorities who spared no effort toward the entertainment of the ship's company.

At the end of October, on completion of the training program, *Patriot* paid off into reserve as the age and worn condition of the ship rendered her unfit for further sea service.

H.M.C.S. Champlain and Vancouver.—When it became necessary to remove *Patriot* and *Patrician* from sea service, negotiations were entered into with the British Admiralty for the loan of two destroyers to replace these ships pending construction of two new destroyers for the Canadian Naval Service.

The destroyers *Torbay* and *Toreador*, which were in reserve, were loaned to the Canadian Government by the Admiralty. The Canadian Government bore the cost of recommissioning them and the cost of maintaining them in commission, no charge being made by the Admiralty for the use of the ships.

With the consent of the Admiralty the ships were renamed *H.M.C.S. Champlain* and *H.M.C.S. Vancouver* respectively.

The dimensions and armament of the ships are as follows:—

Class—Thornycroft "S."

Tonnage—1,075.

Length—266½ (p.p.) 275½ (o.a.) x 27' 5" x 10' 5" (mean) draught.

Armament—Guns—3 4-in. (m k IV Dir. Com. with 30° elevation.

1 2-pdr. pom. pom.

1 M.G.

4 Lewis.

Torpedo tubes—4 21-in. in pairs.

Machinery—Brown-Curtis (all geared) turbines, 2 screws.

Designed S.H.P. 29,000—36 Kts.

Boilers Yarrow—Oil.

Complement—90 officers and men.

Both ships were laid down in November, 1917, and were launched after the conclusion of the war.

The ships were not subjected to the heavy strain of war service, and the hulls and machinery are in excellent condition.

The ships were commissioned in reserve under the Canadian Government in February, 1928, at Portsmouth, and fully commissioned and manned by Canadian officers and men on March 1. Prior to their departure from England the ships were inspected by the High Commissioner for Canada, and the Commander in Chief, Portsmouth.

The ships sailed on March 17 from Portsmouth for Canada via Canary islands, Cape Verde islands, West Indies and Bermuda. Upon arrival in Canada

H.M.C.S. *Champlain* proceeded to Halifax, N.S., and H.M.C.S. *Vancouver* proceeded to Esquimalt for service.

H.M.C.S. *Festubert* and H.M.C.S. *Ypres*.—These ships are based on Halifax, N.S., and are used almost entirely for training R.C.N.R. and R.C.N.V.R. officers and men.

H.M.C.S. *Festubert* carried out the following cruises during the year:—

1. Training cruise to St. Margaret's Bay, May 17-20.
2. Training cruise to Shelburne, May 25-30.
3. Training cruise to Sheet Harbour, June 25-28.
4. Training cruise to Chester, July 29-August 1.
5. Training cruise to Hubbards Cove, August 12-15.
6. Training cruise to Chester, August 27-30.

H.M.C.S. *Ypres* completed the following cruises:—

1. Training cruise to St. Margaret's Bay, May 17-20.
2. Training cruise to Shelburne, May 25-30.
3. Training cruise to Chester, August 9-12.
4. Training cruise to Sheet Harbour, August 12-15.

The ships cruised in company to St. Margaret's Bay and to Shelburne.

While cruising R.C.N.V.R. officers and ratings trained in gunnery, seamanship, navigation, signals and wireless telegraphy.

While in harbour training classes were conducted in general ship work, seamanship, mine sweeping and boat pulling.

During the cruise of H.M.C.S. *Festubert* to Chester in July a special class of R.C.N.V.R. officers trained in navigation and pilotage.

During October H.M.C.S. *Festubert* was employed in company with H.M.C.S. *Patriot* assisting in gunnery exercises off Halifax, N.S. *Festubert* towed *Patriot's* targets for full calibre firing and acted as target ship during torpedo exercises.

In addition to the regular training cruises, both H.M.C.S. *Festubert* and H.M.C.S. *Ypres* carried out daily runs off Halifax, on training duty. Both ships remained in full commission throughout the year.

H.M.C.S. "PATRICIAN"

H.M.C.S. *Patrician* is based on Esquimalt. During the year the ship completed the following cruises:—

1. Pelagic sealing patrol to Queen Charlotte islands.
2. Torpedo training cruise to Comox.
3. Cruise to Seattle.
4. Gunnery training cruise to Port Renfrew.
5. R.C.N.V.R. training cruise to Bella Coola.
6. R.C.N.V.R. training cruise to Drew Harbour.

1. *Pelagic Sealing Patrol to Queen Charlotte Islands*.—This cruise, which covered a period from May 2 to June 3, was carried out in company with H.M.C.S. *Armentieres* and H.M.C.S. *Thiepval* at the request of the Department of Marine and Fisheries to prevent infringements of the Pelagic Sealing Treaty of 1911.

The ship visited the following ports during the patrol:—

Winter Harbour, Port Alice, Queen Charlotte City, Captain's Cove, Prince Rupert, Sand Spit and Bamfield.

During the cruise a total of about 100 seals was sighted. A number of halibut fishing vessels were boarded and searched for seals, but nothing was found to indicate that the owners were violating the terms of the Pelagic Sealing Treaty.

Investigations into activities of a number of small boats were also carried out from H.M.C.S. *Patrician's* motor launch, but no violations of the treaty were found.

On this cruise it was ascertained that for the past few years the Indians of Queen Charlotte islands have done very little seal fishing as they did not find it sufficiently lucrative.

Full reports of sealing operations were supplied to the fisheries authorities.

Throughout the cruise the ship's company trained in general drill, navigation, seamanship, signals, wireless telegraphy, gunnery and torpedo.

The cruise provided excellent opportunities for training under seagoing conditions, and in view of the severe weather conditions encountered the seamanship training was specially valuable.

While in harbour the ship's company trained in boat pulling and disciplinary drill. Athletic competitions with local sports organizations were also held.

The ship was open to visitors at all ports visited and a large number at each place availed themselves of the opportunity afforded to visit the ship.

While at Prince Rupert the R.C.N.V.R. Headquarters was inspected and ratings of the Prince Rupert Half Company trained on board.

H.M.C.S. *Patrician* returned to Esquimalt, B.C., on June 3.

2. *Torpedo Training Cruise to Comox*.—This cruise extended from June 30 to July 9. En route to Comox, H.M.C.S. *Patrician* visited Vancouver and represented the Royal Canadian Navy at the Diamond Jubilee celebrations. The Jubilee parade was led by a field gun crew and a detachment from *Patrician*.

On July 3 the ship arrived at Comox and carried out a complete course of torpedo exercises. The results of these exercises were satisfactory and showed a steady improvement in the efficiency of the ship's company. *Patrician* returned to Esquimalt, B.C., on completion of the exercises on July 9.

3. *Cruise to Seattle July 9 to July 12*.—The cruise to Seattle was made in company with H.M.S. *Colombo*, a ship of the America and West Indies Squadron. While proceeding to Seattle joint tactical exercises were completed and H.M.C.S. *Patrician* acted as target ship for H.M.S. *Colombo's* throw off firing. Combined torpedo attacks were also carried out. H.M.C.S. *Patrician* parted company with H.M.S. *Colombo* on July 12 and returned to Esquimalt.

4. *Gunnery Training Cruise to Port Renfrew*.—The ship's summer gunnery training program was carried out at Port Renfrew from July 17 to July 20. During the first two days the working-up exercises were completed and the third day was taken up with both day and night full calibre firing. The results of firings were quite satisfactory.

5. *R.C.N.V.R. Training Cruise to Bella Coola*.—On August 23 H.M.C.S. *Patrician* with a class of R.C.N.V.R. officers and ratings on board sailed for Bella Coola. The following ports were visited during the cruise:—

Beaver Cove, Namu, Bella Coola, Ocean Falls, and Qualicum.

The R.C.N.V.R. officers trained throughout the cruise in navigation and pilotage, and the ratings followed a course in seamanship. The cruise was most valuable for the type of training carried out in view of the difficult nature of the passes navigated. The ship returned to Esquimalt on August 28.

6. *Training Cruise to Drew Harbour*.—From September 26 to October 8 H.M.C.S. *Patrician* in company with H.M.C.S. *Armentieres* cruised to Drew Harbour and also called at Deep Bay, Phillip's Arm, Duncan Bay and Tribune Bay. Classes of R.C.N.V.R. officers and ratings formed part of the complement of each ship.

Joint tactical and gunnery exercises were completed and the R.C.N.V.R. Officers trained in navigation and pilotage and R.C.N.V.R. ratings in seamanship and gunnery respectively. The ships' crews also completed combined General Drill and evolutions while in harbour.

The ships were open to visitors at all ports visited.

General.—On completion of the training program H.M.C.S. *Patrician* was placed in reserve. The general condition of the ship and the worn state of machinery and boilers rendered her unserviceable for further sea service. She will be replaced by H.M.C.S. *Vancouver* (ex H.M.S. *Toreador*) upon arrival of that ship at Esquimalt.

H.M.C.S. "ARMENTIERES"

H.M.C.S. *Armentieres*, based at Esquimalt, in co-operation with H.M.C.S. *Thiépval*, is used for R.C.N.R. and R.C.N.V.R. training purposes of that port. In addition to the above, during the year this ship made the following cruises:—

1. Pelagic sealing patrol—west coast of Vancouver island to Queen Charlotte sound.
2. R.C.N.V.R. training cruise to Maple Bay.
3. R.C.N.V.R. training cruise, west coast of Vancouver island to Queen Charlotte sound (Pelagic Sealing Patrol duties)
4. Gunnery cruise to Port Renfrew.
5. R.C.N.V.R. training cruise to Bella Coola.
6. and 7. Bamfield life-saving patrol.

1. *Pelagic Sealing Patrol to Queen Charlotte Sound*.—From April 19 to 28. This cruise was taken in conjunction with H.M.C.S. *Patrician* at the request of the Marine and Fisheries Department.

During this period H.M.C.S. *Armentieres* patrolled off the west coast of Vancouver island and in Queen Charlotte sound, calling at the following ports:—

Ucluelet Arm, Refuge Cove, Nootka, Thasis Narrows, Clayuquot Sound, Winter Harbour, Maple Creek, Port Alice and Bamfield. At all these ports search was made for illicit trafficking in pelts and other information dealing with this matter.

Training classes were maintained throughout the cruise.

2. *R.C.N.V.R. Training Cruise to Maple Bay*.— From June 2 to 6. En route to Maple Bay H.M.C.S. *Armentieres* called at Ladysmith. R.C.N.V.R. training classes were instructed in seamanship and gunnery.

3. *R.C.N.V.R. Training Cruise to Queen Charlotte Sound*.—From June 17 to 19. This cruise was on pelagic sealing patrol work as explained in Cruise No. 1. In addition R.C.N.V.R. training classes were embarked and received extensive training, both theoretical and practical, in seamanship and ship work.

The following ports were visited during the cruise:—

Refuge Cove, Hecate Channel, North Harbour, Verney Bay, Hardy Bay, Port Alexander, Shushartu Bay, Port Langford, Uchucklesit Harbour and Bamfield.

4. *Gunnery Cruise to Port Renfrew*.—From July 15 to 21. During this cruise H.M.C.S. *Armentieres* towed targets for H.M.C.S. *Patrician's* firings and

also carried out 12 pdr. practice. From July 22 to 26, *Armentieres* was employed co-operating with military authorities in connection with military coast defence exercises.

5. *R.C.N.V.R. Training Cruise to Drew Harbour*.—September 26 to October 8, in company with H.M.C.S. *Patrician*. The following ports were visited during this cruise:—

Deep Bay, Drew Harbour, Phillip's Arm, Duncan Bay and Tribune Bay.

R.C.N.V.R. training classes exercised in seamanship, signals and gunnery instruction. General drills and evolutions and also manoeuvres at sea were carried out with H.M.C.S. *Patrician*.

6 and 7. *Life Saving Patrol*.—During these cruises H.M.C.S. *Armentieres* was employed in the vicinity of Bamfield for the Department of Marine and Fisheries. The ship was on this duty from December 10 to 28, and February 14 to March 1.

A continuous patrol was maintained by the ship in the vicinity of Bamfield, but no ships in distress were sighted or reported. The weather conditions encountered were severe.

H.M.C.S. "THIEPVAL"

H.M.C.S. *Thiepval* based at Esquimalt, in co-operation with the H.M.C.S. *Armentieres* is used for R.C.N.V.R. and R.C.N.R. training purposes. In addition to this work the following cruises were carried out:—

1. Pelagic sealing patrol off west coast of Vancouver island and in Queen Charlotte sound.
2. Pelagic sealing patrol off west coast of Vancouver island.
3. R.C.N.V.R. training cruise to Comox.
- 4, 5 and 6. Bamfield life-saving patrol.
7. Training cruise to Vancouver and Ladysmith.

1. *Pelagic Sealing Patrol off West Coast of Vancouver Island and in Queen Charlotte Sound*.—From May 1 to 15. This cruise was taken in conjunction with H.M.C.S. *Patrician* at the request of the Department of Marine and Fisheries. Various ports along the coast were visited, including: Matilda creek, Refuge cove, Queen's cove, Winter harbour, Bull harbour, Hardy bay, Port Alice, Verney bay, and Bamfield.

General drills and evolutions were carried out at sea and in harbour.

2. *Pelagic Sealing Patrol off West Coast of Vancouver Island and in Queen Charlotte Sound*.—From May 22 to June 1. This cruise was for the same purpose as the previous cruise. The following ports were visited:—

Refuge cove, Nootka, Friendly cove, and Bamfield.

General drills and evolutions were carried out at sea and in harbour.

3. *R.C.N.V.R. Training Cruise to Comox*.—From July 3 to 9. During the cruise in company with H.M.C.S. *Patrician*, H.M.C.S. *Thiepval* acted as target ship for *Patrician's* torpedo practices and R.C.N.V.R. ratings trained in signals and torpedo.

Military Coast Defence Exercises.—From July 18 to 24, H.M.C.S. *Thiepval* co-operated with military authorities in connection with the Military Coast Defence Exercises.

4, 5 and 6. *Bamfield Life Saving Patrol*.—During these cruises H.M.C.S. *Thiepval* was employed in the vicinity of Bamfield for the Department of Marine and Fisheries. The ship was on this duty from November 30 to December 11; from December 28 to January 4; and from January 30 to February 15.

Severe weather was encountered during these patrols, but no calls for assistance were received and no ships reported in distress.

7. *Training Cruise to Vancouver and Ladysmith*.—March 19 to March 24 W/T experiments were carried out during the cruise.

GENERAL

The training carried out by all of H.M.C. ships during the year was of a high order. The officers and ratings showed improvement in their technical knowledge and the cruises were so planned that the general knowledge of each ship's company with regard to the navigation of approaches to harbours and, in the case of ships stationed on the west coast, the navigation of the difficult passes and straits were greatly extended.

At all ports visited, ships' companies were received most courteously and the co-operation and consideration extended by the civic authorities is highly appreciated.

2. R.C.N. BARRACKS

R.C.N. Barracks are maintained at Halifax, and Esquimalt as depots for H.M.C. ships based at those ports, and as training bases for R.C.N., R.C.N.R., and R.C.N.V.R. personnel.

Training of R.C.N. ratings in barracks is divided into the following classes:—

New Entries	Signalman
Boys	Wireless Telegraphy
Ordinary Seaman	Engine Room Ratings
Seaman Gunners and Seaman Torpedomen	

The new entries, boys, and ordinary seamen classes train in gunnery, torpedo, seamanship, mine-sweeping, signals, boat pulling and school.

Signal classes train in semaphore, morse, signal books, practical training, wireless telegraphy and school.

Wireless telegraphy classes train in buzzer, visual signalling, theory, practical training, signal books and school.

Engine room ratings train in boat pulling, squad-drill, school, and engine room duties.

R.C.N. BARRACKS, HALIFAX

During April no training classes were formed, as with the exception of the necessary instructors for the R.C.N.R. training during the winter and the minimum ratings required for the upkeep of the barracks, the remainder of barracks' company was on draft serving in H.M. ships of the American and West Indies squadron, and did not return to Halifax until May 1. During May these ratings were employed fitting out minesweepers and *Patriot* for the summer training season for R.C.N.V.R. personnel. In June all new entries were drafted to H.M.C.S. *Patriot* for sea service as all instructors at barracks were occupied with R.C.N.V.R. training of officers and men.

At the end of July, at the request of R.C.A.F., a diving party from R.C.N. barracks was sent to locate and salve seaplane *Vaurna Z U* which was sunk in Cross lake, Manitoba. This operation which involved transportation of three tons of diving gear and equipment up rivers in small boats through practically virgin wilderness was entirely successful and valuable aerial equipment was recovered.

In the autumn, on completion of R.C.N.V.R. training season, extensive training of the R.C.N. personnel was undertaken. In view of the satisfactory new equipment which has been installed in the gun battery and torpedo drill hall, and the installation of a mining school in the dockyard, it was considered

possible for the first time in the history of the R.C.N. to qualify seaman gunners and seaman torpedomen in Canada. Notwithstanding that certain practical parts of the syllabus in turret work and heavy calibre gun work had to be omitted, the results were highly satisfactory. Details of the numbers instructed are shown under "Personnel."

During the year great improvements have been made in the W/T equipment of barracks and a series of highly important W/T experiments have been carried out between barracks and H.M. ships and W/T stations.

Classes in academic subjects were conducted at barracks under qualified schoolmasters. This school training is of a nature which enables ratings to qualify at the educational tests required by the Regulations for advancement to higher ratings.

The personnel of the barracks had a successful year in athletics, especially in soccer, when the R.C.N. teams won every league they entered and the following trophies:—

Chronicle Cup (Championship of Nova Scotia), Garrison Cup, City League Cup and Milne Trophy.

Both Junior and Senior rifle teams were very successful, the junior team winning the trophy for the second time.

Great interest was also shown in boxing, baseball, and other games. The participation in sports is a very valuable part of the general training and is an important factor in the development of esprit de corps in the service.

The autumn training classes were completed just before Christmas.

On January 2 a draft of 90 officers and men were discharged to Portsmouth to assist in fitting out *Torbay* and *Toreador* for commissioning. This draft eventually commissioned *Torbay* (renamed *Champlain*) on March 1.

The main buildings, Gunnery School, Torpedo School and Mining School, situated in the dockyard, together with other buildings and equipment for the effective training of ratings, have all been well maintained during the year and requisite repairs and alterations have been carried out as necessary.

R.C.N. BARRACKS, ESQUIMALT, B.C.

The group of buildings forming the barracks establishment at this point is situated across the harbour from the dockyard and adjacent to the new *Sanghees Drydock*. The buildings, boathouses, jetty, and parade ground, and also lighting and water services are in a condition of good repair.

The roads in the barracks were rebuilt during the year, also a guard house and a new W/T mast were erected and other improvements carried out.

In April, R.C.N. barracks and ship's company were inspected by the Director of Naval Intelligence of Headquarters, Ottawa.

During April the personnel were employed fitting out H.M.C. ships for the summer R.C.N.V.R. training season.

In May all new entries and younger ratings were discharged for sea service in H.M.C. ships, as all instructors at R.C.N. barracks were required for R.C.N.V.R. training of officers and men.

During the autumn, when the R.C.N.V.R. training was completed, extensive training of the R.C.N. personnel was undertaken.

On January 1 a draft of twenty ratings was sent to attend gunnery and torpedo schools at Portsmouth for technical courses, prior to joining H.M.C.S. *Vancouver*.

On January 28, H.M.C.S. *Patrician's* ship's company was drafted to Portsmouth to commission H.M.C.S. *Vancouver*.

During the year great improvements have been made in the W/T equipment of barracks.

Classes in academic subjects were conducted at barracks under a qualified schoolmaster.

Great interest was taken in all athletic games and rifle shooting, and the results were satisfactory.

3. H.M.C. DOCKYARDS

H.M.C. DOCKYARD, HALIFAX, N.S.

The repair base at the dockyard has been in continuous operation throughout the year. Main activities have been in connection with maintaining in running efficiency all ships of the Naval Service, and the carrying out of repairs as required to vessels of the Department of National Revenue, Marine and Fisheries, Railways and Canals, also to ships of the militia services, Royal Navy, and vessels of the United States ice patrol.

In addition to ship work other requirements of Government departments have been dealt with within the capacity of the repair establishment.

The condition of all dockyard buildings, wharves, roads, machinery, boilers, cranes, equipment, electric, gas and water services, etc., have been well maintained throughout the year, and steps have been taken to provide additional facilities for the proper and effective training of personnel at this establishment.

The Armament Supply Depot at the dockyard has continued to function in an efficient manner and the overhaul of torpedoes has been undertaken as required. During the year the magazines at Fort Clarence have been evacuated, all ammunition, explosives, etc., having been transferred to the new magazines at Bedford Basin. The magazines at Georges Island have given satisfactory service, the fire protection arrangements being in every way efficient.

The small dockyard technical staff is considered to be capable and efficient. During the year labour has been, for the most part, scarce, but sufficient has been procurable to meet requirements.

H.M.C. DOCKYARD, ESQUIMALT, B.C.

All demands upon the repair base of the above dockyard have been met during the year. Overhauls, refits and repairs have been undertaken to H.M.C. ships *Patrician*, *Thiepval*, and *Armentieres*, and the auxiliary vessels at the dockyard have been well maintained.

Work has been undertaken for the Departments of Marine and Fisheries, Public Works and Health during the year.

The general condition of dockyard roads, buildings, wharves, etc., is good and all machinery, including machine tools, plant, equipment and appliances, has been kept up to date and in good order.

In the course of the year the new boat shop and torpedo depot building was completed and put into operation, thereby enabling the repair base to return to its full capacity for operation. The electrical services were also re-organized and made efficient.

There has been an increased demand for labour at this point during busy seasons, but notwithstanding this no delay has been occasioned for want of men. The small technical staff is considered to be efficient.

4. NAVAL INTELLIGENCE

The Canadian Naval Intelligence Service has operated in a satisfactory manner as a unit of the world-wide Intelligence organization maintained by the Admiralty.

Close co-operation has been maintained with the Intelligence Service of the Militia and Air Force and also with other Intelligence areas. The other Government departments have furnished the service with much valuable information for inclusion in various reports.

Reports on Hudson bay and routine reports on naval intelligence, shipping, trade routes, etc., in the Ottawa area have been forwarded to the Admiralty for reference and necessary distribution.

5. PERSONNEL OF THE CANADIAN NAVAL FORCES

The personnel of the Canadian Naval Forces is as follows:—

	Officers	Men
(1) Royal Canadian Navy.....	74	451
(2) Royal Canadian Naval Reserve.....	70	430
(3) Royal Canadian Naval Volunteer Reserve.....	70	930

(1) ROYAL CANADIAN NAVY

The personnel of the Royal Canadian Navy is allocated throughout the service as follows:—

Ship or Establishment	Officers	Men
Headquarters.....	10	1
H.M.C.S. <i>Stadacona</i> (Halifax Depot).....	13	104
H.M.C.S. <i>Patriot</i> (East Coast).....	5	80
H.M.C.S. <i>Champlain</i> (East Coast).....
H.M.C.S. <i>Preserver</i> (East Coast).....	1	18
H.M.C.S. <i>Ypres</i> (East Coast).....	1	18
H.M.C.S. <i>Naden</i> (Esquimalt Depot).....	13	104
H.M.C.S. <i>Patrician</i> (West Coast).....	5	80
H.M.C.S. <i>Vancouver</i> (West Coast).....
H.M.C.S. <i>Armentieres</i> (West Coast).....	1	18
H.M.C.S. <i>Thiebral</i> (West Coast).....	1	18
Serving in the Royal Navy.....	24	10
	<hr/> 74	<hr/> 451

The department's policy is to fill all vacancies in the Naval Service by recruiting young Canadians. Youths between 16½ and 17½ years of age sign an engagement form for seven years' continuous and general service from the age of 18. This policy has been further implemented during the present year by the discharge of 9 ex R.N. ratings who were serving in the Royal Canadian Navy under special service engagements. The vacancies caused by their discharge were filled by the advancement of qualified Canadian ratings. Sixty-four Canadians entered the service during the year, and filled vacancies caused by the discharge of Special Service ratings and Continuous Service ratings whose engagements terminated.

The Admiralty have placed at the disposal of the department training facilities of ships and establishments of the Royal Navy where Canadian ratings attend and qualify in non-substantive courses. The cost of this training is borne by the department.

During the past year the following ratings attended courses for the non-substantive ratings shown at R.N. Establishments:—

Seaman Torpedoman.....	9
Leading Torpedoman.....	5
Torpedo Gunner's Mate.....	3
Torpedo Coxswain.....	1
Gunlayer II.....	5
Gunner's Mate.....	1
Gunner's Mate (Re-qualifying).....	1
P and R.T. Instructor.....	1
Diver II.....	2
Morale Course.....	4
Ordnance (qualifying).....	1
Ordnance (re-qualifying).....	1
Chief Electrical Artificer (re-qualifying).....	1
P.O. Telegraphist (re-qualifying).....	1
Signals.....	4
Mechanical Training Course.....	12
Gunner (T), (qualifying).....	1

In addition to the above the following qualified at R.C.N. Barracks, Halifax:—

Seaman Torpedoman.....	9
Seaman Gunner.....	8

Twenty-eight ratings passed the Educational Test for advancement to Petty Officer and six ratings passed the Higher Educational Test for promotion to Warrant Rank.

Twenty-four officers of the R.C.N. have trained in ships and establishments of the R.N. during the year. One officer attended the Imperial Defence College, one attended the Royal Navy Staff Course, one officer qualified in navigation, two Navigating officers qualified for 1st Class ships, and three officers are undergoing courses to qualify for rank of Lieutenant. The remaining officers served in H.M. ships.

In December, 1927, the complement of H.M.C.S. *Patriot* and H.M.C.S. *Patrician* proceeded to England to man H.M.C.S. *Champlain* and H.M.C.S. *Vancouver*, commissioned at Portsmouth. While awaiting completion of refits of these vessels, the Canadian ratings eligible for gunnery and torpedo courses qualified in these subjects at R.N. establishments.

Upon the visit of H.M. ships of the America and West Indies Station to Canadian naval bases, the facilities available in these ships for training and examination of engine room ratings in auxiliary machinery were used, through the courtesy of the Commander in Chief, to enable R.C.N. ratings to qualify in that subject.

(2) ROYAL CANADIAN NAVAL VOLUNTEER RESERVE

The following table gives a list of R.C.N.V.R. companies and half companies, the number of officers and men of the strength of each and the number of officers and men who performed naval training and voluntary service.

The training carried out in ships of the Royal Navy is shown separately. Officers and men embarked in H.M.S. *Capetown*, *Colombo*, *Cairo*, *Heliotrope* and *Wistaria*, ships of the America and West Indies squadron, while these ships were cruising in Canadian waters. The reports from Commanding Officers of H.M. ships show that the R.C.N.V.R. ratings were successful in their training and that they evinced keenness to learn. Their conduct throughout the cruise was very good and they took their place among the more experienced Imperial ratings in an exemplary manner.

Headquarters at	Recruited Strength on 31st March 1928		Annual Training		Voluntary Service		Training with R.N. Ships
	Officers	Men	Officers	Men	Officers	Men	Ratings

	68	740	40	496	13	212	45

The recruited strength shows an increase over the previous year of 11 officers and a reduction in the total number of ratings of 81. This reduction is due to the completion of three-year term of enlistment of ratings who did not re-engage. The complement will be refilled as soon as the summer training season begins.

The activities at each headquarters have been further developed during the year and training equipment has been improved and increased. Attendance at Company Headquarters drills has been excellent and at practically all headquarters social clubs have been organized, which have created a healthy *esprit de corps*. Any expenses incurred through social activities are paid from private sources and not from Government funds.

The R.C.N.V.R. at each Headquarters have supplied Naval Guards of Honour at public functions and have carried out with the military units combined church parades, route marches and other joint exercises. The organization is now well established and is most favourably commented upon by the press.

The Imperial Order of Daughters of the Empire have donated two cups for competition in signals in the R.C.N.V.R. One of these cups is competed for by R.C.N.V.R. ratings training at Esquimalt, B.C., and the other by ratings training at Halifax, N.S.

Each company or half company trains not less than two nor more than four ratings to participate in the competition. Upon arrival at Naval Training Headquarters the ratings are examined on a competitive basis in signalling and are awarded points. The company or half company winning the greatest number of points is awarded the trophy. The trophies were won by the Quebec half company and by the Winnipeg company for the past year.

(3) ROYAL CANADIAN NAVAL RESERVE

During the year recruiting for the Royal Canadian Naval Reserve was re-opened to a limited extent, and one officer and fifty-one ratings were added to the force. The recruited strength at the end of the year was 34 officers and 141 ratings.

The R.C.N.R. training season extended from October 1 to March 31.

The following table shows the localities where R.C.N.R. registrars are located, the total number of officers and ratings on the rolls of each registrar, and the total number of officers and ratings from each locality who carried out naval training and voluntary service.

Locality	Recruited Strength		Naval Training		Voluntary Service	
	Officers	Ratings	Officers	Ratings	Officers	Ratings
Halifax.....	14	27	5	27	8
Lunenburg*.....
Charlottetown.....	1	24	17	2
St. John.....	1	8	5	1

Victoria.....	4	12	8
	34	141	10	113	29

†Prince Rupert was cancelled and records and personnel transferred to Victoria Division in March, 1928.

*Lunenburg was cancelled as an R.C.N.R. centre and records and personnel transferred to Halifax Division in March, 1928.

ROYAL FLEET RESERVE

The arrangements made with the British Admiralty for training Royal Fleet Reserve ratings resident in Canada have been continued during the past year. All costs in connection with this training are paid by the British Admiralty.

At the end of the fiscal year there were 91 Royal Fleet Reservists enrolled in the Canadian section of the R.F.R. Of this number 26 were Class "A" and 65 were Class "B."

Class "A" Reservists are those drawing a pension from the Admiralty and qualifying for reserve pension and they carry out reserve drill every other year.

Class "B" ratings are those who are completing time for R.F.R. gratuity and they are required to drill for a period of seven days each year.

The following R.F.R. ratings trained during the year:—

At Halifax—

Class "A"—5 ratings.

Class "B"—17 ratings.

At Esquimalt—

Class "A"—2 ratings.

Class "B"—11 ratings.

6. NAVAL STORES

The work of supplying naval, victualling and armament stores to H.M.C. ships and establishments and to auxiliary services was carried out during the year with complete success. The greatest economy possible was practised in connection with the handling of supplies and the employment of personnel.

In addition to meeting the requirements of the Naval Service, stores were supplied to other Government departments on a repayment basis to a considerably greater extent than has been the case in the last few days. Supplies have also been made for or on behalf of the British Admiralty.

The condition of the stocks and storekeeping facilities generally at the store depots reflects credit on the store officers concerned. At Halifax, however, the storehouses are not the most satisfactory, inasmuch as they are of various designs, in many instances being of very old construction. They are not conveniently located, being scattered from one end of the dockyard to the other. Owing to the absence of a satisfactory method of heating, the proper care of the stores is always a difficult task. The erection of a modern, steam-heated storehouse at Halifax would solve all these difficulties. The same condition does not apply at Esquimalt to the same extent. The personnel, which is well trained, carried out their duties in a satisfactory manner.

An inspection of the store depots at Halifax was made in May by the Director of Naval Stores, where the supply work was found to be in a state of efficiency. Inspections were also made during the year of the eastern R.C.N.V.R. company stores. The stocks held by these companies were verified and any discrepancies discovered adjusted. Clothing stores were examined and, where necessary, surveyed, condemned or returned to H.M.C. Dockyard. Disposal of unserviceable garments was made to the Department of Indian Affairs through the Government Salvage Officer.

During the year H.M.C.S. *Aurora* and submarines C.H. 14 and 15 were sold through the Government salvage officer for breaking up purposes. Prior to their sale all stores and fittings which could be utilized in the service for training or instructional purposes were removed.

As the work of this branch has to do with the supply of two distinct classes of stores, which, owing to their nature, require separate treatment, the branch is divided into two divisions, viz., naval and victualling stores, comprising also the

supply depots at the dockyards, and Naval Armament Supply, likewise comprising the Naval Armament Supply depots at Halifax and Esquimalt. The detailed work of these divisions is, therefore, reviewed separately.

NAVAL AND VICTUALLING STORES

This division is responsible for the provision, issue and accounting for all naval and victualling stores, including the uniforms for the R.C.N.V.R. and R.C.N.R., and the victualling of naval personnel.

Stocks of all necessary stores are maintained under experienced Naval Store officers at H.M.C. Dockyards, Halifax and Esquimalt. In addition to supplies to meet ordinary requirements, reserves of certain items are maintained to ensure issue without delay and also to provide for emergencies.

The stocks of naval and victualling stores on hand at the close of the year amounted to \$708,937.36 at Halifax and \$371,151.22 at Esquimalt.

The direct supply of stores, particularly of fresh provisions and fuel, is also arranged for vessels of the Canadian Naval Service and for all other naval establishments, including R.C.N.V.R. Company Headquarters, as well as for visiting vessels of Imperial Service, and when required for vessels of other Government departments either by local purchase or by standing contracts. These contracts are made by the Director of Contracts for supply at different points of fuel, provisions, ice, laundrying, cartage, etc., to meet estimated or probable requirements. In addition to the direct supply from these contracts to visiting Imperial ships, supplies were made to H.M. Dockyard, Bermuda, particularly of lumber and gases.

The issues to Canadian naval ships and establishments are governed by the authorized allowance, in case of naval stores, which not only control the quantities but the patterns of the stores used. In addition, naval stores for authorized refits, repairs, new construction, etc., are issued. Clothing is issued in accordance with the uniform regulations, and provisions are drawn under a general messing system which operates on a standard scale of rations.

The total volume of issues from both dockyards of all naval and victualling stores for 1927-28 was as follows:—

HALIFAX DOCKYARD

(Not including naval armament stores)

Value of stores received.....	\$ 114,791 65
Value of stores returned.....	8,532 40
Value of stores issued.....	171,709 04

ESQUIMALT DOCKYARD

(Not including Naval Armament Stores)

Value of stores received.....	\$ 74,898 19
Value of stores returned.....	13,338 00
Value of stores issued.....	113,164 09

Disposal of obsolete and unserviceable stores from both dockyards was continued throughout the year by the Government Salvage Officer; the value of stores disposed of in this manner amounted to \$9,059.05. Inasmuch as all stores which can be used by other Government departments are transferred instead of being sold, this method of disposing of these stores is economical, and satisfactory from the point of view of this department.

The fuel oil tank which was leased from the Imperial Oil Limited at Esquimalt, B.C., was given up, as the balance of the serviceable stock of naval fuel oil had been drawn from this tank. Trials had been made previously of the commercial fuel oils available on the west coast, and as a result of these

trials it was found that arrangements could be made for the supply of satisfactory fuel oil from commercial sources. This will mean an appreciable saving to the department in the matter of rental charges.

The biennial program of stocktaking at both dockyards was completed during the year with very satisfactory results. Under this program stock was taken of every section of the stores, and in the case of perishable stores and stores which are used up frequently, such as provisions, stock was taken twice in the course of two years. The discrepancies found were very few and none were of a serious nature, and the results of the stocktaking as a whole indicate that the storekeeping at both dockyards is in a very high state of efficiency.

The store accounts at the dockyards, as examined at the close of the fiscal year under the system of concurrent audit, have been found to have been kept very accurately, any discrepancies discovered being of a minor nature and readily adjusted. In addition to the store accounts of the dockyard stocks, the store accounts from H.M.C. ships and establishments which were rendered in accordance with the regulations, have been examined and found to be satisfactory; the stores supplied being properly accounted for with no serious deficiencies. The clothing accounts maintained by each R.C.N.V.R. company were sent into office during the year and were examined with very fair results. Where necessary, new accounts have been prepared and returned to the different companies with the necessary instructions. A review was also made of a number of inventories of the stores kept at each R.C.N.V.R. Company Headquarters, with satisfactory results.

In connection with the victualling of the personnel of H.M.C. ships and establishments, under the general messing system, the provision accounts of each ship and establishment concerned were carefully scrutinized at Headquarters, with a view to ensuring that (1) all supplies were used to good advantage and (2) that a satisfactory menu was provided.

The system of general messing proved very satisfactory and 387,828 meals were served at an average cost of 15 cents a meal.

The issue of special clothing for the reserve officers from Naval Service Headquarters was continued, and the volume of material supplied in this connection is an indication of the necessity and popularity of this service.

In connection with the provision of stores at the dockyards, transfers were made of quantities of stores between both dockyards; shipment by water freight being arranged wherever possible in view of the economy to be effected.

Special reserves, such as minesweeping stores, examination service stores, port war signal stations reserve, submarine mine net defence reserves, etc., were maintained in a state of efficiency.

During the year a number of transactions in connection with naval reserve properties were handled by this branch, including the leasing of these lands to private individuals, where such action was in accordance with public interests, and the transfer of other properties as necessary to the Department of Interior for administration.

NAVAL ARMAMENT SUPPLY

This division is responsible for the supervision and control of all matters pertaining to the provision, receipt, issue, care and maintenance, repair, testing, examination, accounting and audit of all naval armament stores, comprising ordnance, ordnance stores, ammunition, torpedoes, torpedo stores, paravanes, mines and depth charges, in connection with the Canadian Naval Service and Imperial Service at Halifax and Esquimalt.

Naval Armament Supply Depots maintained at Halifax and Esquimalt comprise storehouses where the necessary facilities for the care, issue and receipt of guns, gun mountings, and torpedoes are available; magazines for

the proper stowage, care and maintenance of the respective classes of explosives; and workshops for carrying out the necessary repairs and alterations to ordnance and ordnance stores authorized by the list of changes in war materials.

The magazines at Halifax are situated at Bedford Basin and Georges Island; the old magazine at Fort Clarence was vacated in June, 1927, when the property was sold to the Imperial Oil Limited, and the explosives removed to the new magazines at Bedford Basin.

The Bedford Basin Joint Service Magazines, now in course of construction, will eventually accommodate all explosives at Halifax, for the Naval, Military and Air services. Up to the present the construction of buildings has been confined to naval requirements as it is most important that Georges Island should be vacated at the earliest possible date.

The principal feature of the year's progress was the removal of the approximately 300 tons of ammunition from the old Fort Clarence magazine to Bedford magazines. This work was carried out within a week, which, considering the difficulties of the operation owing to the lack of facilities for transport, reflects great credit on the Naval Armament Supply Officer and his staff. The new construction completed this year comprises magazines for groups I, II, III, IV and VI, a laboratory area consisting of examination rooms for groups III and VI, and V and VII, and shell scraping room, office and empty store, boiler house, heating conduits, men's dining room, and additional railways. The program for the completion of this magazine will be continued during the fiscal year 1928-29.

The completed buildings have proved very satisfactory and are now ready for occupation; the evacuation of Georges Island will, therefore, be carried out this summer, which will complete the concentration of all naval explosives with the exception of a few small groups for which buildings are not yet available.

During the year 1927-28 the organization has been improved by the evolution of a trained inspection staff for the carrying out of all proofs, tests, etc., of ammunition and inspection of naval ordnance.

The extent and importance to the service of the establishment and the responsibility which it involves can be realized from the fact that it will, when completed, comprise fifteen buildings, 11 of which are magazines, situated in an area larger than that of the Naval Dockyard.

The facilities of transportation from the dockyard to Bedford leave much to be desired, as the only boat available is the M.L.5, which is unable to cope with ice conditions during the winter and is not powerful enough to tow an ammunition lighter. Moreover, this boat has to carry out all dockyard work. These difficulties have to a certain extent been overcome through the co-operation of the military transport services who undertake to make certain trips to Bedford when ice or weather conditions render it inadvisable to use M.L. 5. The matter of providing a suitable vessel for use at the new magazines is therefore one of considerable importance.

Two married quarters have been provided for the storehousemen who have taken up their residence there. This is a distinct advantage, as in addition to being on the premises at all times, these men assist the night watchman in guarding the area both day and night, a form of nucleus brigade.

The guarding of the magazines will eventually be undertaken by a detachment of the R.C.M. Police as soon as the necessary accommodation is available. These quarters have been included in the 1928-29 building program.

The naval cordite and miscellaneous explosives are at the present moment still stowed at the Georges Island magazine, where the inspections and laboratory operations in connection therewith have to be carried out in extemporized

places. As the evacuation of this magazine is now about to take place, all such work will be carried out at Bedford in the modern buildings provided. The services of the resident storehouseman at Georges Island, who is now employed part time, will be dispensed with.

An ammunition lighter of 60 tons capacity is being built by contract for service at the Bedford magazines and will be available for use in July, 1928.

The magazines at Halifax are inspected by a representative of the Commander in Chief, American and West Indies Squadron, whenever opportunity offers. The reports of these inspections reflect the greatest credit on the Naval Armament Supply Officer and his staff.

The Torpedo Workshops at Halifax, and Esquimalt, have been included as a part of the Armament Supply Depots. The work of repairs, overhauls, tests, etc., is carried out under the joint supervision of the Consulting Engineers and the Naval Armament Supply Officers.

The Director of Naval Stores continued to be represented on the Standing Board of Officers, Joint Service Magazines, Halifax, N.S., by Lieutenant E. Haines, M.B.E., R.N. (Ret'd). The work of this committee has been most satisfactory from the point of view of the Naval Stores Branch.

The stocks of naval armament stores at Halifax and Esquimalt are maintained in an efficient manner and have been depleted of all obsolete and unserviceable stores. Stock provision for the requirements of the Canadian Naval Service is made under an agreement with the British Admiralty to maintain sufficient reserve of ammunition and issue to H.M.C. ships on repayment as required. Under this agreement the storekeeping of all Imperial stocks, whether for ultimate issue to Imperial or Canadian services, is undertaken by the department in return for the provision of the necessary reserves by the Admiralty.

The store accounts of both depots, as well as of H.M.C. ships and establishments, have been kept and rendered in a satisfactory manner, as shown by the audit thereof.

The following represents the value of the receipts and issues made on behalf of the Canadian Naval Services during the year, exclusive of all transactions from Imperial stock:—

NAVAL ARMAMENT SUPPLY DEPOT, HALIFAX

Receipts.....	\$ 54,102 00
Returns.....	65,318 00
Issues.....	74,242 00

NAVAL ARMAMENT SUPPLY DEPOT, ESQUIMALT

Receipts.....	\$ 22,643 00
Returns.....	47,465 00
Issues.....	29,142 00

During the year the various R.C.N.V.R. units have been supplied with new web equipment to replace the obsolete leather equipment first issued.

Four 12-pdr., 8 cwt. field guns have also been provided, and are disposed at Edmonton, Winnipeg, Toronto, and Ottawa; the mid-western units using either the Edmonton or Winnipeg gun, whichever is nearer, and the mid-eastern units the Toronto or Ottawa gun. The coast units use the guns at Halifax, or Esquimalt.

The purchase of 1,200 rifles and bayonets through the High Commissioner at a cost of 30-/Od. per rifle and 10-/Od. per bayonet was effected. As the vocabulary price of these rifles and bayonets is £6.18.0 and £1 respectively, this purchase resulted in a saving of approximately \$34,000. The 700 rifles loaned by the militia service have been returned.

A system of continuous stocktaking is carried on in such a way as to ensure that the complete stocks of naval armament stores, both Imperial and Canadian, are verified every year. Certificates of comparison of stock lists with ledger balances are rendered periodically.

All discrepancies, other than those of a trivial nature, i.e., wrong nomenclature or obvious clerical error, are thoroughly investigated, and the necessary adjustments made. The results of these stocktakings have been very satisfactory.

PURCHASES

As in past years, assistance has been afforded the Contracts Branch whenever possible in connection with the purchase of stores required for the Naval Service. Decisions have been given on technical questions entering into such purchases.

At the dockyards local purchase was made of such stores as are required in an emergency or which are of such a nature as to be best obtained locally. In all instances competitive tenders were invited and the purchases effected to the best advantage of the service. Copies of all such orders were forwarded daily to the Headquarters' office of the branch and if in order were passed to the Contracts Branch for final action towards payment. The value of all purchases made at the dockyards during the year amounted to \$41,348.58 at Halifax and \$36,908.19 at Esquimalt.

Local purchases were similarly effected by H.M.C. ships and establishments, comprising for the greater part fresh and miscellaneous provisions not issued by the dockyards, and on the basis of standing contracts arranged by the department from Headquarters. The procedure for dealing with these orders is similar to that followed for dockyard purchases.

During the year the total value of naval, victualling and armament stores purchased on account of the Naval Service, by local purchase and otherwise, for delivery to the store depots and to the service direct, amounted to \$315,404.

7. FINANCIAL STATEMENT

The attached statements show a total expenditure of \$1,727,305.85. There was a revenue during the year of \$27,094.65, derived from refunds, rentals, discharges by purchase, sale of stores, coaling bridge and gun cases ex *Aurora*.

(c) Laid up Oct. 21, 1927, replaced by H.M.C.S. *Champlain*.

(d) Laid up Jan. 21, 1928, replaced by H.M.C.S. Vancouver.

(e) Commissioned at Portsmouth February 1st 1928.

(f) Commissioned at Portsmouth February 1st 1928.

8. GENERAL

H.M.S. *Calcutta* flagship and H.M.S. *Cairo*, *Capetown*, *Helitrope* and *Colombo* of the America and West Indies Squadron, cruised in Canadian waters from July 1 to October 10.

These ships accommodated R.C.N.V.R. Officers and men on board and provided seagoing experience and training for them. The department wishes to express appreciation of the valuable assistance and co-operation given by the Commander-in-Chief.

The general health of naval personnel has been excellent throughout the year.

I wish to express my satisfaction with the competent manner in which officers and men, civilian employees of the Naval Service in H.M.C. ships and establishments and at Naval Service Headquarters, Ottawa, have performed their duties during the past year.

I have the honour to be, sir,

Your obedient servant,

WALTER HOSE,

Commodore R.C.N.,

Chief of the Naval Staff.

INTRODUCTORY LETTER
TO REPORT OF THE
DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

The Hon. J. H. KING, M.D., M.P.,
Minister of Pensions and National Health,
Ottawa.

SIR,—In accordance with your instructions, I have the honour to submit the attached report of the work of that division of the Department of Pensions and National Health which was previously the Department of Soldiers' Civil Re-establishment for the fiscal year 1927-28.

During the year an important administrative change has been effected in that by Order in Council passed on December 12, 1927, the Department of Soldiers Civil Re-establishment and the Department of Health were merged as one department. The necessary legislation giving effect to this merger was duly passed by Parliament and enacted as chapter 39 of the statutes of 1928.

The medical service, which is the most important feature of the work of the department, has expanded during the fiscal year under review. At the commencement of the year there were 2,839 patients on strength receiving treatment. At the end of the year the number had increased to 3,257. The number of men who received in-patient treatment during the year was 11,030 and clinical treatments were given by medical officers of the department in 102,580 cases. Of the number remaining in hospital at the end of the fiscal year, 1,764 were receiving treatment in departmental institutions and the balance in other institutions in Canada, the United States and Great Britain.

The manufacture of artificial limbs and other prosthetic appliances is being continued with excellent results. Owing to the experience now enjoyed by the staff of the department engaged in this work few, if any complaints are received. The all-metal limbs are gradually being supplied to all wearers.

Steady work is being carried on in connection with the after-care of the blind through the Canadian National Institute for the Blind.

There has been an increase in the Unemployment Relief issued, both as regards the number assisted and the amount expended. In 1926-27 the number of men was 4,079, in 1927-28, 4,182. In 1926-27 the amount expended was \$333,222.02, in 1927-28, \$390,004.02.

The department continues to provide vocational training for a certain limited number of cases in which there has been an increase in the service disability, or for other special causes, and endeavours to find suitable employment for them. Considerable assistance has been rendered by the Rehabilitation Committee in Montreal, which has rendered excellent service. In other areas the department co-operates with the Dominion-Provincial Employment Service in the placement of disabled ex-service men. While the number of unemployed pensioners shows an increase, this is partly due to the increased number now receiving pension. The actual percentage of the unemployed among pensioners has fallen from 4.9 to 4.8.

Notwithstanding the active co-operation of employers and others, the difficulties confronted by departmental officers in dealing with problem cases increases year by year and it has been found necessary to devote a great deal of intensive study thereto. The maintenance of Sheltered employment workshops has proved very beneficial in many instances, but the operation of these workshops is limited to market demands for the articles manufactured. Other cases are taken into departmental institutions, where they are provided with free board and lodging and such medical care as they may require. The number of those applying for this benefit is increasing.

In the last Annual Report an increase in the mortality rate among ex-members of the forces insured under the Returned Soldiers' Insurance Act was noted. It is gratifying to report that this year there has been a decrease. Figures for the past three years are as follows: 1925-26, 8.21 per thousand; 1926-27, 9.33 per thousand; 1927-28, 8.4 per thousand. Increased activity in connection with Returned Soldiers' Insurance will be reported next year owing to the re-opening of this legislation at the last session of Parliament.

The demand for reimbursement by Workmen's Compensation Boards and employers in respect of pensioners suffering injury or disease in industrial establishments has increased, notwithstanding that by Order in Council (P.C. 558), operative from the beginning of the fiscal year, the department could only assume liability in respect of pensioners of twenty-five per cent and upwards. Previously the pensionable limit was twenty per cent and upwards. The number of individual cases dealt with was 247, against 203 in the previous year, and the amount expended was \$69,968.56, as against \$57,113.19 in the previous year. The total number of cases dealt with since this legislation was enacted is 1,211, involving a total expenditure of \$274,026.84.

Attached as an appendix to this report is a summary of the reports received from the Boards of Trustees and others handling the Canadian Canteen Fund and the Imperial Canteen Fund in Canada.

The total expenditure of the department shows a substantial increase during the fiscal year, the exact amount being \$1,885,881.97. The major portion of this, however, represents increased pension payments, this amount being \$1,718,607.26. Notwithstanding this greater expenditure and the larger amount of work involved thereby, the actual cost of administration, including salaries, etc., is only about \$11,000 more than the previous year.

The following is an epitomized statement of the manner in which the funds appropriated by Parliament have been dealt with by the department:—

Direct payments to men and dependents.. . . .	\$43,131,385 83
Payments for services to men and dependents..	3,813,812 29
Capital expenditures.. . . .	31,686 26

VETERANS CARE CASES

The department has been authorized for some time past to provide institutional treatment for pensioners whose disability prevents them permanently from obtaining or continuing remunerative work and who, as a result, have or will become public charges.

On March 31, 1928, there were sixty-nine men in departmental institutions under this authority, distributed as follows:—

District	Institution	Strength
A	St. Anne's Hospital.....	15
B	Camp Hill Hospital.....	4
D	Christie Street Hospital.....	16
G	Deer Lodge Hospital.....	7
I	Colonel Belcher Hospital.....	8
J	Shaughnessy Hospital.....	18
K	Lancaster Hospital.....	1
		69

DENTAL SERVICES

The number of dental clinics in operation on March 31, 1928, totalled 11, being a reduction of 1 from the previous year. The staff employed by the Dental Division was reduced from 19 to 18, of whom 6 are employed on a part time basis.

Dental services, supplied during the fiscal year, through departmental dental clinics, dental representatives, and the United States Veterans' Bureau, totalled 27,993 clinical treatments.

ORTHOPÆDIC AND SURGICAL APPLIANCES DIVISION

This branch has continued to supply the beneficiaries of the department with such prosthesis as were necessitated on account of disabilities incurred during overseas or other service. With certain exceptions these are manufactured in the Orthopædic depots which are distributed in the various provinces throughout the Dominion.

The work throughout the year has been very satisfactory, and the most notable development was with regard to the production of all-metal artificial limbs. These are manufactured of Duralumin from component parts received from the J. E. Hanger Company of London, England, and exceptional success has been met with in the fitting by our depot staffs. To the end of the fiscal year, 406 of these all-metal limbs had been issued and production had been brought up to an average of 32 per month. Consideration is now being given by the department towards the production of the metal parts, to enable the complete all-metal limbs to be manufactured in the departmental factories.

The department still continues to manufacture willow artificial limbs of various types, in addition to manufacturing orthopædic boots and other appliances in the various districts in about the same yearly average, with a tendency towards increase.

It is pleasing to record that, in spite of the great economies which have already been effected in the past years in the manufacture of appliances by this division, the operation results for the year now under consideration again show a slight improvement.

The operatives who are employed consist chiefly of mechanics, limb fitters and makers, orthopædic bootmakers, makers of other appliances and those who are engaged in repair work. They are highly skilled in their various fields of work and together with their long and efficient service contribute to a great degree to the success of the factories.

BLINDED SOLDIERS

Aftercare of blinded ex-members of the forces has been principally dealt with under arrangement with the Canadian National Institute for the Blind. The institute with its services organized in various parts of Canada operates through its representatives or establishes such other contact as may be necessary in individual cases. It is not necessary to deal at length with the forms of service being given beyond listing as follows:—

- 1st. Book loans from Library.
- 2nd. Monthly Braille magazine.
- 3rd. Provision of raw material at cost price.
- 4th. Purchase for cash of products in excess of local sales.
- 5th. Employment in industries organized by Institute.
- 6th. Placement in private industries or occupation.
- 7th. Visiting, follow-up and advice with more or less continual contact by correspondence.
- 8th. Provision of poultry feed at cost price for poultry farmers.
- 9th. Provision of typewriter and Braille writer supplies and repairs.
- 10th. Provisions of brush-up courses through Home Teachers, etc., where necessary.
- 11th. Arrangement for substantial discounts on radio sets and auxiliary equipment.

Blinded soldiers are, with scarcely an exception, now settled down in their own homes or with relatives or friends and are following trades or occupations for which they were trained. In a certain number of cases original occupations have been given up owing to ill health or changed circumstances while in others opportunities have led to change. Listed below will be found occupational divisions with stated number of men following each line mentioned.

TABLE SHOWING OCCUPATIONS OF BLINDED SOLDIERS

Root repairing and Matmaking.....	4

Of the above classified list 117 are resident in Canada, 36 in the British Isles, 1 in Belgium and 4 in the United States.

EMPLOYMENT

The arrangement with the Department of Labour, whereby the Employment Service of Canada undertook to carry on the work formerly done by the department in finding employment for disabled ex-service men, continues to prove very satisfactory.

Applications and placements of disabled ex-service men during the fiscal year ending March 31, 1928, Employment Service of Canada:—

Placements—permanent.....	2,276
Placements—temporary.....	5,159
Cancellations.....	4,432
Unemployed.....	1,660
Total.....	13,527

MONTREAL REHABILITATION COMMITTEE

This committee composed of prominent professional and business men under the chairmanship of General Sir Arthur W. Currie, G.C.M.G., K.C.B., has continued to secure excellent results.

Placements—permanent.....	351
Placements—semi-permanent.....	464
Placements—temporary.....	1,456
Cancellations.....	334
Unemployed.....	764
Total.....	3,369

SUMMARY

Comparative statement of applications and placements of ex-service men during the fiscal years ending March 31, 1927-March 31, 1928.

Years ending	Applicants	Placements	Cancellations	Pending Placement
March 31, 1927.....	17,826	10,425	5,421	1,980
March 31, 1928.....	16,896	9,706	4,766	2,424

Applications for assistance in obtaining employment decreased 930.

The number of men for whom employment was found decreased 519, this is partially accounted for by decreased number of applicants.

The number of men who were shown as unemployed increased 344.

Total number of pensioners in Canada, March 31, 1928.....	42,193
Total number of pensioners outside Canada, March 31, 1928.....	3,442
Total number of Pensioners.....	50,635
Increase in number of pensioners over previous year.....	2,277

Of this number 2,424 were registered as unemployed.

EMPLOYMENT IN FEDERAL CIVIL SERVICE

The Employment Division of the department maintains a close liaison with the Civil Service Commission, and all federal departments for the purpose of assisting disabled former members of the forces to obtain employment in the federal Civil Service.

All applications from ex-service men for employment in the Civil Service received by the Employment Service of Canada are dealt with through the department.

RELIEF

Relief was granted during the winter of 1927-28 to 4,182 men. This relief—which is not given in cash but by an issue of orders, payable by the department, on grocers, coal dealers, etc.—was given 38,373 times, or an average of 9.18 times per man. The actual expenditure amounted to \$390,004.02.

SHELTERED EMPLOYMENT

The department continues to operate Sheltered Employment Workshops, wherein Canadian pensioners who are unfitted for employment in the general labour market are admitted subject to certain conditions.

The need for these workshops was carefully investigated by the parliamentary committee during the session and this need was fully recognized, as well as the necessity for their enlargement, to take care of the increasing problem.

During the year, results have been on the whole very satisfactory, although in each Workshop the competition of the ordinary manufacturer has been felt and a constant endeavour has to be made to produce new lines, or undertake manufacture which will as little as possible interfere with ordinary industry.

The workshop which was in operation at Saint John, N.B., was closed down on March 31, 1928, as the activities were carried on under many difficulties and the need for a workshop in that city was not so necessitous as elsewhere. The remaining problem cases have been taken care of under other arrangements by the department.

Arrangements are under way just now whereby the department, at the request of the Red Cross Society, will take over the operations and management of the workshop at Montreal, the effective date of the change being May 1, 1928.

The shop at Hamilton, Ont., was badly handicapped on account of the accommodation, and new premises were acquired and fitted up and the change over takes place on April 1, 1928.

The department still continues to manufacture in its workshops the poppies and wreaths which are distributed on Armistice Day and it is very pleasing to report a good increase in sales this year, particularly so with the wreaths, where a direct effort has been made to interest the public and increase sales, as it was felt that there was room for a very appreciable improvement.

VOCATIONAL TRAINING

Vocational training, and compensation while undergoing such training, may still be given to the following two classes:—

1. To a former member of the forces who is prevented—owing to an increase in his pensionable disability—from following either his principal prewar or principal post-war occupation, or the occupation for which he was previously trained.

2. To a former member of the forces where pensionable disability has not increased but who has not been granted previous training and who, in the opinion of the department, having endeavoured to follow his pre-war occupation is now unable to do so.

INDUSTRIAL PROBLEM CASES

A disabled former member of the forces (also a disabled former member of the Imperial Forces who was a pre-war resident of Canada) who is not eligible for vocational training but who has become an industrial problem case owing to his inability to secure or hold steady employment, may be given probational training along specific lines, with an industry or firm, and while undergoing such training his pension may be augmented to a rate fixed under Order in Council.

ENGINEERING DIVISION

The following services come under the responsibility of the Engineering Division:—

Maintenance and repairs to buildings, mechanical services, fuel supply, fire protection, rentals, taxes and water rates, mechanical transport, laundries and gardening operations.

During the past year maintenance and repairs have been kept well within the estimates, and a certain amount of new work has been undertaken. A three-year exterior painting program was finished this year covering the exterior of several of the larger institutions.

Special care has been given to adequate fire protection in departmental hospitals, with a consequent revision of fire protection regulations. Arrangements have been made in certain institutions to tie up fire alarm system with that of the municipality.

Laundry operations are being carried on in the two psychopathic hospitals only. The average cost per piece has been kept well within that of last year, and at a considerably less rate than could be done if let by contract.

The beautification scheme started a few years ago in connection with departmental institutions has progressed in a favourable degree. A large number of donations of trees and shrubs have been made to certain institutions. The work is carried out almost entirely by patients or our service staff.

RETURNED SOLDIERS' INSURANCE DIVISION

The work of the division during the past year has been concerned with the collection of the premiums payable on account of the insurance in force, the various adjustments necessary in policies and the settlement of death claims.

The number of death claims admitted during the year is 210 being 41 less than the previous year. The death rate is lower than the rate for the previous year—being 8.4 per thousand as against 9.33. There has been a net increase in lapses of 378 during the year bringing the total net lapses to 6,992. A decrease is noted in the number of policies which have been surrendered for cash, the total number of surrenders to the end of the year from the commencement of the Returned Soldiers' Insurance Act is 2,329.

There has been considerable increase in the balance of the fund. As at the end of the year March 31, 1927, the balance was \$5,090,041.62. The balance as at March 31, 1928, was \$5,964,246.99; the balance, therefore, has increased through the year by an amount of \$874,205.37.

* These figures are each \$574.03 in excess of those shown on the financial statement of the Department due to the inclusion of premiums paid by cheques which were dishonoured but subsequently paid.

ACCOUNTS BRANCH

Cost accounts are maintained to control the activities of the various departmental hospitals, pension examination centres, clinics, O. and S.A. depots and Vetreft factories operated by the department.

All subsidiary ledgers and books of original entry maintained at Head Office and the various outside Units of the department are in balance with the relative control accounts kept in the general ledger at Head Office.

The various items of income and expenditure are in agreement with the amounts shown in the Public Accounts and Auditor General's reports.

Complete details of the financial operations will be found in the statements which follow. These statements are shown in the same form as in preceding years; a short description of each is given:—

1. *Income and Expenditure, Fiscal Year 1927-28.*—On the left side is shown the appropriations granted by Parliament: revenue received from all sources, together with the balances of trust funds as at the first of the year. On the right side is shown the gross disbursements made, divided into direct payments to men and their dependents, both on account of pensions and re-establishment, payments for services rendered such men, and payments made to outside organizations which render service to returned men, unexpended portions of the appropriations voted by Parliament for the fiscal year and the balances of trust funds at the close of the year.

The summary statement covers the main divisions of the department's income and expenditure condensed for reference purposes.

2. *Net Disbursements on Pensions Account for the Period, April 1, 1916, to March 31, 1928, by Fiscal Years.*

3. *Net Disbursements of the Department of Soldiers' Civil Re-Establishment on Re-Establishment Account for the Period, July, 1915, to March 31, 1928, by Fiscal Years.*

4. *Current Assets of the Department as at March 31, 1928.*—Cash advances made for travelling, petty cash, maintenance accounts, outside institutions, Red Cross Workshops, etc.

Stores.—Value food, equipment, etc., held by department for use in hospitals, offices, etc.

Disposal Stores.—Surplus goods available for sale or transfer to other Government departments.

5. *Vocational Loans as at March 31, 1928.*—Outstanding loans distributed by provinces.

6. *Accounts Receivable at March 31, 1928.*—Amounts due from Great Britain, British Dominions, United States and Allied Governments for treatment of their ex-nationals, services rendered Canadian Government departments—Department of National Defence, Department of Indian Affairs, etc.—amounts due from outside hospitals and sanatoria.

7. *Passenger, Freight and Express Transportation as at March 31, 1928.*—Services of the department on which passenger transportation expense was incurred; freight and express on goods purchased, shipped, etc.; distributed according to railways used.

8. *Department of Soldiers' Civil Re-establishment and Pensions Appropriations by Fiscal Years to March 31, 1929.*

APPENDIX I

REGULATIONS OF THE DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

Under Order in Council P.C. 1842, Dated October 18, 1928

1. Definitions:

- (a) *A disability attributable to service*, includes a disability aggravated on or by service and means a disability in respect of which pension has been awarded or conceded by the commission. Disability Attributable to Service.
- (b) *Child* means a child of a former member of the forces within the meaning of the Pension Act, or in the discretion of the department, any person in regard to whom he stands in loco parentis. Child.
- (c) *Commission* means the Board of Pension Commissioners for Canada. Commission.
- (d) *Compensation*, unless otherwise qualified, means in respect of medical treatment, the compensation set forth in clause 3 hereof, and in respect of vocational training, the compensation set forth in clause 6 hereof. It also means "pay and allowances" referred to in the Pension Act. Compensation.
- (e) *Department* means the Department of Pensions and National Health. Department.
- (f) *Dependents* means only such persons as are classed as dependents under the Pension Act, or such other persons as the department may recognize as such. Dependents.
- (g) *Former member of the forces* means any person who has served in any of the naval or military forces of Canada during the late war; Former member of the forces.
- (h) *Maintenance* means the cost to the department for the provision of medical treatment, care and subsistence in a hospital or other institution operated by the department or the cost to the department of these services in a hospital or other institution not operated by the department but in regard to which the department has entered into an agreement for the provision of the same, or such lesser amount as the department may determine in individual cases. Maintenance.
- (i) *Medical authority* means the opinion of a medical practitioner acting on behalf of the department, subject to the concurrence of the Director of Medical Services or supervising medical officers appointed by him. Medical authority.
- (j) *Member or former member of the permanent forces* means any person who is serving or has served in any military or naval or air force of Canada. Permanent Force.
- (k) *Military service, service or served*, unless the term is qualified, means and includes service in any of the naval or military forces of Canada during the late war. Military service.

Out-patient 2. (m) *Out-patient 2* means a former member of the forces who requires out-patient treatment for a disability attributable to service, which treatment does not prevent him from following his usual trade or occupation.

Pension. (n) *Pension*, except where otherwise specifically stated herein, means a pension awarded by the Government of Canada on account of a disability attributable to service in the late war, and includes addition to pension and temporary pension, but does not include long service or other service pension, or pension awarded in respect of a decoration.

Pensioner. (o) *Pensioner*, except where otherwise specifically stated herein, means a person who is or was in receipt of a pension as herein defined awarded under the Pension Act.

Pre-war Resident. (p) *Pre-war resident* means a former member of the Imperial, Dominion (other than Canada) allied or associated forces who was domiciled in Canada prior to the 4th August, 1914.

Masculine and Feminine. (q) Terms indicating the masculine gender apply also to the feminine gender.

The late war. (r) *The late war* means the war which commenced on the 4th day of August, 1914, and was officially concluded on the 31st day of August, 1921.

Treatment. (s) *Treatment* includes medical and surgical treatment and also includes dental services and the provision of prosthetic appliances.

Treatment—Pensioners eligible for. **CLAUSE 2.** (1) The department may give treatment to, or may admit to hospital for the purpose of observation, any former member of the forces who is suffering from a disability attributable to service, if treatment or observation is required for such disability, and, during treatment or observation, he shall be paid compensation.

Treatment—Persons not eligible for. (2) Except as provided in the succeeding paragraphs of this clause, the department shall not, under the authority of this Order in Council, give treatment with compensation to any former member of the forces for a disability in respect of which the commission or the Federal Appeal Board has ruled that it was not attributable to service.

Classification of persons undergoing treatment. (3) Persons undergoing treatment by the department shall be divided into the following classes, and shall be subject to the conditions set forth in this clause:—

Class 1. *Class 1.* Persons in this class shall be paid compensation;

Pensioner requiring treatment for a disability attributable to service;

Pensioner requiring observation in connection with pension examination or pensioner or non-pensioner requiring observation to determine whether a disability which has not been accepted by the commission is attributable to service;

Pensioner or non-pensioner requiring observation for assessment of pension, following a ruling by the Federal Appeal Board;

Pensioner requiring observation to determine whether treatment is required for a disability attributable to service;

Pensioner who is found while undergoing examination or treatment for a disability attributable to service to be suffering from a disability not attributable to service which directly and adversely affects

the nature of the treatment provided for the former or to retard recovery from the same.

Class 2. Pensioner requiring hospitalization in respect of a non-pensionable disability—Treatment only may be granted without compensation or allowances except those benefits furnished to treatment only cases, if pensioner is unable to provide the same at his own expense, subject to the following conditions:— Class 2.

- (i) That treatment shall be granted only in a hospital operated by the department or with which the department has a contract, if accommodation is available;
- (ii) That the cost of conveying the pensioner to the hospital and from the hospital to his home shall not be a charge on the department, except in very extreme and special cases in which the department may defray the same;
- (iii) That the granting of treatment shall not entitle the pensioner to pension in respect of the disability for which treatment is granted;
- (iv) That should the pensioner, as an adjunct to his treatment, require a prosthetic appliance, or the adjustment of a prosthetic appliance, by reason of an injury or disease, except dental disease, sustained in civilian life, the department may furnish or adjust the same, but subsequent repairs or renewals shall not, except in special cases when no other means of providing the same are available, be a charge on the department;
- (v) That treatment in this class shall not be granted (a) to any pensioner entitled to workmen's compensation or to corporation medical attendance in respect of the disability for which treatment is required; (b) to any pensioner who should be a charge upon his municipality or province by reason of his suffering from tuberculosis or infectious diseases including venereal disease contracted since the war; (c) to any pensioner who should be a charge upon his municipality or province by reason of his suffering from insanity or any mental disease requiring custodial care, unless he, at the time the application for treatment is made, is in receipt of payment of pension for a disability other than mental, or unless he, while receiving treatment from the department for a disability attributable to service other than mental, is found to be suffering from a mental disease not attributable to service; (d) to any pensioner who is a seaman and is entitled to treatment in a marine hospital; or (e) to any pensioner who requires dental treatment only.

Class 3. Pensioner or non-pensioner requiring treatment for a sequelae of venereal disease aggravated during service or contracted on service. Class 3.

- (i) If pension is payable under section 12 of the Pension Act, in-patient treatment with compensation may be granted.
- (ii) If no pension under section 12 of the Pension Act is payable, and the former member of the forces requires in-patient treatment, the department may grant treatment only.
- (iii) If in-patient treatment is not necessary, and a pensioner or non-pensioner is residing at a distance from a provincial G.U. clinic, and cannot avail himself, therefore, of the facili-

ties provided at such clinic, the department may authorize out-patient 2 treatment by a departmental medical representative.

Class 4.

Class 4. Veteran's care cases.

- (i) The term "pensioner" as used in this class means, in addition to the meaning set forth in definition (o), a person who was resident or domiciled in Canada on the fourth day of August, 1914, and who is or was in receipt of a pension payable under the Pension Law of the United Kingdom, or of any of His Majesty's Dominions (other than the Dominion of Canada), or of any of His Majesty's Allies or Associated Powers in the Great War, in respect of a disability resulting from injury or disease or an aggravation thereof attributable to or incurred or aggravated during service in the Great War.
- (ii) The department may, at its discretion, provide quarters and maintenance and, when necessary, medical treatment in a departmental institution for any pensioner whose disability prevents him permanently from obtaining or continuing remunerative work and thereby earning sufficient to maintain himself, and who, as a result of these conditions, has or will become a public charge.
- (iii) On the admission of a pensioner to a departmental institution, partial cost of his maintenance up to forty dollars (\$40) per month may, at the discretion of the department and by arrangement with the pensioner and his dependents, be paid to the department from pension or any other moneys or income to which the pensioner may be entitled, provided that such payment shall not be made from pension payable to or in respect of his dependents; Of the sum so paid \$3 per month, payable on the 15th and the last day of the month, may be repaid to the pensioner in order to provide comforts, etc., and seven dollars (\$7) per month shall be credited to him on the books of the department for the provision of such clothing as he may require.
- (iv) If no payment is made to the department towards the partial cost of maintenance of a pensioner, due to circumstances approved by the department, or if the payment made to department is less than ten dollars (\$10) per month, the department may pay to the pensioner the sum of \$3 per month payable on the 15th and the last day of the month in order to provide comforts, etc., and may furnish or purchase clothing as he may require, provided that the cost to the department for such clothing shall not exceed seven dollars (\$7) per month.

Class 5.

Class 5. Non-pensioner admitted to hospital for examination or treatment and found not to be eligible for treatment by reason of the fact that his disability is not attributable to service but whose condition will not permit his immediate discharge from hospital; treatment only may be granted until discharge from hospital is possible.

Class 6.

Class 6. Pensioner who has been sentenced to imprisonment for six months or more and who, during the period of his imprisonment, requires treatment for a disability attributable to service may be

admitted to hospital at the request of the prison authorities but no compensation or allowances shall be granted.

Class 7. Members of Permanent Force, Naval Service, Air Force or Non-permanent Active Militia. Treatment may be furnished by the department as follows:— Class 7.

- (i) If treatment is required for a disability attributable to service in the late war, treatment will be at the expense of the department. No compensation or allowances will be issued to or in respect of the patient, but pension, if any, will be continued.
- (ii) If treatment is required for a disability not attributable to service in the late war, treatment will be at the expense of the Department of National Defence. No compensation or allowances will be issued to or in respect of the patient, but pension, if any, will be continued.

Class 8. Persons described in Orders in Council P.C. 848 dated the 29th May, 1925, P.C. 2187 dated the 20th October, 1922, and P.C. 1165 dated the 15th June, 1927, and any future amendments thereto. Treatment may be provided by the department and allowances issued in accordance with the authority set forth in these orders in council. Class 8.

Class 9. Royal Canadian Mounted Police. The department may grant treatment, without compensation or allowances, to members of the R.C.M.P. at the request and expense of the R.C.M.P. authorities. Class 9.

Class 10. Northwest Rebellion pensioners. The department may grant treatment with compensation to any person who served in the Northwest Rebellion who is in receipt of a pension for a disability resulting from such service and who may be in need of medical treatment for such disability. Class 10.

Class 11. Staff of the department who suffer injuries or contract communicable disease while employed. Class 11.

- (i) An employee of the department also a veteran operative and, at the discretion of the department, a former member of the forces who is undergoing training, who is injured in the performance of his duty and who is entitled under the law of the province in which the accident occurred to compensation including treatment, may be admitted to treatment under the department, without compensation or allowances.
- (ii) A non-permanent member of the staff employed in a hospital operated by the department who contracts a communicable disease while in attendance on patients suffering from such disease as a direct result of exposure while on such duty in hospital may be granted treatment with salary for such period as may be deemed necessary by the department.
- (iii) A permanent member of the staff employed in a hospital operated by the department who contracts a communicable disease while in attendance on patients suffering from such disease as a direct result of exposure while on such duty in hospital may be granted treatment and such allowances or salary as are provided under Civil Service Regulations.

Class 12.

Class 12. Workmen's Compensation Cases. A pensioner or a former member of the Imperial Forces who is in receipt of a pension of 25 per cent or upwards who sustains an accident or suffers from a disease contracted while employed in an industry may, if the department is liable to reimburse a Workmen's Compensation Board or an employer for the cost of treatment, be granted treatment by the department without compensation or allowances.

Mental Cases.

(4) (i) Former members of the forces suffering from a mental disability necessitating treatment in a psychiatric hospital shall, in addition to the classification set forth herein, be classified as follows:—

"A" If mental disability attributable to or aggravated during service;

"C" If mental disability not attributable to service and the former member of the forces has no other pensionable disability;

"D" If the former member of the forces is a pensioner in respect of another disability and requires treatment for a mental disability not attributable to service.

(ii) If a legal guardian or curator has been appointed under the authority of a court with proper jurisdiction, or an administrator, appointed by the commission under the authority of the Pension Act, to administer the affairs and assume responsibility for the person of a former member of the forces suffering from a mental disability, he may, at the discretion of the department, be discharged from hospital and transferred to the care of such guardian, curator, or administrator, provided that the department shall not pay over any balance standing to the credit of the former member of the forces unless it is considered to be in the interests of the former member of the forces that this be done. The department may at its discretion require any guardian, curator or administrator to furnish a bond in an adequate amount.

Transfer from one Class to another.

(5) (i) The department may transfer a former member of the forces who is receiving treatment only in any of the classes in which the same has been authorized to Class 4 (Veterans Care) and if the said former member of the forces refuses such transfer the department may discharge him from treatment strength.

(ii) The department shall transfer any person who is receiving treatment only in any of the classes in which the same has been authorized to Class 1 if it is conceded by the commission that the disability for which he is receiving or has received treatment only is attributable to service.

(iii) The department may transfer any person who is receiving treatment in Class 1 to such other class as may be deemed necessary if it is found that the disability from which he is suffering and for which he requires further treatment is not attributable to service.

Patients to perform duties.

(6) A former member of the forces, who is an inmate of an institution at the expense of the department, who is receiving the benefits set forth in this clause, shall perform such duties as may be allotted to him by the department, provided that if such duties are of a supervisory character and such former member of the forces is

not in receipt of compensation, the department may, at its discretion, pay to him an additional allowance to that authorized for treatment only, veterans' care and Class D mental cases.

(7) (i) If on examination for pension of a former member of the forces it is found that a disability attributable to service is directly affected by the condition of his teeth and dental attention is required to reduce such disability or to prevent its increase, treatment may be given in accordance with departmental regulations. Dental Treatment.

(ii) A pensioner may be granted emergent dental relief in accordance with departmental regulations.

(8) Should the commission decide that a disability in respect of which a former member of the forces has obtained treatment, other than through the department, is attributable to service, the department may reimburse him or the organization or authority, under or through which he has obtained such treatment, such portion of the expenses incurred as may be in accordance with the regulations of the department, provided that such reimbursement shall not cover a period prior to the effective date from which pension is awarded for the said disability or subsequent to the commencement of payment of pension. Treatment obtained privately.

CLAUSE 3. (1) The compensation set forth in the schedule hereto attached and marked "A" (hereinafter referred to in this clause as the compensation) shall, subject to the conditions set forth in this clause, be payable monthly in arrears to or in respect of a former member of the forces while he is undergoing treatment for a disability attributable to service which prevents him from obtaining or continuing employment. Treatment Compensation.

(2) The compensation includes clothing allowances. Clothing Allowances.

(3) The compensation is payable in respect of the rank or acting rank held by the former member of the forces in respect of which he was in receipt of pay and allowances at the time of his retirement or discharge from military service or the rank at which he is pensioned, whichever is the higher. Acting Rank.

(4) In the cases of medical and dental officers where the pay of rank under the Department of National Defence would be \$1 per day in excess of the compensation it shall be increased by \$1 per day. Medical and Dental Officers.

(5) The compensation shall be payable in the following manner:— Manner compensation payable.

(i) Single man in hospital: \$20 per month, the balance to be held by the department until the completion of treatment.

(ii) Men at home—the full compensation authorized.

(iii) Married men in hospital or men in hospital with dependents in respect of whom compensation is payable: to man, \$20 per month; to wife or dependent, the dependent's compensation authorized.

(6) If a widower has children and it is necessary, in order to keep the family together, for him to employ a person for full time to care for them, he may, at the discretion of the department, be paid as a married man with children. Compensation for Widowers.

Men with
Dependents.

(7) Man with dependent or dependents as referred to in Schedule "A" means (a) a widower with a child or children or a dependent parent or parents and/or with a dependent brother or sister or dependent brothers or sisters, (b) a single man with a dependent parent or parents and/or with a dependent brother or sister or dependent brothers or sisters.

Children
in excess
of six.

(8) When there are more than six children or dependents the dependents' compensation shall be increased by \$10 per month in respect of each child or dependent in excess of six.

Dependent
parents, etc.

(9) If a married man is supporting a parent or parents, or a brother or brothers, or a sister or sisters, any such additional dependent may, for the purpose of receiving compensation be regarded as a child.

Man and wife
undergoing
treatment.

(10) When a man and wife, both former members of the forces, are undergoing treatment at the same time, the compensation payable shall be as to two single former members of the forces in accordance with the rank of each. In cases where there are children or other dependents, if the compensation payable to a married man with children or other dependents, based on the rank of the man, would be in excess of that payable in respect of two single former members of the forces, in accordance with the rank of each, it shall be substituted therefor, but if it would be less, no extra compensation in respect of children or other dependents shall be payable.

Man living
with woman
not his wife.

(11) The department may, at its discretion, pay the compensation provided for a wife to a woman with whom a pensioner is living as his wife if the circumstances are such as to warrant such payment.

Wear and
tear allow-
ance.

(12) When a pensioner commences or has received treatment with compensation or allowances under the authority of this Order in Council or of any previous Order in Council, if he is or was entitled to a pension allowance for wear and tear of clothing his compensation shall be increased accordingly.

Allowances
during
Treatment
only.

(13) In any case in which treatment only is authorized, except a class "D" mental case, an allowance of \$3 per month, payable on the 15th and the last day of the month may be made for the provision of comforts, and clothing may be furnished when necessary up to a value not exceeding \$7 per month, provided that if the former member of the forces is in receipt of a pension of \$10 per month or over no allowances for clothing or comforts shall be issued, provided also that if the pension is less than \$10 per month the department may provide clothing, if required, to a value equal to the difference between the pension paid and \$10 per month.

Class "D"
Mental
Cases.

(14) In any Class "D" mental case the following shall be the procedure:—

Subject to the discretion of the commission there may be paid to the department towards the cost of maintenance and the provision of comforts and clothing from the pension payable to him, a sum not exceeding \$40 per month, provided

(a) that the difference between the compensation which would otherwise be payable if the disability were attributable to service and the pension prior to the reduction of the latter

under the provisions of section 29 (2) of the Pension Act shall be considered as a payment towards the said cost of maintenance;

- (b) that if the sum paid to the department is \$10 per month or over there shall be repaid to him \$3 per month for comforts and there shall be credited to him on the books of the department \$7 per month for the provision only of such clothing as he may require while undergoing treatment; or if the sum paid to the department is less than \$10 per month no amount shall be credited to the pensioner for clothing, but he shall be paid \$3 per month for comforts and shall be furnished with such clothing as in the opinion of the department he may require, to a value equal to the difference between the pension paid and \$10 per month.

(15) When a former member of the forces who has been undergoing treatment for a mental disability as a Class "C" case has sufficiently recovered to be allowed temporarily to pass under his own control, or that of his friends, there may be paid, at the discretion of the department, an allowance at the rate of \$1 per day for a period not exceeding three months.

Class "C"
Mental
Cases.

(16) Any credit balance held by the department on account of a former member of the forces, during treatment or subsequent to discharge therefrom, shall be administered by the department on his behalf; provided that any unpaid balance representing compensation payable by the department due at the time of the death of the former member of the forces shall not be deemed to form part of the assets of his estate but if he has dependents or obligations within the meaning of the Pension Act or of this Order in Council, such balance may be paid by the department to such dependents or applied against such obligations.

Credit
Balances.

(17) Notwithstanding the restrictions contained in any previous Order in Council the department shall credit the accounts of former members of the forces, who are undergoing or who have undergone treatment for a mental disease and who have been classified "A" or "B", with the compensation authorized for non-mental cases in accordance with the rates in force at the time treatment is or was given, provided that compensation prior to the first September, 1920, shall be in accordance with the rates then in force for mental cases.

Compensation
for mental
cases.

(18) The department may pay interest at the rate of three per cent per annum on the amounts of allowances or other moneys withheld under the provisions of this Order in Council or any other enabling authority, from former members of the forces or pre-war residents of Canada who have been on the strength of the department for treatment for a period of three months or longer and may pay a similar rate of interest on any moneys belonging to former members of the forces, which, in the interests of such former members of the forces, it is deemed advisable to receive and hold, such interest to be credited on all open accounts of such former members of the forces or pre-war residents of Canada as at the date of completion of treatment or death, provided that no interest shall be payable by the department on moneys which are withheld owing to failure on the part of a former member of the forces of a pre-war resident of Canada to claim the amount due or to furnish the department with his proper address or the proper address of his dependents, or owing to the disturbed condition of the country in which his dependents reside.

Interest on
Credit
Balances.

(2) For children or brothers or sisters in excess of three, \$10 each per month shall be payable.

(3) In cases where a former member of the forces who, while undergoing training, is not subsisted by the department, and who has a dependent or dependents, to or in respect of whom compensation is payable under this Order in Council, with whom he was residing at the commencement of his training, is, owing to his undergoing training, unable to continue to reside with such dependent or dependents, or finds it necessary, with the approval of the department, to remove such dependent or dependents to another place in order to continue to reside with them, the compensation payable to such former member of the forces shall be increased by an amount of \$8 per month, and the compensation payable to or on account of such dependent or dependents shall also be increased by an amount of \$8 per month.

Additional allowance when living away from or having to move dependents.

(4) If a former member of the forces who is undergoing training by the department is a pensioner, any payments or pension covering the period of training, whether in respect of himself or his dependents, shall be deducted from the compensation set forth in this clause.

Pension during training.

(5) The compensation set forth in this clause shall include expenses of transportation to and from places of training and meals except as provided in clause 13 hereof.

Compensation includes car fares and meals.

(6) The payment of compensation authorized by this clause shall be continued for one month after completion of training of a former member of the forces, provided that

Payment of compensation for one month after completing training.

- (i) in the opinion of the department his conduct while undergoing training has been satisfactory;
- (ii) his training has occupied a longer period than two months; and
- (iii) he has not already received this benefit on completion of a previous period of training.

CLAUSE 7. If a former member of the forces who is undergoing training by the department requires institutional treatment during the period of his training, his training compensation and the compensation of his dependent or dependents may be continued during the period of such institutional treatment, provided (a) that the payment of such compensation during the period of such treatment shall be suspended if the treatment is made necessary by misconduct, (b) that if the disability is attributable to service the former member of the forces may at any time be transferred from training compensation to treatment compensation at the discretion of the department, and (c) that if the said treatment is required for a disability not attributable to service, the continuation of compensation shall be at the discretion of the department up to a limit of one month.

Institutional treatment while undergoing training.

CLAUSE 8. When a former member of the forces has been found eligible for training, the department shall, at its discretion, where it is considered desirable in the interests of the trainee so to do, and as far as the same may be practicable, place him for training in an industry under an agreement with the employer as to wages on an

Training in an industry.

ascending scale, and the department shall pay the difference between the wages or other remuneration received by him in such industry and the compensation set forth in Clause 6 hereof.

Probational
training—
Problem
Employment
Cases.

CLAUSE 9. Disabled former members of the forces, also disabled former members of the Imperial Forces who were pre-war residents of Canada, who are ineligible for training under the provisions of Clause 5 hereof but who nevertheless have become industrial problem cases through their inability to secure or hold steady employment, may be granted probational training to fit them for permanent employment along specific lines with an industry or firm and during such probational training may be remunerated in the following manner:—

Pension payable by the commission or other authority and any payment of wages or salary by the trainors may be augmented to the following rates:—

	Per Month
Single man.....	\$50 00
Married man without children.....	65 00
Married man with one child.....	77 00
Married man with two or more children..	87 00

Vocational
Loans to
Trainees.

CLAUSE 10. (1) The department, at its discretion, may advance by way of loan to any former member of the forces who has received training on account of a disability attributable to service and who is in need of the same, a sum not exceeding \$500 for the purchase of tools and equipment necessary to establish him in his new occupation, such loan to be repayable within five years from date of issue without interest.

Discharges
Chattel
Mortgages.

(2) Authority is hereby granted to the Minister of Pensions and National Health and/or the Deputy Minister of Pensions and National Health to sign discharges or releases of chattel mortgages taken in favour of His Majesty by way of security for such loans.

Accidents
to Trainees
and Vetract
Operatives.

CLAUSE 11. Former members of the forces undergoing training by the department and veteract operatives shall, while in receipt of compensation or wages from the department, be considered employees thereof and, in case of injury, shall be entitled to the full benefits of workmen's compensation provided by the Government Employees' Compensation Act (Revised Statutes of Canada 1927, chapter 30), provided that the department shall be authorized to carry out such investigations as may be necessary to safeguard the interests of the Government in this regard; any workmen's compensation awarded may be paid by the department or by the Department of Finance.

Age limit
of Children.

CLAUSE 12. No compensation or allowances shall be paid under the authority of this Order in Council for any child or brother or sister of any former member of the forces, who, if a boy, is over the age of 16, or, if a girl, is over the age of 17 years, provided that if the Commission has awarded or continued pension in respect of any such child or brother or sister beyond the age limit payment of compensation may be continued for so long as the ruling of the commission is operative, provided also that no allowances shall be paid in respect of a child or brother or sister after the marriage of such child or brother or sister.

CLAUSE 13. (1) The following allowances may be granted to a former member of the forces directed by the department or the commission to report at any place, to cover travelling by the most direct route to and from his place of residence, subsistence and other out-of-pocket expenses while travelling or while detained at the place where directed to report, and, if not in receipt of treatment or training compensation from the department, loss of wages while necessarily absent from his regular occupation:—

Travelling
and Sub-
sistence
Allowances.

- (i) Return railway transportation, first-class, with sleeping berth if necessary, and/or reasonable charges for other modes of transportation when necessary and if supported by proper vouchers;
- (ii) Meals, in transit, if not provided by transportation company, at \$1 each;
- (iii) If not undergoing treatment or training, board and quarters during the time detained, which shall wherever possible be furnished at a departmental institution, but if such cannot be furnished by the department, the following rates shall apply during the time he is detained: meals each, 50 cents; lodging, \$2 per night.
- (iv) Reimbursement for loss of wages, on production of a certificate from his employer stating rate of pay which he will lose or has lost on account of absence from work up to but not exceeding \$3 per day. If the former member of the forces is his own employer he may furnish the certificate himself but shall not be paid any allowance for loss of wages unless the department is satisfied that he has sustained the loss for which claim is made. If he is admitted to hospital for observation or treatment he shall not be paid any allowance for loss of wages on the day of admission or discharge or during his stay in hospital.

Reimburse-
ment for
loss of
wages.

(2) A former member of the forces who reports for examination or treatment, or the repair of a prosthetic appliance without having been directed to report shall not be granted the allowances set forth in this clause unless and until it is determined that

Reporting
without
direction.

- (i) in the case of a pensioner the examination results in an increase of pension for his recognized pensionable disability or the award of a further pension in respect of a disability not previously recognized, or in hospitalization for a disability attributable to service;
- (ii) in the case of a former member of the forces who is not a pensioner the examination results in an award of pension or hospitalization;
- (iii) in the case of a former member of the forces who reports for the repair of a prosthetic appliance he would have been directed to report had he made proper application;

when he may at the discretion of the department or the commission be granted the said allowances provided that should he report to an office of the department outside of the district to which he would have been directed to report had he made proper application he shall not be paid an amount in excess of that which would have been paid had he reported under direction.

Travelling
allowances
outside of
Canada.

(3) The allowances set forth in this clause shall be applicable in Canada only unless otherwise determined by the department. When a former member of the forces is not resident in Canada, he shall be paid such travelling and out-of-pocket expenses for the services covered by this clause as the department may at its discretion from time to time determine, provided that where possible the amount payable and the conditions of payment shall be those prevailing between the Government of the country in which the former member of the forces is residing and the former members of the forces of the said country.

Agreements
with other
Governments.

CLAUSE 14. The department may enter into agreements with the British Government or the Governments of any of His Majesty's Dominions, or the Governments of any of His Majesty's Allies or Associates in the late war for the following purposes:—

- (a) The treatment or training of former members of the forces in any country outside of Canada;
- (b) The treatment or training of former members of the Imperial, Dominion, Allied or Associated forces in Canada or in any country outside of Canada and in accordance with such agreements may, notwithstanding the regulations contained in the preceding clauses of this Order in Council, pay such compensation or allowances to former members of the forces or their dependents in countries outside of Canada as may be agreed upon with the Government of the country concerned, and may pay compensation or allowances to former members of the British, Dominion, Allied or Associated forces, or their dependents, subject to subsequent reimbursement by the Government concerned, and may render accounts for the cost of examinations, treatment or training to the Government concerned.

Psychiatric
Hospitals.

CLAUSE 15. The department shall have authority to operate such hospitals for psychiatric treatment of persons suffering from mental diseases as may be deemed necessary and may make such arrangements with the provincial governments in regard to such hospitals as may be required and may also, when it is recognized by medical authority that the department is liable for maintenance, make arrangements with the provincial governments for the care and treatment of former members of the forces, who are not mentally responsible, in provincial institutions for the treatment of mental disease.

Purchase
of Graves.

CLAUSE 16. The department may purchase from time to time single graves or blocks of graves in any cemetery for the burial of former members of the forces who may die while on the strength of the department for treatment or for whose burial the department is otherwise responsible.

Departmental
and B.P.C.
decisions
final.

CLAUSE 17. In any matters which are left to the discretion of the department, the decision of the department shall be final, and in any matters which are left to the discretion of the commission the decision of the commission shall be final.

CLAUSE 18. The department shall have power to make regulations respecting the administration of benefits granted by this Order in Council and discipline of, and compensation or allowances payable to, a former member of the forces while undergoing treatment or training by the department, or while enjoying any other benefits granted by this Order in Council, and the compensation or allowances payable to or in respect of his dependent or dependents, and all deductions from or cancellations of his or their compensation or allowances for the purpose of discipline, or recovery of over-payments of compensation, allowances or pension, or for any other purpose, and to require that before becoming entitled to treatment or training by the department, or to any other benefits granted by this Order in Council, a former member of the forces shall sign a document agreeing to submit to all such regulations.

Power to
make
regulations.

APPENDIX II

ADMINISTRATION OF CANTEEN FUND

ONTARIO

Trustees:

Major-Gen. V. A. S. Williams, C.M.G., Chairman.
 Lieut.-Col. Betram Hooper, D.S.O., M.C.
 Capt. W. S. Haney, M.P.P.
 Capt. Jules John Ferry.
 Private Percy T. Bould.
 Major Alexander C. Lewis, Secretary.

The Board of Trustees definitely organized on September 21, 1927, when a secretary-treasurer was appointed and instructed to formulate for consideration by the trustees a policy for the administration of the fund, and in February, 1928, active work commenced, the objects agreed upon being as follows:

1. For assistance in the education of children of ex-service men, special cases.
2. For relief of urgent cases amongst ex-service men (not pensioners), resulting from sickness, operations, etc.
3. For relief of urgent cases of widows and orphans of ex-service men (not pensioners), resulting from illness, etc.
4. No relief to be granted for conditions resulting from unemployment.

An effort will be made to transfer each year a sum of \$10,000 from revenue to capital account for the purpose of bringing the capital sum to the amount of \$1,000,000, and maintaining it at that figure for some years to come. It is felt that the demands for at least a decade could be met from the income from an investment of \$1,000,000. This action was prompted by the belief that the heaviest demand on the Canteen Fund will commence in a few years when men who served overseas and who took their discharge in Category "A", who are not entitled to pension, will begin to break down under the strain of their daily vocations as a result of the shock to their nerves, while on active service, and will then require assistance, which could only be given them from such a fund as the one the board is administering.

The following is a statement of receipts and expenditures:—

Amount received.. . . .	\$ 977,671 83	Investments.. . . .	\$ 968,698 42
Interest.. . . .	47,139 46	Relief.. . . .	205 00
		Administration.. . . .	319 62
		Balance on hand.. . . .	55,588 25
	<hr/>		<hr/>
	\$1,024,811 29		\$1,024,811 29

QUEBEC

Trustees:

Brig.-Gen. G. E. McCuaig, C.M.G., D.S.O., Chairman.
 Brig.-Gen. E. de B. Panet, C.M.G., D.S.O.
 Lieut.-Col. C. B. Price, D.S.O.
 Lieut.-Col. John F. Buckley, Secretary.

The fund of the Province of Quebec has only commenced to function from the first of November, 1928, so there is no expenditure prior to that date, other than the rent of safety deposit box and revenue stamps for cheques issued prior to March, 1928.

Assistance may be granted from the fund to the following:—

Ex-members of the Canadian Expeditionary Force, who saw service in France or England in the late war, or members of the Royal Canadian Navy, who served overseas, except those who are in receipt of pension or assistance from the Government.

Any ex-member of the Canadian Expeditionary Force, who fulfills the above conditions, but is not in receipt of pension, may be helped by the fund, in case of sickness, accident, or circumstances beyond his control (other than unemployment) in such manner and for such length of time as the Board of Trustees may decide.

The fund is also applicable to dependents of deceased ex-soldiers, providing they are not in receipt of pension.

The following is a statement of receipts and expenditures, as submitted by the trustees:—

Amount received.. . . .	\$267,606 55	Investments.. . . .	\$288,660 94
Interest.. . . .	21,408 60	Administration.. . . .	34 00
		Balance on hand.. . . .	320 21
	<hr/>		<hr/>
	\$289,015 15		\$289,015 15

NOVA SCOTIA

Trustees:

Capt. the Rev. Clarence MacKinnon, D.D., Chairman.

Major Edgar J. Vickery, Secretary.

Mr. John Vincent MacNeil.

The Nova Scotia Board of Trustees, with the co-operation of the Nova Scotia Branch of the Canadian Legion, made a wide survey of the objects to which the money could be devoted.

Special attention was given to non-pensioned T.B. cases among indigent ex-service men and their dependents. Thirty such cases were placed in Kentville Sanatorium, where there were as many as eighteen at one time. Expenses amounted to \$14,000, and some patients are still being taken care of. Relief was also granted to the most needy and deserving cases, but as this, at best, is only a temporary palliative, the Board is seeking ways and means of making some more permanent arrangements. It is also pointed out that \$3,400 has been repaid by ex-soldiers, who have been helped through this Fund.

The following is a statement of receipts and expenditures:—

Investments, as at 1.4.27.. . . .	\$ 94,092 82	Investments.. . . .	\$ 38,563 25
Loans outstanding, as at 1.4.27.. . . .	7,200 00	Unemployment relief.. . . .	31,291 93
Balance on hand, as at 1.4.27.. . . .	8,558 70	Sickness relief, less reimbursement.. . . .	10,348 98
Interest	5,358 70	Special loans.. . . .	11,397 13
Profit on investments sold	2,234 13	Education.. . . .	224 00
		Grants to N.S. Legion.. . . .	8,500 00
		Administration.. . . .	10,429 30
		Balance on hand.. . . .	689 76
	<hr/>		<hr/>
	\$117,444 35		\$117,444 35

NEW BRUNSWICK

Trustees:

Major John S. Scott, Chairman

Major H. S. Priestman.

Major J. Gilbert Hart, Secretary.

There was no important change in the policy adopted previously by the New Brunswick Trustees, in the administration of the fund.

Relief has been provided as in the past to ex-service men and their families where definite need was shown, particularly in the case of widows and dependents not entitled to Pension.

The following is a statement of receipts and expenditures:—

Investments, as at 1.4.27.. ..	\$82,658 37	Investments.. .. .	\$82,658 37
Balance on hand, as at 1.4.27..	3,767 18	Relief.. .. .	4,969 30
Interest.. .. .	4,444 56	Administration.. .. .	1,230 78
		Balance on hand.. .. .	2,011 66
	<hr/>		<hr/>
	\$90,870 11		\$90,870 11

BRITISH COLUMBIA

Trustees:

Hon. Mr. Justice D. A. McDonald, Chairman.

Lieut.-Col. W. W. Foster, D.S.O.

Lieut.-Col. F. A. Robertson, D.S.O

The major portion of expenditures have been for relief purposes. The general policy of the trustees has been to grant assistance to ex-service men and their dependents, for relief of distress when caused by illness, emergency, or death. No grants have been made for straight unemployment relief. In cases of death, assistance has been given in a number of cases in the payment of funeral expenses.

It was generally agreed that the Canteen Fund should not be kept indefinitely, but should be used during the lifetime period of those who contributed to the fund.

The expense account for the year amounted to only forty dollars. It will be noted that the fund has not been charged anything for administration expenses. The fact that the Secretary of the Board of Trustees is also Chairman of the British Columbia Returned Soldiers' Aid Commission makes this possible; all necessary expenses such as office rent, salaries, stationery, postage, travelling expenses, etc., are included in the overhead charges of the Returned Soldiers' Aid Commission, which is a department of the provincial Government. As long as this arrangement continues, veterans are assured that the whole fund will be used for the benefit of ex-service men and their dependents.

The following is a statement of receipts and expenditures:—

Investments, as at 1.4.27.. ..	\$233,185 95	Investments.. .. .	\$233,185 95
Cash on hand, as at 1.4.27.. ..	21,718 34	Relief and grants.. .. .	27,121 49
Interest.. .. .	11,321 77	Administration.. .. .	40 00
Loans repaid.. .. .	260 85	Conference cost.. .. .	1,350 46
		Balance on hand.. .. .	4,789 01
	<hr/>		<hr/>
	\$266,486 91		\$266,486 91

MANITOBA

Trustees:

Brig. Gen. R. W. Paterson, C.M.G., D.S.O., Chairman.

Brig. Gen. H. M. Dyer, C.B., C.M.G., D.S.O.

Major D. M. Duncan.

The Trustees of the Manitoba Canteen Fund report that the total number of cases dealt with since the board commenced operations in February, 1926, has been 1,056, of these 619 cases being in the year under review. These figures do not in any way represent the amount of actual work done as the above entailed 7,628 services, not including the investigation of cases not found eligible for assistance.

The Trustees wish to place special emphasis on the fact that these extensive operations were made possible only by the co-operation of the Red-Cross, who have given their services to the board free of all expenses up to the present time. They have given notice, however, that after June 30, they will be unable to continue this service, and it will be necessary for the Board to set up its own machinery which will entail considerable additional expense.

The board has continued its educational work through the Khaki University and Y.M.C.A. Memorial Board and has given educational aid direct in a number of cases. The policy of the trustees has been to give such assistance as will fit the applicant to make his own way rather than to hand out relief in the ordinary sense of the word.

The following is a statement of receipts and expenditures, covering two years:—

Amount received.. . . .	\$245,317 52	Investments.. . . .	\$235,566 04
Interest.. . . .	21,411 17	Relief.. . . .	25,477 91
		Loans.. . . .	470 28
		Poppy Day Fund.. . . .	700 00
		Education.. . . .	2,365 00
		Administration.. . . .	1,826 06
		Balance on hand.. . . .	353 40
	<hr/>		<hr/>
	\$266,728 69		\$266,728 69

PRINCE EDWARD ISLAND

Trustees:

Major Ernest H. Strong, M.C., Chairman.
 Capt. Wm. A. McLaren.
 Capt. Donald F. Tierney.

The Prince Edward Island Board of Trustees report that assistance to specially meritorious cases was given to ex-members of the forces, or their dependents. Sixteen cases came under this class during the past year, and any case where relief was granted or refused, was only so after careful investigation.

The Board is of the opinion that the Funds at their disposal will all be required to meet cases of the class above mentioned, which will continually arise amongst the returned soldiers or their dependents.

The following is a statement of receipts and expenditures:—

Deposit with Provincial Govern- ment, as at 1.4.27.. . . .	\$16,500 00	Investments.. . . .	\$16,500 00
Bank balance, as at 1.4.27.. . .	726 26	Administration.. . . .	77 05
Interest.. . . .	842 35	Relief.. . . .	928 00
	<hr/>	Balance on hand.. . . .	563 56
	\$18,068 61		<hr/>
			\$18,068 61

ALBERTA

Trustees:

Lieut-Col. W. G. MacFarlane, Chairman.
 Mr. G. H. Wade, M.D.
 Mr. G. W. Waistell.

The board has not yet received any recommendation from the various association of ex-service men, dealing with the ultimate disposal of the fund. The board, therefore, continued its work of relief to deserving ex-soldiers until such time as some practicable scheme of utilization of the fund has been brought forward and approved by ex-service men generally within the province. Relief has been granted as far as possible when distress or sickness exists, but the funds are not used for straight unemployment relief.

The board considers that the number of applications for relief will increase from year to year, as some ex-service men are breaking down under the strain of maintenance of themselves and families. It is, therefore, essential that the greatest care be exercised in the dispensation of relief and that the fund be maintained as long as possible in order to deal with these cases for whom no other form of assistance is, at present, known to be available.

The following is a statement of receipts and expenditures, covering a period of two years:—

Amount received	\$178,496 47	Investments	\$171,701 82
Interest earned	14,321 18	Relief, less repayments	18,405 65
Profit on sale of bonds	1,600 00	Administration	2,818 30
		Balance on hand	1,491 88
	<hr/>		<hr/>
	\$194,417 65		\$194,417 65

SASKATCHEWAN

Trustees:

Capt. Albert Humphrey White, M.C., Chairman.
Dr. Charles Gordon Cox.
Lieut.-Col. James McAra.

Ten meetings were held during the second year of administration of this fund. During this period 170 applications were received, requesting financial assistance, and 96 were approved, involving an outlay of \$8,177.05. Repayments have amounted to \$640, and the sum of \$1,127.70 has been repaid on account of relief disbursements.

No suggestions have yet been received from the returned soldiers' organizations as to the disposal of the principal and any relief granted has been done from the interest earned from investments.

The trustees are indebted to the Canadian Red Cross of Regina, for granting a continuance of free office space.

The following is a statement of receipts and expenditures:—

Investments, as at 1.4.27	\$161,733 86	Investment at cost	\$162,749 32
Balance on hand, as at 1.4.27	2,404 56	Relief disbursements, less repayments	6,519 09
Loans outstanding, as at 1.4.27	600 00	Loans less repayments	1,430 26
Interest	7,289 87	Advance outstanding	22 80
		Administration	769 02
		Balance on hand	537 80
	<hr/>		<hr/>
	\$172,028 29		\$172,028 29

YUKON TERRITORY

Trustees:

Mr. G. I. MacLean, Chairman.
Mr. Hamilton Daglish.
Mr. John F. MacLennan.

The fund is used to assist deserving cases of ex-service men, who are not eligible for assistance from other sources. Each case is being dealt with on its own merits.

The following is a statement of receipts and expenditures:—

Fund, as at 1.4.27	\$5,105 00	Investments	\$5,105 00
Balance on hand, as at 1.4.27	659 94	Loans, less repayments	545 80
Loans, as at 1.4.27	557 80	Bank balance	951 36
Interest	279 42		
	<hr/>		<hr/>
	\$6,602 16		\$6,602 16

UNITED KINGDOM

The Canteen Fund in Great Britain is administered by the United Services Fund, in accordance with the regulations under which the British Canteen Funds operate. A considerable number of deserving cases were looked after and assisted through this fund, in matters pertaining principally to children's education, hospital maintenance and care of convalescing children of ex-service men.

The following is a statement of receipts and expenditures:—

	£	s	d		£	s	d
Fund, as at 1.4.27.. . . .	10,028	16	5	Relief.. . . .	908	1	0
Interest.. . . .	226	19	5	Balance on hand.. . . .	9,347	14	10
	<hr/>				<hr/>		
	10,255	15	10		10,255	15	10

AMERICAN RED CROSS

The American Red Cross, which operates the Canteen Fund in the United States, reports that the number of loans and grants made is considerably greater than in the previous year. The average expenditure per case has been about \$57.00.

The report indicates that the preponderance of applications still remains in the Eastern area, although there has been a decided increase in the number in the Pacific area.

The following is a statement of receipts and expenditures:—

Fund, as at 1.4.27.. . . .	\$49,055	71	Relief.. . . .	\$ 3,918	32
Interest.. . . .	2,374	89	Balance on hand.. . . .	47,512	28
	<hr/>			<hr/>	
	\$51,430	60		\$51,430	60

IMPERIAL CANTEEN FUND

Trustees:

Col. G. E. Sanders, C.M.G., D.S.O., Calgary, Alberta.

Brig.-Gen. J. A. Gunn, C.M.G, D.S.O., Toronto.

Lt.-Col. A. A. Magee, D.S.O., Montreal.

The following regulations govern the granting of assistance by the Board of Trustees of the Imperial Canteen Fund in Canada:—

In determining the eligibility of an applicant for assistance, actual need is the governing factor.

Eligibility for assistance is limited to Imperial ex-service men, discharged from the Army, or Royal Air Force, prior to the 31st of August, 1921; and to men who served with the Royal Naval Division, and to their dependents. Ex-naval men, other than those who served with the Royal Naval Division, shall not be eligible.

Preference in granting assistance is given to those who are suffering from a war disability. No portion of the said fund will be used for unemployment relief or other cases for which adequate relief is available from other sources.

The following is a statement of receipts and expenditures:—

REPORT
OF THE
DEPARTMENT OF HEALTH
FOR THE FISCAL YEAR ENDED MARCH 31, 1928

OTTAWA, July 14, 1928.

Hon. J. H. KING, M.D.,
Minister of Health,
Ottawa.

SIR,—I have the honour to report on the Department of Health for the year ended March 31, 1928, under the following headings:—

1. Food and Drug Division.
2. Narcotic Division.
3. Proprietary or Patent Medicines.
4. Pollution of the Inland Waters of Canada.
5. Marine Hospitals Service.
6. Quarantine Service (including Leper Stations).
7. Immigration Medical Service.
8. Laboratory of Hygiene.
9. Venereal Disease Control.
10. Child Welfare.
11. Hospitalization and Sanitation.
12. Financial Statement.

J. A. AMYOT,
Deputy Minister of Health.

FOOD AND DRUG DIVISION

This was a year of progress with outstanding developments in connection with legislation and improvement in laboratory services. The Food and Drugs Act was amended to increase its usefulness and maintain a measure of protection to the purchasing consumer for whose benefit it was clearly intended.

By this amendment the statement of net contents, in terms of weight, measure, count, is required on all packages of food or drugs weighing two ounces or more, gross, whether such packages are sealed or not, excepting certain containers legalized by the Meat and Canned Foods Act. Deception by slack fill is also covered. The section of the Act of 1920 dealing with misbranding of foods was extended to cover drugs as well. Provision was made for control of drugs such as digitalis, ergot, strophanthus, vaccines, sera, tissue preparations such as pituitary extract, and arsenicals to be used for treatment by injection. For these, biological tests are necessary and it will take considerable time to develop a complete system of licensing, inspection and testing. Judging from the quality of these drugs as sold in Canada, there was a decided need for this extension to the Act.

In the revision of the statutes the Honey Act and the Maple Products Act were made to appear as Parts II and III, respectively, of the Food and Drugs Act.

Laboratory Services.—A laboratory has been opened in Toronto, in order to meet the increasing needs of a large centre of population and a very heavy port of entry. This will not only make the inspection service more effective, but will considerably reduce delays and expenses. Laboratory services are now provided at the following district centres: Halifax, Montreal, Ottawa, Toronto, Winnipeg and Vancouver.

The following table summarizes the laboratory work for this year:—

SAMPLES EXAMINED IN THE FOOD AND DRUG LABORATORIES

Nature of Samples	LABORATORIES					
	Ottawa	Halifax	Montreal	Toronto*	Winnipeg	Vancouver

Food and Drug Inspection.—The twenty-six inspectors of food and drugs reported a total of one hundred and fifty-four prosecutions during the year. Of these ninety-nine were for meat and meat products, resulting very largely from an effort to enforce the regulation respecting the use of chemical preservatives and colouring matter in sausage and hamburger steak. The remaining prosecutions cover maple products, soft drinks, spices and drugs. Fines, fees and costs collected amounted to \$11,178.30. It is to be remembered that in administering the Act all possible effort is made to secure compliance with the law without resorting to prosecution. It is only where adulteration or misbranding is wilful, persistent or dangerous, that legal proceedings are instituted. The number of prosecutions does not, therefore, fully portray the activities of the inspection.

FOODS

The following comments are offered respecting some of the more important items in connection with the work on foods.

Baking Powder.—During the year, twenty-eight samples of baking powder and baking powder materials were examined, chiefly for available carbon dioxide and freedom from excessive amounts of metallic impurities. Warning was deemed necessary to one manufacturer because the finished product was slightly substandard. Statement of net weight was omitted from another line. One blunder committed by a wholesale house would have been followed by serious consequences, had there not been prompt and effective check. In this instance, cockroach powder containing a fluoride was sold by mistake instead of baking powder.

Beverages.—Four hundred and fourteen samples were analyzed in the laboratories and in addition to this control many labels were inspected from the standpoint of the Food and Drugs Act. This trade represents many problems from the regulatory standpoint, partly because small operators are entering the field from time to time and many labelling defects arise on a plea of lack of information. In general there is no great difficulty in securing reasonable compliance with the requirements of the Act. Far more serious is the wilful use of saccharin which is prohibited and the use of preservatives without label declaration, as required by the regulations. It was found necessary to institute twenty-six prosecutions for offences arising from these two sources. It is to be hoped that these will have the effect of improving the beverage trade.

Butter.—One thousand and seventy-seven samples of butter were analyzed during the year. This work was done largely in co-operation with the Department of Agriculture in the enforcement of the Dairy Industries Act. Strict control was kept of the butter importations, particularly at the port of Vancouver. Inspection was made of 25 shipments from Australia, 291 from New Zealand, 1 from the Fiji Islands and 9 small shipments from the United States. It was found that there was general compliance with the regulations respecting preservatives, particularly that limiting boric acid. Two of the shipments from the United States were refused entry because of excess moisture content.

Cocoa.—Of fifty-six samples of cocoa powder all proved to be of fair quality. In some instances, particularly in the cheaper powders sold from bulk, the fat content was comparatively low but in the absence of excess shell or fibre they met the standards generally accepted on this continent.

Eggs (Processed by drying or refrigeration).—Fourteen import shipments from China were examined at the laboratories in Vancouver and Halifax and found to be of satisfactory quality.

Figs.—This fruit always presents a special problem because the fig is particularly subject to infestation with insects and moulds. One hundred samples were examined in the laboratories. From the results obtained, five comparatively heavy shipments were refused entry. Two of these, however, were but trial shipments made by a New York importer, who, finding a huge consignment from the East refused entry to the United States at the port of New York because of defective quality, endeavoured to re-ship them to the Canadian market. As this attempt was not successful further shipments were not made. In comparing the condition of this fruit as sold now with what it was a few years ago, a decided improvement is noted in the general quality of figs coming from Smyrna and other countries in the East. The industry there is evidently making a successful effort to meet the higher standards demanded by inspection on this continent.

Fruits, Dried and Evaporated (Apricots, Peaches, Raisins).—One thousand one hundred and sixty-four samples of dried fruits of all kinds, were taken from import shipments. In the collection of samples there is full co-operation with the Department of National Revenue. Entry was refused to many shipments because of excess sulphites. These exclusions from the Canadian market cover ten shipments of apricots and two shipments of peaches. This condition contrasts very favourably with that noted a few years ago, before this control was instituted.

Ice Cream.—One hundred and ninety-eight samples of this important food gave, upon analysis, results indicating in general, a fair observance of the regulations fixing the standards of quality. It was found necessary, however,

to call the attention of certain manufacturers to the fact that they were trying to standardize their products too closely to the minimum of 10 per cent milk fat.

Maple Products.—There is a considerable improvement in the quality of the products sold this year. The brown sugar cakes and certain syrups, formerly sold during the maple season, did not appear in the trade, apparently as a result of the special effort made last year to enforce the sections of the Maple Act, which prohibit the sale of any such sugar or syrup resembling maple sugar or maple syrup. Twelve prosecutions for adulteration were brought to a successful issue. Considerable laboratory work was also done for the investigations and relief of the problems of this industry.

Meats and Meat Products.—Six hundred samples of these products were examined in the course of the year. The results of analysis gave rise to ninety-nine prosecutions because of adulteration in sausages and hamburg steak. Persistent efforts have been made to maintain quality in these products and to combat the wishes of those who would use dyes in a deceptive manner and employ chemical preservatives as a substitute for proper refrigeration and careful handling. An observance of the regulations would undoubtedly improve the market in these products by establishing confidence in the mind of the purchasing consumer. It is quite impossible to handle meat carelessly and to disguise or arrest incipient putrefaction, to prevent spoilage by the use of sulphites and give the purchaser a product of good quality. In some districts the trade has failed to appreciate these facts, although in other localities the market in such meat products is on a much more satisfactory basis.

Nuts (Almonds, Filberts, Peanuts, Pecans, Walnuts, etc.).—In the course of the year 485 samples of nuts of all kinds were examined in the laboratories. Most of these samples came from import shipments held in customs pending the result of analysis. This has been found to be a far more satisfactory policy than any procedure based on attempts to inspect after the goods are distributed to the trade. Several very heavy shipments were refused entry and a few were reconditioned before sale was allowed. A decided improvement of the quality noted in previous years was observed in all lines. One stock consisting of ten cases of shelled walnuts was disposed of by confiscation and destruction as it was quite unfit for food.

Spices.—The results obtained in the analysis of 911 samples of spices of all kinds indicate some improvement in the general quality of these products as sold, but in view of the fact that such analytical work has been conducted annually since 1876, it is evidently a difficult matter to legislate this trade into honesty. It has been found necessary to make several very heavy seizures of adulterated pepper containing over 30 per cent of rice flour. These, consisting of several tons, will be disposed of by forfeiture and donations to charitable institutions. In addition to this important case, thirteen prosecutions were instituted for the adulteration of spices. As a result of the inspection at ports of entry the quality of imported spices, particularly that of nutmegs, shows decided improvement over that of previous years. The trade cannot, therefore, complain of unsuitable raw materials.

Other Important Foods examined may also be mentioned briefly, the numbers following each item indicating the number of samples analysed during the year: Cheese, 41; macaroni and spaghetti, 94; flavouring extracts, 85; fish, 46; food colours, 192; coffee, 33; prepared milk, 74; jams, 49, etc.

DRUGS

Acetylsalicylic Acid.—This drug is very widely sold under a variety of trade names, the majority of which give no clue as to their chemical composition. One stock of five-grain tablets was found defective with respect to weight. These so-called five-grain tablets weighed only 4.77 grains, the acetylsalicylic acid content being 4.5 grains. These failures indicate careless manufacture. Fortunately this condition has not become general. There was a great improvement in the general run of market samples of this drug as compared with those collected last year and two years ago.

Belladonna Preparations.—Belladonna preparations were dealt with in two articles published in the Journal of the Canadian Medical Association (August, 1927, Vol. XVII, page 923; also October, 1927, Vol. XVII, page 1187). There seems to be considerable confusion in the matter of labelling these preparations and the quality of many samples was decidedly inferior. Subsequent samples show some improvement in the market but it will likely require considerable time for the trade to appreciate the importance of maintaining quality in these products.

Camphor, Spirits of.—In the following up the work done in 1926, further samples of spirits of camphor were procured and analysed. One stock, found to contain only 7.25 grams of camphor per 100 cc. was held in detention until brought up to the requirements of the B.P. (10 per cent). The product of one manufacturer was found to contain brucine, as it had been made from a denatured alcohol, the sale of which (as rubbing alcohol) is authorized by the Department of National Revenue.

Camphorated Oil.—Occasionally samples of this preparation come to the laboratory for analysis, as it enjoys extensive sale and use, although not regarded as an important potent drug. Apparently the majority of manufacturers have adopted the formula of the United States Pharmacopoeia, in which cottonseed oil is used instead of the olive oil specified in the British Pharmacopoeia. There is no evidence that cottonseed oil is unsatisfactory as a vehicle for the camphor and if properly labelled as a United States pharmacopoeial product, its sale in this form does not conflict with the requirements of the Food and Drugs Act.

Ether, Anaesthetic.—Ether for anaesthesia continues to present a problem. Several samples have been found not to meet the requirements of either the U.S.P. or the B.P. Defective stocks have been drawn from the market on several occasions. There seems to be less difficulty in manufacturing satisfactory ether than there is in maintaining quality in containers while passing through the channels of trade and the storage period preceding use in the operating rooms. The deterioration of ether has been the subject of many technical investigations and it is hoped that a study, now in progress in the laboratory, will assist in improving matters.

Hydrastis (Golden Seal).—Fifty-one samples of commercial preparations of Hydrastis were examined and made the subject of a special report (Canadian Medical Association Journal, 1927, Vol. XVII, p. 1317). Only 23 per cent of the liquid extracts and about 15 per cent of the tinctures met the pharmacopoeial requirements. There is great confusion in labelling and evident lack of standardization by the manufacturers. Publication of details has been made, largely as a formal warning. Effects will be judged by results of subsequent collections.

Hydrogen Peroxide.—A number of samples collected in the district of Ottawa were found to be substandard, the available oxygen in one instance as low as six per cent instead of the ten per cent required by the pharmacopoeia. These were traced back to manufacturing jobbers who had been making decidedly amateur attempts at preparing this drug for the market. As the manufacturing processes for making and stabilizing peroxide solutions of satisfactory quality are now well past the experimental stage, there is no excuse for gross failure in marketing a product which will be satisfactory to the purchasing consumer. A seizure of existing stocks was necessary to secure adjustment. Subsequent examinations have shown a decided improvement in the quality of the peroxide purchased in retail stores.

Iodine, Tincture of.—There was a recurrence of complications arising from apparent misunderstanding of the iodine content of a certain grade of denatured alcohol furnished by the Department of National Revenue. The manufacturer responsible for the error was compelled to withdraw substandard stocks from the market. It is to be hoped that the revision of the British Pharmacopoeia, now pending, will provide different standards, sufficient for all the needs of the trade, and relieve the situation complicated by the use of the same name for solutions of widely variant strength.

Medicated Wines.—It is held that a label declaration must be made of the medication claimed to be present and that such medication shall be in a manner detectable by the usual methods of analysis. Large stocks in Toronto were held until there was compliance with these conditions. This has no bearing upon the possible misuse of these wines for beverage purposes, as it was clearly not the intent of the Food and Drugs Act to limit or restrict the sale of alcoholic beverages. The regulations require, however, that label declarations shall be reasonably accurate.

Nux Vomica Preparations.—The results obtained in the analysis of forty-one samples of Fluid Extract of Nux Vomica and of sixty-five of Tincture of Nux Vomica, procured on the open market in the drug stores of the several provinces of Canada, revealed a very undesirable condition of affairs. Fifty-five per cent of the tinctures and sixty-three per cent of the fluid extracts failed to meet the requirements fixed by the British Pharmacopoeia. Details were fully presented in an article published in the Journal of the Canadian Medical Association (July, 1927, Vol. XVII, page 803). A subsequent collection showed some improvement although it is evident that carelessness in preparation and marketing has not been entirely eliminated. One pharmaceutical manufacturer protested vigorously against being penalized, after much extensive warning, because he was found to be using a method of assay fundamentally in error. Undoubtedly it is the duty of both manufacturers and dispensers to pay great attention to the quality of this drug as sold.

Sulphur Ointment.—It was found upon inspection that one manufacturer was dispensing this preparation made with a petroleum base. As the pharmacopoeias and standard works do not recognize such an ointment as official, the product must be regarded as adulterated.

DRUGS, NARCOTIC

Four hundred and sixteen samples were analyzed for the purposes of the Opium and Narcotic Drug Act. In a great majority of cases certificates were used for court cases. In this very exacting work, requiring extra care and skill, very satisfactory services were given by the analysts in the Ottawa laboratory and by the analysts in charge of the branch laboratories. There still remains for adjustment, the sections of the Act which have been construed as requiring the appearance of the analyst in court.

PATENT MEDICINES

During the year sixteen samples of patent medicines were examined in the laboratory, chiefly for the purpose of comparing the composition of preparations actually on the market with that indicated by the formulæ submitted with the application, prior to the assignment of registration number. In one instance the alcoholic content was in excess of the amount claimed and the accompanying medication decidedly low. In another case the strychnine content was at variance with the facts, apparently because of the manufacturer confusing strychnine with nux vomica. There was a full measure of co-operation with the Proprietary or Patent Medicine Division in dealing with the claims made for registered preparations upon the label or otherwise.

OTHER DRUGS

From the standpoint of the administration of the Act, the most difficult problem presented in connection with drugs arises from the flagrant advertising employed in the marketing of preparations sold under distinctive names, which are not to be found in any pharmacopœia or generally recognized standard work on materia medica or drugs. The amendment to the Act, made during the 1927 session of Parliament, prohibits the making of false or exaggerated claims for any drug. It has taken considerable time for all parties interested to become informed of this amendment but plans are being made for an extensive campaign to protect the purchasing public from being misled by improper advertisements. It is hoped that prosecution of a few of the worst offenders will serve as an example and that the ultimate result will be an improvement in these matters.

NARCOTIC DIVISION

The Narcotic Division of the department had a very busy year, as a result of which it may safely be stated that the narcotic situation in Canada continued to improve.

In so far as the legal traffic was concerned, some three hundred more ounces of cocaine were imported than in 1927, while there was a marked reduction of nearly two thousand ounces in the morphine entering Canada, with a small reduction of fifty pounds of crude opium as compared with the previous year.

In November, 1927, a meeting was held in Ottawa between officials of the department and representative wholesalers, licensed to handle narcotics, at which a number of important points were discussed, both from the standpoint of the administrative control of narcotics, and also the commercial aspect thereof, as a result of which certain standard rules were agreed to, and all license holders circularized accordingly, the principal points being:—

- (1) That narcotic orders, in transactions between wholesalers, should be signed by a responsible person, who would designate under his signature his status in the firm issuing the order.
- (2) That narcotics despatched by wholesalers direct to physicians, at the request of, and which were charged to retail druggists, should be reported monthly as sent to the druggist or physician concerned, thus rendering it possible to keep an accurate record in the department of the total quantities of narcotics received by physicians from all sources.
- (3) That telephone or telegraph orders for narcotics should not be accepted by wholesalers, and that proper written orders therefor must be actually on their premises, and passed upon by a responsible officer of the firm before the despatch of the narcotics.

- (4) That preparations containing less than one-quarter grain of morphine per fluid ounce, or two grains of opium per ounce, could be supplied to retailers in small packages not containing over sixteen ounces, without a narcotic order, if properly labelled, as provided under section (8), as being unlawful to administer to children under two years of age.

At the request of the wholesalers, all hospitals were circularized, pointing out that under the Act narcotics could only be obtained for a hospital on a physician's order, which had to be on the premises of the wholesaler before the narcotics were shipped. It was also pointed out that in some cases it was known that hospitals had no superintending or resident physician, and that there might conceivably be a reluctance on the part of any one of several attending physicians to take the responsibility for signing such orders, in which case there would be no objection to their being countersigned by either the lady superintendent, the buyer, or the dispenser, for the protection of the physician, but that the latter's signature was an absolute essential under the Act.

In so far as the retail druggists were concerned, the inspection of a large number of drug stores was undertaken, and this work will be continued from year to year. In a very considerable proportion of cases various conditions, more or less serious, which were in contravention of the Act, were discovered, such as the acceptance of narcotic prescriptions not properly signed or dated, neglect to enter narcotic transactions in the narcotic register, the holding of blank prescriptions signed in advance by physicians, etc. In every instance, in addition to a verbal warning issued at the time of inspection, a letter was despatched from the department to the drug store concerned, explaining the law on the subject, with follow-ups where necessary, until an assurance was received that the Act would be more carefully followed in future. In this way it was possible to very materially improve conditions affecting the retail sale of narcotics without recourse to the courts. While any retail druggist is limited to the purchase of a maximum of one ounce of any one narcotic in any one month, there were found to be a few whose legitimate requirements, by reason of their being located in a large centre, or of having handled for many years the orders of their local hospital, exceeded the maximum. In every such case, where conditions warranted it, permission was given for the purchase of a larger supply.

In so far as physicians are concerned, a large amount of work was undertaken in an endeavour to compile, and keep up to date, a complete list of those "registered as medical practitioners, and in good standing under the Act governing the practice of medicine and surgery" within the various provinces. The same procedure was followed with regard to dentists and veterinary surgeons, and the thanks of my department are due to the registrars of the various associations in the nine provinces for their co-operation, and for the very considerable trouble which they took in that regard. When such lists were finally compiled, it was found that certain persons had been in the habit of obtaining narcotics, who were not legally entitled to do so. Such cases were immediately adjusted, and continue to be as they arise, so that it can now safely be said that the system of control of narcotics in the legal traffic is as efficient as it is possible to make it.

Many physicians were communicated with, whose purchases or prescriptions for office use were above the average, and while the department has neither the right nor desire to interfere between a physician and his patients in cases where a medical condition exists which requires the use of narcotics, I regret to state that a certain proportion of cases was discovered where the narcotics obtained were not being administered in accordance with the Act. In some instances patients were being given large quantities daily, under circumstances

where no condition other than addiction existed. Some of these cases were of long standing, dating back to the period before there was an Opium and Narcotic Drug Act, which made such conditions illegal. No one appreciates more earnestly than I do the unfortunate situation in which the practising physician is placed in cases such as these, but if some consideration is given to the subject, it will be realized how impossible it is to permit their patients to continue indefinitely to receive large quantities of the drugs to which they are addicted. The unfortunate physician, with one or more of such cases on his hands, quite naturally says:—

“It is against the law for me to continue to treat these cases as I have done in the past, yet what am I to do with them? There are no institutions in my province where proper treatment is available, or if there is such a place, it is a private institution where the fees, in so far as my cases are concerned, are prohibitive.”

At present the only answer available to the department is that the responsibility for the care and treatment of addicts, by the provision of institutions therefor, or the making available of accommodation in existing institutions, with power to commit addicts thereto for treatment, is just as much a provincial obligation as is the care and treatment of the tuberculous or the insane, and although this phase of the narcotic problem has been strongly stressed for many years past, Alberta is the only province in Canada where both power to commit and provision for treatment exist, although Nova Scotia has passed legislation in that regard without, however, making it effective by providing the necessary accommodation. If, in such circumstances, the department allows matters to continue as formerly, the intention of Parliament, as expressed in the Opium and Narcotic Drug Act, is not being carried out, and we are failing in our obvious duty, not only because the law on the subject is perfectly clear, but because, from our own experience, we realize how essential it is to prevent matters remaining as they are, and have these unfortunate people continue as addicts for the balance of their lives. Similarly, if they are allowed to carry on as before, and receive what narcotics they want from their attending physicians, everything remains quiescent, and no government, provincial or otherwise, could be expected to undertake the expenditure involved in the provision of institutional treatment if, by reason of everything remaining quiescent, no particular purpose would apparently be served, and with no public opinion apparently demanding a change. I have also in mind the fact that by endeavouring to enforce the provisions of the law as it now stands, we undoubtedly are of considerable assistance in co-operating with the physician concerned in effecting cures in a certain number of cases, particularly where the patient concerned is possessed both of a certain standing in the community, and of a real desire to be cured. Letters received from physicians at the successful conclusion of such cases more than make up for the lack of success or co-operation which are also experienced in other instances, and I cannot for one moment agree that we should merely abandon all effort to cope with the evil effects of drug addiction so long as we are achieving even a small measure of success, which would, however, be undoubtedly increased to a marked degree if the remaining provincial governments filled the crying need which exists for the provision of institutional facilities within their borders, to which narcotic addicts could be sent by the physicians practising in their provinces, and thus in many cases render it possible to return to a normal life, members of their own communities, who are in many instances entirely susceptible of being again made decent citizens, and also not only free the members of the medical profession from a condition which many of them feel to be more intolerable as each year goes on, but perform a social service which would be of incalculable benefit.

Cases of addiction, other than those of the underworld, naturally become known to us only in the strictest confidence, and I venture to state that if the medical profession had at its disposal the machinery for handling the narcotic addict in a manner somewhat similar to that of the insane, in so far as administration is concerned, the results in some provinces at least would prove surprising, and more than worth while. Drug addiction as an underworld accompaniment may be with us permanently, and underworld associations will always result in a large percentage of reversions after cure, but there are many persons in the higher planes of life who would almost certainly never revert if given the chance of cure under conditions involving the control both of the patient and his narcotics during treatment, which are recognized as being absolutely essential if concrete results are to be obtained. Furthermore, every drug addict removed from the streets, and sent to an institution for treatment, not only lessens the demand to that extent, and thereby renders more effective the efforts which are made to control the illicit traffic, but reduces the criminal activities of the underworld type, who, in so many instances, embark on a life of crime to furnish the means whereby they may cater to their craving. It is also well known that "addicts breed addicts", and any steps taken which tend towards the control and cure of those already addicted, cannot fail to have their effect in preventing the spread of this most insidious habit.

During the year it was unfortunately necessary to institute proceedings against seven physicians, two veterinary surgeons, and three druggists. As cases against medical men naturally result in considerable comment from those not familiar with the circumstances, it might be well to point out that no prosecution is entered until a most careful investigation has been made, which investigation is not initiated as part of a general campaign, but because definite suspicion exists in a particular case. In every instance the evidence available is carefully weighed in the department, and authority to prosecute is not issued unless the circumstances in the case are such that it is considered to be in the public interest, and in the proper administration of the Opium and Narcotic Drug Act to do so.

In order, therefore, that there may be no misunderstanding of the circumstances, which the department encounters in dealing with this class of case, I deem it advisable to quote such details in regard to some of them, without giving the names or places, as will, I trust, make the situation clear.

(1) Doctor "A", resident in a large city, being strongly suspected of commercializing in narcotics by supplying numerous peddlers and addicts, was interviewed by an agent, who arranged to purchase, and paid in advance for, \$7 worth of cocaine. This narcotic, being purely a local anaesthetic, could not conceivably be sold by an honest physician under such circumstances. Later, on the same day, the doctor delivered the cocaine, and expressed a desire to sell drugs by the ounce, as a result of which another appointment was made, on which occasion a deposit of \$14 was paid, and arrangements made for the delivery of an ounce of cocaine and the payment to him of the balance of the purchase price. At this interview Doctor "A" tried to sell an ounce of morphine as well, stating that he was short of money and needed \$50 by the end of the week. In due course the cocaine was delivered, and on examination was found to consist of one-half ounce only. Subsequent investigation proved that the doctor had, on the same day, purchased one-half ounce of cocaine from a wholesaler, and as no narcotics were found in his office, it is reasonable to assume that he deliberately supplied only one-half of the quantity agreed upon and paid for. He was arrested, and eventually sentenced to eighteen months' imprisonment, the judge making the following remarks when sentencing him:—

"Doctors who make a living selling drugs will get severe sentences if caught. They are supposed to look after these unfortunate people, and not help them in their habits. It is a more serious offence for a doctor, owing to his position, to be selling drugs illegally, and severe punishment will be given to them."

(2) In the same city Doctor "B", also under strong suspicion, agreed to sell one ounce of cocaine to an agent for \$35, and stipulated that he make the delivery at a house some doors away from his own office. In due course delivery was so made, and on his being arrested, the purchase price, in marked money, was found in Doctor "B's" pocket. He admitted the facts, and claimed that he had mixed three-quarters of an ounce of some other drug with the cocaine, and estimated that he had actually sold only one-quarter of an ounce of the narcotic. He would, therefore, have received \$35 for something which cost him \$3. He made the additional statement that he had not been practising long, found it difficult to get a start, so sold narcotics to make a little money. He pleaded guilty, and was fined \$200 or three months' imprisonment.

(3) In another city Doctor "C", being under suspicion on account of a large number of narcotic prescriptions known to have been issued by him to straight addicts, was visited, and sold twelve and one-half grains of morphine for \$12, at the same time promising to obtain cocaine and a larger supply of morphine for a future transaction. On a later date he sold twenty grains of heroin for \$20, and after four transactions in all, was arrested in due course, found guilty, and sentenced to from six to twelve months' imprisonment.

(4) In another locality Doctor "D" was suspected of supplying narcotics to a young addict under conditions which amply warranted investigation. As a result an agent purchased from the physician eight grains of cocaine, and forty-six morphine tablets, arranging also for further purchases. Five days later ten grains of cocaine, and twenty-five morphine tablets were purchased. A week later seven grains of cocaine were sold for \$5. Shortly afterwards Doctor "D", in return for \$11, sold ninety-two morphine tablets, a bottle of cocaine solution and four needles. A week later he sold twenty-eight morphine tablets, four grains of cocaine, and two prescriptions for twenty-five morphine tablets, and ten grains of cocaine respectively for \$22. He was arrested on that occasion, convicted on the first charge, and committed to trial on the remaining five. He appealed against the conviction, but the Appeal Court of the province dismissed his appeal, and sentenced him to three months' imprisonment. The Chief Justice in delivering judgment stated:—

"The court is of the opinion that the defendant was properly tried, and on credited evidence, properly convicted."

He subsequently pleaded guilty to the remaining five charges, and received similar sentences on each, to run concurrently.

In so far as the two cases against veterinary surgeons were concerned, these were both in the same city, and as the department had strong reason to suspect that narcotics were purchased illegally from them, an agent found that he had no difficulty in purchasing cocaine by the ounce. The court imposed a sentence of three months' imprisonment in each instance.

In the prosecutions of retail druggists one case was developed as a result of an investigation being made into another matter, it being ascertained that although the accused had been a druggist for twenty-five years, he kept no narcotic register whatever, although narcotic prescriptions, the subject of the other investigation, which were known to be forged, were being filled. The department had ample reason to take action in this case, and a fine of \$200 was imposed.

In the other case, which was one of selling paregoric illegally, which preparation contains one-quarter of a grain of morphine per fluid ounce, the conditions were such as to reveal a very distressing set of circumstances, upon which it is not advisable to dilate, and my department felt that court proceedings were necessary. A fine of \$50 and costs was imposed.

THE ILLICIT TRAFFIC

While there has been a decrease in the number of convictions obtained for breaches of the Opium and Narcotic Drug Act during the period under review, the year has been one of exceptional activity on the part of the officers administering this Act, and the policy of aiming at, and continuing to aim at real traffickers has been amply justified, and produced highly satisfactory results. To the furtherance of this end, the Department of Justice, at my request, communicated with the Attorneys-General of the various provinces, pointing out that if, in the ordinary course of the administration of justice, the police forces, both provincial and municipal, within their jurisdiction, would undertake the responsibility of developing and prosecuting the smaller narcotic cases; such as the small street deck peddler, the keepers of opium joints, and the frequenters thereof within their cities and towns, this would relieve the federal officers of a vast amount of petty detail, to say nothing of the saving of time which they were otherwise required to devote to attending court on numerous occasions owing to the frequent remands in connection therewith, which time could be much better devoted to the larger cases, and those of an interprovincial or international character. This change was effected during the summer of 1927, and by means of personal visits to many of the police forces concerned, a basis of mutual co-operation was arranged, which has already proved to be of the greatest assistance. It was realized that some cases required the expenditure of considerable money, which the previously calculated budgets of the local police forces were not prepared to assume, and it was, therefore, arranged that if certain municipal police forces, in the course of keeping their streets or territory clear of the small peddler, encountered an unexpectedly big case, or one in which the various processes of appeal or Habeas Corpus were invoked, the department, as a temporary measure, would furnish, on request, and free of cost, trained legal assistance to represent the Crown in such instances. Similarly, a great improvement was effected by the employment, so far as was possible, of lawyers who would specialize on narcotic work. It can be easily realized that in many of the larger cases, which we handle, money is no object on the part of the prisoner when the evasion of a penitentiary sentence is his aim, and every possible process of law is resorted to with that objective in view. Various new points are constantly being brought before and decided by the courts, and as such cases are concluded, the facts and decisions are at once communicated by the department to the lawyers handling narcotic cases throughout Canada, so that they are at all times au fait with what is going on in the Dominion as a whole; previous errors can be guarded against, and effect given to judgments rendered in various provinces, which are of importance in the rest of the Dominion. The wisdom of this procedure has been particularly exemplified during the past year, when, on the Crown proceeding to appeal in British Columbia against a four-year sentence, on the ground of inadequacy, a seven-year term was imposed by the Appeal Court, under conditions which were almost immediately duplicated in Winnipeg, when prompt action on our part resulted in similar action being taken in that city with equally satisfactory results, although the Vancouver case had not as yet appeared in the Official Law Reports. As an instance of the numerous legal points which are raised by a narcotic trafficker, it will be found that no less than seven narcotic cases are reported in the last volume published (49) of Canadian Criminal Cases, and they are well worth the study of those interested in this problem.

Of the 490 convictions obtained during the year, 351 involved Chinese, but it will be noted from the details of a number of cases included in this survey that the connection of members of that race with the narcotic situation in Canada is by no means limited to operating or frequenting opium joints, but

extends to trafficking not only in opium, but in the three drugs, morphine, heroin and cocaine, which are more commonly the drugs of addiction for Occidentals. It will also be noted that of the 490 convictions, 200 were for possessing or selling narcotics, 166 were for offences in connection with opium smoking, while for 124 we have no definite details. During the year arrangements were made with a press clipping agency for news-clippings covering all narcotic cases appearing in the press, and as a result I hope in future years to be in possession of details in connection with the great majority at least of the cases handled by municipal police forces, or at least those of sufficient interest to warrant a newspaper item. Great assistance in connection with the smaller cases has been furnished by the British Columbia Provincial Police, who have handled many on their own initiative, and assisted us in others, while the work of the city police forces in Montreal, Toronto, Winnipeg, Saskatoon and Vancouver has also greatly aided in ridding our streets of the smaller trafficker, with occasional cases of larger calibre occurring in which the mutual co-operation has been all that could be desired.

The work of the Royal Canadian Mounted Police has been of the highest calibre. Their co-operation has been whole hearted and painstaking, and I have on many occasions had my attention drawn to the extraordinarily careful and clever methods by which most intricate cases have been developed.

I also desire to pay tribute to the most valuable assistance which has been accorded to us by the narcotic authorities of the United States. Co-operation between the two countries in this regard is of almost daily occurrence, and two of our most important cases have been brought to a successful conclusion largely through their loaning us the services of one of their best operatives, which enabled us to inject into the proceedings that element of trained knowledge, combined with a complete freedom of any possibility of recognition, which is so essential in dealing with the "higher-ups". This was particularly exemplified in a case which had its origin in the United States, the trail leading thence to Windsor, then Montreal, and finally to the Pacific coast, where we were able to convict a man known for many years as the leader of the narcotic operators there, who had been previously arrested twice, but had always succeeded in avoiding conviction, although a number of his associates had been imprisoned. This gang were known to be using two very fast motor boats in smuggling very large quantities of narcotics into Canada from the Orient. The details of this case are extremely interesting, and as they afford a good idea of the difficulties which are encountered in developing cases of this nature, they are quoted at some length.

During the summer of 1927, as a result of certain arrests in Detroit, information became available that the source of supply of the opium involved was located in Montreal. With a combination of the services of a special investigator of the United States Narcotic Service, and officers of the Royal Canadian Mounted Police, specially brought in from an outside point, a careful investigation was made in Montreal, as a result of which opium in large quantities was purchased from a certain source in that city. Matters progressed in such a manner, however, that it was definitely known that the large Montreal supply emanated from Vancouver, and that there was a reasonable chance of getting at the main operators in the latter city. The Montreal cases were, therefore, deliberately left open, and our activities transferred to the Pacific coast. It would not be in the public interest to disclose the methods then adopted, but it is possible to state that as a result of a very careful reconnaissance of underworld conditions in Vancouver Chinatown, and the use of certain letters of introduction to intermediaries therein, our special operative was eventually introduced to the "big boss", Lim Gim, who was president of a large Oriental importing house, and had many other financial interests. This operative, posing

as a large trafficker in New York, was closely questioned by Lim Gim, with regard to his acquaintances in those circles in the East. Lim Gim displayed a thorough knowledge of the various operators on the Atlantic seaboard, both in the United States and Canada. Our operative told him that he wanted to buy two hundred tins, over \$10,000 worth, of genuine Lem Kee opium, to take to New York, where there was a good market. At a subsequent meeting Lim Gim stated that he could not furnish that quantity of Lem Kee, adding:—

"We are having a bad time in getting it off the boats now. Sometimes we get it out of the water, and sometimes not. The law is pretty tough now. I could have had 700 cans, which are now in the water off Seattle, but the Seattle connection bid higher for the goods so I let them have it. I get more calls for Lem Kee from the States. I sell more of my No. 2 here, which is a very good grade, about eighty per cent as good as Lem Kee. I have direct wires pulling in Hong Kong, and have the first option on any stuff coming from China. That is how I know 700 tins have gone to Seattle. About fifteen years ago I was in partnership with three other men (whose names were given). At that time I had the market cornered in opium both in the States and Canada, as I used to do all the buying, and nobody got any opium except through us. We broke up two years later, each making \$20,000."

After further details which it is not advisable to disclose, he stated:—

"I sold one hundred cans of Opium three weeks ago to a fellow from Frisco. It was No. 2 and he liked it very well. About the same time a Chinaman from the East bought one hundred and fifty cans. There is no chance for you to get Lem Kee when I haven't got it. You couldn't get two hundred cans of any kind of stuff from anybody here but me as I control it all on the Pacific coast. You know when you went to see (—) last week, he was going to get the stuff from me so you see that I am the big connection."

Lim Gim then suggested that they arrange a code for use in letters and telegrams, the letters "Vancouver B." being selected to represent the figures from one to ten, the name "George" for Lem Kee opium, and "Smith" for No. 2 opium. He also arranged to do business under the name of Charles B. Young, and handed over a card bearing his address. He was then shown a prearranged telegram purporting to come from our operative's partner in New York stating, when decoded, that seventy-five cans were to be shipped within a week if possible. As Lem Kee was not available in large quantities, it was finally arranged that ten cans of No. 2 opium should be bought as a sample, smuggled into Seattle, and shipped thence by express to New York. If, on arrival, the New York partner was satisfied with its quality, he would telegraph our operative at Seattle, and a further deal would be arranged.

It will be appreciated that it was an extremely difficult matter to win the confidence of a man such as this big operator, and to get him to do business personally, but the prospect of a big order immediately, with others to follow, probably induced him to take a personal interest. At any rate, on the following day, our operative visited Lim Gim at his store at night, and paid him for ten cans to be delivered the following morning, Lim Gim's reason for an early delivery being that "The law is all in court, and it is the best time to deliver it." Delivery was made by Lim Gim himself, who showed the operative how to wrap the tins up in paper so that they would get past the Customs at Seattle. He then placed two tins in each of the operative's five pockets, and promised to see him again the following week. The cans were in due course turned over to the police, while the operative proceeded to Seattle to stay there for the period during which the shipment was supposed to be en route to New York. During these various interviews the operative was carefully shadowed into and out of the store, and all money used was carefully marked.

While in Seattle the operative wrote to Lim Gim in the agreed code, and in due course received a reply which, in part, read as follows:—

"Mr. A. B. B. Smith is now in town. He will be ready to do business at any time. Let me know soon as Mr. Smith is going away shortly."

This was the code indication that two hundred cans of No. 2 opium were now ready. A reply was sent both by telegram and letter telling Lim Gim that the deal would be put through on the following Sunday or Monday. The telegram was duly traced by the Vancouver authorities to Lim Gim's store, and a fake telegram, purporting to be from the New York partner to the operative, was prepared for production to Lim Gim to satisfy him that the New York end was satisfied with the grade of opium. The operative then returned to Vancouver, and by means of a telephone conversation with Lim Gim, which was listened to on an extension, a meeting was arranged for the same evening, on which occasion Lim Gim raised the price \$10 per can. He was shown the New York telegram, which, it was pointed out, referred to the price previously quoted. He expressed his regret, but would not agree to any reduction, and finally a purchase, at the higher price, was arranged. At an interview the same evening he discussed in great detail narcotic conditions in New York, and the seizure of 1,070 cans of opium on a Blue Funnel boat at Seattle the previous week, about which he was worried, remarking:—

"You know, when that boat was in here about two weeks ago, we couldn't get the load off. I have got some No. 1 coming in to-day, but don't know whether we can get that off either."

He was then paid \$1,100 for twenty more cans to be delivered the following morning, on which occasion the store was surrounded by officers in concealment, who were to rush in on receiving the prearranged signal of the operative tipping his hat, it being calculated that one minute and thirty seconds would elapse from the signal being given to the presence of the officers in the store, and the covering of the front and rear exits. The operative entered the store, and shortly afterwards, Lim Gim came down from the sleeping quarters upstairs. He told the operative to take the package from a barrel which he pointed out. This the operative did, and then proceeded to the front of the store and gave the signal, returning immediately thereafter to Lim Gim, and paying him a balance of \$50 due him. He then followed him to the back of the store, and informed him that he was under arrest. Lim Gim shouted, "What! My God! My God!" several times, ran into the cashier's office, put his hand in the wastepaper basket, and then ran upstairs, where he was found in a bed other than his own with the clothes pulled over him.

A most thorough search of the premises, which lasted all day, revealed amongst other things the marked \$50 bill in the cashier's cage, and the \$1,100 in marked money paid for the opium on the preceding evening, while in the wastepaper basket, to which Lim Gim made his first move, were the torn pieces of the letter and envelope addressed to him in the name of Charles B. Young by the operative while in Seattle. There were many other pieces of corroborative evidence which, however, it is unnecessary to enumerate. Lim Gim was in due course tried at the Assizes, where the defence was a complete alibi for all the numerous interviews outlined above. He was found guilty on the two charges laid, and sentenced to four years in the penitentiary, with a fine of \$1,000. Being a naturalized Canadian citizen he is not eligible for deportation. At the time of sentence, however, the judge remarked as follows:—

"You are what is termed a wholesaler as distinct from an ordinary peddler of dope or cocaine. The sentence would be heavier were it not for the fact that your friends have presented a wonderfully worded petition for leniency. It is signed by people I cannot ignore. I will allow this petition and the letters to be filed, and later you may get some additional advantage from them."

The prisoner having appealed, the Crown proceeded to cross-appeal on the ground of inadequacy of sentence. The decision of the Court of Appeal is given on pages 255-7 of Canadian Criminal Cases, Volume 49, in which it is stated as follows:—

"The sentence of the court is that the sentence be increased to the maximum permitted by law, viz., seven years, in each case, and in addition a fine of \$1,000 in each case, the sentences of imprisonment to run concurrently, and the prisoner to pay the costs of each proceeding here and below.

"While the discretion of the trial judge is not lightly to be interfered with, yet the statute has imposed on the court the duty to review that discretion. In this appeal it was stoutly contended by counsel for the Crown that the judge had proceeded on evidence which was not legal evidence or was not in accordance with past practice. He was handed a petition asking for leniency signed by a number of business men of Vancouver, which appears to have influenced him in imposing sentence.

"The petition is well described as wonderfully worded, but we think the trial judge was in error in receiving it. The proper practice in the presentation of evidence in mitigation of sentence is set forth in Archbold's Criminal Pleading, Evidence and Practice, where it is said:—

'As an aid to determining the appropriate punishment, the court will after verdict hear evidence for the Crown or the defendant, either *viva voce* or by affidavit.'

"While we have felt impelled to disapprove of this novel innovation at its inception, we are yet of the opinion that, apart from the influence of the petition on the trial judge's discretion, we ought, in the other circumstances of this case, to increase the sentence to the limit of our powers."

Lim Gim is now serving his seven years' sentence in Westminster Penitentiary.

In so far as the *Maritime Provinces* are concerned, conditions in regard to the narcotic traffic are eminently satisfactory, only three breaches of the Act having been detected, one of which, a charge of possession of opium, resulted in a six months' sentence, while in the other two cases fines were imposed.

In the *Province of Quebec*, which, by reason of the facilities existing for importations from overseas through the ports of Quebec and Montreal, and the proximity of New York with its heavy illicit importations, is one of our most important centres, there was a marked improvement, and both the United States authorities and the officials of my department are convinced that Montreal is no longer a centre of distribution for narcotics destined to the United States. The conviction of the gang in that city, who specialized in large international shipments, referred to in my annual report for last year, had a very marked effect, and rendered it possible to devote an increased amount of attention to other traffickers who operated solely within our borders. The Montreal city police were extremely active in ridding their streets of the small peddler, with the result that there has unquestionably been a very great improvement in that regard. Of the 99 convictions in the province of Quebec, 67 involved jail or penitentiary sentences, including one of 5 years, one of 4 years, four of 2 years, six of 18 months, and five of 1 year. Thirty-seven, or roughly one-third of the convictions obtained, involved Chinese. The following are typical of the cases handled:—

A. B. was known for many years to be a large retail trafficker in Montreal, usually making deliveries of narcotics by means of an automobile, but it proved on many occasions most difficult to arrange matters so that they would be actually in his possession if arrested. After a careful study of his methods, and the arrangement of a transaction through agents, the place agreed upon for delivery was carefully watched. A. B. was seen to engage in conversation with several men recognized as addicts or drug runners. He then re-entered his car with two of them, proceeded to a lane, and on emerging therefrom with one of them they were both arrested. The second man, C. D., was carrying an oblong parcel, which he threw down and started to run. This parcel, when recovered, was found to contain five ounces of morphine, heroin and cocaine. In the possession of A. B. were certain keys which were found to fit a padlocked trunk in his place of residence, which contained thirty-five ounces of narcotics, a large number of empty boxes, decking papers and scales used in the peddling of narcotics. A. B. was eventually sentence to two years and a fine of \$1,000, while C. D. jumped his bail, and is now living in the United States.

As a result of certain arrests in western Ontario, it became fairly certain that a Chinaman, E.F., in Montreal, was selling opium on a large scale. Two large buys were made from him under police conditions, but owing to the fact that information from other sources, obtained during this investigation, indicated that an opportunity existed to get at a large wholesale source of supply in Vancouver, which proved to be correct, as reported above, these cases were deliberately held over, and the officers despatched to the Pacific coast. On the successful conclusion of the work there, they returned to Montreal, where E.F., apparently secure in the knowledge that past transactions had proved both profitable and safe, was quite willing to sell a further large quantity, and invited our operative to lunch at a cafe. In the course of the meal a purchase of over \$1,100 worth of opium was arranged, and E.F. paid for the meal with one of the marked \$50 bills involved in the opium transaction. At the time set for the delivery of the opium, the premises were entered by our officers, and the opium seized, while some of the marked money was found in the Chinaman's pocket and the balance in a cash drawer in the store. He was eventually sentenced to twelve months' imprisonment and a fine of \$1,000.

In the *Province of Ontario* there were 50 convictions, 28 of which involved Chinese, including one sentence of 3 years; five of 2 years; two of 18 months; eleven of 1 year; and four of 9 months. Most of these cases were developed in Toronto, in which city conditions have now very considerably improved. The situation at Windsor was also the subject of a special investigation, but the cases developed there have not as yet been finally concluded in the courts. As samples of the type of cases encountered in Ontario, the following are quoted:—

G.H., considered to be the largest retail trafficker in Toronto, and possessed of a long criminal record, was the subject of a long and careful investigation extending over many weeks, at the conclusion of which, upon an addict being seen to leave the premises, he was arrested, and a complete search made of the house. The eventual touching of a button on the top of a bureau in a bedroom disclosed a secret drawer which contained eighty-nine decks of morphine and cocaine, and \$375 in money. G.H. was arrested, sentenced to two years' imprisonment, and died in jail. It was later found that his wife was still carrying on narcotic transactions on the same premises, and offering to exchange morphine for stolen goods. A lady's coat was purchased, and exchanged in that manner, while other cash transactions were put through. The wife was eventually arrested, and sentenced to six months' imprisonment, and a fine of \$600. After her arrest a thorough search of the house revealed a hiding place hollowed out in one of the beams in the cellar, in which a further quantity of narcotics was found.

I.J., recently discharged from the penitentiary from serving a narcotic sentence, was reported to have gone back into the narcotic traffic shortly after his release. Some months afterwards he, having moved over one thousand miles to another city, was found to be operating in his new location. After his methods had been studied, and shortly after he had visited another city for a fresh supply of narcotics, his apartment was searched, and he was found in possession of a quantity of heroin and a loaded revolver. He was eventually sentenced to two years' imprisonment. While the search was being made in this case, another man was seen in the vicinity acting suspiciously. He was brought into the apartment, searched, and found with morphine in his possession. He was well known to the police, and had previously served a narcotic sentence. He was awarded twelve months' imprisonment and a fine of \$500 and died in jail.

Early in the year it came to our knowledge that a man well known as an addict was making a practice of victimizing physicians in several parts of Canada by selling them worthless stocks, and obtaining morphine under pre-

tence of being desirous of taking a cure. Having convinced one physician in particular of his desire to be cured, the latter made arrangements for him to be placed in hospital, which, however, he consistently evaded, and rewarded the doctor for his trouble by stealing a prescription pad from his office, and proceeding to forge his name to a series of narcotic prescriptions. He was located before he had succeeded in having many of them filled at drug stores, and received a well earned sentence of from six months to two years on four charges in connection therewith, and at the same time pleaded guilty to ten charges of theft in connection with his selling of worthless stocks.

In the same city it was learned that an American race-horse owner, who visited Canada several times each year, was in the habit of selling narcotics on the occasion of such visits. An investigation was conducted, on both sides of the line, which lasted over a year, with the result that it was eventually possible for our officers to purchase narcotics from him, and to arrange for a larger supply. Certain available information as to the source of supply in the United States was obtained and transmitted to the narcotic authorities of that country, and finally, after another purchase of heroin and cocaine had been made from him, he was arrested and the marked money involved in the transaction found upon his person. A search of his rooms revealed the presence of considerable quantities of narcotics, an automatic pistol, and correspondence indicating his narcotic activities. He was released on \$10,000 bail, which he jumped. A thorough search was made for him on both sides of the line, and probably because the chase became too hot for a man so well known as he was, he gave himself up some weeks later, was sentenced to six months' imprisonment, with a fine of \$600, and deported at the end of his sentence.

It was noticed from narcotic sales reports received from wholesalers in the same city that a certain veterinary surgeon, whose name did not appear on the list of those registered to practise in the province, was regularly obtaining an ounce of morphine, and a similar quantity of heroin monthly. Inquiry elicited the fact that no such veterinary surgeon existed, and with the assistance of the wholesaler concerned, arrangements were made to shadow him on the occasion of his next purchase, when it was ascertained that he was selling these narcotics to the underworld. On the occasion of his next purchase he was arrested when leaving the wholesaler with two bottles of cocaine in his possession. He admitted that he had no right to purchase narcotics, gave his correct name and address, and was sentenced to two years' imprisonment with a fine of \$1,000.

In the *Province of Manitoba* there were 12 convictions, all confined to Winnipeg, and three of which involved Chinese. Included in these were two sentences of 3 years; one of 18 months; two of 1 year; and one of eight months.

In the case of A.B. and C.D., two well known and large traffickers, with ramifications extending throughout the entire underworld of Winnipeg, a very careful investigation was made of their activities, as a result of which it was ascertained that the car in which they made their deliveries of narcotics was preceded by another car, which made certain that the coast was clear, and then speeded away while the transactions were concluded. Finally, after several attempts had failed through sheer hard luck, advice was received of a fresh consignment of narcotics having reached them, and an unknown operative was imported in order to avoid any possible slip up. Posing as a bootlegger from the United States, this agent succeeded in arranging for a purchase of three ounces of heroin for \$270. A meeting with A.B. was arranged in a cafe, where C.D. joined the party, and the three then proceeded to an apartment where the three ounces of heroin and the purchase price changed hands, these men promising to deliver a further twelve ounces in two weeks' time. They were arrested and taken to the Police Station despite an offer of \$1,000, which they made

for their freedom. C.D. jumped his bail of \$20,000, thereupon his bondsmen were called upon to fulfill their obligations. This they failed to do, and as it developed that the justice of the peace who granted bail had been grossly imposed upon, proceedings were taken against them, they having disappeared in the meantime. They were subsequently located, apprehended on a Writ of Capias, and lodged in jail, subsequently pleading guilty to a charge of perjury. The effect of this action in regard to "straw bail" in a number of cases proved excellent, and several bondsmen asked to be relieved of their responsibility "for the appearance of their prisoners." Meanwhile, A.B. pleaded guilty, and was awarded the minimum sentence of six months' imprisonment. The department felt that this was totally inadequate in the case of a large trafficker, and entered an appeal on the ground of inadequacy of sentence, as a result of which his sentence was increased to three years by the Manitoba Court of Appeal. This very interesting judgment is quoted in Volume 49 of Canadian Criminal Cases, pp. 298-302, and in the course of delivering same the court stated:—

"In the reasons for judgment in several cases cited it is pointed out that the judge who presides at a trial, and sees and hears the witnesses is in a much better position to determine the proper sentence than a Court of Appeal. The authorities both here and in England lay down the rule that the Court should not interfere unless it can see that the trial judge has proceeded on some wrong principle. The present case stands in quite a different position. The accused pleaded guilty and this court is in as good a position as the trial judge to determine the sentence which should be imposed . . . The narcotic problem in Canada is a very acute one. The Government is evidently alarmed at the existing conditions, and determined, if possible, to stamp out this illegal traffic. In an effort to effect such a laudable object it is entitled to every assistance this court can legitimately give it. The authorities have no difficulty in apprehending the addict himself but for obvious reasons have the greatest possible difficulty in securing evidence against the man responsible for the existence of the traffic, namely, the vendor. The imposition of the minimum sentence of six months would not, in our opinion act as a deterrent to others who would be tempted by the enormous profits to engage in this traffic. Moreover, we are of the opinion that Parliament never intended the minimum penalty to be imposed on a person guilty of one of the most serious offences mentioned in section 4."

In another Winnipeg case, our offices got in touch with a well known peddler, who was known to be operating extensively. Working on a pre-arranged plan the locality most frequented by him was covered, and he was seized while engaged in his narcotic activities. He put up a strong resistance, and was seen to throw away a match box, which was found to contain eleven decks of heroin. He was found guilty at the Assizes and sentenced to eight months' imprisonment with a fine of \$200.

Another case in Winnipeg was that in which we had reason to believe that a parcel in the mails contained a large quantity of narcotics. With the hearty co-operation of the postal authorities, an officer disguised as a postman delivering mail made the delivery of this particular parcel at the address designated thereon, to the person who claimed that it was for him. He was arrested, and eventually sentenced to three years and a fine of \$200. A subsequent appeal on his behalf was dismissed. Curiously enough, during a subsequent raid on an apartment in a city over one thousand miles away, the original post office receipt for the insured parcel in this case was discovered, and the possessor thereof was also awarded a sentence of imprisonment.

In *Saskatchewan* as a whole we have very little trouble, there being only 13 convictions, 10 of which involved Chinese. One sentence of 2 years, two of 18 months, two of 1 year, and one of 10 months are included therein. Most of these cases were in Saskatoon where a pretty bad state of affairs was uncovered in the small Chinese underworld at that point. A suitable agent having been detailed to ascertain local conditions, it was found that the Chinese had practical control of all narcotic supplies in that city, which were sold to

white people and Chinese alike. Small purchases were made from time to time, while a full knowledge of existing conditions was being obtained, and a point for delivery selected which would permit of police supervision of the transaction. We received the most hearty co-operation of the Saskatoon city police in these cases, in the course of the development of which it was ascertained that it was a common practice, when an addict had "stung" a Chinese peddler for the supply of every addict in the city to be cut off for twenty-four hours until they were all sick, as a reminder to them all to play squarely. Finally four Chinamen were arrested for selling narcotics. The evidence obtained indicated that one of them had sold drugs to an agent in our employ for four months, that he had compelled her paramour to steal goods for him, and when her man was sent to jail, further supplies were refused to her until she stole a handbag for the lady friend of the Chinaman. After the agent had been supplied with a purse for this purpose, she exchanged same, together with some money, for a supply of cocaine, under conditions which were susceptible of corroboration both by mounted and city police officers. This man received a sentence of eighteen months and a fine of \$1,000.

One of the other Chinamen, who was proved to have sold to the same agent, received a similar sentence, the magistrate remarking that,—

"There is no provision in the Act for ordering him to be whipped. I think there should be provision and that the time is near when the law will be amended to that effect. This is one of the most serious crimes the courts have to contend with."

The two other Chinamen convicted of selling received sentences of one and two years respectively.

In *British Columbia*, with a Chinese population of approximately 25,000, we, of course, encountered our greatest difficulties in connection with the illegal importation and sale of opium, while owing to the position occupied by Vancouver as a leading Pacific coast port, we also encountered cases in which narcotics are brought in, and offered for sale, from other countries as well. It is also thoroughly well established that the Chinese dope peddler as a rule by no means confines his activities to opium, but also handles considerable quantities of morphine, heroin and cocaine. Consequently our efforts have been unsparing to effectively cope with their activities, with the result that the number of cases handled in that province is over one-half the total for whole Dominion. Of the 291 convictions obtained, about one-half were for the comparatively less important cases of smoking opium or frequenting opium dens, but it will be noted that there were 59 convictions for being in possession of narcotics, 32 of which involved morphine or cocaine or both, while there were 18 further cases of selling. Thirty-eight of those convicted were not of Chinese origin, and consisted of 32 British and Americans; three Italians; two Hindus; and one Negro. Some severe sentences, amply warranted by the facts, were imposed, including one of 7 years, one of 5 years, two of 4 years, eight of 3 years, six of 2 years, and four of 1 year. Of these heavier sentences, 20 were imposed on Chinese.

By far the most important case was that of Lim Gim referred to above, but the following details in connection with others will to some extent indicate our difficulties on the Pacific coast, and the efforts being made to overcome same. It being borne in mind that in many instances it is not advisable to disclose full details.

A.B., possessing peculiar facilities for liaison with the officers and men of ships of a certain nationality entering Vancouver, was strongly suspected of arranging for the importation of narcotics from overseas, and disposing of them in that city. After careful preliminary investigation, and the necessary introductions, arrangements were made for him to sell fifty ounces of cocaine for \$2,250. At the last minute, however, the deal fell through owing to a sale

having been arranged in another quarter, but another transaction was arranged to be put through on the arrival of the next boat a month later. Owing, however, to a special guard and search of this vessel in connection with an expected shipment of liquor, no attempt was made to land any narcotics, and matters were postponed for another month. In due course A.B. delivered samples of both morphine and cocaine, and offered for sale one can of opium for \$100. A large deal involving the purchase of thirty ounces each of morphine and cocaine, and six tins of opium for \$4,800 was initiated, but delivery was refused until the money was paid in advance, under conditions which rendered its eventual recovery impossible. A smaller deal was then arranged for, and in due course AB was arrested in a hotel, with narcotics and marked money in his possession. He pleaded guilty, and was sentenced to two years and a fine of \$200.

Information being received that a certain Japanese, C.D., was offering for sale cocaine obtained from overseas, steps were taken which resulted in an officer being introduced to him by another Japanese, E.F. In due course the latter stated that C.D. had forty-five ounces of cocaine, and sixteen ounces of morphine, for which, after considerable bargaining, the latter agreed to accept \$1,600. Samples were purchased, and found to be of good quality. Arrangements were made for delivery by car on one of the main streets of Vancouver. E.F. arrived first, and on being satisfied that everything was in order stated that the deal would proceed. C.D. thereupon drove up in a truck, whereupon one officer posing as a taxi driver and another as a passenger drove as arranged to the courtyard of a well known club. They refused to do business in the club, whereupon C.D. and E.F. got into the taxi with a sack containing the narcotics in their possession. They handed same over, were paid \$1,600 in marked money, and the car was then driven to the police station. A search of their places of residence disclosed a further small quantity of cocaine on the premises of C.D. They were committed for trial, in due course receiving sentences of three years with a fine of \$1,500, and six months with a \$200 fine respectively. C.D. applied for Habeas Corpus on the ground that the Opium and Narcotic Drug Act was ultra vires. This application was dismissed, the Supreme Court of British Columbia issuing a very full judgment which is reported in Canadian Criminal Cases, Volume 49, pp. 392-401, in the course of which it is stated:—

"When I view the 'mischief' sought to be remedied, and the manner in which this was to be accomplished, the state of the law as it existed prior to the Act of 1923, and the nature of the remedy thus applied, I have no hesitation in holding that the Act in question is criminal and not licensing legislation. The primary object was to create a crime and afford punishment for its infraction. The licensing provisions were necessary but did not affect the validity of the legislation. It was within the competence of the Dominion Parliament and did not invade the jurisdiction allotted to the province by the British North America Act. While such legislation constituted a new crime, it was remedial, in order, if possible, to destroy an existing evil. It was for the promotion of 'public order, safety and morals,' and was enacted by Parliament for the public good. While not in doubt as to the validity of the Act, I might add that it was entitled under section 15 of the Interpretation Act, R.S.C., 1927, c. 1, to receive such:—

"'Fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act and of such provision or enactment, according to its true intent, meaning and spirit.'"

In another case, a Chinaman, G.H., located in Victoria, had, in 1925, been convicted for the possession of sixty tins of opium, which conviction had been quashed on appeal on the ground that he had been convicted under the "Opium and Narcotic Drug Act" and not the "Opium and Narcotic Drug Act of 1923." He was known to be heavily interested in the smuggling of narcotics from overseas, and consequently when a careful survey of conditions on Vancouver island was made in the fall of 1927, it became evident that his activities were still widespread. An officer posing as an American drug peddler

was able to get in touch with one of his runners, and a trial shipment of opium was ordered and delivered. A further consignment was arranged for, twenty-five ounces of cocaine for \$800 being offered in addition to the opium. Further details were being obtained as a result of these transactions, as to the manner in which the gang of which G.H. was the head were doing business, and a final buy of \$800 worth of opium was then arranged. Upon the officer visiting G.H.'s store to pay him the amount involved in the transaction, he was told to come back later, and pay the money to another Chinaman, who would hand over the opium. At the second interview, however, G.H. accompanied the officer to a street address where he introduced another Chinaman, instructed him to receive the money, and arrange for the delivery of the goods. The officer was then handed over to a third Chinaman, who actually made the delivery, whereupon, on a pre-arranged signal, other officers closed in and all three were arrested. On a search of the premises a large quantity of opium smoking paraphernalia, revolvers and ammunition were found. At the trial a comprehensive alibi was sworn to by numerous witnesses for the defence, the prisoner's movements at a point eighteen miles from Victoria on a certain date, when the prosecution swore he was trafficking in that city, being described in great detail. As defence witnesses, however, swore that there was no snow on the ground on the date in question, and that the roads were in perfect condition, we were able to prove by Government weather recorders that there were eight inches of snow on the ground, which effectively disposed of the alibi in so far as that particular date was concerned. G.H. was sentenced to three years and a fine of \$350. He appealed, but his appeal was dismissed. He, however, jumped his bail of \$10,000 and has not as yet been located. The two other Chinamen were sentenced to four years with a fine of \$1,000 and two years with a fine of \$200 respectively.

Another case involving a Chinaman and a Hindu in Vancouver was very cleverly handled by the officers of the Royal Canadian Mounted Police. The Chinaman was ascertained to be running a vegetable store as a blind to his narcotic activities, which were conducted in a very cautious manner. A search of his premises having produced no results, it was found that he subsequently completely changed his method of delivery, and had recently received a pound of morphine, for which he had paid \$600, and a pound and a half of cocaine from overseas. Several agents failed to gain his confidence, and establish a connection with him, but finally a deal for one-half an ounce of morphine was arranged, the Chinaman offering to supply any quantity of morphine, heroin or cocaine. Delivery was to be in a park, and officers being concealed in surrounding bushes, the Chinaman duly appeared, carefully surveyed his surroundings and went away. He returned in fifteen minutes, took the agent into some brush just outside the park, and pointed to a package lying on the ground saying, "There it is." This package was subsequently found to contain morphine. A later deal, involving cocaine, was made, and on this occasion the Chinaman again met the agent in the park, and took him down the street where he introduced him to a Hindu, who stepped off the road, picked up a package, and handed it to the agent. This was found to contain cocaine. It was then decided to continue to make purchases until conditions were such as would permit the obtaining of evidence which would be sufficient in court to directly connect both these Orientals with the crime of drug trafficking. The Chinaman arranged with the officer for the use of a code over the telephone so that an order for four tons of potatoes would mean four drams of morphine, and a similar quantity of carrots would represent cocaine, while one ton would in each case represent one dram. Several other deals were put through, the officers spending long hours, both late at night and early in the morning, concealed in surrounding bushes. One deal was arranged by telephone, which was

listened in on an extension, and officers dressed in workmen's clothes proceeded to various points from which it was thought probable that the movements of these two traffickers could be watched. The agent then met the Chinaman, who walked him round three blocks, and finally took him behind the "Leap the Dips" at Hastings Park, where he was paid a sum of marked money. The Chinaman then called the Hindu, who came up, and handed over a package of morphine. When their arrest was decided upon, a final deal was made, on which occasion the Chinaman met the agent, proceeded to some bushes where he was paid, and he then told the agent to walk to a certain street and wait there fifteen minutes. When he met the agent there the Hindu was with him, the latter handing over one dram of morphine and promising to deliver another three drams the same night. On that night he delivered two drams, and promised the balance later. The Chinaman was not then present so it was necessary to arrange still another deal, when the Chinaman met the agent, received the money, and walked away. He was seen entering the Hindu's shack, from which, in a short time the latter emerged, met the agent at a pre-arranged spot, and handed over a package of cocaine. The transaction was observed by several officers, and upon the Chinaman being arrested, marked money was found upon his person. The Hindu's shack was then searched, when morphine, cocaine, decking papers and a set of scales were found concealed under a stove in the woodshed, the keys of which were in the Hindu's possession. The Chinaman was sentenced to five years and a fine of \$500, while the Hindu received a sentence of two years and a fine of \$200. This case is given in considerable detail, as indicating the extreme patience and care required in developing a case of drug trafficking. The magistrate warmly complimented all concerned, stating that rarely, if ever, had he seen a case where everything was so complete without any unfairness, while the Crown prosecutor for Vancouver city stated that it was the best prepared case he had had to handle in his fifteen years of experience, it being remarkable the way in which the evidence was worked out.

In a North Vancouver case a Chinaman was known to be selling morphine. He was visited on several occasions, and morphine purchased each time, the vendor stating, "Chinatown decks not so strong, mine much better." He was eventually arrested, with marked money in his possession, at the time of sale, together with another Chinaman, who was mixed up in the case. A search of the bushes in the vicinity of their house revealed a supply of morphine and opium. They were each sentenced to three years and a fine of \$500.

In another Vancouver case a Chinaman was sentenced to four years, and a fine of \$500 for selling narcotics, and while in the city jail was found in possession of a package of morphine cleverly hidden in a piece of sugar cane which had been hollowed out to receive it.

In a Victoria case, in which the Chinaman concerned had been sentenced to two years and a \$220 fine, an application for Habeas Corpus was made on the ground that a conviction for "distributing" opium to one person, as charged, was illegal, distribution to one person being impossible. The wording of the Act appeared to be plain enough, reading as it does, "gives away or distributes to any person," and the application was dismissed, the court stating:—

"Whatever force there may be in the submission as sought to be applied to that expression detached from the context, and in a strictly literal sense, is met by section 15 of the Interpretation Act, which reads, 'Every Act and every provision or enactment thereof shall be deemed remedial where its immediate purport is to direct the doing of anything which Parliament deems to be for the public good, or to prevent or punish the doing of anything which it deems contrary to the public good, and shall accordingly receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act, and of such provision or enactment according to its true intent, meaning and spirit.'"

Another Vancouver Chinaman known to be selling morphine and cocaine in lots from one ounce up, was approached by an officer posing as a drug peddler from Seattle, and after a purchase of one ounce at \$68, and a subsequent purchase of half an ounce, an offer was made to supply ten ounces the following week. A five-ounce deal was arranged, and paid for, the Chinaman being arrested at the time of delivery, and sentenced to two years with a fine of \$200. He had had three previous narcotic convictions, but had hitherto escaped deportation on a technicality.

Information obtained, as a result of the above case, resulted in the arrest and conviction of another Chinaman long known as the third largest trafficker on the Pacific coast. An agent, after proper introduction and the establishment of confidence, paid him \$40 for a supply of cocaine to be delivered later. A search warrant was obtained, and after the agent had received delivery at a hotel of which the Chinaman was proprietor, the premises were thoroughly searched. One of the rooms particularly suspected, and locked with a Yale lock, was found to contain a set of scales, opium labels, one cocaine label, and the marked money paid previously for a supply of cocaine, while hidden in the walls were found ninety-seven cans of opium, and over six ounces of morphine and cocaine. In the cash box was found over \$1,000 part of which was the marked money paid to the prisoner in the case previously mentioned, for a five ounce buy, which clearly showed the source of supply. This case was bitterly contested in the courts. The Chinaman, at the time of his arrest, was in possession of a large number of documents, one of which, on translation, proved to be an agreement under which, in 1920, he had purchased a girl in China for \$120 and brought her to Canada as his daughter. As he elected to give evidence on his own behalf, he was open to cross-examination, and we had no difficulty in establishing that he had perjured himself in connection with the importation of this girl. He was sentenced to three years, and a fine of \$200, otherwise a charge of perjury would have been proceeded with. Many of the documents seized were of the greatest value to our officers, and included an agreement with a certain party overseas, as to prices for narcotics, and the distribution of the financial risk in landing them in Canada. We also obtained a very comprehensive code with words covering the various phases of illicit operations in the smuggling into Canada of narcotics from the "starting work as soon as the boat arrives" and "the string has been put down" to the final phase, satisfactory no doubt from their point of view, "no goods left, all sold out." An appeal was taken in this case, but unanimously dismissed. Habeas Corpus proceedings were also dismissed, and when this man is deported at the end of his sentence, Canada will be thoroughly well rid of him.

I am convinced, and my opinion is confirmed by information obtained from a number of sources, that our systematic method of "going after" these big traffickers, a policy which has been energetically followed up during the period subsequent to that now under review, has at last begun to tell, and that we are gradually getting a firm hold upon the narcotic situation on the Pacific coast.

NOTE.—Morphine includes diacetylmorphine (heroin).

In addition to the amount of narcotics imported by licensed dealers during the twelve months ended March 31, 1928, the following amounts of such drugs seized for infractions of the Opium and Narcotic Drug Act were disposed of to licensed wholesalers as follows:—

TABLE NO. 4

By the Department of Health.....	nil
By the Department of National Revenue, Customs-Excise Preventive Service—	
Drug.....	Quantity
Gum opium.....	20 lbs. 5 oss.
Morphine.....	50 "
Cocaine.....	55 "

TABLE NO. 5.—Summary of Narcotic Drugs exported from Canada during the fiscal year ended March 31, 1928

Kind of Drug	Destination	Quantity
Cocaine.....	Newfoundland.....	1 oz. 33½ grs.
Cocaine.....	British West Indies.....	22 oss.
Morphine (9,230 tablets and pills).....	Newfoundland.....	3 oss. 312 grs.
Morphine.....	British West Indies.....	6 oss. 109½ grs.
Heroin (diacetylmorphine).....	Newfoundland.....	36 grs.

PREPARATIONS CONTAINING NARCOTIC DRUGS

Blackberry Compound (Newfoundland).....	160 oss.	Each fluid ounce contains 15 minims of tincture of camphor compound.
Chlorodyne (British West Indies).....	16 oss.	
Chlorodyne (Newfoundland).....	256 oss.	
Concentrated Tincture of Camphor Compound (Newfoundland).....	16 oss.	
Creo-Terpin Compound (Newfoundland).....	80 oss.	Each fluid ounce contains 7½ grs. heroin.
Cholera Infantum Mixture (Newfoundland).....	80 oss.	Each fluid ounce contains 60 minims tincture of camphor compound.
Elixir Heroin and Terpin Hydrate (Newfoundland).....	3,800 oss.	Each fluid ounce contains ½ gr. heroin.
Elixir Terpin Hydrate and Creosote Compound (Newfoundland)....	2,960 oss.	Each fluid ounce contains ½ gr. heroin.
Hypno-Bromic Compound (Newfoundland).....	168 oss.	Each fluid ounce contains ½ gr. morphine and 1 gr. Cannabis indica.

PREPARATIONS CONTAINING NARCOTIC DRUGS—*Concluded*

Ichthy-Tannic Suppositories (Newfoundland).....	576	Each suppository contains 1 gr. opium.
Ointment Galls with Opium (Newfoundland).....	6 lbs.	
Ointment Hemorrhoidum (Newfoundland).....	8 lbs.	
Syrup White Pine and Tar (Newfoundland).....	800 ozs.	Each fluid ounce contains $\frac{1}{4}$ gr. of heroin.
Syrup Bronchial Compound (Newfoundland).....	160 ozs.	Each fluid ounce contains $\frac{1}{4}$ gr. heroin.
Syrup White Pine Eucalyptol and Honey (Newfoundland).....	2,240 ozs.	Each fluid ounce contains 80 minims tincture of opium camphorated.
Stoke's Expectorant (Newfoundland).....	16 ozs.	Each fluid ounce contains 75 minims tincture of camphor compound.
Tincture of Camphor Compound (Newfoundland).....	16 ozs.	
PILLS AND TABLETS, ETC.		
Tablets Bronchitis Special (Newfoundland).....	500	Each tablet contains $\frac{1}{16}$ gr. of Dovers' powder.
" C.T. Cholera Infantum (Newfoundland).....	600	Each tablet contains 3 minims Tincture of camphor compound, B.P.
" C.T. Colic Infantile (Newfoundland).....	200	Each tablet contains 1 $\frac{1}{2}$ minims tincture of camphor compound, B.P.
" Coryza (Newfoundland).....	700	Each tablet contains $\frac{1}{4}$ gr. of morphine.
" Diarrhoea (Newfoundland).....	500	Each tablet contains $\frac{1}{4}$ gr. morphine.
" C.T. Dovers' Powders (Newfoundland).....	9,512	Each tablet contains 5 gr. of opium.
" Fever Improved (Newfoundland).....	1,000	Each tablet contains $\frac{1}{16}$ gr. morphine sulphate.
Pills Lead and Opium Acetate (Newfoundland).....	2,500	Each pill contains 1 gr. of opium.
Tablets Nausea (Newfoundland).....	100	Each tablet contains $\frac{1}{16}$ gr. cocaine hydrochloride.
" Opium Camphor and Tannin (Newfoundland).....	500	Each tablet contains $\frac{1}{4}$ gr. of opium.
" Throat Mentholated (Newfoundland).....	100	Each tablet contains 1-280 gr. cocaine muriate.
" A.F. Zinc Sulphate Compound (Newfoundland).....	12	Each tablet contains $\frac{1}{4}$ minims tincture of opium.

PROPRIETARY OR PATENT MEDICINE DIVISION

During the fiscal year ended March 31, 1928, 714 medicinal preparations were proposed for registration under the Proprietary or Patent Medicine Act, 491 were assigned registration numbers, and 223 were rejected. The registration of 5,000 preparations was reviewed and 1928 licenses were issued.

The division continued to pay particular attention to the claims made for registered medicines on the labels, wrappers, literature and newspaper advertisements, having regard to the provisions of sections 8(e) and (f) of the Act, which, in effect, prohibit all representations of cure, and false, misleading and exaggerated recommendations.

Over 4,300 pieces of printed matter including labels, wrappers, circulars, pamphlets and newspaper advertisements, were criticized. Of this number 1,389 modifications were required, 31 of which were improper newspaper advertisements.

Nineteen seizures were made: seven for improper labelling; one as containing cocaine; two for changing formula and using alcohol without sufficient medication; nine for selling without a license.

The sale of all secret formula non-pharmacopoeial medicinal preparations in Canada is legalized by this Law on condition that no false, misleading or exaggerated claims or representations of a cure for any disease are made on the labels and wrappers, or in any other manner respecting the article.

*Deck is a small package containing from three to five grains of drugs.

In consequence of these restrictions, the department has ruled that no medicine be accepted for registration under this Act which is directed to be used for any of the following ailments, for the reason that eminent medical authorities hold the opinion that such remedies should be administered only under skilled supervision, and that recommendations for their indiscriminate use by the laity are false, misleading, and fraught with grave danger to public health and life, in that specific treatment might be delayed by their use until alarming symptoms had developed, and the disease had reached a hopeless stage. Another feature in this connection is that many cases of the same kind of disease are attended with different circumstances requiring different treatments, as, for example, some types of Goitre respond to iodine preparations whereas the use of iodine may do positive harm to others.

Remedies for goitre,

- | | | |
|---|---|--|

| " | " | infantile paralysis, |
| " | " | spinal meningitis, |
| " | " | erysipelas, |

Earth packs containing medicinal ingredients,

Radium activity remedies,

Remedies for restoring sexual virility,

Specifics,

Abortefacients, etc., etc.

Of the diseases above enumerated, cancer is regarded to-day as the outstanding dreaded disease of the world. Scientific investigation has not produced anywhere the slightest evidence to show that this disease is amenable to medicinal treatment. The dread of cancer and its widespread prevalence have been so exploited by the purveyors of cancer medicines, that it becomes the duty of informed persons to warn the public of the menace that lies in the use of so-called cancer remedies which are put forward by unscrupulous persons or misguided enthusiasts. There is nothing more deplorable or pitiable than the exploitations of the hopes and fears of cancer sufferers in order to enhance the sale of products, which the whole scientific world would pronounce worthless. Cancer research authorities are agreed that time is the vital factor in the treatment of cancer. It is a matter of life and death, and persons who discover cancer in its early stages (i.e. while the disease may still be described as a cancerous growth rather than a true cancer) and resort promptly to competent

skilled treatment, have a chance to get well. Time lost in taking and trying advertised remedies, which are not only useless but frequently increase the misery of the sufferer, results only in the disease gaining such hold that its eradication becomes impossible. It is for these reasons that an earnest endeavour is being made to remove from the market medicinal preparations subject to this Act which are represented in printed advertisements, or by mouth to mouth advertising, as remedies or treatments for cancer. Considerable data, as evidence, has already been procured. At a later date prosecution proceedings will be instituted against all offenders in this regard. Similar action is contemplated respecting manufacturers who recommend medicinal preparations for the other diseases mentioned.

POLLUTION OF INLAND WATERS

It was not until the progress report of the International Joint Commission on the Pollution of Boundary Waters was published that the seriousness of the pollution of the Great Lakes by vessels was appreciated. Vessel sewage was considered next in importance to municipal sewage as a factor in the pollution of the boundary waters. Extensive series of analyses made in 1913 showed that the unrestricted discharge of sewage from vessels (1) menaced the water supplies of Sault Ste. Marie, Michigan, Sault Ste. Marie, Ontario, Port Huron and Sarnia; (2) together with the sewage from towns, polluted the sources of water supply for summer residents and pleasure boats in St. Marys river, lower end of lake Huron, lake St. Clair, and about the Thousand islands; and (3) seriously polluted the waters in the lanes of vessel travel.

In the Final Report of the International Joint Commission issued in 1918, one of the conclusions was that "vessel pollution in certain parts of boundary waters exists to an extent which causes substantial injury to health and property." The commission recommended disinfection of vessel sewage before discharge.

Pollution from vessels is of four kinds: (1) raw sewage in the shape of human excreta, garbage, etc., discharged from toilet and other outlets directly into the lakes; (2) water ballast; (3) dredged material from scows; and (4) oil waste. This pollution affects the public health through contamination of (a) municipal water supplies near their intakes, (b) water supplies of other vessels following or crossing the same routes, and (c) bathing beaches.

The use of water for ballast is largely limited to freight vessels on the Great Lakes and is widely practised. The ballast carried on a large freight vessel is equivalent to from 20 to 60 per cent of the freight tonnage capacity. On a 10,000-ton freighter this is equivalent to 1,500,000 gallons of water. Water ballast is frequently taken aboard in a polluted harbour and discharged in less polluted waters, often within close proximity to some water works intake.

Lake pollution by dredged material is an important public health matter. River dredgings are commonly grossly contaminated by sewage and industrial wastes. Their consistency is often about that of thick cream and if scows encounter heavy seas gross pollution of the adjacent waters results.

The extension of water works intakes farther and farther out from shore corresponds with the encroachment of sewage pollution upon the water supply. Water works intakes at Cleveland, Ohio, have been extended from a point 400 feet out into the lake in 1858 to a point $4\frac{1}{2}$ miles out recently.

There are now at least nine freight vessels and four or five passenger vessels on the Great Lakes using oil for power. In addition there is a considerable number of tankers engaged in the petroleum trade. With the greater use of oil for power by vessels and for general industrial purposes, the extent of oil pollution of the lakes is bound to increase rapidly in the near future.

The question of disposal of sewage and water ballast from lake vessels still remains to be solved. At certain lake ports the pollution due to municipal sewage is considerably greater than that from the vessels, so that regulation of vessel sewage would not be advantageous until the city sewage was disposed of in a more satisfactory manner. It has been demonstrated quite definitely that vessel sewage can be cheaply and easily disinfected by the use of steam before discharge. A practical test of an automatic apparatus designed for this purpose was carried out through two complete seasons upon the lake steamship D. C. Kerr and met with entire success both as to mechanical operation and bacteriological efficiency.

Pollution by water ballast constitutes a more difficult problem. A feasible means for purifying large quantities of ballast water has not been determined as yet. It will probably be sufficient at present to control this practice by suitable regulation designed to limit or prevent the discharge of water ballast in the neighbourhood of intakes and bathing beaches. In the event of failure of such control by regulation more expensive and time-consuming methods of treatment will have to be developed and prescribed.

In the future it is quite possible that the problem of pollution of the lakes by vessels will become more serious with the opening of lake ports to foreign shipping.

Traffic on the Great Lakes has not been limited entirely to traffic between Canada and the United States ports, or port to port traffic in the United States and in Canada. Before and since the war tramp vessels entered the St. Lawrence carrying heavy cargoes as far as Montreal, where a portion was unloaded and then went on to upper lake ports via the various canals.

In 1926 a fleet of ten Norwegian vessels operated between ports in Europe and the Great Lakes. This commerce will bring to the lakes vessels which have hitherto not been operated in accordance with government regulations for lake shipping and may result in the introduction of disease due to contamination of water supplies with sewage from foreign vessels. This commerce will also bring many oil-burning vessels and tankers to the lakes increasing the pollution from this source. During the season of navigation of 1927 a total of 262 vessels entered the Great Lakes from outside seaports. Of this number 14 were vessels in ballast and two were privately owned yachts.

During the season of navigation of 1927 visits were made to a number of the larger passenger vessels engaged in traffic on the St. Lawrence river and through the co-operation of the provincial sanitary engineer of the province of Quebec it was possible to induce the vessel owners concerned to very materially improve the quality of the supplies of water for drinking and culinary purposes available aboard such steamships.

Similarly an effort was made to improve the quality of drinking and culinary water supplies available aboard vessels operated on the inland waters of the western provinces. In this connection water supply systems on vessels engaged in traffic on the Red river and lake Winnipeg in Manitoba were examined as were also the drinking water systems of passenger steamships that operate on Kootenay lake, the Upper and Lower Arrow lakes and Okanagan lake. In addition to which copies of the regulations regarding water for drinking and culinary purposes were supplied to the owners and officers of all passenger steamships operated on the inland waters of the western provinces.

The result of investigations made by R. C. Wallace, F.R.S.C. and associates to determine the nature of the dissolved and suspended materials carried by the Red river, their variation during the summer months and in winter, their relation to the composition of lake Winnipeg and to such contrasted types as the Mississippi and St. Lawrence rivers indicates that the volume of material carried

in solution by the Red river below Winnipeg is four times as great as that carried by the St. Lawrence at Ogdensburg. Comparatively the St. Lawrence is higher in CO_2 , SiO_2 , and in Ca; the Red river is higher in Na, SO_4 and Cl. This is typical of the difference between igneous rock and sedimentary rock erosion. The Red river stands at one end of a series, in which the St. Lawrence river, flowing in its upper reaches through igneous rocks, stands at the other. It may therefore be taken to represent the extreme case of river erosion in sedimentary strata rich in sulphates, with a very marked contribution from brine springs which in themselves have no connection with the surface deposits.

Work in connection with the supervision of vessel water supplies was continued throughout January and February, 1928, through the medium of a series of lectures that were given at the Schools of Navigation and Marine Engineering at various ports on the Great Lakes system. In this manner it was possible to get into contact with the coming generation of ships' masters and engineers under the best circumstances and at a time when questions could be asked and answered. The actual field work was commenced early in March, 1927, and carried on until the close of December. The data for the report submitted have been gathered throughout this period.

During the season of 1927, 1,486 routine visits to Great Lakes vessels were made by Health officials, this total including certain examinations of steamship water supply systems which were carried out in response to the special requests of various steamship operators.

In addition to the physical examination of water supply systems installed on various steamships, information and advice of a technical nature and copies of reports showing the quality of water supplies were supplied to navigation companies. Plans of proposed water supply systems for new steamships in course of construction by various shipbuilders in both Great Britain and Canada on being submitted for the approval of this office were examined and approved if in accordance with the regulations.

During 1926 there were constructed in lake shipyards three of the most modern type of bulk freighters that have a combined capacity of 40,000 gross tons. Shipyards on the St. Lawrence river, the Atlantic coast and Great Britain contributed eleven new ships and the Great Lakes fleet was further augmented by the purchase of six steel steamships, and there were in process of construction in lake shipyards for early delivery in 1927, thirteen more steel steamships, eight of this number being bulk freighters of the largest class. Thus in the last five years the United States and Canadian fleets have been augmented by ninety-eight cargo carriers capable of moving 537,100 gross tons of ore in a single trip. A most extensive program of large ship construction was carried out during the winter of 1926-27 at Great Lakes shipyards. This included seven freighters 600 feet and upwards in length, three steel car ferries, four steel package freighters, a self-unloading cement carrier and an immense passenger steamship for the St. Lawrence river service. At the present time thirteen new ships are being built for Canadian shipowners, including two large passenger steamships with stateroom accommodation for 550 persons aboard each vessel.

The volume of water borne commerce carried on the Great Lakes is not generally appreciated. The traffic of the Great Lakes is nearly as great as the total commerce on all other United States internal waterway systems. It is far in excess of the United States coastwise ocean-borne commerce and exceeds the foreign commerce of the Atlantic Pacific and Gulf.

The number of passengers carried, during the season of 1927 by the larger steamships and ferries that ply into Canadian ports on the Great Lakes and St. Lawrence river as given in detail in the table in the appendix to this report, numbered 20,986,726.

Total traffic for 1926 through the Canadian and United States locks at Sault Ste. Marie aggregated 85,679,087 tons, an increase of 3,803,978 tons over the similar period of 1925.

The number of passengers carried for the period mentioned was 52,704, of which number 62 per cent were carried by Canadian steamships.

A statement of traffic via the Welland canal for the season of 1926 shows a total of 5,640,298 tons carried in 5,866 vessel passages, being an increase of 505 vessel passages and 364,238 tons of freight.

Returns for the port of Toronto show that a total of 4,690 steamships, propellers, tugs and sail and tow vessels were listed as arrivals and departures at this lake harbour for 1925 season of navigation.

The traffic between upper lake ports and lower St. Lawrence ports has increased by leaps and bounds. The bulk of the grain tonnage carried down to Montreal from upper lake ports during 1927 was carried by Canadian vessels which made 9,745 trips, compared with 829 by American ships of all classes. Ships of other nationalities made 189 trips. There was an increase of 148 also in the recorded figures representing the number of ships trading from Montreal to lower ports in the St. Lawrence river and to the Maritime Provinces and Newfoundland.

The traffic movement on the St. Lawrence canals during the season of 1927 was the greatest in their history and amounted to 7,912,952 tons. The total grain movement was 176,355,806 bushels, which was 30,142,415 bushels more than the total shipped out during the twelve months of 1926 at New York, Philadelphia and Baltimore.

Certain vessels engaged in passenger traffic to lake and river ports handled 792,255 passengers in the season of 1927, but in addition to these steamships there is a considerable fleet of smaller vessels plying in and out of Montreal for which no information is available at the present time.

The port of Montreal provides passenger services both up and down the St. Lawrence river. Several organizations such as the Canada Steamship Lines and the Clarke Steamship Company are engaged in this business. Up the St. Lawrence there are services to the Lachine rapids, the Thousand islands, lake Ontario, Toronto, Hamilton and Niagara Falls. Downstream there are services to Quebec, Murray Bay, the Saguenay river, the Gaspé coast and Newfoundland, while another operates from Montreal to Bermuda. The passenger traffic over these lines is enormous.

Fresh water hydrants are located at intervals along the water front of Montreal harbour and several crews of men are kept busy during the season of navigation answering telephoned calls for water for boilers and for drinking purposes for vessels about to sail. A motor truck is used to convey the lengths of hose from the drying towers to the vessels. In 1926 there were 682 vessels supplied with a total of 16,129,990 gallons of fresh water.

An official report for the harbour of Three Rivers, P.Q., for 1926 shows 1,986 steamboats, barges and tugs engaged in inland traffic having passed through this port in addition to 195 canal boats and barges engaged in traffic to points in the United States as well as 110 other vessels of various nationalities engaged in ocean traffic, a very decided increase over the traffic of the previous season.

The record of arrivals and departures of vessels at the port of Quebec for 1926 shows a total of 231 coasting vessels as having arrived from Montreal and the Great Lakes, in addition to 299 coasting vessels that arrived at Quebec from lower St. Lawrence points and seawards.

While there has been a decided improvement in the quality of the water supplied for drinking and culinary purposes aboard a considerable number of the Canadian vessels on the Great Lakes, the constant attention of the persons responsible will be necessary in order that water supplies of standard quality may be always available.

Correspondence and interviews with Health and Navigation officials and other persons concerned were carried on regarding the certification of water supplies available at various ports. In this connection visits have been made to nearly all of the Canadian ports on the Great Lakes system to study in detail the facilities available for the supply of drinking and culinary water from certified shore sources.

The interest taken by vessel operators in regard to the drinking and culinary water service is best expressed in the words of a prominent official of the largest Canadian company in a letter last summer. He wrote: "We are keenly desirous to have the drinking water supplies on all passenger and freight vessels of the very best quality."

Throughout the season steamship companies operating vessels in Great Lakes traffic have been supplied regularly with copies of water analyses reports and wherever it has seemed advisable, attention of the management of these organizations was drawn to flagrant carelessness or violation of the regulations.

The amount of office work has grown appreciably coincident with the enlargement of the field of operations and co-operation with other Government departments.

That, since the regulations concerning water for drinking and culinary purposes on vessels navigating on the Great Lakes of Canada became effective, there has been a decided reduction in the number of typhoid fever patients put ashore from such vessels is very clearly indicated by the diagram showing the comparative number of typhoid fever cases on Canadian and United States vessels in Great Lakes traffic in the period 1920 to 1927.

This report is in reality a summary of the results of the co-operation of various Health officials at Great Lakes ports and the definite efforts of eighteen of these persons to secure the maintenance of supplies of water for drinking and culinary purposes of the standard of the regulations. As during the seasons of navigation of 1923, 1924, 1925 and 1926, vessels have been boarded by Canadian Health officials at the ports of Montreal, Kingston, Cobourg, Toronto, Welland canal, Chatham, Windsor, Owen Sound, Midland, Port McNicoll, Sault Ste. Marie, Port Arthur and Fort William. The findings of the subsequent analyses of water samples thus obtained have emphasized the necessity for general compliance with the regulations and have been also a powerful aid in accomplishing the improvements made to the water systems of various vessels.

The sudden death of Mr. R. K. Leslie, of the Provincial Department of Health, at Owen Sound, in midsummer put an end to the very valuable co-operative work that he had been doing in that district since June, 1923.

At the urgent request of various steamship operators concerned and the Director of the Branch Laboratory of the Provincial Department of Health, Sault Ste Marie, Ont., the matter of the water supply available at the Government docks at Sault Ste. Marie was taken up with the Department of Public Works and substantial improvements were subsequently made.

In accordance with a request from the Deputy Minister of the Department of Public Works a visit was made to Fort Frances, Ont., to examine and report upon matters of sanitation that will be involved in the proposal to raise the maximum elevation of the surface of the waters in Rainy lake and Rainy river.

To facilitate the elimination of contamination from the water supply systems of vessels engaged in navigation on the Great Lakes, through the courtesy of the Department of Marine, arrangements have been made to communicate by wireless with vessels whose water supplies indicate very serious contamination. At the request of the Assistant Deputy Minister of Marine an investigation and report was made regarding the sanitary conditions abroad the Canadian Government steamships *Stanley*, *Mikula* and *Lady Grey* at Quebec with special reference to a reported outbreak of typhoid fever.

Regarding the supervision of water supplies for drinking and culinary purposes on railway trains engaged in international and interprovincial traffic, details of this matter have been taken up with the officials of the United States Public Health Service, the various Canadian Departments of Health and the railway companies concerned. Preliminary reports have been received respecting the sources and quality of such water supplies and where these were shown to be contaminated notification of that condition has been sent to the railways interested.

That more care should be exercised regarding drinking water supplies abroad passenger trains is only too evident, it was noted on one occasion at a divisional filling point that the hose used to fill the drinking water tanks was dragged across the dirty muddy roadbed and no attempt made to clean the nozzle before it was inserted into the tank of a passenger coach.

In this connection it is of interest to note that the total number of passengers carried by all of the steam railroads of Canada during the year ended December 31, 1926, was 42,686,166 persons.

TABLE NO. 1

The total number of cases of typhoid fever reported as originating aboard Canadian vessels navigating the waters of Lakes Superior, Huron, Erie and Ontario during 1926 was 4, as indicated in the attached schedule.

During the same period the number of cases of typhoid fever reported as originating from vessels of United States ownership (including ss. *Lake Gaither*) was 28.

TYPHOID FEVER PATIENTS FROM GREAT LAKES STEAMSHIPS

Steamship	Owners	Number of Cases reported	From where reported	Date	Remarks—Patient's name, etc.
Tug.....	Reid Wrecking Company.....	1	Dr. J. W. S. McCullough.....	June 6, 1926	W. Woodside, deck hand.
Wakias F. Nisbet...	Eastern Steamship Co.....	1	Dr. Donald McKay, Collingwood.....	July 13, 1926	C. Woolner, seaman.
Elmboy.....	Tree Line Limited.....	1	Dr. J. W. S. McCullough.....	July 30, 1926	A. Marleau, seaman.
Not stated.....	Key Line, Limited.....	1	Dr. J. W. S. McCullough.....	1926	Charles Gregg, Kingston; died from typhoid fever.

TABLE No. 2—CASES OF TYPHOID FEVER REPORTED FROM GREAT LAKES PORTS

Municipality	Year	Number of		Remarks, increase, etc.
		Cases	Deaths	
Montreal.....	1927	5,121	553	
	1926	93	49	
	1925	161	50	5 directly from steamships.
	1924	130		
	1923	169	47	4 directly from steamships.
	1922	271	63	
	1921	187	62	
Kingston.....	1926			2 directly from steamships.
	1924	8		All from outside of Kingston.
	1923	0	2	1 directly from steamships. 6 originated outside of Kingston.
	1922	A few		Report of Dr. Williamson.
	1921	6		" "
Oshawa.....	1925	1		
	1923	8		
	1921	8		
Toronto.....	1925	43		9 21 contracted infection outside of city.
	1924	39		29 originated outside of city.
	1923	85		2 directly from steamships.
				66 originated outside of city.
Hamilton.....	1927	3		Probably infected outside of city.
	1926	1		
	1925	18		10 were infected outside of the city.
	1924	13		6 from outside of the city.
	1923	13	4	9 cases infected outside of city.
	1922	21	1	
	1921	21	3	
St. Catharines.....	1923	13	2	1 from steamships, increase of 11.
	1922	2	1	
	1921	13		All contracted outside of city.
Welland.....	1926			None from vessels.
	1925	20	5	8 originated outside of Welland.
	1924	10		2 directly from steamships.
	1923	10		3 directly from steamships.
	1922	14		3 directly from steamships.
	1921	4		
Chatham.....	1924	1		1 case from lake steamship.
	1923	1		
	1922	11	4	
Windsor.....	1926			2 directly from steamships.
	1925			
	1924	12		1 directly from steamships.
	1923	24		3 directly from steamships.
	1922	15		3 directly from steamships.
	1921			1 from steamship.
Sarnia.....	1926			1 case from tug, Reid Wrecking Co.
	1925	6		1 case from steamship <i>Sarnolite</i> .
	1924	10	2	None.
	1923	2		Both being employees of vessel companies.
	1922	5		4 directly from steamships.
	1921	4		3 directly from steamships.
Collingwood.....	1926			1 from Great Lakes vessel.
	1925			None from steamships.
	1924			None from steamships.
	1923	1		1 directly from vessels.
	1922	2		2 from steamships.
Owen Sound.....	1925	28		3 An epidemic of typhoid fever in the city. One from lake vessel.
Midland.....	1924	8		6 from steamships.
	1925			Two cases from Great Lakes vessels.
	1924	2		Both from Great Lakes steamships.
	1923	11		Increase 10, 6 directly from steamships.
	1922	1		1 from steamships.
	1921	3		2 directly from steamships.

TABLE No. 3.—CASES OF TYPHOID FEVER REPORTED FROM GREAT LAKES PORTS
Concluded

Municipality	Year	Number of		Remarks, increase, etc.
		Cases	Deaths	
Parry Sound.....	1925	3		These are two cases infected outside of Parry Sound. This is for Parry Sound district. Increase 3.
	1924	2		
	1923	13		
	1922	14		Very bad record. See report of Dr. E. George.
	1921	11	1	
Sault Ste. Marie.....	1927	9		None from steamships.
	1926			None from steamships.
	1925	3		None from steamships.
	1924	1		None from steamships. Decrease of 4.
	1923	5		2 directly from steamships.
	1922	6		Decrease of 3, 2 from steamships.
	1921	3		1 from steamships.
Port Arthur.....	1926			Increase of 6. 4 originated outside of Port Arthur.
	1925			
	1924			
	1923	7		
	1922	1		
	1921	1	1	
Fort William.....	1925			1 directly from steamships. Increase 6, 11 directly from steamships. Increase 11. Two directly from steamships. 3 directly from steamships.
	1924	3		
	1923	27	1	
	1922	21	1	
	1921	10	1	

TABLE No. 4—TYPHOID STATISTICS

TYPHOID FEVER CASES REPORTED

Province	Year	Totals		Increases		Remarks
		Cases	Deaths	Cases	Deaths	
Nova Scotia.....	1927	92				There was a total of 193 from Enteritis and Diarrhoea in 1925.
	1926	43	16			
	1925	91	24		3	
	1924	123	24	10		
	1923	113	33			
New Brunswick.....	1927	241	28	118	8	
	1926	123	20			
	1925	187	17			
	1924	233	18			
	1923	402	28			
Quebec.....	1927	5,866				Increase.
	1926		256			
	1925		236			
	1924-25	562	316			Epidemic at St. Jerome.
	1923-24	893	334	60		
	1922-23	833	326			
Ontario.....	1927	753		172		Decrease. Outbreak at Courtright and Owen Sound. Port Colborne epidemic. Cochrane epidemic.
	1926	581	77	278	7	
	1925	859	70			
	1924	833	76			
	1923	1,663	212	1,087	85	
	1922	576	127			
Manitoba.....	1927	108				
	1926	128	18			
	1925		23			
	1924	81	20			
	1923	110	24			
	1920	192				

TABLE No. 4—TYPHOID STATISTICS—*Concluded*

TYPHOID FEVER CASES REPORTED

Province	Year	Totals		Increases		Remarks,
		Cases	Deaths	Cases	Deaths	
Winnipeg City.....	1926	66	8			13 while travelling outside city; 9 contracted disease while travelling.
	1925	42	6			
	1924	36	6	10		Report for Winnipeg states that 15 persons contracted typhoid while travelling outside of city in 1923.
	1923	26	5			
Saskatchewan.....	1927	82				Decrease.
	1926	115	30			
	1925	223	39	140	2	
	1924	83	37	68	26	
	1923	151	63			
	1922	249	71	66		
Alberta.....	1927	62				Decrease.
	1926		16			
	1925	127	27	29	3	
	1924	98	24	57	12	
	1923	155	36			
	1922	169	50			
British Columbia.....	1926	64	17	45		Decrease of 45.
	1925	109	12			
	1924	109	15	30		
	1923	79	12			

* From the above figures it will be seen that during 1926 more than half of all the deaths from typhoid fever for all the provinces of Canada, occurred in the province of Quebec. The percentage for the epidemic year, 1927, is of course very much greater.

MARINE HOSPITALS SERVICE

The Marine Hospitals Service is operated in conformity with the provisions of chapter 186, Canada Shipping Act (Sick and Distressed Mariners).

During the year the department operated two marine hospitals, namely at Sydney and Lunenburg in the province of Nova Scotia. At the larger ports contracts were made with the local hospitals for the treatment of sick sailors at fixed per diem rates. At ports of lesser importance the department operated emergency hospitals, and at smaller outports satisfactory arrangements were made for their care and treatment through the agency of the collectors of inland revenue. The following is a list of the hospitals which were under contract with the department during the year 1927-28:—

NOVA SCOTIA

Amherst	Highland View Hospital.
Antigonish	St. Martha's Hospital.
Bridgewater	Dawson Memorial Hospital.
Glace Bay	St. Joseph's Hospital.
Halifax	{ Victoria General Hospital.
	{ City Health Board (Contagious Diseases).
	{ Tuberculosis Hospital.
Kentville	Nova Scotia Sanatorium (Tuberculosis).
Middleton	Soldiers' Memorial Hospital.
New Glasgow	Aberdeen Hospital.
North Sydney	Hamilton Memorial Hospital.
Pictou	Pictou Cottage Hospital.
Springhill	Springhill Cottage Hospital.
Windsor	Payzant Memorial Hospital.
Yarmouth	{ Yarmouth Hospital.
	{ Clinic Infirmary.

NEW BRUNSWICK

Bathurst	James H. Dunn Hospital.
Campbellton	Hôtel-Dieu.
Chatham	Hôtel-Dieu.
Moncton	Moncton Hospital.
River Glade	Jordan Memorial Sanatorium (Tuberculosis).
St. John	General Public Hospital.
	St. John County Hospital (Tuberculosis).
St. Stephen	Chipman Memorial Hospital.
Tracadie	Hôtel-Dieu.

PRINCE EDWARD ISLAND

Charlottetown	Charlottetown Hospital.
	Prince Edward Island Hospital.
Summerside	Prince County Hospital.

QUEBEC

Chicoutimi	Hôtel-Dieu.
Lachine	General Hospital.
Lake Edward	Lake Edward Sanatorium (Tuberculosis).
Levis	Hôtel-Dieu.
Montreal	Montreal General.
	Notre Dame.
	Hôtel-Dieu.
	Royal Victoria.
	St. Paul's (Contagious diseases).
	Alexandra (Contagious diseases).
	Grace Dart Home (Tuberculosis).
	St. Mary's.
	Convalescent Home.
Quebec	Hôtel-Dieu.
	Jeffery Hale's.
	Civic Hospital (Contagious diseases).
	Laval Hospital (Tuberculosis).
Sorel	Hôpital général.
Sainte-Agathe-des-Monts ..	Laurentian Sanatorium (Tuberculosis).
Saint-Jean	Hôpital Saint-Jean.
Three Rivers	Hôpital Saint-Joseph.

BRITISH COLUMBIA

Anyox	Anyox General Hospital.
Alert Bay	St. George's Hospital.
Bella Bella	R. W. Large Memorial Hospital.
Chemainus	Chemainus General Hospital.
Cumberland	General Hospital.
Duncan	King's Daughters' Hospital.
Ladysmith	General Hospital.
Nanaimo	Nanaimo Hospital.
New Westminster	St. Mary's Hospital.
Ocean Falls	Ocean Falls Hospital.
Port Alberni	West Coast General Hospital.
Powell River	St. Luke's Hospital.
Prince Rupert	General Hospital.
Tranquille	Tranquille Sanatorium (Tuberculosis).
Vancouver	St. Paul's Hospital.
Victoria	St. Joseph's Hospital.
	Provincial Royal Jubilee Hospital.
	City Isolation Hospital (Contagious diseases).

Emergency hospitals were operated at the following ports:—

Nova Scotia.—Arichat, Canso, Liverpool, Lockport, Louisburg, and Shelburne.

Prince Edward Island.—Souris.

Quebec.—Port Alfred.

The total number of sick, distressed, and injured mariners treated during the year 1927-28 was 5,217, and the number of days of hospital treatment was 45,207.

The total expenditure for the year 1927-28 was \$189,969.80; and the total revenue from the collection of Sick Mariners' Dues was \$222,048.08. Detailed information as concerns the expenditure will be found in the financial statement.

A tabular statement of diseases and injuries treated during the year 1927-28 follows.

STATEMENT OF DISEASES AND INJURIES TREATED DURING THE YEAR 1927-28			
GENERAL DISEASES			921
Measles	14	Rheumatism	91
Diphtheria	4	Anaemia	7
Chicken-pox	1	New growths—Malignant	11
Mumps	9	Non-malignant	35
Scarlatina	5	Cyst	22
Erysipelas	4	General debility	18
Typhoid fever	32	Pyæmia	9
Typhoid inoculations	37	Influenza	175

QUARANTINE SERVICE

The following organized quarantine stations were maintained during the fiscal year:—

Province of Quebec.—Grosse Isle in the river St. Lawrence (with Father Point as the inspecting base); with Quebec and Montreal Harbours as substations.

Province of Nova Scotia.—Halifax, the Harbour and Lawlor's Island.

Province of New Brunswick.—St. John, the Harbour and Partridge Island.

Province of British Columbia.—William Head, Victoria, with Vancouver, Esquimalt, New Westminster and their respective harbours, as substations.

Each organized quarantine station is in charge of a medical quarantine officer.

A substation is a port of final destination to which vessels may go after procuring pratique at an organized quarantine station, and where, following discharge of cargo, they can with greater facility be fumigated or disinfested, and where other functions may, when required, be performed as directed by the Department.

Each substation is in charge of the chief or senior immigration medical officer, except when otherwise provided by the Department.

The following table shows the number of vessels and personnel inspected at the several stations:—

Station	Vessels inspected	Passengers			Crews	Cattlemen, stowaways, distressed seamen, etc.	Total persons inspected
		First class	Cabin class	Tourist third, third class and steerage			
Province of Quebec— Father Point.....	1,150	4,196	24,179	86,626	92,409	357	207,767

Totals.....	2,917	17,152	52,398	222,110	241,836	481	533,977

Persons to the number of 78 were detained in quarantine. Of these, 32 were hospitalized on account of sickness; the remainder were either contacts under observation or members of families accompanying those in hospital.

COMPULSORY FUMIGATION OF SHIPS

Facilities for fumigating ships for the destruction of rats, etc., either by the cyanide or sulphur dioxide method, in accordance with section 37 of the Quarantine Regulations, now exist at the ports of Montreal, Quebec, Three Rivers, Chicoutimi, and Port Alfred, province of Quebec; St. John, N.B.; Halifax and North Sydney, N.S.; Vancouver, Prince Rupert, and William Head (Victoria), B.C.

The following table summarizes the work done at the respective ports:—

DERATIZATION OF SHIPS

Port	Method of rat destruction employed		Certificates of deratization issued	Dead rats recovered	Deratization exemption certificates issued
	Fumigation by sulphur dioxide	Fumigation by hydrocyanic acid			
Montreal, P.Q.		119	119	1,131	102
Halifax, N.S.	23	5	28	Rats 87 Mice 74	5

Prince Rupert, B.C.	0		0	91	
Totals	127	240	367	Rats 2,157 Mice 74	109

The following extracts are from reports received from the respective quarantine officers:—

GROSSE ISLE, QUEBEC (Medical Superintendent, Dr. G. E. Martineau)

"Infectious or contagious diseases were reported on 67 occasions, from 24 steamers. These included all the minor infectious diseases. On two occasions modified smallpox was found (on the ss. *Andania* and *Ausonia*). These cases were among the crews.

"On October 11, the ss. *Canadian Trapper* arrived from Halifax, having landed a case of smallpox there and leaving before any action had been taken by the local authorities. On instructions from the Department, this vessel was stopped at Grosse Isle, where the necessary action was taken.

"Deaths were reported on six occasions on the following vessels, from the causes named: ss. *Letitia*—pneumonia; *Empress of France*—typhoid; *Blair-athol*—hemorrhage of lungs; *Regina*—lost overboard; *Doric*—myocarditis; *Antonia*—following injury.

"Passengers refusing vaccination under the regulations were vaccinated on seven occasions by your quarantine officers. Three who refused vaccination were sent to the Immigration Hospital at Quebec for the necessary period of observation.

"One birth was reported on November 19 on the ss. *Regina*.

"*Fumigation of Vessels.*—There were 198 vessels ordered routine fumigation at the port of Montreal (see Montreal report). Of these, 101 were fumigated and 97 were exempted. In addition, vessels from plague-infected ports, or having called at plague-infected ports since last fumigation, to the number of 23, were ordered 'mandatory fumigation'. Of these, 5 were exempted from fumigation.

"Port of Quebec.—There were 12 vessels ordered to be fumigated at this port. Of these 1 was ordered fumigated by error, and 1 produced a certificate of recent fumigation. Both were exempted. The remaining 10 were fumigated.

"Port of Three Rivers.—One vessel was fumigated at this port.

"Port of Port Alfred and Chicoutimi.—Six vessels were fumigated at these ports.

"One case of typhus fever, one of smallpox and one suspected case of smallpox were admitted to the hospital of Grosse Isle.

"Typhus fever.—Michael Malinski and his wife, natives of Northern Poland, left Varsau April 22, were examined and deloused at Volskova (?), the station before Danzig. At Danzig they had another inspection for vermin and eyes. They stated no epidemic existed in their native village and that they did not know of any sickness. Embarked at Liverpool on ss. *Montclare* on May 6, arrived at Quebec on the 14th. The man passed the usual line of inspection, but four hours later he was reported by the Red Cross nurse as being sick on the train, with a severe chill and fever. It is not likely that he had much fever at the time of inspection, for in everting the eyelids, as is done in the case of every foreigner, the inspector would undoubtedly have noticed it. We learned later from his wife that the patient had not been very well the last three days on board ship and that he had been given a strong purgative by the ship's surgeon or the dispenser. He was not reported on the bill of health. Asked how he was feeling when he passed the medical inspection in the Immigration building, Quebec, he replied that he was feeling weak only.

"On admission at the Immigration Hospital, Quebec, May 15, about 11 p.m., the patient had a temperature of 104° with a frequent dry cough and was fretful. Next morning, he was reported as having passed a sleepless night and wanted something to make him sleep.

"In the afternoon, May 15, he became delirious with increased restlessness but got more calm during the night. Delirium did not return. The following days he was rational and took willingly the water, milk and medicine offered him. His axillary temperature ranged between 103 and 104, with rapid pulse. His cough, flushed face and sudden chill suggested pneumonia at first, but examination of the chest revealed only a coarse bronchial breathing. Malaria was eliminated by a negative blood examination. Albumin and biliary pigments were present in the urine.

"On the 17th some maculae (8 to 10) were noticed on the abdomen and chest, resembling the rose spots of enteric fever. Next day their number had increased considerably on the legs and arms, chiefly on the flexor surfaces. They were round or oval in form, none were raised, some disappeared on pressure, others did not. The first to appear faded, leaving a dark hue, while the most recent ones were quite red. They came in successive crops, even on the same part of the body; on the 19th and 20th they invaded all the body except the face; there were very few on the neck. Some were petechial, none coalesced. There was some tenderness in the splenic region but no enlargement of the gland.

"On the first appearance of maculae, typhoid fever was at once suspected. A first sero diagnosis was made on the 18th, but no agglutination was obtained with the B. Typhosus and the Para A and B; a second one on the 20th gave a very slight and incomplete agglutination with Para B and none with the Typhosus or Para A. The same day a Weill Felix test was absolutely negative. The patient was then in the sixth day of his illness. In spite of the failure of agglutination of the Proteus X 19, a suspicion of typhus exanthematicus was created by the character of the rash and the concomitant symptoms—initial delirium, flushed face, stupor, dry, brown-coated tongue with very red edges, obstinate constipation, high temperature with almost no morning remission and accelerated pulse.

"The case was diagnosed definitely as typhus fever and on instruction of the department, the patient, and his wife, who had remained in the Immigration building, were transferred to Grosse Isle on the 21st.

"The patient's serum was sent to Dr. Harris, bacteriologist of the Department at Ottawa, and to Dr. Piegay, Immigration Hospital, Quebec, both of whom found that it agglutinated with the proteus X 19, thereby confirming the diagnosis of typhus fever.

"No complications occurring, and the patient having fully recovered, he was released with his wife on June 15.

"Smallpox—One member of the crew of the ss. *Andania* suffering from smallpox was landed at Grosse Isle on August 13, with seven contacts. All the contacts showing immunity or positive reaction after vaccination were released on the 19th, in accordance with the Quarantine Regulations. The patient having fully recovered was released on September 1.

"One member of the crew (musician) ex ss. *Andania*, a suspected case of smallpox, was landed at Grosse Isle with three contacts on November 21. These people were all released on November 24, following diagnosis of non-infectious skin eruption. From the history of this case, as given by the ship's surgeon, also from the kind of rash and the parts of the body where it started and was distributed, combined with the fact that he came from a district infected with smallpox, we at first had every reason to believe that we had to deal with a suspected case of modified smallpox."

LAWLOR'S ISLAND, HALIFAX, N.S. (*Quarantine Officer, Dr. J. V. Graham*)

"The following cases of minor infectious disease, with relatives accompanying, were handed over to the Immigration medical officer for treatment in the Rockhead hospital: Measles—25 cases, with 42 accompanying; scarlet fever—1 case, with 4 accompanying; mumps—3 cases, with 4 accompanying; chickenpox—2 cases, with 5 accompanying; observation for diphtheria—2 cases with 1 accompanying; erysipelas—1 case, with 2 accompanying.

"During the night of January 14, the motor ship *Clydebank* arrived at quarantine from the East Indies. Quarantine inspection was made on Sunday morning, January 15, when the master of the vessel reported one of the Hindu crew had been ill for eight days. Examination of this man revealed an inguinal bubo of unexplained origin. The ship was held in quarantine and the department communicated with by wire. The bubo was aspirated and a smear and cultures made and a guinea pig inoculated, all of which proved negative. Dr. Harris, departmental bacteriologist, who had arrived here in the meantime, however, was of the opinion that this did not exclude the possibility of Pestis Minor with few bacilli. The patient was transferred to the quarantine hospital at Lawlor's island on January 19. The following day I dissected out the gland with the assistance of Drs. Rutherford and Macaulay, and smears and cultures made from the pus taken from the gland proved negative. Two guinea pigs were inoculated subcutaneously and two interperitoneally with pus taken from the gland on the 20th. Pending the result of this, the vessel was given permission to dock, breasted off from the wharf, with rat guards on the mooring lines and the lines wrapped with canvas strips coated with fresh tar for three feet, and the cargo destined to Halifax unloaded under quarantine supervision. The animals inoculated on the 20th, still being normal, as also the animals inoculated on the 15th, the ship was released from quarantine at 1 p.m. on Tuesday, January 24, and the vessel thereupon sailed for Boston. A detailed report of the measures taken against this vessel was made by special delivery letter to the quarantine officer at Boston. A diagnosis of Idiopathic Inguinal Bubo was made, and on the instructions of the department, the patient was transferred to the Victoria General Hospital, Halifax, on February 3, 1928.

"There were 28 vessels fumigated at this station during the year. On five of them, 87 dead rats were recovered after fumigation, and on two of them 73 dead mice were recovered. On February 28, we fumigated for the first time here with Zyklon-B.

"Other than the routine vaccination of members of the staff requiring it this year, there were no vaccinations performed at this station."

WILLIAM HEAD, B.C. (*Quarantine Officer, Dr. C. P. Brown*)

"There has been an increase of approximately 18 per cent in shipping, a general all-round increase of all nationalities. Accompanying this is a decrease in passenger traffic inspected, the freighters being increased as shown by number of crews and vessels. The effect of the European grain trade is shown by the relative decrease of 7 per cent in vessels from the Orient, and increase of 9 per cent in vessels from Europe.

"General health conditions of traffic have been good. There were two vessels quarantined for smallpox. One was a passenger vessel of the Admiral Orient Line. The ship's surgeon had carried out preliminary vaccination so carefully that it was only necessary to detain the patient. The other was a freighter. The patient and one member of the crew who refused vaccination were detained. This vessel had already passed through the United States Quarantine Service at Gray's Harbour, where vaccination was carried out.

"There have been no violent epidemics of quarantinable disease at ports from which our traffic comes during the year. These diseases have been reported as widespread but in small numbers.

"Plague has been reported from the Straits Settlements at Colombo, Sourabaya, Singapore and Bangkok; from Constantinople, Port Said and Alexandria; from Cape Verde and the Canary Islands; from Oran and Algiers; from South America chiefly at Guayaquil, Callao, Rosario and Rio de Janeiro.

"Smallpox has been reported at almost all ports from which we get traffic.

"Cholera has been reported at Singapore, Manila, Hongkong and Shanghai, but not epidemic.

"Typhus has been reported at Oran, Algiers, Cairo, Alexandria and some North and South American ports.

DETENTION DIVISION

"There were twenty-one total detentions during the year. There were no deaths on the station, although one boy died in the Isolation Hospital at Victoria, from general septicæmia following mastoid infection. He came to us with scarlet fever and was later removed to Victoria for operation. There was a very virulent type of both measles and scarlet fever among the children of white parentage returning from Asia during last summer.

"Outside of our staff and a few of the immediate neighbourhood, there were no vaccinations.

FUMIGATION DIVISION

"Total fumigations are just the same as last year. All fumigations on the coast are now carried out under the personal supervision of a medical officer appointed by the department, and are reported to the Quarantine Officer at William Head. Cyanide, either as the barrel method or as Zyklon-B, is the method of choice at Vancouver. Sulphur has been used exclusively at other ports. During the year eighteen vessels have been ordered fumigation as coming from infested ports.

"Models illustrating ratproofing of vessels and supplied through the kindness of Dr. Grubbs of the U.S.P.H.S., have been exhibited at Vancouver. This has been done with the aim of interesting shipping authorities in this important question. So far, however, there has been very little attempt to carry it out among vessels trading to this coast.

"Notes kept on the deratization of vessels show that the use of cyanide, especially in the form of Zyklon-B, is coming more into favour. The U.S.P.H.S. still does nearly half the fumigating of our total traffic.

LABORATORY

"The laboratory has been kept ready for work. The usual examinations for the station and Bentinck Island have been made.

LAZARETTO, BENTINCK ISLAND

"Equipment, buildings and grounds, generally have been maintained in good order by our staff, supplied with material by the Public Works Department. The Public Works Department completed a fine new building during the year that supplies offices for ourselves and the customs and a residence for the customs officer. We appreciate the added office and storage accommodation very much. They have also rebuilt the shed on the wharf. During the year the telephone line to Victoria has been destrung and put in good condition.

"Quarantine boats under the efficient supervision of the officials at H.M.C. Dockyard, Esquimalt, have undergone extensive repairs. The *Madge* has several new plates. The *Evelyn* was overhauled above the waterline. It has also had several trips to the navy yard for emergency repairs. Both its engine and hull are approaching the limit of safety.

"It is my sad duty to record the death of two members of the staff during the year, that of Dr. H. MacLaren, who died from natural causes September 15, 1927, and of Dr. H. P. Cox, who died following injuries sustained by a fall into the hold of the ss. *Ethelwolf* while on fumigating duty in Vancouver January 9, 1928. All members of your staff here felt the loss of these two associates very much.

"Following the death of Dr. Cox I had the assistance and advice of Dr. W. W. Aylen from January 13 till February 14, 1928, and later of Dr. J. B. Peloquin from February 22 to March 30, 1928. I appreciated their help very much indeed. The work of the department was carried on without delay to shipping either at William Head or Victoria. I also wish to express my appreciation of the co-operation Dr. Cartwright rendered so willingly during this time. He was also given training in cyanide work at Vancouver and eventually received the appointment.

"Dr. W. W. Aylen's visit also constituted the official visit of inspection from the department for the year.

"During the year the station was visited by Mr. J. B. Hunter, Deputy Minister, Public Works Department, July 30, 1927. Delegates from the British Columbia Hospital Association visited and inspected the station September 8, 1927.

"I would like to express my appreciation of the loyal and efficient co-operation of all members of the staff during the year; also to express my thanks to officials of associated Departments and services, both Dominion and Provincial, with whom I have had official dealings during the year. They have uniformly been cordial and willing to assist in any way."

MONTREAL SUBSTATION, P.Q. (Fumigating Officer, Dr. G. E. Beauchamp)

"Every vessel coming to the port of Montreal with a fumigation order from the Quarantine Officer at Father Point was inspected immediately after arrival by the Chief Fumigator, in order to find out if there was evidence, old or recent, of rat infestation, rat harborage or any indication of rats on board the ship. When the inspector's report was positive the fumigation was ordered. When there was no evidence of rat infestation an extension of time for the fumigation of the ship was granted to twelve months from the date of the last fumigation. A certain number of vessels reported as coming from Mediterranean ports or from ports suspected to be infected with plague were also inspected. When the inspection of these vessels did not show evidence of rat infestation an extension of time for the fumigation was also granted. In the case of vessels arriving in the port of Montreal with an order of mandatory fumigation the ships were fumigated, except in seven cases where it was shown, after a careful inspection, that there was no evidence of rat infestation, old or recent, and no other indication of rats on board of the ship. The log book on board the vessels referred to showed that although they had been to infected or suspected infected ports, they had not been tied to the docks but remained in midstream for coaling or to take a certain quantity of cargo brought to the ship by tenders. These exemptions were granted until the ship's return to the port of Montreal, and it was clearly mentioned that the captain would have them to produce a certificate of recent fumigation in another port or the vessel would be fumigated. Two ships exempted from fumigation at their first voyage were fumigated on their return to the port of Montreal later in the season.

"In the months of May, June, September, October and November, owing to the great number of ships coming to Montreal, the harbour master issued an order that all vessels coming in ballast and which were ordered to be fumigated by the quarantine officer at Father Point, should anchor below Longue Pointe until they could have a berth in the harbour. This necessitated the inspection of vessels in midstream. A temporary gasoline launch was provided to take the inspector on board. The cost for the said launch was \$2.50 per hour, paid by each vessel inspected according to the time taken for each inspection. In September, at my request, the Department obtained the loan of a small gasoline launch, the *Little Mike*, with a captain and an engineer, from the Department of Marine, for the inspection and the fumigation of ships in midstream. The charges made against the ships for the use of the said launch were \$3 per hour. This boat was in service from October 3 until November 21, 1927. All vessels loaded coming direct to the harbour were inspected at their dock after the unloading had been completed. No charges were made against the ships for that inspection.

Number of vessels inspected amidstream at Longue Pointe.....	43
Number of vessels inspected in the harbour.....	178
Total.....	221

"One hundred and nineteen vessels were fumigated during the navigation season from April to December, 1927. Eleven vessels were fumigated with cyanide (barrel method), and 108 vessels were fumigated with Zyklon-B. The fumigation with Zyklon-B has proved to be very effective, and although this method is more dangerous than the other methods, I am glad to say that no accidents happened, due to precautions taken and to a strict discipline during the fumigation process. Four men, under the direction of Mr. Michel Perrault, chief fumigator, and under the direct supervision of a medical officer, Dr. Bell or myself, were employed for the fumigation of each ship. The transportation of the personnel and material was made by the gasoline launch. The transportation of the members of the crew of each ship ashore was also made by the launch. Transportation of material in the case of vessels fumigated in the harbour was made by a hired automobile truck, and the cost of same, \$3 per hour, was paid by the ships."

Number of vessels fumigated at Longue Pointe.....	27
Number of vessels fumigated in the harbour.....	92
Total.....	119

VANCOUVER, SUBSTATION, B.C. (Fumigating Officer, Dr. C. Cartwright)

"The following report is made up mostly from the notes and reports left by the late Dr. H. P. Cox, and covers the period from April 1, 1927, to March 31, 1928.

"It will be noted that the figures for boats done by cyanide as against those done by sulphur, practically reverse the figures for 1926-7.

"It will also be noted that there is an apparent falling off in boats fumigated that are arriving from the Orient, but this is probably due to the fact that many Japanese ships are being fumigated in Japan, and many more are being done in American ports before coming to Vancouver.

"The total number of boats fumigated in Vancouver during the past twelve months was 160.

"Of this number 81 were remanded and 79 done by request.

"Of ships fumigated there were:—

From the Orient.....	62
From North America.....	22
From Central and South America.....	13
From Europe.....	52
From Africa.....	0
From Australasia.....	11
The number of ships fumigated with sulphur was.....	44
The number of ships fumigated with cyanide was.....	116
The total number of rats picked up was.....	478
On ships done by requests.....	159
On ships remanded.....	319
The total number of rats found after sulphur fumigation was.....	31
The total number of rats found after cyanide fumigation was.....	447

"Of 61 ships reported on that had not been previously examined, 40 were clean and free from rats, 15 were doubtful, and 6 showed definite evidence of the presence of rats. Practically all ships have considerable cover for rats and in only a few have I seen any attempt to screen off places where food is stored so as to make them rat-proof. As for actual rat-proofing I have personally only seen one ship—the ss. *West Camargo*—on which any real attempt had been made to make the ship rat-proof and on this ship I found one rat after fumigation. This one was in No. 2 hold and might have got on board from the dock.

"Inspection of wharves and piers showed that rat-guarding regulations were being enforced."

LEPER STATIONS

Under the Leprosy Act (chapter 136, Revised Statutes, 1906), the department administers two leper colonies, one at Tracadie, N.B., the other at Bentinck Island, B.C.

Tracadie, N.B.—This lazaretto is in charge of Dr. J. A. Langis, medical superintendent, assisted by nursing sisters of the Order of St. Joseph. At the close of the fiscal year, March 31, 1928, there were eight inmates being cared for as compared with eleven the previous year. This reduction was due to two deaths, one in July, 1927, the other in February, 1928; and to the transfer of a Chinese leper patient to the lazaretto at Bentinck Island, B.C.

Of the eight remaining, three have clinical signs of active leprosy; the other five are considered to be arrested cases. The following table furnishes particulars of the respective patients:—

Patient	Age	Sex	Admitted	Nationality	Where from
P. D.....	41	M.	May, 1909.....	French Acadian.....	Lamèque, N.B.
O. L.....	82	M.	October, 1910.....	French Acadian.....	Negua, N.B.
B. T.....	75	F.	October, 1914.....	French Acadian.....	Portage River, N.B.
A. D.....	29	F.	July, 1918.....	French Acadian.....	Lamèque, N.B.
J. D.....	67	M.	April, 1919.....	French Acadian.....	Lamèque, N.B.
V. de L.....	28	F.	January, 1921.....	Scotch and French descent.....	Toronto, Ont.
K. S. L.....	46	M.	October, 1922.....	Chinese.....	Montreal, P.Q.
J. P.....	33	F.	November, 1926.....	Russian.....	Blaine Lake, Sask.

It will be seen that five of the inmates are French-Acadians. These are natives of Gloucester county, N.B., where leprosy first made its appearance in Canada.

The medicinal treatment was similar to that in past year, viz., the ethyl esters of the fatty acids of chaulmoogra and hydnocarpus oils, supplemented by benzocaine and olive oil and a French preparation "Hyrganol Iode".

Bentinck Island, B.C.—This leper station is in charge of Dr. C. P. Brown, medical superintendent of the quarantine station at William Head, B.C., to which Bentinck Island is adjacent. At the close of the fiscal year there were eleven male patients being cared for, this number being one additional as compared with the previous year. Two patients died during the year—a Chinese admitted on April 26, 1927, very far advanced in terminal exhaustion from lesions, due to the disease, on May 23, 1927; and A.B., a Russian Jew, on February 13, 1928, who had been a patient at the lazaretto since 1921.

There were three new admissions during the year, one, referred to in the preceding paragraph, whose illness ended fatally; a Chinese admitted on October 5, 1927, from the Vancouver General Hospital; and the third, a Chinese, transferred from the lazaretto at Tracadie, N.B. The following table furnishes particulars of the respective patients.

Patient	Age	Admitted	Nationality	Where from
F. H.	42	August 28, 1916.....	Chinese.....	Vancouver, B.C.
C. K. W.	43	October 4, 1918.....	Chinese.....	Vancouver, B.C.
L. A.	31	November 28, 1918.....	Chinese.....	Victoria, B.C.
L. E.	37	December 23, 1920.....	Chinese.....	Vancouver, B.C.
C. K.	48	March 31, 1922.....	Chinese.....	Victoria, B.C.
J. L.	32	August 5, 1923.....	Chinese.....	Vancouver, B.C.
E. D.	34	January 31, 1924.....	Doukhobor...	Veregin, Sask.
M. J.	31	May 31, 1924.....	Chinese.....	Vancouver, B.C.
W. K. D.	43	October 28, 1925.....	Chinese.....	Nanaimo, B.C.
W. H. F.	26	October 5, 1927.....	Chinese.....	Vancouver, B.C.
W. S.	37	November 16, 1927.....	Chinese.....	Tracadie Lazaretto, N.B.

The condition of these patients may be summarized as follows:—

Six show clinical signs of present active disease.

Two have discharging sinuses on feet, the result of damage done by the disease.

Two have no active clinical signs of the disease, but have had mixed positive and negative smears.

One has no active clinical signs of the disease, and is bacteriologically negative.

Medicinal treatment consists of chaulmoogra oil capsules, with "Moogrol" injected intramuscularly, supplemented by a preparation manufactured according to the formulae of Sir Leonard Rogers called "Alepol," which is a combination of lower melting point fatty acid derivatives than the "Moogrol". The protein shock induced by injection intramuscularly of 3 cc. of milk has also been tried. Dr. Brown reports it is impossible as yet to express an opinion as to the value of these special treatments.

The lepers are housed in cottages, each with his own room and outfit, and look after themselves as far as practicable. Two male caretakers and a trained female nurse are in immediate charge of the leper colony, under the supervision of the quarantine medical officer, who visits the island at weekly intervals, or oftener if needed. The completion of additional cottages now provides available space for six more patients.

IMMIGRATION MEDICAL SERVICE

Ocean passengers, immigrants and non-immigrants (tourists, etc.), to the number of 137,941 were medically inspected at Canadian ports on the Atlantic and Pacific coasts during the fiscal year. In addition 1,646 persons en route to Canada by way of the ports of New York and Boston were medically inspected by officers of the United States Public Health Service.

The following tables show (a) the monthly arrivals by ports, and (b) a comparison with the figures of the previous fiscal year.

The following table shows the number of persons medically certified at ports of arrival as prohibited of entry to Canada under the Immigration Act:—

Ocean Ports	Insane, feeble-minded epileptic, etc. Section 3 (a)	Tuberculosis, loathsome or chronic infectious disease Section 3 (b)	Physically defective—liable to become a public charge Section 3 (c)	Constitutional psychopathic inferiority Section 3 (k)	Minor physical or mental defects— affecting ability to earn a living Section 3 (m)	Total

IMMIGRATION MEDICAL SERVICE OVERSEAS

On February 15, 1928, it became compulsory for all prospective emigrants to Canada from European countries, including the British Isles, to undergo medical examination before being permitted to enter this country. Prior to that date, while all immigrants were subject to medical line inspection on arrival at Canadian ports, compulsory medical examination before embarkation applied only to those emigrating under Government assisted passages, to unaccompanied women, and to juvenile immigration schemes. While the new policy did not come into complete operation until the date above-named, prospective emigrants were given the option of being examined by the augmented staff of Canadian medical officers sent overseas as early as November, 1927.

Under the old scheme, British and Continental doctors selected from an official roster were utilized to conduct the examinations. Their medical certificates were then reviewed by the London office of the Canadian Immigration Medical Service. Where doubt existed as to their actual condition, a personal examination was made by the Canadian medical officer in charge, or by his assistant.

The following statements summarize the various activities:—

ROSTER DOCTORS' CERTIFICATES REVIEWED

April.....	4,967	September.....	1,726
May.....	5,187	October.....	1,043
June.....	3,548	November.....	561
July.....	2,819		
August.....	2,298	Total.....	22,149

EXAMINATIONS BY CANADIAN MEDICAL OFFICERS

April.....	235	November.....	839
May.....	267	December.....	1,966
June.....	296	January.....	5,066
July.....	206	February.....	11,750
August.....	168	March.....	21,765
September.....	98		
October.....	89	Total.....	42,745

Of those examined, the following were found to come within the "prohibited classes" under the Immigration Act:—

MENTAL CONDITIONS

Section 3 (a)—	
Dementia praecox.....	10
Epilepsy.....	26
Feeble-minded.....	216
Idiocy.....	6
Imbecility.....	6
Maniac depression.....	1

Vision, defects of.....	350

Total..... *2,850

* Of this number, 1,785 were thus certified under the new scheme by Canadian medical officers, during the period November, 1927, to March, 1928, inclusive.

CHRONIC ALCOHOLISM

Section 3 (1).....	3
--------------------	---

MINOR MENTAL OR PHYSICAL DEFECTS

Section 3 (m)—	
Mental defects.....	12
Physical defects.....	901
Total.....	913

Whereas it is the task of officers of the Immigration Medical Service overseas to diagnose the mental and physical condition of prospective emigrants to Canada, and to assess their medical rating under section 3 of the Immigration Act, the final responsibility as to their acceptance or rejection rests with the Department of Immigration.

Before the close of the fiscal year, in order to carry out the new policy, medical examination centres in charge of Canadian doctors were established in the British Isles and Europe as follows:—

Great Britain—London.	Ireland—Belfast.
Bristol.	Londonderry.
Birmingham.	France—Paris.
Liverpool.	Belgium—Antwerp.
York.	Holland—Rotterdam.
Glasgow.	Germany—Hamburg.
Inverness.	Poland—Danzig.
	Latvia—Riga.

LABORATORY OF HYGIENE

During the year the activities of the laboratory were varied. Following upon the publication by Dr. Glover of New York of the formula of his "Cancer Medium," whereby he claimed cultures of the specific microbe of cancer could be isolated, attempts were made to corroborate his claims. Following carefully Dr. Glover's technique, cancerous tissue from three cases of the disease were closely investigated and in no instance could Glover's claims be substantiated. The results attained were quite in conformity with those published by Kolmer of the Dermatological Institute of Philadelphia.

As in the past, close collaboration was maintained with the Food and Drugs Laboratory and with the Chief Sanitary Engineer of the department, whereby bacteriological examinations of various kinds of foods, and water samples from various vessels plying on the Great Lakes were duly examined.

At the request of the expert retained by the Provincial Board of Health of Quebec investigating the typhoid outbreak in Montreal, the laboratory took part in certain critical investigations with satisfactory results.

Supplies of both plague and Asiatic cholera vaccines have been purchased and supplied to the quarantine medical officers of the various stations controlled by the department.

A case of suspected plague on board a ship entering the port of Halifax from Calcutta, India, was made the subject of close inquiry. Laboratory tests, carried out under the supervision of the chief of this division, ultimately showed that the incident was not due to plague, but to another type of infection harmless to the general public.

About the close of the year investigations were begun in reference to the presence of Malta fever in Ottawa and vicinity, which indicated the presence of this type of infection. The work is being carried on with the anticipation that publication of the research will be accomplished in the course of the coming year.

* Of this number, 548 were thus certified under the new scheme by Canadian Medical officers, during the period November, 1927, to March, 1928, inclusive.

In the laboratory an incubator room was built with the collaboration of the supervising architect of the department, as an experiment to try out new systems of insulation. The experiment has proved to be quite a success and will be made the subject of a publication at a later date.

Upon invitation from the authorities of the United States Department of Agriculture, Bureau of Food and Drugs, the laboratory collaborated in an investigation of the biological assay of digitalis, according to the United States Pharmacopoeia method, and was brought to a satisfactory conclusion. A new method in interpreting the facts of the biological assay of digitalis by means of probability curves was undertaken, but as yet is not concluded. It would appear, however, that by this method more concise results of analyses will be attained. Should this be so, the method will be published in one or other of the scientific journals later on.

In anticipation, during the forthcoming year, of the application of the new regulations as applied to the Food and Drugs Act of 1927, work is under way in the laboratory for the manufacture of standard preparations of digitalis, strophanthus, ergot and pituitary extract. These standards are to be made available to all Canadian manufacturers of these pharmacopoeial preparations.

DIVISION OF VENEREAL DISEASE CONTROL

The work of venereal disease control was carried on, as in preceding years, with the aid of the Dominion grant, which has been allocated to the provinces for the past nine years. The grant this year was distributed as follows:—

Alberta.....	\$ 6,504 21
Ontario.....	32,425 03
Nova Scotia.....	5,790 00
Saskatchewan.....	8,372 80
Manitoba.....	6,743 67
New Brunswick.....	4,287 22
British Columbia.....	5,798 23
Quebec.....	26,098 47
Printing and stationery.....	2,837 58
Total.....	\$98,858 11

While it has been considered advisable to decrease the amount of the grant, in view of the fact that the period of organization is over, a period when expenditure by the provinces was at its height, the need for a continuance of the work is only too evident. In spite of the fact that a campaign of an intensive nature has been carried on during the past nine years, there is no dearth in the number of cases being treated at the clinics. In this regard, it is important to remember that, in the majority of cases, syphilis requires approximately three years of treatment before the question of cure may be entertained, and in some cases, in view of the fact that the Wassermann reaction is continuously positive in spite of treatment, a longer period may be necessary. Prolonged treatment makes for an accumulation of cases, so that the clinics are well filled with patients at all times. This is particularly true of the large cities.

The treatment of gonorrhoea, in spite of popular opinion, is usually prolonged before cure can be definitely established. In the case of complications, such for example as chronic prostatitis, the patient may return year after year for treatment.

The total number of new cases of venereal diseases admitted for treatment for the calendar year 1927 was, approximately, as follows:—

	Treated in Clinics and Institutions	Reported by Physicians	Total
Syphilis.....	7,262	4,022	11,284
Gonorrhoea.....	9,495	7,186	16,681
Chancroid.....	281	75	356
	17,038	11,283	28,321
Total number of treatments administered.....			493,016
Total number of laboratory examinations.....			74,605

The number of male cases under treatment outnumbers the female, although in recent years there is an increase in the number of female patients. This increase is due to the large number of females who are leaving the protective atmosphere of the home and entering industrial life, as well as the opportunities afforded by the automobile. It is found in our cities, as in those of other countries, that houses of prostitution have diminished in numbers and that the motor car is taking their place. Late marriages are, no doubt, a concomitant factor.

Patients in our clinics, while composed in the main of the labouring class, are representative of all and comprise all age groups, although the greatest prevalence is between the ages of nineteen and twenty-five years. Many of the female patients are quite young; some of them of school age.

An important factor that contributes to promiscuity is uncongenial surroundings. Boarding-houses, for example, are dreary places at best, and companionship is sought in public places such as the streets and public parks. This contributes to the sum total of venereal disease.

The cost of treatment at the hands of a private physician is prohibitive for most. The earning capacity of the average young man or woman between the ages of nineteen and twenty-five is small and quite inadequate to meet the cost of treatment, so that the necessity of continuing free treatment is self-evident. If free treatment is not available, it is neglected, and the end result is injurious to the individual and to society.

It is found that a large percentage of those suffering from syphilis do not continue treatment until a cure has been established; in fact, the majority drift away from the clinic and eventually relapse. It is, unfortunately, the remote effects of syphilis that are particularly dangerous. The disease in the later stages attacks the vital organs, such as the heart, arteries and nervous system, and early death or insanity closes the case. It is most often just at the time that a man's responsibilities are at their greatest—between the ages of 40 and 50 years—that these later symptoms, which result in invalidism or death, occur. The diminished earning capacity of the father who is suffering from syphilis lowers the status of the family, so that often it is reduced to living in slum areas which have a demoralizing influence on the children, and these children contribute their quota to delinquency and crime.

The follow-up system that is being carried out with some degree of effectiveness in all of our clinics, together with the educational methods which are part of the duties of the physicians and nurses attached to the clinic, do much to encourage patients to continue treatment until discharged. This is an important feature of the work. An increasing amount of preventive work is being done in pre-natal clinics and maternity hospitals.

Treatment in penal institutions continues to be effectively carried out. In penitentiaries, jails and other penal institutions, all prisoners are given a physical examination and a Wassermann is taken. This is followed by treatment where necessary. Treatment may be enforced after the prisoner is discharged, until such time as it is considered no longer necessary.

The facilities afforded by laboratories in all of the provinces are increasingly in demand. This is due largely to the fact that the younger generation of physicians is fully informed of the importance of a Wassermann and takes advantage of it.

Free treatment continues to be afforded sailors at the several ports, in accordance with an international agreement whereby sailors of all nationalities are to receive free treatment at all world ports.

The campaign of education has been continued. During the year approximately 140,000 pieces of literature were issued. Lectures have been continued as usual.

In European countries statistics would appear to indicate a diminution in syphilis. Although physicians are apathetic towards reporting their cases, their returns as well as those of our clinics would appear to indicate a similar condition in this country. One cannot state as yet whether this is of a permanent nature, but there is no doubt that the intensive campaign of education and provision of free treatment, which have reached such great numbers, cannot but have a beneficial effect. There does not appear to be a corresponding reduction in the prevalence of gonorrhœa, but there is no doubt that the incidence is not so great as it was when the venereal disease campaign was instituted. On the whole, the work of venereal disease prevention and treatment is being carried out efficiently.

DIVISION OF CHILD WELFARE

Co-operation has been maintained and increased throughout the year with the Departments of Immigration and Colonization, Trade and Commerce, External Affairs, Justice, Interior (North West Territories and Yukon Branch), Labour, Indian Affairs and the Dominion Bureau of Statistics as well as with the provincial authorities in child welfare, health and vital statistics.

MATERNAL MORTALITY

The Report of the Maternal Mortality Inquiry which was made at the request of the first Conference on Medical Services in Canada on December 20, 1924, was completed on October 28, 1927, and was published on January 31, 1928, as Publication No. 37 in the National Series of "The Little Blue Books." The number of copies printed was 30,000 and a copy was sent to every legally qualified medical practitioner in Canada and also on request to a large number of nurses, provincial officials, members of voluntary societies, clergymen and others, and were distributed on request.

A number of requests were received for a popular edition of the report. These requests came chiefly from clergymen, service clubs, nationally organized associations of women and from the general public. It was not found possible to draft one publication which would be suitable for general distribution and this difficulty was met by the preparation of publications 38 and 39 entitled, respectively, "Mother—A little Book for Women" and "Mother—A little Book for Men," each of which contained a summary of the results of the Inquiry. These publications were received from the Government Printing Bureau on February 9, 1928.

The importance of maternal mortality and maternal morbidity to the country and the efforts made by the above-mentioned, especially by members of the medical profession, provincial and municipal officials, voluntary asso-

ciations, the clergy and the press, resulted in great attention being directed to this subject. The demand for "The Canadian Mother's Book," both in English and in French, was much increased. Special committees were appointed by various professional and other organizations to study the subject and to bring forward plans to lessen maternal mortality and morbidity.

Attention has been drawn by a medical officer of health to the fact that every mother in his district is supplied with a copy of "The Canadian Mother's Book" either before or immediately after the birth of her child, distribution being made by the public health nurses who visit the homes, and also to the fact that maternal mortality in this district has been reduced to about 4 per 1,000 living births.

HOSPITAL MAP OF CANADA

The Canadian Council on Child Welfare presented a request for the preparation of a map similar to the Hospital Map of Canada, giving special information in regard to medical and surgical care and treatment for disabled children in Canadian hospitals. It was decided that this request should be complied with and that information on this subject should be obtained by the Canadian Council on Child Welfare and transmitted to the department.

In the meantime, the Canadian Medical Association established a Hospital Division and appointed Dr. H. A. Agnew as director, and, at the request of that association, a copy of "The Hospital Map of Canada," along with a few necessary corrections and other information placed on file since this publication was issued, was transmitted to Dr. Agnew. It is intended that a complete handbook of all hospitals and sanitariums in Canada including mental hospitals shall be prepared and that the manuscript shall be submitted to the department by the Canadian Medical Association, Hospital Division.

NATIONAL BABY WEEK COUNCIL

At the request of the National Baby Week Council, co-operation has been given as before in informing the provincial authorities of the conditions for the Imperial Baby Week Challenge Shield Competition. The competition this year was for the best local "Baby Week Campaign." Entries were received by the council from India, Newfoundland, Ceylon, the Irish Free State and Canada. The shield was awarded to Bellary municipality in Madras and a certificate of merit was awarded to the Calgary Council on Child Welfare, Calgary, Alta.

CHILD WELFARE WORK FOR CHILDREN NOT IN THEIR OWN HOMES

A publication has been prepared and will be issued immediately on "Child Welfare Work and Workers for Children not in their Own Homes." It contains a statement of the modern principles of child welfare as approved by the provincial superintendents in this work and also a directory of the Government officials and voluntary organizations concerned.

CHILDREN NEEDING SPECIAL CARE

Progress has been made during the year in the care, treatment and education of children needing special care. This work has been done under the auspices of the Red Cross, the Rotary Club, the Canadian Council on Child Welfare and others.

A special ward for disabled children was opened in October, 1927, in the Brantford General Hospital. It is known as the "Edgar Allen Ward," being named after the President of the International Association for Crippled Children. The Ontario Association (Rotary) with the co-operation of the Ontario Gov-

ernment has appointed an executive secretary. Public school classes for disabled children in several cities have met with gratifying success and are much appreciated. Transportation facilities for these pupils in Toronto, Ottawa and elsewhere are excellent.

Vocational schools for children to whom manual training is of fundamental importance on account of their backwardness in academic subjects have made marked progress during the year in Ontario and other provinces.

OUTPOST HOMES

Correspondence courses established by the Departments of Education in Ontario and Manitoba have helped to educate children whose homes are so far from school that they are unable to attend classes. The "School Cars" continue to discharge an important duty in northern Ontario. Co-operation with inspectors and teachers engaged in this work has been maintained throughout the year.

PUBLICATIONS

THE LITTLE BLUE BOOKS

"The Canadian Mother's Book".—The Confederation Diamond Jubilee edition of *"The Canadian Mother's Book"* was published on September 1, 1927.

A supply of the *"Card for The Baby's Mother"* along with a letter *re* the method of distribution of these cards was sent as usual to all registrars, deputy registrars and sub-deputy registrars of vital statistics at the beginning of the official year.

A deputation of Ukrainians waited on the Red Cross authorities in June to renew their request that *"The Canadian Mother's Book"* should be translated into Ukrainian.

Requests for *"The Little Blue Books"* were received from Australia, New Zealand, the Dominion of South Africa, Kenya, the Gold Coast Colony, Kumasi, Madras, British Honduras and other parts of the British Empire, also from Reims in France, Lausanne in Switzerland, from Siberia and from Kameido, Koyko-Fuka, Japan.

The National Series

No. 37. Maternal Mortality in Canada.

No. 38. Mother. A Little Book for Women.

No. 39. Mother. A Little Book for Men.

No. 40. Child Welfare Work and Workers in Canada for Children Not in Their Own Homes.

This series was published during the year and some thousands have been distributed on request.

DIVISION OF HOSPITALIZATION AND SANITATION

HOSPITALIZATION

Tuberculosis Sanatoria

The persistent interest evinced by the medical profession, health authorities, sociologists and welfare workers indicates a marked desire to improve existing conditions, by adopting the principle and practice of modern hospital planning for the care of those suffering from tuberculosis.

The Maritime Provinces, as also other provinces, desired to have the chief of the division visit various centres for the purpose of overlooking the situation concerning this phase of hospitalization. Many centres were visited, including Amherst, Truro, New Glasgow, Antigonish, Pictou, Sydney, Glace Bay, New

Waterford, North Sydney, Bridgewater, Middleton and Kentville, all of Nova Scotia, Charlottetown and Summerside of Prince Edward Island and Ste. Agathe, P.Q.

In most of these places, suitable sites for the tuberculosis unit planned by the department were decided upon, having due regard to orientation and existing services from the general hospitals. Orientation is one of the chief phases in planning tuberculosis sanatoria, as also general hospitals, since without exception, wherever possible, patients' quarters should have a southern or southwestern exposure.

One of the chief appeals to the public of such a unit as before described is that it overcomes the prejudice based on sentiment, namely, the avoidance of members of the family being removed sometimes hundreds of miles away from home while undergoing treatment.

The lack of knowledge of the fundamentals involved in such hospitalization was evinced by the avid interest exhibited and inspires the department to prepare, in due course, a brochure, with suitable plans and data, covering tuberculosis sanatoria, thereby, in a measure, supplying the want so urgently presented.

The following excerpt, received from the Nova Scotia Tuberculosis Commission, summarizes the reaction of the visits made by the chief of the division, i.e.:—

"In view of the very definite information presented and the thorough manner in which it had been worked out, the tuberculosis unit, adaptable as an annex to the varied conditions of our rural hospitals, made a splendid impression on the communities visited, and the practicability of the scheme was recognized. A great deal of difficulty has been experienced and, in fact, the commission did not seem to be able to get any definite information concerning the character of additions required and the cost. Therefore, with this definite information, we are able to give the different hospital centres a more complete idea of what is required."

In the case of Prince Edward Island, appreciation was expressed through the Chief of Red Cross Services, by stating that the visit was very successful, the officer gaining complete victories at full meetings of the trustees and medical staffs at the various centres, and further, although funds for the moment were lacking, each and every centre was anxious to proceed with the scheme. The department was advised that, as a result of the visit, in a few hours educational work along the lines referred to had been accomplished, which otherwise would have taken years.

The aftermath of the visits has proved interesting, inasmuch as inquiries have been received by the department from various hospitals, city medical officers, and private medical practitioners, some asking for plans for sanatoria of twenty-four and thirty bed capacity, others for sleeping porches in connection with private houses together with specifications and costs of same.

The following letter, received by the department, is typical of the interest being evinced by the medical profession in the housing of tuberculosis patients directly under their charge, namely:—

"I am connected with our Colchester County Anti T. B. League. There is no hospital accommodation for advanced cases in the county and I feel that there is a great need for some means where these cases can be cared for, as well as isolated from their family as much as possible. Then again, there are many patients taking the cure at home, and in many cases they do quite as well as if they were in a sanatorium. Even those cases, however, who go to the sanatorium, either at the expense of an Anti T. B. League, or by private means, do not remain at the sanatorium but for a very few months. They also require some place where they can carry on the treatment at home after their return from the hospital."

Another inquirer from Halifax, N.S., sought information as follows:—

"Could you let us have complete plan and specification of a self-contained sanatorium of cheap construction, of about twenty-four or thirty beds, that is, two wards of twelve or

fifteen beds, one for men and one for women; also provision for nurses' quarters. There are some local hospitals so small and inadequately equipped that the idea of an Annex with a view of getting any auxiliary service from the hospital is out of the question, and a request has already been made by one town for such plan as is now asked for."

The City Medical Officer of Health, Sydney, N.S., requested the department to advise upon the remodelling of the vacated air service buildings at North Sydney, for the purpose of a sanatorium. The existing buildings were inspected, and duly reported upon adversely.

At the request of the President of the Laurentian Sanatorium, Ste. Agathe Des Monts, P.Q., the chief of the division visited this sanatorium, with a view of advising as to the best means of overcoming many undesirable conditions which obtained. Phases were covered such as heating; ventilation; lighting; water supply; suitable fuel; insulation of buildings; laundry; nurses' home; gymnasium; infirmary; lack of sterilization; sanitation in treatment of infectious cases; fire protection; refrigeration; general arrangement of patients' quarters; laboratory; X-Ray accommodation; occupational therapy; pathological building for research work, solaria and recreational facilities.

The department's services were recognized by the president, as follows:—

"We wish to thank your department for the courtesy of your visit and to assure you that the suggestions which have been made will be of tremendous value to our institution."

The President of the Greenfield Memorial Preventorium, Ste. Agathe Des Monts, P.Q., also asked for advice upon insanitary conditions and planning generally. Tersely described, the Directors determined, upon receipt of the report, that this institution should be remodelled on the lines advocated, when funds were available.

GENERAL HOSPITALS

Interest is being sustained in the department's publication No. 34, inquiries being received from all parts of the British Empire, Europe and the United States of America, as also from each and every province of the Dominion.

The division is working in close co-operation with the Canadian Medical Association, in advising upon problems affecting new small community hospitals, and in the words of the secretary of the association, "it is surprising how much such a department as yours seems to be needed; judging by the letters which have been coming in."

The Dominion Council of Health had under advisement a communication from the Deputy Minister of Health and Public Welfare, Manitoba, which letter stated that many requests were being received from rural communities for advice regarding the building of small hospitals, and further, that no definite plans were available which could be submitted to the inquirers on the lines of standardization. As a result there is a tendency to use large unoccupied dwelling-houses, or to build new hospitals subject to the individual peculiarities of local communities. This is felt to be unsatisfactory and, in his opinion, it would be greatly appreciated if the necessary advice could be given. The great need in this province is for the twenty, fifteen and ten-bed hospitals.

Great Britain has become interested in the type of hospitals built in Canada, inasmuch as the office of the High Commissioner of Canada, London, England, asked to have transmitted at the request of the Ministry of Health, Great Britain, information regarding some of the larger hospitals in Canada, the particulars especially desired being general layouts, detailed plans of patient accommodation and section of measurements and heights of the various storeys. Information was furnished by the department through the courtesy of the architects of the following hospitals, i.e., Toronto General Hospital, Ottawa Civic Hospital, Notre Dame Hospital, Montreal, and Royal Victoria Maternity Hospital, Montreal.

Reviewing general hospitals throughout the Dominion, it is to be noted that sterilization is often lacking; operating rooms are planned with southern exposure; sanitation faulty; nurses' homes more elaborate than hospitals, all of which, it is suggested, has been caused by those responsible having visited more ambitious projects, but nevertheless faulty, and applying both faults as well as desirable phases to their own problems; in fact, copying without knowledge of the fundamentals involved.

Ofttimes it has been observed that laundries are so located that soiled linen, which incidentally may be infected, has to be traversed over the same route as that used for clean linen.

Ventilation, in the smaller general hospitals, requires much more consideration than apparently has been given to it, since, in many cases, mechanical ventilation has been installed and discarded after the first month or two of operation, whereas if the gravity system had been installed, such cost would have been avoided, as well as better results obtained.

Food services would appear in many cases to have been looked upon as of secondary importance, which is a great mistake, inasmuch as without a satisfactory food service, cost of maintenance and administration increases in leaps and bounds, and has been proved on more than one occasion to be the cause of hospitals not being self-sustaining.

One of the most serious phases observed is that of the lack of sterilization for dishes, as also no provision made for preparation of diets, and, further, unsuitable materials used for floors and walls, more particularly so in the case of operating rooms, corridors and service departments.

A predominant factor governing most of the rural hospitals is that of cost and, doubtless, many of the errors and faults observed have been caused through lack of funds. However, many such objections could be overcome at a minimum cost and the hospital service throughout the Dominion greatly improved by careful consideration being given to the problem at its inception.

Public health officers, hospital trustees and the medical profession generally are taking advantage of the service of the department in advising upon general hospitals, as is evidenced by a few excerpts given hereunder, namely:—

"Prince Edward Island Hospital, Charlottetown, P.E.I.

"Your officer has been in Charlottetown and has been good enough to go over with us the plans of a proposed new hospital that we have in contemplation. He has given us some very valuable advice and has dictated a schedule of changes and improvements that he would suggest should be made. We are much indebted to him for his kind services in that way."

"Town of New Glasgow, N.S.

"The town of New Glasgow, N.S., has been favoured with two short visits, in the last few weeks, from your officer who specializes in hospital construction.

"On behalf of our citizens I wish to thank you, most sincerely, for your kindness in giving us the benefit of his services.

"While in New Glasgow, he met a number of our leading men, interested in hospital work, and all were highly pleased with his evident ability and pleasing personality."

"Ross Memorial Hospital, Sydney, N.S.

"During your officer's short visit to our hospital last spring, we went over sketches of a proposed new wing to the present building. On submitting these sketches to the architect, Mr. McCormick, he advised us to write you of our proposition.

"It is necessary for various reasons that we have a forty bed hospital, this would mean that the new wing should comprise about five private rooms; men's ward, about six bed; children's ward; nursery; operating room with sterilizing; scrub-up; doctors' dressing room; nurses' work room; X-ray; laboratory; kitchen; nurses', sisters' and maids' dining rooms; a small serving room and bathroom on each floor.

"Thanking you sincerely for any assistance you may give us in making our little hospital meet the requirements stated above."

The appreciation shown for the department's service by the Reverend Sisters, at this hospital, was expressed as follows:—

"We wish to extend our sincere appreciation to you for the work done by the members of your department. The valuable assistance, rendered us by the chief of the division; in regard to the plans of the proposed extension of our hospital, is, we assure you, very much appreciated. We congratulate the department in having for one of its members a person so generous and obliging."

"We have no doubt that when our hospital is completed according to these sketches, and suggestions, that we will have every facility to assist us in caring for the sick."

"Dawson Memorial Hospital Bridgewater N.S."

"We were visited a short time ago by your hospital consulting architect.

"The floor under our operating table needs to be renewed and he suggested the use of a material known as T. M. B. for this purpose.

"Will you be good enough to give us the benefit of your information and experience regarding this material and its suitability for our purpose, and any advice that may suggest itself to you in connection with its application and use.

"Also please let us know where the material can be obtained, and about what it should cost."

"Hamilton Memorial Hospital North Sydney, N.S."

"I am writing on behalf of the management of the Hamilton Memorial Hospital, here, of which I am secretary.

"Starting back as early as last March, we had correspondence with your Hospital Architect, in connection with the building of a new hospital adjoining the one which we now have.

"He has been with us four times since that, giving us advice, and have finally arrived, through his assistance, at a definite plan which we propose going ahead with.

"The reason that I am writing this letter particularly is to thank your department, on behalf of the management for the valuable assistance given us. Your officer has been most thorough in his work and extremely patient, as you can well understand a man dealing with people like the ordinary hospital management would have to be. It certainly was a grand thing for us that we were able to have the assistance of such a man."

"Soldiers Memorial Hospital, Middleton, N.S."

"Blueprints, in regard to the proposed changes in connection with the above hospital are gratefully acknowledged, and will be at once submitted to the hospital commission.

"I thank you personally for your interest in the matter and consider that we were exceedingly fortunate to have such valuable suggestions."

IMMIGRATION AND INFECTIOUS DISEASES HOSPITALS

The new units, as also the remodelled hospitals of the Immigration Medical Service, have attracted the attention of many of the provincial health authorities, as also civic health officers, so much so that requests have been made to the department to advise upon projected schemes for cities, as well as remodeling existing Civic Hospitals.

The Civic Hospital for Infectious Diseases, Quebec, P.Q., is an example, and the way in which the service is recognized is stated in the following excerpt, received from the Director of the Bureau d'Hygiene, Quebec, P.Q., namely:—

"We had the visit of your hospital consulting architect and, together, have visited our Civic Hospital, also that of the Department of Immigration at Parc Savard.

"He has furnished us with a lot of information regarding our hospital, put himself at our disposal for the future and has been kind enough to accept our plans to revise same.

"Let me congratulate you on the way the Immigration Hospital is kept; we have found there much precious information concerning the upkeep of a modern hospital.

"I thank you sincerely for your courtesy in offering us your Architect's services, and am sure that the city will benefit by his advice."

Close co-operation with the Superintendent of Marine Hospital Service resulted in the completion of the Marine Hospital and Infectious Diseases Unit, Sydney, N.S., which remodelling and new construction represents the latest principles, practices and thought on modern hospital planning.

Inter alia, the Provincial Health Officer of Nova Scotia is of opinion that the Infectious Unit is the best of its kind throughout the Dominion.

The Immigration Hospital, Savard Park, Quebec, P.Q., owing to the increased service required for hospitalization of immigrants arriving at the port of Quebec, demanded an additional unit. Plans and data were prepared by the division, and the work is now proceeding. When completed, it is anticipated this hospital will prove a very important instrument of efficiency in the Immigration Medical Services.

Various works and repairs have been dealt with at the quarantine stations throughout the Dominion, in conjunction with the Department of Public Works. These stations to-day are better from a physical point of view (both planning and equipment) than in any previous year of the service.

MENTAL HOSPITALS

Another phase of hospitalization which seems to be gathering impetus is that of hospitals for the feeble-minded. This urge was met by the division preparing a *Compilation of Current Data with Illustrations, Plans, Etc.*, covering the many phases for the care of the feeble-minded, namely, the problem, institutions, colonies, hospitals, training schools, clinics and buildings generally. This compilation has 190 pages, with index, appendix and bibliography, and is profusely illustrated, covering every kind of institution on the American continent. The value of the compilation can be judged by the letters received from members of the Dominion Council of Health, which are given hereunder, namely:—

"University of Toronto, Director School of Hygiene and Connaught Laboratories"

"I have just received to-day the very valuable compilation on mental hygiene, which you have prepared for the members of the Dominion Council of Health. We are very pleased indeed to receive this material. It will be exceedingly useful both to the members of the staff and to students in the various departments in the School of Hygiene in this university. I wish to congratulate you upon the very successful completion of a work of a thoroughly difficult character."

"Department of Public Health, Nova Scotia"

"I have your letter of February 15 and to-day, by express, there was received the compilation of current data dealing with the care of the feeble-minded, which is very valuable."

"Department of Public Health, Alberta"

"I beg to acknowledge with many thanks receipt of the volume compiled by you on mental hygiene. This volume contains much useful information."

"Department of Health, New Brunswick"

"Am in receipt under separate cover of compilation by your hospital consulting architect, respecting 'Mental Hygiene,' for which I am much obliged. It is of interest and value."

"British Ministry of Pensions"

"I wish to express my best thanks to the Deputy Minister of Health for the splendid work which you have sent me.

"I shall read the compilation with every attention and with special appreciation because it deals with the subject in which I have long been interested.

"The Ministry of Pensions has provided institutional care in its own specially designed hospitals for those mental defectives who come under its authority.

"The Mental Deficiency Act of the United Kingdom was passed shortly before the Great War and consequently was neglected in favour of less constructive activities. The implementation of this Act left a lot to be desired when I was last in England two years ago.

"Again recording my very best thanks to the Deputy Minister of Health."

The Board of Governors, Verdun Protestant Hospital, Verdun, P.Q., enlisted the aid of the division in remodelling the various units. Several interviews took

place between the Governors and the chief of the division, culminating in sketch plans being prepared and data furnished which eventuated in the final program being proceeded with to the satisfaction of all those concerned.

HOSPITALS IN ARCTIC

At the request of the Northwest Territories and Yukon Branch, Department of the Interior, plans, specifications, schedule of materials and data were prepared for a hospital and medical officers' residences to be erected in the Arctic Circle. Special attention was given to the insulation of the buildings in view of climatic conditions prevailing in that region. One of the residences is being built this year, and it is the intention to erect others, in due course, in different parts of the Arctic Circle for the housing of the medical officers in charge of the care and treatment of Eskimos.

The Food and Drug Laboratory at Winnipeg has further been developed, plans for which were prepared and data comparable to the requirements of the service.

SANITATION

The publications covering water supplies and sewage treatment prepared by the division are still in great demand, to such an extent that reprints are being made of publication No. 1, covering "Sewage Treatment for Isolated Houses and Small Institutions where Municipal Sewage System is not Available," and publication No. 17, under the caption of "Safe Water Supplies for Isolated Houses and Institutions where Municipal System is not Available."

Publication No. 36, "Pasteurization of Milk for Small Communities," has been translated into French, to meet the demand of the French-speaking people of the Dominion.

The chief of the division, when visiting Prince Edward Island, was asked to report upon a dairy, at the request of the Medical Officer of Health, owing to the fact that such dairy claimed its milk was being pasteurized efficiently, but upon inspection, the plant was condemned, which action was particularly interesting, inasmuch as the plant had been supplying so-called pasteurized milk to one of the hospitals, thereby incurring risks distinctly prejudicial to the health of the people.

Vast correspondence has been received by the department, seeking information on sanitation, having a range of cleaning camp wells, constructing septic tanks, wells in basements, sewage systems, filtering rain water for drinking purposes in schools, rural drainage, and disinfectants, all of which is conclusive evidence of the value of the department's publications.

FINANCIAL STATEMENTS

SUMMARY OF EXPENDITURE BY SERVICES, FOR THE FISCAL YEAR 1927-28

Service	Gross expenditure	Refunds	Net expenditure
	\$ cts.	\$ cts.	\$ cts.
